Notes of the Week.

The Seif Ed-Din Affair.

Egypt is learning that in political affairs things are not always exactly what they are represented to be by political opponents. The truth of this statement is exemplified just as much in Egyptian comments on many of Great Britain's actions, whether real or merely imputed, as in the manner in which what is known as the Seif ed-Din affair has been represented in the Egyptian Press. In the first place no precise date was attributed to the part that Nahas Pasha and Wissa Bey Wassif were alleged to have played when acting in their legal capacity on behalf of Prince Seif ed-Din after his escape from an English asylum, and it was left to be inferred that the head and front of their offending lay in their abuse of their high political positions. The wisdom of the suggestion made in these columns last week that judgment should be suspended until these two high officials had been afforded an opportunity of giving their own explanation of the matter has been shown by the subsequent course of events. The contract to which exception was taken, it is now explained, was entered into sixteen months ago, before there was any question of Nahas Pasha's becoming Prime Minister or President of the Chamber of Deputies. As soon as the two chief signatories accepted official positions, they withdrew from any active part in the legal proceedings. As for the letter in which their associate claimed that their new posts would materially assist them in their efforts to promote Prince Seif ed-Din's interests, it is claimed that it was written without their knowledge and that the translation from the Turkish, in which it was written, has been deliberately distorted as a pretext for a case against them. The reason for the very high fees is stated to be the great value of the stake at issue—an estate of four or five million pounds. Finally, there was nothing clandestine in the whole affair, as the three lawyers concerned had already appeared in open Court on the Prince's behalf.

The Danger of Hasty Conclusions.

Nowhere will the refutation of the charges brought against the late Prime Minister of Egypt be more welcomed than in Great Britain, in view of the fact that, after the forty years of close association of the British and the Egyptians, anything that reflects on the honour and good faith of the latter detracts to some extent from the credit to which Great Britain is entitled for her painstaking and well-meaning efforts in the building-up of Egypt as a modern independent State. This aspect is often lost sight of by the Egyptians themselves when indulging in criticism of British action. In the present crisis, which is essentially of purely Egyptian manufacture, it is at once supposed even by highly-placed Wafdists that Great Britain must necessarily be responsible and must be aiming a blow at constitutionalism in Egypt. Yet constitutionalism is a product so closely identified with British principles the world over that it stands to reason that Great Britain has a far greater interest in witnessing its success, wherever it is tried, than in encompassing its failure. It could be only a source of pride for the British people to be able to point to Egypt as an outstanding success in the application of constitutional methods, in a country where they were previously unknown, as a result of a few decades of British tuition. The allegation that Great Britain is likely to stultify her record by wrecking constitutional government in Egypt can spring only from motives that might be expected to underlie satisfaction on the part of Egyptians, if a Prime Minister were to be convicted on a criminal charge. The honour of the country is linked up with the honour of its first citizen, and if Nahas Pasha had been guilty of the charges brought against him, Egypt's reputation also must have suffered. What may conceivably happen, is that Great Britain, anxious for the success of the constitutional experiment in Egypt, may find it hard to refrain from pointing out

where her wider and longer experience shows her that the Egyptians through ignorance and inexperience are in danger of jeopardising the future of constitutionalism in their country. If the Wafd have occasion in the present instance to complain of unfair tactics on the part of their political opponents, it is to be hoped that in the interest of Anglo-Egyptian relations they will be chary of jumping to wrong conclusions on insufficient evidence in regard to Great Britain's policy in Egypt.

The New Egyptian Government.

The new Egyptian Cabinet under Mohamed Pasha Mahmud may be regarded as an attempt to enlist Moderate opinion in the country in the cause of good government. Rightly or wrongly, the impression gained ground during the premiership of Nahas Pasha that he was not as independent of his Wafdist extremists as he would have liked to be. Just as he strove hard to perpetuate the coalition with the Liberals which the more intransigent section of his Party was bent on destroying, so he would have preferred a general line of policy calculated to avoid constant friction with the British authorities. Mahmud Pasha can have no illusions regarding his ability to govern the country in the Wafd's despite. He has advised King Fuad to prorogue Parliament for a month, and will doubtless use the period of grace allowed him to bring home to the country as a whole a better appreciation of the political situation than was possible amid the quarrels that had broken out under the late coalition. If in the event of a fresh general election the Wafd again sweeps the country, it will still have to decide whether it will be content to subordinate the task of promoting the material interests of Egypt to the policy of providing occasion for Anglo-Egyptian friction. The charges brought against Nahas Pasha have been the means of increasing his popularity in the Wafd, and he may find as a result his hands strengthened for restraining the extremists of his Party. Only political vindictiveness run riot can attribute lack of patriotism to the Egyptians who have sought to find a basis for an Anglo-Egyptian understanding in the conviction that, not until that has been reached, can Egypt settle down to the work of governing herself according to her own genius. The pity of it is that so much valuable time is being wasted in attempts to put the cart before the horse.

A Greek Crisis.

M. Venizelos has administered another violent stirring to the Greek political cauldron. When, a little over a month ago, his sudden return to Greek politics brought about the fall of the Zaimis Ministry, owing to the resignation of M. Kaphandaris, Minister of Finance, he was not prepared apparently to take office at once, and the Coalition under M. Zaimis was reconstructed. This time the veteran politician has thrown down the gauntlet to M. Kaphandaris, whom his return ousted from the leadership of the Liberal Party and has indicted two important items of his financial policy. The points at issue are of a technical nature; M. Venizelos attacks the issue by the National Bank of the shares of the new Bank of Greece—a step taken by the Financial Minister without consulting the Cabinet, but provided for in the agreement with the League of Nations and, therefore, not lightly to be set aside in Greece—and accuses M. Kaphandaris of having caused Greece serious financial losses by setting off the Greek debt to France, which was in paper francs, against the French debt to Greece, which was in gold francs. Once again the resignation of M. Kaphandaris has involved the fall of the whole Cabinet; and this time M. Venizelos's acceptance of office appears to be inevitable. The holding of a general election as soon as possible is indicated—probably in September—and M. Venizelos will set himself the task of re-establishing stable government in Greece. Whether his efforts will meet with the success that he anticipates for them remains to be seen. His return to the country had brought about an impossible state of affairs, so long as he wielded the real power without having the responsibility of government. The chief

danger lies in the revival of the old passions that kept Monarchists and Republicans in two bitterly hostile camps.

General Pangalos.

Two problems that will immediately confront M. Venizelos, in addition to the promised financial measures, are the tobacco strike, which attempts are still being made to expand into a general strike, and the fate of General Pangalos. Successive Greek Governments have contrived to postpone the inconvenient case of the ex-Dictator; but M. Zaimis, in spite of frequent changes of Cabinet, had been compelled to make a show of bringing the trial nearer. If the Chamber is now dissolved, an excuse will be provided for postponing the trial for several months longer, unless M. Venizelos refuses to be a party to a state of affairs which has seriously impaired Greece's claim to be regarded as a civilised State. While parties and politicians have wrangled, the man who, with the acquiescence of the people, was the recognized ruler of Greece for a considerable period, has been kept in prison for two years without a trial. It would seem as if the instinct of justice in modern Greece is so lacking that no single Greek, whether in a public or in his private capacity, has come forward to denounce the outrage. General Pangalos may quite well be guilty of all the charges laid against him; but until a judicial system which has allowed him to remain incarcerated for two years without trial has been purged, Greece would not seem to be in a position to pass judgment on any one who, whatever his faults and mistakes, had worked according to his lights for the good of the country.

Marking Time in Yugoslavia.

Although it is taken for granted that M. Voukitchevitch must hand in the resignation of the Government in view of the tragic episode in the Skupshtina, he has so far refrained from taking the step. Explanations for the delay have been found in the necessity for awaiting the Foreign Minister's return from Bucharest, in the incidence of a national holiday in commemoration of the Battle of Kossovo, which entailed the absence of King Alexander and the Cabinet from the capital, and in the concern of the Government to ensure a smooth transfer of authority to its successors. It may possibly be nearer the mark to suppose that M. Voukitchevitch and the Radicals are trying hard to discover whether some way does not exist by which the present Prime Minister, or at least his Party, can retain power. There would seem to be a general consensus of opinion in the country that impartial elections held at this time would give the Opposition parties a substantial majority, as the position of the Radicals has been badly shaken by the Skupshtina murders, and they can no longer count on much support outside Serbia. On M. Voukitchevitch's behalf it can be said that until M. Raditch has recovered sufficiently from his wound to leave the hospital, and is available for consultation, deliberations between the parties are necessarily incomplete owing to the personal antagonism which M. Pribitchevitch, the other leader of the Peasant-Democrat group, is credited with inspiring. There can, however, be little doubt that M. Voukitchevitch, if he aspired to win the esteem of the Yugoslavia nation as a whole in contradistinction to any position that he has in Serbia alone, has played his cards badly in postponing his resignation. The effect of his retention of office has been to represent his Government in the eyes of the majority of the people as indifferent to the grave blot on the national escutcheon which the murders in the Skupshtina have brought about. In the face of such a grim development to party quarrels, however, it may well be that a Government finds itself momentarily non-plussed and seizes any excuse for postponing action.

"De-souling" the Zionist Movement.

It was easy to foresee that the report of the Palestine Survey Commission, which was published in our last issue, would meet with criticism at the hands of a certain

section of Zionists who never have been happy at the proposed inclusion in the Jewish Agency of non-Zionists and who now are inclined to stigmatise the Commission's report as a mere appeal to Jewish philanthropists. And so it has proved. Dr. Weizmann's own expression—"de-souling" the Zionist idea—has been used against him: it is felt by those Zionists to whom we refer that the whole ideal of Zionism has been muddled by the grovelling to the wishes of wealthy non-Zionist Jews. It is well, therefore, to examine from an ideological aspect and particularly from the aspect of its effect upon Palestine this report of the experts: does it or does it not reduce an ideal to pounds, shillings, and pence? That is a question which the Jewish nation must answer for itself. But it is, in effect, the greatest question concerning the "Jewish National Home." Other things, such as the decline of unemployment (it is said that there are now but a thousand unemployed), the still prevailing balance of Jewish emigrants from Palestine over Jewish immigrants into it, and so on, important though they seem, are little compared with the great problem, which is apt occasionally to be lost sight of, whether idealism shall prevail in Palestine among the Jews over practical politics, or *vice versa*. On the one hand are those who incline to the view that as an ideal tends to become a reality it ceases to be an ideal (although they probably object to this way of putting it), and on the other are those who assert that a reality can always exude an ideal—the firmer the reality the more potent the ideal. Dr. Weizmann and his supporters know that Palestine can never include "a Jewish National Home" unless the support of the non-Zionist American Jews is secured, but it is, of course, quite true that a certain self-containing quality in Zionism may be lost by his working upon the basis of that knowledge. In any case, the majority of Zionists are prepared to support him. At the same time, however, it is proper to record that so far the report of the Commission does not appear to have awakened very much new enthusiasm.

Lord Plumer and Palestine.

The forthcoming departure from Palestine of Lord Plumer, who for the last three years has been High Commissioner of Palestine and of Trans-Jordan, will, we are sure, be the cause of much regret in many different circles. For this renowned soldier has performed his task most admirably in the Holy Land. His energy has been amazing; he has touched life at every point among the peoples under his charge; and his discretion has been a model to future High Commissioners in this somewhat sensitive region. To petulance on the part either of Arab or of Jew he has never lent an ear: the scales have been kept perfectly even; and the result—apart from the question of economics and finance, over which he had no control—has been far from unsatisfactory. The Arabs, who under the régime of Sir Herbert Samuel, just and impartial though it was, resolved that they could not expect a square deal, have in the régime of Lord Plumer come to realise that what the British Government lays down, its servant on the spot carries out; nor have the Jews, who at first were inclined to show dismay at the appointment of a British soldier to succeed a Jewish civilian, any grounds for complaint that the High Commissioner has failed to carry out the promises of the British Government. Rather may Lord Plumer's name be remembered with gratitude in Jewish circles, for it was under his aegis that the Government effected so timely a rescue of the depressed colonists during the last year or so. If Lord Plumer's successor, whose appointment now needs only the Royal Assent, is able to inspire the affection and respect which are the merited reward of the gallant Field-Marshal, there need be no fear about the administration of the Holy Land.

Affairs in Trans-Jordan.

Although the discontent in Trans-Jordan with the recently-published Anglo-Trans-Jordan Treaty has very

possibly been exaggerated in interested quarters outside the new Arab State, there is little doubt that among a few educated inhabitants of the Amirate the opinion prevails that the Amir Abdullah signed the Agreement with too easy a complaisance. This Amir, however, is a shrewd realist compared with a few of the townsmen of his country, and although at one time he, like all his family, may have entertained notions of immediate, absolute, and vast independence, he now sees the wisdom of making sure of the lower stake instead of playing hazardously for the higher. He has probably heard his ultimate fate compared with that of his father, now an exile in Cyprus. At this he may have smiled, for whatever the urban Trans-Jordanian may think of his Amir, the tribesman generally and genuinely likes this merry-eyed monarch. But "Nationalist" notions have a way of spreading; already the cry has been heard in Trans-Jordan for union with Syria; and no impartial observer can doubt that the great conception of a federated, independent Arabia will at no distant date be popular in places such as Amman, Irbid, and so on. It will be unfortunate, however, if the urban Trans-Jordanian gets too far in advance of his tribal brother, who, after all, is the mainstay of the country. The more practical policy of the "Nationalist" in Trans-Jordan would appear to be, therefore, rather to concentrate upon educating the backward tribesman up to his ideas than merely to revile the Amir Abdullah, and, by implication, the Mandatory Power also. As things are, it is absurd to suppose that the "Nationalist" shaikh or journalist who accuses the Amir Abdullah of treachery to his country's interests represents more than a fraction of the real opinion of that country.

Hashimite and Saoudi.

It might be thought that the main feud between the Sharifian family of Mecca and the Saoudi family of Riyadh came to an end when the Amir Ali left the Hijaz and the Wahhabs entered into undisputed possession of the lands of ex-King Husain. On a minor scale, however, it still continues, although rather between the partisans of the respective families than between the principals themselves. This is now to be seen in connexion with Syria. If Syria is to be blessed with a monarchy, who more suitable, say, certain supporters of the Hashimite family, than the Amir Zaid, the youngest son of ex-King Husain, a man, moreover, who is well liked in certain circles in Iraq? But another formidable

RELIGIOUS REFORM IN TURKEY.

By a Law of March 3, 1924—the day that witnessed the abolition of the Ottoman Caliphate by the National Assembly—the Turkish Minister of Public Instruction was empowered to create a Faculty of Theology in the Stamboul University. While the Angora Government was carrying through its own scheme for the laicisation of Law and Justice, by the substitution of modern Codes for Muhammadan Law and the suppression of Courts exercising jurisdiction under that Law, it was left to the Stamboul Faculty to deal with the question of the introduction of reforms in the purely religious side of Islam. The Commission appointed by that body has now drawn up its report, which has been presented to the Government, and experience under the Republic suggests that its findings will in due course be endorsed by an obedient Assembly and become the law of the land. It is of interest, therefore, to examine the recommendations of the Commission and the line of argument by which it has reached them. The democratic evolution of Turkey, it is pointed out, has entailed the application of scientific direction to social institutions and their investment with a national character. Religion is a social institution and, therefore, has to conform to the exigencies of existence and the laws of progress. This "progressive perfection" must not go outside the rational limits of the religion, but Islam cannot remain immovably attached to primitive forms and superannuated usages, for ever deprived of the aid and all-powerful force of the law of progress. In the Turkish democracy religion, like everything else, must enter into the new era of vitality. Having thus established that religious life, like moral and economic life, must be reformed "by means of scientific procedure and by the aid of reason" in order that it may move forward in line with other social institutions, the Commission indicates the nature of the reforms that it recommends. Hygienic considerations came first, perhaps because they can be more easily introduced; shrines are to be kept clean and in good repair, mosques are to have seats; worshippers are to retain their footwear, but it is to be clean. For the modernisation of the services it is recommended that they should be conducted wholly in Turkish (both the prayers and the reading of the Quran); that prayers should be simple and clear "and such as to stir the souls of the Faithful"; that in the choice of muezzins and imams consideration should be given to their voices, and modern instrumental music should be introduced into mosques; that the standard of prayers and sermons—the latter at present being "purely religious and not inspired by scientific ideas"—should be improved by the training of preachers in philosophy and theology.

As in the case of other State departments in Republican Turkey, the Faculty of Theology in the Stamboul University takes itself seriously. Its report is not intended to be merely a series of pious recommendations launched upon the nation to take their own chance of winning through or falling by the wayside. It proposes to expound in detail the manner in which these suggestions are to be applied, with a view to making religious services conform with principles of hygiene, to Turkifying them, to imprinting on them a certain æsthetic character and to reconciling them with philosophy. Pamphlets on the subject will be issued, lectures and classes organised, the training of ministers of religion taken in hand, and specimen sermons delivered in the more important mosques. Whether this programme be carried out to the degree of thoroughness contemplated or not, there can be little doubt that the main features of it will be enforced. Successful prophets, according to Machiavelli, are mainly armed prophets. Those of to-day in Turkey are essentially of that category and have to deal with a disciplined people. The clerical forces in the country have allowed so many successive strongholds to be breached and overthrown, that they are unlikely to be able to join issue with any chance of success against the "progressive perfection" which is not "to go outside the rational limits of the religion."

In the struggle that has been in progress in the Republic during the last six years between Nationalism and Islam it seemed as if the only logical outcome could be the complete elimination of the latter. How, then, does the attempt to infuse "a new era of vitality" into the national religion conform with the views and intentions hitherto associated with Turkey's leaders? With the removal on April 10 by the Grand National Assembly of two Articles from the Turkish Constitution, one of which laid down that "the Muslim Religion is the religion of the Turkish State," the laicisation of the Republic was held to be complete, and Turkey appeared to have taken the last, and an irrevocable, step in sacrificing whatever advantages of prestige and support she stood to derive as the foremost State in the Islamic world. Yet according to the Stamboul Faculty of Theology the value of the modernising of Islam will not be restricted, as far as the Republic is concerned, to the spiritual domain, by the mere awakening of consciences. Turkey, it is argued, will at the same time constitute herself "the educator and guide of all Muslim peoples who remain backward and enslaved." In this way "the bases of reform closely concern the higher politics of Turkey, and will be likely to have a fruitful influence on all Muslim countries." Whether in this aspect of the proposed reforms the Faculty is travelling beyond its terms of reference there is at present no means of knowing. It may be that the rulers of the Republic are pursuing a carefully considered programme, which has been mapped out stage by stage of a far-seeing comprehensive policy. If the purpose were to free the Republic from the trammels that had encumbered the former Turkish State, it is certain that Nationalism, in the spirit that possessed it in the early days, would be deterred as little by consideration of foreign policy as by religious scruples. In several directions, however, it is now seen that there was method where none was suspected at first in Turkish dispositions. Possibly the new leaders of Turkey in their wisdom decided that, if Islam remained as it was, the hegemony of it was, under modern world conditions, hardly worth having, and they may have aimed from the outset at moulding it to their views, after having first prepared Turkey for the rôle that they had in store for her. If this should be the case, the world's estimate of Mustapha Kemal Pasha will have to be materially revised.

The Near and Middle East

From Our Own Correspondents.

Baghdad, June 12.

Parliament.

The final results of the secondary elections in Iraq divided the parties as follows:—

Progressives (Government Party)	...	70
Opposition	...	10
Independents	...	8
		88

Parliament, in extraordinary session, was opened at 9 a.m. on May 19 by King Faisal, with the usual pomp and ceremony. The High Commissioner and his staff, the Air Vice-Marshal and his staff, and all foreign Consuls were present. His Majesty, who was in Arab costume, drove through the streets in procession, attended by the royal bodyguard, mounted police, and troops. He was received at Parliament House by the Prime Minister and all the Ministers. After reading the Speech from the Throne, which was warmly applauded, the King returned in procession to the Palace.

The King's Speech referred to the newly-elected Majlis, and hoped that it would satisfy the aspirations of the nation. The political position of Iraq was enjoying continuous improvement, and her foreign relations were day by day being strengthened on a more permanent foundation. A new Treaty had been signed with Great Britain, and negotiations were still in progress for the revision of the Financial and Military Subsidiary Agreements. When these negotiations were ended, and when they bore a result likely to satisfy the interests of the country, they would be duly submitted to the Majlis for a decision.

The only new development in Iraq's relations with neighbouring States had been the regrettable incidents on the Najd frontier. Negotiations had now been opened with King Ibn Saoud, which it was hoped would remove all cause of further misunderstanding between the two countries.

The Government had spared no effort to expand the system of foreign diplomatic representation; a Diplomatic Agent had been sent to Angora following the appointment of a Turkish Consul-General in Baghdad, and it was hoped soon to establish diplomatic and commercial relations with Egypt.

The country's finances had made good progress. The question of the Ottoman Debt had been studied, and an effort made to reach a scheme for introducing an Iraq currency. Negotiations were also proceeding for the establishment of a national and an agricultural bank.

Steps had been taken to prepare a permanent cadre of State officials, with laws for the protection of their rights and regulation of their duties, and this task was almost completed; nor had the encouragement of trade and development schemes been neglected.

The internal situation of the country was improved, peace was well maintained, and social and economic improvement was noticeable. The Budget of the Ministry of Education had been increased by 14 per cent. in order

to meet the increasing demand for educational facilities. Expenditure on the task of combating the locust plague had been doubled.

Among important measures to be presented to Parliament during the coming session were the Budget, the Latifiyah Agreement, which was a substitute for the former Asfar Concession, and the Electricity Concession. The question of national defence had also to be considered.

After His Majesty's departure, the Chamber of Deputies elected as its President Abdul Aziz Beg Qassab.

Commenting upon the Speech.

At the third session of Parliament the reading of a short reply to the Speech from the Throne was followed by discussion, several members insisting that a detailed reply should be presented. The Opposition demanded from the Prime Minister a statement on the new Anglo-Iraq Treaty, and on Perso-Iraqi relations.

In reply Sir Abdul Muhsin Beg as Saadun said that the Iraq Government was still awaiting a reply to its demand for a revision of the Financial and Military Subsidiary Agreements of the new Treaty. If a conclusion "capable of satisfying our national desires" were reached, the Treaty and its Subsidiary Agreements would be submitted to Parliament, but in case of failure they would not be submitted.

With regard to Persian relations, the Prime Minister regretted that no advance had been made, because Persia persisted in making impossible demands which no Iraq Government could accept, e.g., she was still demanding the Capitulations. Nevertheless, every effort was being made to maintain the traditional friendly relations between the two States.

Yasin Pasha (Opposition) said in reply that he approved of the action of the committee in writing the reply to the Speech from the Throne as shortly as possible. It was of no avail to debate at length things of minor importance, but every effort of Parliament should be concentrated on the revision of the Subsidiary Agreements to the Treaty.

A motion calling for a detailed reply to the Speech was then rejected.

The "Mond" Demonstration.

In reply to questions on the anti-Mond demonstrations in March, the Minister of Education said that he was perfectly satisfied that his Ministry had taken proper action against those responsible. He regretted the permanent dismissal of a number of students, but for their own sakes the Government could not allow students to be tools in the hands of political agitators. Had any harm been done to a British ex-Minister, the consequences to Iraq would have been far more serious than the dismissal of a few students from Government schools. He promised to assist the dismissed boys, either by finding them employment or by allowing their admission into non-Government schools.

Supporting the Minister of Education, the Prime Minister (acting Minister of Interior) said that the exceptional measure for flogging demonstrators had now been cancelled.

New Cabinet Appointments.

The three new Cabinet appointments are as follows: Ministry of Interior, Naji Beg as Shauqat Pasha (previously Mutasarrif of Baghdad); Ministry of Defence, General Nuri Pasha Said; Ministry of Justice, Daud Beg Haidari (son of the ex-Shah of Islam of the Ottoman Empire).

The Cotton Crop.

It is hoped that the cotton sown in 1928 will produce a minimum of 3,000 bales, an advance on the 1,800 bales of 1927, but less than the hopes at first entertained for this year. The drop from 3,500 bales on 1926 to 1,800 in 1927 was due to the slump in cotton prices, followed by the wet weather of November 1926, which further reduced the price of the Iraq crop; but satisfactory prices were obtained for the 1927 cotton, and it was hoped that this would give a fresh impetus to cotton-growing for the following year. Unfortunately the serious damage done by locusts in 1927, and the general fear of an even worse invasion in 1928, led many farmers to sow a great deal less cotton than they would otherwise have done. There has none the less been a considerable revival, particularly in the Euphrates area, where the railway authorities have given impetus to cotton cultivation by propaganda with a view to the development of their traffic. Farmers who employ mechanical pumps are getting better results than those who rely on flow irrigation, and the steady increase in the number of pumps installed gives promise of a proportionate increase in the area under cotton cultivation.

Oil.

The Turkish petroleum Company struck oil in a new well in the Baba Gurgur area, and have the well under control.

The Gertrude Bell Memorial.

King Faisal and the Government of Iraq have agreed

that a memorial tablet to the late Miss Bell shall be placed in the Iraq Museum at Baghdad in commemoration of her devoted work in inaugurating the Museum and supervising its early stages. The tablet is to take the form of a bronze plaque set in plain marble frame, surmounted by a portrait medallion, and bearing the following inscription in Arabic and English:—

GERTRUDE BELL,

*whose memory the Arabs will ever hold in reverence and affection,
erected this Museum in 1923,
being then Honorary Director of Antiquities for the Iraq.
With wonderful knowledge and devotion
she assembled the most precious objects in it
and through the heat of the summer
worked on them until the day of her death
on 12th July, 1926.
King Faisal and the Government of Iraq,
in gratitude for her great deeds in the country,
have ordered that the principal wing shall bear her name,
and with their permission
her friends have erected this tablet.*

A suitable site in the Museum has been chosen, with the approval of the King. The cost of the memorial will be about £600.

Electricity Concession.

An agreement was signed on June 2 revising the provisions of a concession granted in 1911 by the Imperial Ottoman Government to Mahmud Shabandar for the supply of electrical energy and the construction and operation of a tramway in Baghdad. The concession is now held by the Baghdad Electrical Lighting and Tramway Syndicate, Lt. This agreement is subject to the approval of Parliament, and is expected to come up for discussion during the present session.

The Spanish World Flight.

Two Spanish officers, Captain Simeniz and Captain Inglesas, who left Seville on May 29 on a world flight in an attempt to beat the long-distance non-stop record, were forced to descend after a twenty-four hours' flight at Dawiyah, some forty miles north-east of Nasriyah. The machine was not damaged, but the airmen have had to cable to Madrid for new valves, without which they are unable to go on to India. They are at present the guests of the Royal Air Force in Baghdad. The machine is a Blequet, built in Madrid, with a single 600 horse-power Hispano-Suiza engine.

The Air Marshal.

It is rumoured that on the return to England of Air Vice-Marshal Sir Edward Ellington, the Iraq Command will be given to Sir Robert Brooke-Popham. The Air Marshal is responsible not only for the Royal Air Force units and armoured cars in Iraq, but also for all British military forces serving in the country.

Visit of Lord Wester Wemyss.

Admiral of the Fleet Lord Wester Wemyss has been on a visit to Iraq, and was the guest of King Faisal during his stay in Baghdad.

GREECE.

Athens, June 14.

M. Venizelos.

Whether the return of M. Venizelos to politics will be justified or not remains to be seen. It is to be hoped, at any rate, that his well-known capacity for getting things done will be exercised in the direction of a speeding up of settlement of the Road and Drainage Contracts. One immediate result of his return has been a renewed bitterness in the Royalist papers and a revival of violent expressions of personal hatred, which had been for some time in abeyance. As long as M. Kaphandaris remains Minister of Finance, the continuity of a wise economic policy is assured. The same is true of the Ministry of

and Branches.

Foreign Affairs, which continues to be directed by M. Mikalakopoulos; and it is hard to see how the presence of M. Venizelos can be other than an embarrassment to both of them. Meanwhile, the interminable discussions about the composition and method of election of the Senate, and about General Pangalos continue, although the case of the latter has advanced a stage, since the report of the Committee is to come up before Parliament immediately.

Tourists' Difficulties.

The tourist season is now over, but the much discussed improvements have not been in evidence. It seems that the organised efforts of the last two years have exhausted themselves, and the tourists are once more at the mercy of private enterprise. In any case, it was only certain stereotyped places that benefited by the effort. Apart from these, the difficulties of travel remain as before, and the real Greece remains unknown and unexplored. It is likely to remain so, as long as the control of the principal means of communication—the sea—remains in the hands of the steamship owners. [The reference is, of course, to Greek coastal companies.—ED.] Though competition is keen, so that two steamers often start from and to the same place at the same time, the owners make good profits, but too often at the expense of the comfort of the passengers. The cargo being more profitable than the passengers, the latter come off second best, deck and even saloon space being sacrificed to the former. When the cargo consists of live stock—sheep, goats, cows, and so forth—the lot of the passengers is not a happy one, and, while, to do them justice, the owners appropriate for the cargo the third-class quarters first, this means that the third-class passengers, in spite of strict injunctions to the contrary, monopolize the first- and second-class accommodation. For this one can hardly blame them, as there is often nowhere else for them to go. In fact, the only advantage of having a first-class ticket is that you can have a berth—but, as in summer, at any rate, the cabins are unbearably hot, and it is preferable to sleep on deck, there is nothing gained by taking a first-class ticket, since the first-class deck is used by all alike.

Boats' Irregularities.

But it is not only the deck-space which is sacrificed to the cargo; time-table and itinerary are also. Though in the case of some lines, there is improvement in this respect, it still happens that a boat may start *before* its scheduled time (it usually starts *after*), may change its course in order to pick up a cargo, at a port not on the itinerary, and in compensation, may leave out a port that is. A particularly bad case was brought to the writer's notice a few days ago by a passenger on board the Mykali, belonging to the Mantafoini Line. This boat was scheduled to leave Brindisi at 6 p.m. on Monday and to reach the Piræus at 6 a.m. on Wednesday, calling at Santi Quaranta, Corfu, and Patras. It was advertised in the International Tourist Offices at Naples, Munich and other places. It actually left Brindisi at 2 p.m., i.e., four hours *before* the scheduled time, and, proceeded to Valona (not on the schedule), which it reached at 8 p.m. on the same day—too late to discharge or take up cargo.

It stayed at Valona twenty-five hours, taking on board a cargo of sheep among other things. Shortly after leaving Valona, the engines broke down, and, after drifting for some time, it continued its journey at half-speed for the rest of the way. It did *not* call at Patras, one of the scheduled ports, nor were the passengers for Patras given the opportunity of disembarking at Corfu, and of taking another boat from there. Only after it had left Corfu were they informed that it would not call at Patras. To add insult to injury, a Frenchman who had booked from Brindisi to Patras, was charged for his full ticket and all meals as far as the Piræus. The deck-space of all classes was almost entirely occupied by oil-barrels and the above mentioned sheep. The boat actually reached the Piræus on Friday at 7 p.m., i.e. sixty-one hours late.

Though an extreme case, it is yet typical. Incidentally, it is a tribute to Greek seamanship, that in spite of the haphazard methods and decrepit boats accidents are extremely rare. But it is high time that the State exercised its authority, as it does over railways, and imposed obligations upon the owners, so that the public, which is too-long suffering, might be spared the waste of time and discomforts entailed by the present happy-go-lucky absence of system.

CYPRUS.

Nicosia, June 14.

The King's Birthday.

His Majesty's Birthday was duly celebrated at Nicosia and the five other district towns. The Governor attended a service in St. Paul's Church, and services were held in the Roman Catholic and Armenian Cathedrals and Churches. The Greeks, however, took no part at all in observing the anniversary. It is not, they say, that they fail in respect to King George, but (according to the logic of the Greek Press and leaders) any observance on their part would, they hold, be inconsistent with their decision to dissociate themselves entirely from any participation in the Jubilee celebrations of the present year.

Sir Ronald Storrs.

During the Governor's absence Mr. Nicolson (Colonial Secretary), will carry out his duties. Before his departure Sir Ronald directed that on July 12, the 50th anniversary of British administration, a certain number of convicts, especially short sentence prisoners, should be released from prison.

More Locusts.

More locusts have appeared in the northern district of Kyrenia. Papers continue to blame the Government, for misplaced parsimony, stating that the price paid for those brought in is not sufficient to tempt villagers to collect and bring collections to a distant centre. A Nicosia paper also refers to delay caused by the "prevailing jocose red-tape system," citing the fact that the Assistant Commissioner of Kyrenia (the Commissionership has been recently abolished) on visiting an infested village promised to refer a complaint on the subject to the Government. This required that he should forward it to the Commis-

sioner of Nicosia, who passed it to the Colonial Secretary, who in turn referred it to the department for locust destruction. The outlook in some places is regarded as serious for next year.

The "Festival of Venus."

This annual fête, called locally the festival of *Kataclismos* (the Flood), was celebrated on June 3, and the following day at the coast towns. It is a very popular anniversary, which draws crowds of villagers to the seashore, where fairs, aquatic sports, and swimming races are carried out. Large numbers go for a sail in boats, which often carry musicians. There is much jollification. The attendance this year was not so large as usual, owing to general depression and a poor harvest.

Hotels in Cyprus.

As regards the lack of up-to-date hotels, as affecting the tourist trade, it is right to mention that the George Hotel at Nicosia deserves a good reputation, and has received a very flattering testimonial from Lady Bowes-Lyon and Mrs. F. Gunnis, who recently spent a considerable time there, and who express their great satisfaction as regards the comfort and general excellence of the hotel arrangements. Several similar letters have been received by the proprietor from late visitors.

Cairo, June 23.

The Political Situation.

At the moment of writing the political horizon is more obscure and the situation is graver than they have been for a very long time. The air is full of resignations. The Coalition is broken up, and the violent polemic that is going on between the party organs means that it cannot be restored for many a long day. To all this have been added the revelations made by the Opposition Press of the part alleged to have been played by the leader of the Wafd and the President of the Chamber in the Seif-ed-din case at present before the Court of the Crown. The result has been to swell the ranks of those within the Wafd who disliked the way in which things have been done of late. In many responsible circles it is considered that the latest developments will have done more to hasten a radical adjustment in the political situation than the disappearance of the Coalition.

An Outspoken Speech.

Sir John Percival had a fine send-off when he left the country on Sunday last, and the very outspoken speech which he made at the banquet given in his honour by Ahmed Khashaba Pasha, the Minister of Justice, seemed in no way to have affected the attitude of his numerous

Egyptian friends who realised that it was his desire for the welfare of Egypt that prompted his remarks.

After emphasizing that he had always been a partisan of an Anglo-Egyptian *entente cordiale* and of the welfare, progress and independence of Egypt, Sir John said he had never been able to understand whether Egypt wanted a real or an apparent independence. If the former, then in his opinion Egypt had lost a magnificent opportunity in 1922. It had been undoubtedly a *beau geste* on the part of England to abolish the Protectorate, and Egypt might well have replied by a similar gesture. If she had said: "We do not want the Protectorate, but we want to enter the British Empire as a free nation like Canada, Australia or Ireland," he believed that England could not possibly have refused and Egypt would then have acquired real independence. Many so-called independent nations, he pointed out, do not possess independence like the Great Dominions. Bulgaria, for example, cannot obtain a loan without the control of the League of Nations. The slightest move on the part of Yugoslavia, leaves it open to a reprimand from Signor Mussolini. Nicaragua cannot even choose its President without the approval of the United States. Nothing of the sort applies to the Dominions, who govern themselves as they like and are members of the League of Nations. Egypt could have had an equally brilliant future. The famous "Four Points" would no longer have existed. The Suez Canal would have become incorporated in the Empire. British and Egyptian interests would have become merged. There would no longer have been any conflict in the Sudan, and it would have been possible for the Capitulations not to be abolished.

The opportunity had passed. Sir John did not believe that it would be possible for Egypt to make or for England to accept such a proposition to-day. But the continuation of the *status quo* was undesirable much more from the Egyptian than from the British point of view. Since 1922 assassins had caused Egypt to lose the Sudan and every year that the present state of affairs continued increased the risk that some unfortunate incidents would cause her to lose what she had gained. Opinion was unanimous that the only solution to safeguard the future of Egypt was an alliance with England, and he urged them to make this alliance as soon as possible, but without discussing too much its details, for it was the principle, and not the details, that really mattered. Once this alliance had been made, the mutual confidence, which is so essential, would arise, and the country would be able to apply itself to internal development, to good administration and good legislation, which unfortunately had been only too much neglected during the preceding six years. Sir John added that he was not one of those who claimed that with the departure of British officials the Egyptian administration was no longer any good. But there were very few Egyptians who could say that any serious progress had been made since 1922. Even his beloved Native Court of Appeal had become more the subject of criticism than it was ten years ago. All of which was the result of the condition of political uncertainty in the country. And he concluded by saying that if he had spoken frankly he had done so because, as the Minister said, he had been a faithful servant to Egypt, and he would have failed in that faithful service if he had not told them what he, in his private capacity and not as Judicial Adviser, thought of the situation.

EGYPTIAN MINISTRY OF EDUCATION.

A PPLICATIONS are invited for Assistant Masterships in Commercial Schools to teach English and Commercial Subjects.

Candidates, who should be between 24 and 34 years of age, must have University Degrees (preferably in Honours) and should have experience of teaching. Diploma in Education is desirable; those who are to teach Commercial Subjects must have the degree of B.Com.

Initial Salary, £E450 (about £461).

Full particulars and Form of Application may be obtained from the Director, Egyptian Educational Mission, 39, Victoria Street, London, S.W.1.

A PPLICATIONS are invited for Posts of Assistant Masters to teach English in Egyptian Government Secondary Schools.

Candidates, who should be between 24 and 34 years of age, should have University Degrees (preferably in Honours) and should have experience of teaching in Secondary Schools. Diploma in Education is desirable.

Initial Salary, £E450 (about £461) for those who have a University Degree, £E420 (about £431) for those who have only a Diploma.

Full particulars and Form of Application may be obtained from the Director, Egyptian Education Offices, 39, Victoria Street, London, S.W. 1.

AZERBAIJAN AND THE KURDS.

By A. S.

It will be remembered that a serious armed conflict occurred between the Turks and Kurds on the Turco-Persian frontier last autumn at the foot of Mount Ararat, and that Turkey sent a diplomatic protest to Persia demanding the surrender of the Turkish officers who had been taken prisoners by the Kurdish raiders. Her Note demanded also the surrender of the Kurdish offenders, claiming them to be Turkish nationals, or their suppression by Persia, because they had taken refuge on Persian territory in Azerbaijan.

The dispute was, however, settled peacefully in December, and, as the newspapers announced a few weeks ago, a special Persian delegate has arrived in Constantinople to discuss with the Turkish Government the perennial question of frontier conflicts, that is to say, the Kurdish problem.

There is no doubt whatever that since the Kurdish revolt of February 1925, there has been considerable turmoil in the eastern and south-eastern Vilayets of Turkey. The accession of Riza Khan Pahlavi to the throne of Persia seems to have indirectly poured fresh fuel on the smouldering fires of a new Iranian renaissance; not that the Pahlavi Shah or his Government take any particular interest in regard to the Kurdish tribes in Turkey. History has proved, however that perturbations among the Kurds of Turkey have had their repercussions across the frontiers, where from the foot of Mount Ararat down to Luristan and Khuzistan live some of the most powerful historic tribes in difficult mountain ranges coterminous with Turkey and Iraq. In the first days of his rule as Shah, it appears that Riza Pahlavi had grave suspicions in regard to the Kurdish movement; but since the Kurdish Nationalist leaders have announced that their only aim is to obtain the security of the Kurds in Turkey the Shah is understood to have changed his view.

The immediate cause of the recent Turko-Persian dispute seems to have been the following. Since the revolt of Shaikh Said of Guinj, in 1925, the Turkish Government has undertaken regular military expeditions against the Kurds with a view to breaking down their "feudal organisation" and the archaic system of tribal government. These military operations, spread over the last three years, were carried out from Bayazid near Ararat, down to Bohtan north of Mosul to Mardin and Dersim. The operations were accompanied with severe treatment of the "reactionary" Kurdish rebels, who were seized by hundreds with their families and deported from their cool mountain valleys to the unhealthy coasts of Western Anatolia. In the summer of 1926, it was the turn of the great tribes of the Shikakis, the Galalis, the Haidarans and their affiliated sub-tribes. Entrenched in the fortress of Bayazid and in the surrounding hills, the Kurdish warriors put up considerable fight against the Turkish army. After a fortnight's struggle the tribes drove their families and cattle towards Persian Azerbaijan, whither the fighters withdrew themselves later. Simko Agha, the famous chief of the Shikaki confederation, was associated at the time with this successful retreat; but the tribes complained of the severe treatment which the Turkish authorities dealt out to the Kurds who remained in their homes in the headwaters of the Euphrates.

The *Seda al Jamhur*, the Arabic paper of Mosul, in its issue of January 2, 1928, contained an article entitled, "The New Danger in the Middle East." According to the Arab writer, Shaikh-Abd-ur-Rahman, the brother of Shaikh Said, who was the leader of the Rebellion of 1925, followed by about 500 armed Kurds, had revolted last October in Southern Anatolia and had captured the heights overlooking the city of Seerd (60 miles south-east of Bitlis in the heart of Kurdistan). Simultaneously with this revolt of Shaikh Abd-ur-Rahman, the Shikakis and their allied tribes, with a view apparently to revenge-

ing the terrors of Bayazid, invaded Turkish territory in great force, massacred many Turkish troops, and captured officers and took them as prisoners back to Azerbaijan.

The Arabic paper of Mosul accuses Prince Salar ud Daulah as the instigator of the Kurdish raid, and advises Simko Agha not to make himself an instrument of intrigue in an international game, and a tool of inter-racial troubles which may not only strain Turko-Persian relations but also do much harm to the Kurds themselves.

It would be extremely difficult to say whether there is any basis of truth in the assumptions set out by the Arabic paper. It would be still more difficult to learn whether Persian authorities of Azerbaijan knew about the intended raid of Shikakis into Turkey; or supposing even that they had some cognisance of it, they had power to stop the tribes from a practice which the latter consider as a prescriptive right. Anyhow, Persia and Turkey are negotiating at present in Angora to effect a settlement of the dispute, which, although technically connected with the recent Kurdish raid, implies a far more important problem which has arisen between the two neighbouring Muslim States. It is the problem of Azerbaijan itself which seems to underlie the Kurdish raid and periodic troubles between the two States.

Considered from a strictly political standpoint, there is no such thing as a question of Azerbaijan as between Persia and Turkey. The former owns it as it had owned it from the days of Darius Hystaspes, as the birth place of Zarathustra, and, therefore, as the cradle of the ancient Iranian spiritual world, where once the greatest temples of fire-worship were kept by the noblest families of ancient Iran. It is true that the Seljuks, and later on, Ak-koyunlu Turkomans and, finally Mongols and Tatars left behind Turki-speaking elements at Tabriz and in the other important centres of the region. But some sort of religious purism always survived in the outlying parts of Azerbaijan, for instance, at Ardabil, whence arose the great Safi family towards the end of the 15th century. Shah Ismail, a distinguished representative of this Persian family resuscitated Iran after about nine centuries of division and subjection to foreign rule. Since the year 1514, some of the more vigorous Ottoman Sultans like Suleiman the Kanuni, Murad IV (1630 A.D.) and others, temporarily occupied parts of Azerbaijan. Even the Young Turks, availing themselves of the utter weakness of the moribund Qajar dynasty, occupied Tabriz and the surrounding regions during the World War, as a base for

flanking the Russian armies in Trans-Caucasia and the British in Iraq. But the Treaty of Amassia signed in 1558 between Sultan Suleiman Kanuni and Shah Tahmasp after forty years' warfare, laid down frontiers between the two States, which have held good until to-day. Those are the frontiers still existing between Persia and Turkey in the north, and Iraq and Persia in the south—frontiers admittedly based on strategic lines, but cruelly breaking in two powerful Kurdish tribes like the Shikakis, Mikris, the Hamavendis and the Jaafs. This arbitrary division of kindred tribes possessing peculiar economic conditions has cost pools of blood and treasure to both States since the 16th century; yet a satisfactory settlement does not seem to be in sight.

From the official point of view of Turkey, there also appears to be no question of Azerbaijan. After the signing of the Armistice in October 1918, Turkey withdrew the remnants of her Army not only from Tabriz and Urumia, but also from the eastern vilayets. Turkey has lost all the Arab-speaking lands. It is to-day a more homogeneous country than it had ever been. During 1911-18, in the heyday of the Turkish *ojaks*, the centres of Nationalist culture and education, certain Pan-Turanian intellectuals fixed their eyes also on Turkish-speaking Persian Azerbaijan, as a more convenient line of least resistance to the heart of Central Asia. To-day the Turkish *ojaks* seem to be devoting themselves to a less ambitious scheme, although a very practical one for the time being, namely, to educate their own people and develop the great resources of their sparsely populated Anatolia.

The issue is not yet closed by any means, even temporarily. There are political refugees of every Middle Eastern nationality scattered from Constantinople to Cairo and Paris. There are the Transcaucasian Nationalist Governments which have settled down in various European capitals after they were driven out from their seats during 1920-21 by the Communist armies. Since then a distinctly Kurdish Nationalist movement at least among distinguished tribal leaders, has assumed a great expansion. Even the smallest national group, and politically backward peoples have learned a good deal by the experience of the War, and have made groping attempts to reconsider their positions and their real interests in relation to their ancient connexions and old conceptions. It cannot be denied that a new atmosphere of inter-racial intercourse is beginning to permeate the leaders. And in Eastern countries convictions of the leaders turn out to be the politics of the day, much more easily than in the West.

Under the guidance of the great Pahlavi Shah, Iran appears to be the axle of these fermentations; for the last year or two there have been talks about the unity of ancient Aryan races. Articles have appeared in the Press of Persia and of other countries advocating an intellectual reunion and co-operation between the Persians, the Kurds, the Armenians, the Georgians and the people of Trans-Caucasian Azerbaijan, claiming the basis of the last-named people as essentially Aryan.

Even the enthusiasts of the programme do not seem to have overlooked the insuperable difficulties which lie in the way of such a wild-cat scheme.

Speculations are rife upon the attitude of Soviet Russia regarding such a scheme. Large Russian garrisons are posted on the frontiers of Azerbaijan which exercise strict control over all possible movements. Nevertheless that does not prevent Tabriz from being a centre of great political activity where both the Pan-

Turanian Turk and the Aryan enthusiast meet each other in the local café round a cup of coffee.

As against the Pan-Aryan-rumblings, there have come out the Tatar Musavatist refugees at Constantinople. One of them recently wrote a book in Turkish attempting to refute the so-called historical truth about the Aryan peoples, and, without saying it in so many words, insists on the identical ethnical origin of the peoples of Persian Azerbaijan and of the Soviet Republic of Azerbaijan.

All these and similar efforts are naturally mere academic discussions without any practical importance, at least for the time being.

A few weeks ago the Turkish Government publicly announced that the Kurdish tribal families which had been deported to Western Anatolia could go back to their ancestral homes in the East if they chose to do so. This appears to be the reversal of the policy which the Turks had adopted towards the Kurdish tribes since 1925. On the eve of Perso-Turkish negotiations regarding the frontier and Kurdish questions, the Turkish leniency towards the invincible Kurd is certain to pacify the tribes.

Even more recently the Constantinople Press announced that Simko Agha had surrendered to the Vali of Hakkari on Turkey's giving an undertaking that all Kurdish chiefs who were refugees in Persia, Iraq or Syria would be amnestied if they returned and submitted to the Turkish authorities. Many others have also returned. Meanwhile a new Turko-Persian protocol was initialled in Angora.

It remains to be seen whether the negotiators will be able to effect an agreement satisfactory to all parties and particularly to Kurds, who, be it remembered, have baulked as much the ancient Roman military commanders, as the Mongols and the Turks.

THE NEW EGYPTIAN CABINET.

The new Egyptian Cabinet was constructed on June 27 as follows:—

*Mohamed Pasha Mahmud	... Prime Minister and Interior.
*Ahmed Pasha Khashaba	... Justice.
*Gaafar Pasha Wali	... War and Marine and <i>ad interim</i> Wakfs.
*Ibrahim Bey Fahmy	... Public Works.
Ali Pasha Maher	... Finance.
Dr. Hafez Bey Afifi	... Foreign Affairs.
Abdul Hamid Pasha Suleiman	... Communications.
Nakhala Pasha el Motei	... Agriculture.
Ahmed Lutfi Bey es Seyyid	... Education.

* Resigned membership of the late Cabinet.

M. Sreckkovitch, Governor of the Serbian National Bank, died on June 28 in Belgrade after a short illness.

Although the Greco-Turkish negotiations in Angora between M. Papas, Greek Minister, and Tewfik Rushdi Bey, have broken down for the time being, an attempt will be made to reopen them in September, provided that the Turkish Law of Reprisals has not been put into effect against the properties of Greeks in Constantinople in the meantime.

At the request of his new Prime Minister, Mohamed Pasha Mahmoud, whose Cabinet was approved on June 28 by Royal Rescript, the King of Egypt last week prorogued Parliament for a month in virtue of Article XXXIX. of the Constitution. The decree of prorogation was read in the Chamber by the President, Wissa Pasha Wassef.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Book Reviews

GERTRUDE BELL'S HAFIZ.

"POEMS FROM THE DIVAN OF HAFIZ." Translated by Gertrude L. Bell. (London: Heinemann. 5s.)

It seems incredible now that the delightful translations by Gertrude Bell of Hafiz, which were first published in 1897, should ever have gone out of print. For though her translations are free, they preserve wholly the spirit of the original, and on the purely technical side they are beyond reproach. How great a Persian scholar, how subtle an interpreter of the poetical Persian mind might not Miss Bell have become! One almost grudges the fortunes of peace and war which turned her fine gifts to other ends. As Sir Denison Ross says in his very useful little Introduction to this new edition:—"One cannot refrain from expressing a regret that such a fine scholar should not have given more time to the field of Persian historical research in which so little has been done and where competent workers are so rare." Nor is the Director of the School of Oriental Studies in London backward in praising these translations of Miss Bell, for he quotes with manifest approbation E. G. Browne's estimate that these versifications are "true poetry of a very high order and, with perhaps the single exception of Fitzgerald's paraphrase of the Quatrains of Omar Khayyam, are probably the finest and most truly poetical renderings of any Persian poet ever produced in the English language." Yet it is nothing less than the truth to say that that verdict is now universally accepted.

It is typical of the times in which he lived—the fourteenth century A.D.—that of Shemsuddin Muhammad of Shiraz, who was Hafiz, neither the year of birth nor the year of death is known. The years of his life, as is remarked in Miss Bell's own admirable Introduction to the Translations, were surrounded by wars and turmoil. When Persia herself had different overlords, when Shiraz itself was subjected to even more numerous vicissitudes, it was necessary for Hafiz—indeed for anyone who was not a man of action—to become to some extent a Vicar of Bray, and to accept whatever powers that happened at any particular moment to be with philosophic resignation. His renowned Sufism was, therefore, as much determinable by actual events as by processes of reasoning or of intuition. But the Sufism of Hafiz is something very different, in its power of appeal, from the set system of later Oriental quietists, for it is replete with beauty, fragrance, rhythm, music. It is, one thinks, rather these externals than the essence of his verse which have preserved it for nearly seven centuries. His real philosophy is almost incomprehensible to the Western mind, which shrinks from being wafted out in remoter dreams far from this solid world and, like Dante, who was contemporary with Hafiz, sooner demands a personal faith. That fact, however, is supremely important to no one except the Oriental Sufi: it is sufficient that Hafiz is now among the immortals. As Miss Bell sang (and her best verse did really sing) in her Dedication to the author of the *Divan* (which, one need hardly add, means a collection of poems arranged in alphabetical order according to the rhyme):—

Thus said the Poet: "When Death comes to you,
All ye whose life-sand through the hour-glass slips,
He lays two fingers on your ears, and two
Upon your eyes he lays, one on your lips,
Whispering: Silence!" Although deaf thine ear,
Thine eye, my Hafiz, suffer Time's eclipse,
The songs thou sangest still all men may hear.

The publishers of this edition are indeed to be congratulated on making easily available these draughts of delicious poetry, coming from a pure and deep well at which Miss Bell herself had drunk deep. On re-reading these Translations one marvels anew at the skill with which a young Englishwoman could render the pathos, the tenderness, the quasi-abandon of the Persian poet. In all respects but that of his profundity—and who shall fitly explain that?—these Translations are indeed mirrors

in which Hafiz would surely have recognised his now wan, now wine-flushed face.

A HISTORY OF THE JEWS.

"A HISTORY OF THE JEWISH PEOPLE," By Max L. Margolis and Alexander Marx. (Philadelphia: The Jewish Publication Society of America.)

This history of Margolis and Marx is the third Jewish history in the course of the last few years to appear in English and be published in America. There seems to be a great demand for such works in the United States and in all other English-speaking countries. The growth and increase of interest in Jewish historical research can be accounted for by many reasons. To mention but one: this key for understanding Jews and Judaism is wanted by foe and friend, by progressive and conservative Jews alike. Each of them turns to history, to justify his own attitude, to prove his peculiar point of view.

What is hidden in the unknown future? Will the dreams, old and new, glowing and gloomy, come true? Will the great expectations of a Jewish National Home fail as so many before our time? We consult history. No wonder that the large masses, who emigrated from Tsarist and Bolshevist Russia, from Small and Greater Rumania, from the Betyar regime of White Hungary, and their children, who become more and more Americanised, have to be provided with a history of histories, of their race, their nation, their religion, their ancestors, their political failures, their literary achievements, their grave persecutions, and the contributions made by them to culture and civilisation.

The authors are fully aware of the great difficulties of their task. This history cannot supply Graetz's history, nor can it oust Dubnow's new work, in spite of the shortcomings of both of these two great writers. Our authors tell the history of the Jews from the dim beginnings to the present day. The Age of the Bible is described in a dry narrative of the Old Testament text—with notable omissions. What a writer of this period loses by ignoring or neglecting the rich archæological and literary discoveries made in Egypt and Babylonia cannot be even hinted at in a short notice like this. The account of Jewish activities and sufferings is divided according to the Jewish centres, e.g., Palestine, Babylon, Egypt, Spain, France, Germany, and so on until the Jews return to Palestine in 1918. The presentation is on the whole, dispassionate and detached. At the end the authors themselves display strong Nationalistic, Zionist proclivity. Some periods are treated too briefly. The Talmudic Age, for instance, so little understood, and of such great importance, needed a fuller account. But, on the whole, the work is to be welcomed as a manual of Jewish history and literature. The work is provided with chronological tables helpful for scholars and laymen alike.

THE WEEK AT HOME

London, Tuesday Morning.

By-Elections.

Those observers who put their faith in by-elections to show which way the political wind is blowing must have been puzzled last week, when at Holborn the Conservative candidate was over 4,000 votes ahead of his Labour and Liberal rivals, and at Carmarthen the Liberal just managed to scrape home against the Labour man, who in his turn was well ahead of the Conservative.

These two elections, however, seem to have impressed the dominant party with two things; first that the Conservatives now stand to lose, rather than to gain, in triangular contests—even at reactionary Holborn the Conservative majority was much less than in 1924; and secondly that the Liberal Party is now something really to be feared. Mr. Lloyd George is thought to some extent to be regaining prestige; or, as others might put it, his nonsense suits the public's nonsense.

Left and Right in Labour.

No very great move in the general ranks of Labour itself is yet discernible as a result of the Maxton-Cook manifesto which I mentioned last week, although there have been demonstrations of sympathy with the Maxton conception among people outside the Labour movement. Upon the Independent Labour Party itself the effect has been more marked, and at a Council meeting last week only a narrow majority was obtained to support the cry of Maxton and Cook.

It is now being claimed by the Left wing of the Labour Party that no intention is entertained of disrupting the Labour movement, but quite obviously the official leaders of the Parliamentary Labour Party are inclined to treat the manifesto as something which, if it gained any considerable popularity in the country, might seriously embarrass them. The Labour Party's Trade Unionist leaders are fairly committed to a full and sincere investigation of what are still known as the "Mond" proposals, and is precisely against such discussion with employers that the school to which Messrs. Maxton and Cook belong is inveighing so vehemently and passionately. This Left wing feels (what many outside the Labour Party more comfortably feel) that the present direction of the Labour Party is really rather towards Liberalism than towards pure and unalloyed Socialism, and it points to these "Mond" negotiations as irrefutable evidence that Labour is quite prepared to flirt with Capitalism. In effect, the Maxton-Cook manifesto is an appeal to the rank and file to repudiate the present action of the T.U.C. leaders and the present tendencies of the heads of the Labour Party.

But it is a little doubtful whether all this internecine stress will have much effect upon Labour's polls, except, possibly, in highly industrialist constituencies.

The Railway Disaster.

The English public was grievously shocked last week at the news of the railway disaster at Darlington, when an excursion train came into collision with a goods train. It was the final sort of tragedy—a similar one had not occurred since 1915—which arouses instinctive and immediate sympathy with the sufferers. All the more shocking, therefore, was the attempt on the part of certain newspapers to make capital out of the fact that their insurance policies had come to the aid of the bereaved. To take this tragic occasion as one for advertising newspaper insurances was, simply, abominable; and one was glad to see that the National Union of Journalists condemned the practice as "derogatory to the profession and repugnant to all sense of common decency."

The Primate.

One is by no means surprised to find the Prime Minister's name in the list of those who are proposing that a national tribute should be offered to the Archbishop

of Canterbury. In recent years the Primate has come to occupy a very prominent place—apart from his ecclesiastical interests and prestige—in the minds of Englishmen. The recent defeat of the re-*Revised Prayer Book* has, of course, emphasised the nature of the Archbishop's position in England, and there has been, even among those who opposed revision, sympathy with the Primate.

But one thinks rather of his protest against the policy of reprisals in Ireland after the War, of his plea for generosity and conciliation in the General Strike, and of other things which have stamped the Primate as a typical Englishman who naturally inclines to compromise and who is prepared to credit a side not his own with decent motives. Such a courteous and kind man as the Archbishop, now approaching retirement and the celebration of his golden wedding, would naturally touch a responsive chord in our warm-hearted Prime Minister.

Wimbledon.

The excitement at Wimbledon this year seems to be on quite the intense level which we have come to expect from the Lawn Tennis Champions who come from near and far. So far possibly the greatest thrill has been the running to five sets of Lacoste by Austin, the one Englishman who really upheld his country in wholly admirable way. At present there seems little reason why the Cambridge Blue should not come still nearer the Championship when strength and stamina are added.

Opinions are about equally divided upon the ultimate winner: Tilden or one of the accomplished Frenchmen. Among the ladies, Miss Helen Wills is of course unique, and the main interest centres upon how near Senorita de Alvarez or Miss Ryan gets near to her.

Cricket.

Despite the persistent protests to the effect that the rules of Cricket need changing in the direction of increasing the defensive batsman's liabilities this season we are having some really exciting cricket. For one thing, neither Lancashire nor Yorkshire is at the top of the Championship table; for another, the West Indians are among us to show us what fast bowling is really like; and for another the rain has quite often come to the help of the bowlers.

Immediate interest is centred on the University match, for which neither Oxford nor Cambridge are yet sound favourites. Cambridge have fallen away from their early batting promise, but they look at the moment to possess the better attack.

NOTES OF THE WEEK

(Continued from page 3.)

candidate is preferred by those who claim to be looking to the real Arab ruler, that is King Ibn Saoud. In the opinion of these, no better King for Syria could be secured than the Amir Faisal, the second son of the Wahhabi King. Whether these two young men would accept the Throne of Syria, were it offered to them, we do not know, but it certainly is to be inferred that they would. From the French point of view, the advantages of having as King in Syria a member of the Saoudi family are very considerable; and such an appointment would redound much to their prestige. It is problematical, however, whether they have the elasticity of mind to see the wisdom, from their own point of self-interest, of such a step. For just as the British have imposed constitutional monarchies in countries unsuited to such essentially British institutions, so, it would seem, are the French unlikely, unless very heavy pressure is brought to bear on them to forgo their beloved republican form of Government for Syria. If a republic for Syria is persisted in, there may be disappointment in both Mecca and Baghdad.

NEWS IN BRIEF.

Cardinal Giovanni Tacci, Secretary-General of the Oriental Churches, who died in Rome after a very short illness, had been at one time Apostolic Nuncio in Constantinople.

The Turkish Minister at Berne represented his country at the third session of the Committee on Arbitration and Security which opened under the presidency of Dr. Benesh at Geneva on June 27.

A new Iraqi decoration has been instituted, called the Order of Al Rafidain, meaning the Order of the Two Rivers. Its first class will be reserved for those who have held important appointments under the Crown.

As a result of long drought the Vilayet of Konia, in Asia Minor, is suffering severely from famine. The Turkish Government is sending help to the affected area, and Shukry Kaya Bey, the Minister of the Interior, has gone to Konia.

The Greek Government last week intervened in the dispute between the employers and strikers, and has appointed a mixed committee, which met in Athens on June 26 under the presidency of the Minister of National Economy.

Mr. Charles Wilson, United States Minister to Bulgaria, has been appointed to succeed Mr. W. S. Culbertson, Minister to Roumania, who has been transferred to the post of Ambassador at Santiago, Chile.

As the result of an accident near Amman (Trans-Jordan) to a D.H. 9a machine of No. 14 Bombing Squadron, Amman, on June 26, Pilot Officers John Henry Lorraine Maund, the pilot of the aircraft, and 363,194 A.C.1 Jack James Heatherstone Middleton were killed.

After completing her tour of the Mediterranean *via* Paris and Bucharest the Greek aeroplane Hellas alighted at the Karaburnu Aerodrome, near Salonika, on July 1. Preparations had been made to welcome her pilots at Tatoi, near Athens.

Major-General Sir Charles Edward Callwell, Campden House Chambers, Campden Hill, who saw service in the Afghan War and in the Boer War, a well-known writer on military subjects, and who died in May, aged 69 years, left estate of the gross value of £8,884, with net personalty £8,709.

Viscountess Erleigh opened the garden fête on June 27 which the Federation of Women Zionists of Great Britain and Ireland held on that and the following day in aid of the Women and Children's Welfare Work in Palestine. The Hon. Mrs. Edward Lascelles performed the ceremony the second day.

The Greek military aeroplane, Bréguet 19, with Colonel Adamides and Captain Papadakos on board, arrived in Athens on July 1 from Bucharest, amid cheering of large crowds, including the Ministers and the foreign diplomatic representatives. The airmen had completed a tour of just over 10,000 miles round the Mediterranean, averaging a speed of 100 miles per hour. They left Athens three weeks earlier, making non-stop flights to Aleppo, Alexandria, Cairo, Tripoli, Casablanca, Paris, and Bucharest, some of which were under trying weather conditions. They had no accident of any kind. The distance between Paris and Bucharest was flown in record time.

During April 179 persons entered Palestine as immigrants, including 117 Jews. Of these, 105, including 63 Jews, had entered as tourists and were given permission to remain. Twenty-one prospective immigrants were refused admission, and 240 persons, including 181 Jews, of whom 125 had settled since June, 1920, left Palestine permanently.

Lord Allenby, presiding on June 29 at the annual meeting of the Palestine Exploration Fund at Burlington House, Piccadilly, said that excavations undertaken by Mr. J. W. Crowfoot, Director of the Jerusalem School of Archaeology, last year in the Tyropoeon Valley, Jerusalem, would be continued in the autumn. An ancient gateway was uncovered last year. Sir Charles Marston had promised £2,000 towards the work of excavation.

It is reported from Tirana that the trial of the five men accused of an attempt on the life of Ahmed Bey Zogu, President of Albania, was concluded on June 30. Four of the prisoners, Denkt Abadjefe, Theodore Vulkanoff, Ibrahim Arapi, and Hasan Prishtina, a political refugee, were condemned to death. The other prisoner, Turat Hadji, was acquitted and set free.

Mr. Stefanos Mavrogordato, of Boutza, Smyrna, and Mayfield Gardens, Sutton, left estate in England valued at £2,475 net. He directed that, on the sale of his property (eight shops) at Farsoula, Smyrna, one-tenth of the net proceeds should be handed to the Greek Government "as a contribution to the nation on my father's part, who built the shops on land he saved from the sea."

An agreement has been signed at Teheran which guarantees to Italian citizens and Italian business undertakings in Persia most-favoured nation treatment in regard to imports and exports and Customs duties. Similar agreements have already been signed between Persia and Great Britain, France, the United States, and other countries.

It is reported from Georgia that M. Parthen Ebralidzé, a 65-year-old militant Socialist, who under the Tsarist régime was an organiser of the Socialist Movement among the Georgian peasantry and was deported to Russia several times, has been arrested in Tiflis, by the Soviet authorities. He is now in the hands of the Cheka, which is said to be endeavouring to make him betray the secret organisation of the Peasants and the names and whereabouts of the Socialist leaders.

The Inter-Allied Commission in Sofia has notified the Government that the Reparations Commission in Paris has decided to defer, on account of the damage done by the recent earthquakes in Bulgaria, the payment of the Bulgarian reparation instalment falling due on October 1 next. As the half-yearly instalment next after that has to be paid the Commission reserves the right to investigate further the country's capacity to pay, and, if necessary, to propose another postponement.

The Postmaster-General announces that a through weekly air mail service has been established with Persia *via* Russia, and is available for all classes of correspondence, except parcels, under the usual conditions. The time of posting at the London chief office is 6 a.m. every Thursday, and the time of transit about five days to Teheran and eight days to Bushire. A special air fee (in addition to ordinary postage) is charged of 1s. 6d. per ounce.

The sixth Annual Dinner of the 4th and 5th Cavalry, Yeomanry, and 2nd Mounted Divisions, and Desert Mounted Corps, R.H.A., was held on June 27 in the King Edward VII. Rooms, Hotel Victoria, General Sir George Barrow presiding. The company included Gen. Sir Philip Chetwode, Maj.-Gen. Sir Edward Chaytor, Maj.-Gen. C. A. C. Godwin, Maj.-Gen. Sir Henry Hodgson, Brig.-Gen. G. V. Clarke, Brig.-Gen. W. G. K. Green, Brig.-Gen. F. F. Lance, Brig.-Gen. Sir Joseph Laycock, Brig.-Gen. C. S. Rome, Brig.-Gen. P. B. Sangster, Brig.-Gen. J. T. Wigan, Col.-Commandant the Earl of Denbigh, Col. Weston Jarvis, Col. G. Knowles, Col. A. J. Palmer, Col. T. C. Robinson, Col. the Hon. G. Wilson, Col. S. H. Charrington, Lieut.-Col. Viscount Cobham, Lieut.-Col. P. N. Craigie, Lieut.-Col. R. W. Eaton, Lieut.-Col. O. L. Eugster, Lieut.-Col. P. Forrester, Lieut.-Col. H. D. P. Francis, Lieut.-Col. W. D. Gunn, Lieut.-Col. H. F. Humphreys, Lieut.-Col. A. W. Moore, Lieut.-Col. Noel, Lieut.-Col. the Hon. R. M. Preston, Lieut.-Col. G. C. Taylor, Lieut.-Col. H. Whitehill, Lieut.-Col. Sir Charles Wiggan, Lieut.-Col. G. M. Wilder, Majors H. D. Ash, N. G. Ash, C. B. Broome, Sir Lionel Darell, S. C. Deed, A. C. Duncan, Elphinstone, Gordon B. Foster, A. W. Fosbrooke Hobbes, S. V. Hotchkiss, A. H. S. Howard, R. Hazel, L. K. Jarvis, T. K. Jeans, R. F. Johnson, A. Kirk, H. V. Landsberg, T. J. Longworth, W. D. Marcuse, E. G. Pemberton, G. A. Robinson, C. J. Rushbrooke, N. H. C. Russell, C. P. Stedall, G. St. J. G. Stedall, L. P. Stedall, O. Teichman, D. W. Turner, A. M. Turner, G. Wheler, W. H. Wiggan, A. G. Wykeham-Musgrave, W. D. Woelworth; Captains E. W. Patterson, F. Pelham Clinton, A. N. B. Stewart, C. B. Stewart, J. R. K. Thompson, G. Throckmorton, D. Tooth, D. Tuck, M. Waterhouse, H. Whitworth, R. Bazell, W. N. Brooks, E. P. Butler, D. A. Burgess, J. N. Cowley, A. B. Dale, F. S. Faber, H. R. Farnell Watson, R. C. Falconer, A. Findlater, Crawford Findlay, V. Gilpin, R. F. K. Gooch, K. Gossell, C. Joynson, L. B. Joynson, C. G. Lloyd, Mr. Clifton Brown, Mr. A. McFarquhar, Mr. A. P. Franklin, Mr. A. D. Hordern, and Mr. L. E. Montennis.

PERSONAL AND GENERAL

TO-DAY

July 5, 1928 (New Style).

June 22, 1928 (Old Style).

Muharram 16, 1347 A.H., of the Muslim Calendar.

Tammuz 17, 5689, of the Jewish Calendar.

Lord and Lady Sinha have arrived at Queen Anne's Mansions, St. James's Park, from Switzerland:

The Prince of Wales received Captain his Highness the Nawab of Palanpur, at St. James's Palace on June 26.

Lieutenant-General Sir Peter Strickland has arrived at the Old Hall, Snettisham, Norfolk, on leave from Egypt.

Viscount Inchcape left London for Paris on June 30 to attend the monthly meeting of the Suez Canal Company, returning on July 2.

Sir Grimwood and Lady Mears have arrived in London from India, and are staying at the Hotel Belgravia, Grosvenor Gardens.

Mrs. Anquetil was At Home at Beechwood, Reigate, on July 1 to meet Monsignor Dobretchitch, Archbishop of Antivari, Primate of Serbia.

Sir Murray Coutts-Trotter, Chief Justice of Madras, left Marseilles on June 30 in the P. and O. liner Kaiser-i-Hind for Bombay.

Prince and Princess Nicholas of Greece visited the King and Queen at Buckingham Palace on July 1, and remained to luncheon.

The Maharaja of Kapurthala has arrived at the May Fair Hotel from the Continent. He will remain in London for about three weeks.

Mr. Harold Armstrong will lecture to the Central Asian Society, on July 11, upon "Turkey of 1927." The lecture, which will be given at the Royal United Service Institution, will begin at 5 p.m.

Mr. Franklin Mott Gunther, the newly-appointed American Minister to Egypt in succession to Dr. Morton Howell, has arrived in Egypt, and has taken up his residence at the American Legation at Bulkeley, Ramleh, Alexandria.

Mr. S. Pinkney Tuck has been appointed First Secretary of the American Embassy at Constantinople. Mr. Tuck was connected with the American Consular Service in Egypt for a number of years, and since 1924 has been American Consul in Geneva.

H.M. King Fuad has graciously conferred the Order of the Nile (3rd Class), on Miralai B.H.C. Lea-Wilson Bey, Principal Medical Officer, Egyptian Army, and the Order of the Nile (4th Class) on Kaimakam V.C. Brind Bey, D.S.O., M.C., General Staff Officer (Instructor of Gunnery), Egyptian Army.

The Egyptian Government has appointed Dr. Hassan Sadek Bey, of the Mines and Quarries Department, and Mr. O. H. Little, of the Survey Department, as delegates to represent Egypt at the International Congress of Geology to be held at Pretoria, Transvaal.

A change which is taking place in commanders' commands affects the sloop Clematis, of the Red Sea Division of the Mediterranean Fleet. The Clematis, which was recently at Port Sudan, has been commanded for two years by Commander C. H. Godwin, D.S.O., who is to be succeeded by Commander Franklin Ratsey, who in 1925-27 was commander of the submarine depot-ship Titania on the China Station, and before that in command of the destroyer Shikari, attached to the target ship Agamemnon.

MRS. ALEC TWEEDIE AT HOME.

In view of Mrs. Alec Tweedie's far-flung travels, particularly in the East, there was naturally a large number of guests identified with the Near, Middle and Far East among those who accepted invitations to an "At Home (Moonlight)" held at her Flat, at Devonshire House, with its spacious balcony commanding a wide view of South-Western London. Among those invited were:—

The Ambassadors of Italy, Germany, and Brazil, the Japanese Chargé d'Affaires, the Ministers of Norway, China, Chile, Persia, Peru, Greece, Esthonia, Lithuania, Afghanistan, Finland and Latvia, the Egyptian Chargé d'Affaires, The Maharajahdiraja of Burdwan, High Commissioner of New Zealand and Lady Parr, Agent-General for Queensland and Lady Robinson, Sir John and Lady Tilley, Sir Ronald and Lady Maclean, Earl and Countess of Desborough, Home Secretary and Lady Joynson Hicks, Minister of War and Lady Worthington-Evans, Earl of Meath, Earl and Countess of Stradbroke, Sir Robert Horne, Earl and Countess of Lytton, Sir John and Lady Simon, Sir John and Lady Maffey, Mr. and Mrs. Reginald McKenna, Lord and Lady Carson, Lord and Lady Lamington, Lord and Lady Bertie of Thame, Sir Granville and Lady Ryrie, Mrs. Stanley Baldwin, Earl and Countess of Denbigh, Field-Marshal and Viscountess Allenby, Field-Marshal Sir Claude Jacob, Lord and Lady Dawson, Marquis of Reading, Lord and Lady Melchett, Sir George and Lady Younghusband, Sir William and Lady Beynon, Sir John Hanbury Williams, Lady Ludlow, Admiral Sir Mark Kerr, Admiral Sir Sydney Fremantle, Admiral Sir Ernle and Lady Chatfield, Admiral Sir Herbert and Lady Richmond, General Sir William and Dame Katherine Furse, General Sir Raleigh and Lady Egerton, Sir Beachcroft and Lady Towse, Sir Gilbert Parker, Air Vice-Marshal Sir Vyell and Lady Vyvyan, Sir Henry and Lady Penon, Sir Edward and Lady Crowe, Sir Arthur Sloggett, Sir George and Lady MacMunn, Sir Bernard and Lady Partridge, Sir Horace and Lady McMahon, Lord and Lady Arthur Browne, Mr. and Mrs. A. A. Milne, Mr. S. Melton Fisher, R.A., Sir Gordon Guggisberg, General Sir Niel and Lady Malcolm, Lord and Lady Clannmorris, Commander and Mrs. Greig, Sir Ian and Lady Hamilton, Lady Ratan Tata, Lord and Lady Charnwood, General Sir Percy and Lady Cox, Sir Edward Wallington, General Sir Leopold Swaine, Lord and Lady Forbes, Sir Ernest and Lady Wild, General Sir John and Lady Maxwell, General Sir Percy and Lady Sykes, Sir Martin Conway, Sir William and Lady Bragg, Professor Donnan, Dr. and Mrs. F. W. Goodbody, General Sir George and Lady Macdonogh, Sir Montague Barlow, Dr. Marie Stopes, Sir Bax and Lady Ironsides, Sir Cecil Armitage, Captain and Mrs. Frederick Guest, Mrs. Hylton Phillipson, M.P., Sir William and Lady Allardyce, Mr. and Mrs. Maurice Greiffenhagen, Sir Michael and Lady O'Dwyer, Mr. and Mrs. Robert Fleming, The Dowager Lady Swaythling, General Sir John and Lady Duncan, Dr. Douglas Gray, Commander and Mrs. Bellairs, Sir Herbert and Lady Hughes-Stanton, General Sir Louis and Lady Dane, General and Mrs. Spiers, Air Vice-Marshal and Lady Higgins, General Sir Charles Mellis, Mr. and Mrs. Ernest Thesiger, Miss Lilian Braithwaite, Mr. Ben Webster and Dame May Whitty, Mr. and Mrs. W. B. Maxwell, The Master of Sempill, General Sir Charles and Lady Delmé-Madcliffe, Sir Arthur and Lady Dick, Sir Francis Blake, Sir Denison Ross, Mr. and Mrs. Alfred Yates, Colonel and Mrs. Boyd-Cable, Mr. John Baird, Sir James and Lady Creighton-Brown, Sir John and Lady Bland-Sutton, Sir Stanley and Lady Reed, Mr. and Mrs. Lewis Baumer, Lady Cunynghame, Mrs. Fagan, Mr. Justice and Lady Salter, Mrs. Nesta Webster, Sir Harcourt and Lady Smith.

(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

AGRICULTURE IN INDIA.

In one respect at least the report of the Royal Commission on Agriculture in India has belied expectations. As was pointed out in the interesting and exceptionally well-informed forecast of the Commission's proposals reproduced in *THE NEAR EAST AND INDIA* of April 26, the question of the advancement of agriculture in a country like India may be approached from three angles. Stress may be laid on the technical improvement of cultivation, so that the land can be made to yield more per acre than it has hitherto done. Again, emphasis may be laid rather on the organisation of the land itself, of the supply of necessities, including finance, to the farmers, and of the disposal of produce so as to bring the greatest return to the producers of the crops. Thirdly, the greatest importance may be laid on the general well-being, comfort and independence of the rural population, even though this results in less exchangeable produce being grown. "All these points of view," proceeded "H.H.M.," "will inevitably present themselves to any member of such a Royal Commission as that now under consideration; it is only a question of the relative stress which is laid on each of them. On the whole, the Commission as constituted will probably be more concerned with the first two aspects than with the third." The volume issued last week conforms in almost every respect to the foregoing anticipations. The work, as we remarked in the previous issue, is divided into the three main divisions envisaged by our correspondent. The only difference—but it is one of some importance—is that the Commission has proved in the result to be more concerned with the need of the ryot "of a fuller and better life" than with what are after all primarily means to the same end. In other words, the Report—and this is probably its greatest merit—recognises that there is no royal road to rural betterment, that neither the Satanic British Government nor the most indefatigable exponents of the Swarajist creed, by legislation or otherwise, can cure all the ills that the peasant endures, and that he must be taught to help himself if he is to escape from his present embarrassments.

The perspective from which the Commission has approached its task is well stated in more than one part of the Report. At the outset, while stress is laid upon the vital importance of research and the need for greater efficiency, in every sense of that much-abused term, throughout the whole field of agricultural production, the Commissioners make it clear that these are only aspects of "the far wider problem of creating an environment in which the cultivator will be willing to receive and put to the best possible use the advice and help which the departments are in a position to place at his disposal." Again, in conclusion, the Commissioners state that throughout the Report they have endeavoured to make plain their conviction that "no substantial improvement in agriculture can be effected unless the cultivator has the will to achieve a better standard of living, and the capacity, in terms of mental equipment and of physical health,

to take advantage of the opportunities which science places at his disposal. Of all the factors making for prosperous agriculture by far the most important is the outlook of the peasant himself." But although to envisage a problem in true perspective is half the battle, Lord Linlithgow and his colleagues would be the last to contend that by so doing they have more than partially discharged their onerous and responsible duty. If, in the endeavour to lay down in broad outlines the future agricultural policy of India in the light of these considerations the Commissioners have not been quite so successful in breaking fresh ground, the reason is not far to seek. "In approaching the subject of our inquiry," the Chairman recalled at the opening session, "we are face to face with an indigenous system of agriculture which has been built up through long centuries, mainly by empirical means. It is a venerable system, whose worth has been proved through years of plenty and of adversity, and those who have studied it most closely are not those who criticise it lightly." From the beginning Lord Linlithgow, who, as we have previously observed, early acquired a remarkable degree of contact with Indian conditions, was impressed by the need not of revolutionary changes, but rather of grafting upon the present stock the new growth of progressive and scientific practice in the way of improved methods of cultivation, better co-operation throughout the long chain which links the primary producer to the consumer, and, above all, an extension of educational facilities hitherto reserved almost exclusively for the non-agrarian classes. In following the less spectacular method of assimilation and adaptation, the Commissioners have added greatly to the difficulty and complexity of their task, but they have incontestably enhanced the value of their Report.

And if this is true of the chapters concerned more specifically with the well-being of the individual cultivator, it is no less so of the recommendations designed to improve the efficiency of the whole organisation catering for his needs, and to extend the sphere of its influence. For, as the Commissioners rightly state, the initial responsibility rests with the Government, and "if the inertia of centuries is to be overcome, it is essential that all the resources at the disposal of the State should be brought to bear on the problem of rural uplift." Of all the varied means proposed to that end the most outstanding, and the one most likely to arouse the greatest criticism, is the proposal to secure the requisite degree of co-operation and co-ordination in the research activities of the Imperial and provincial organisations by the constitution of an Imperial Council of Agricultural Research. This is a difficult subject, and it has been made more difficult by the constitutional changes which were introduced under the Reforms scheme. As a result of these changes agriculture became what is termed a "transferred" subject. This means, stated shortly, that the Government of India divested themselves, except to a very limited extent, of all powers of superintendence, direction, and control over it. They maintained a link with the Provincial Governments by making the administration of cen-

tral research institutions a "central" subject. But they made no special provision for co-ordinating the work of these institutions with the work of similar institutions in the Provinces. The Commission is convinced that there is a lack of a sufficiently close touch between the Central Research Institute at Pusa and the provincial departments themselves. To be effective the research organisation must be such, the Commissioners hold, as to make research workers realise that they are working to an end which cannot be reached unless they all regard themselves as partners in the same enterprise. "Of all the problems with which we have been confronted," the Commissioners say, "there is none which we regard as more important than this, and to none have we devoted more anxious thought." They do not suggest that the Central Government should re-assume the powers of superintendence, direction, and control, which it relinquished in 1919. But they maintain that, even as matters stand, there is a wide field for co-operation between the Central and the Provincial Governments; and their proposal is that this co-operation should be brought about by the creation of a new organisation to which the central and the provincial research institutions would stand in exactly the same relation. The primary function of the Council would be to promote, to guide, and to co-ordinate agricultural research throughout India. It would not exercise administrative control, but it would be a body to which both the central and provincial agricultural departments would look for guidance in all matters connected with research.

In conclusion, we may remark that it is very greatly to the credit of the Commissioners that they should have been able, in less than two years, to complete satisfactorily a task at once so laborious and of such altogether exceptional importance and interest. A rough idea of its magnitude may be gathered from the fact that no fewer than thirteen bulky volumes of the evidence recorded have been published in advance of the report itself. With a subject so vast, and with such an abundance of material, a long report was unavoidable. But no reasonable complaint can be made on this score, for the arrangement of the report is excellent, and the style direct and simple. It is not, as we have observed, a startling or a revolutionary document. It makes no attempt to solve at one stroke the many complex problems with which Indian agriculture is beset. It offers no sovereign remedy for all the evils which afflict the rural population. But it is a serious and statesmanlike attempt to put forward such suggestions and recommendations as will tend to bring about greater efficiency throughout the whole area of agricultural production, and to make farming a more profitable business to the cultivator than it is at present.

CURRENT TOPICS.

"Made in India."

Unlike the present position in this country, there is no provision in the existing law in India which can compel the application of a trade description to imported goods. The result is that articles made in foreign countries, without any indication as to their local origin, are sometimes palmed off as Indian manufactures. It is a well-known fact that a kind of piece-goods especially manufactured abroad is sometimes sold in India as hand-woven khaddar. Again, cheap hosiery, particularly cotton undershirts, have been imported from Japan without any trade description and sold in the country as local manufacture. In such cases it is manifest that the local origin of goods should be indicated so as to prevent fraud on the consumers, and protect some of the struggling industries of India from the unfair competition. Accordingly in a Bill further to amend the Indian Merchandise Marks Act, 1899, which was introduced at the last session of the Central Legislature, it is proposed to arm the Governor-General in Council with power to specify any imported goods in respect of which the importer, or the wholesale

retail dealer, can be called upon to affix a trade description giving the place of origin. The provisions of the Bill follow closely the recommendations of the Board of Trade Advisory Committee regarding similar legislative action in the United Kingdom in the interest of certain British or Empire goods.

Although the theoretical arguments in favour of the proposed legislation are strong, the practical consequences of such a policy have obviously to be carefully considered. That commercial opinion itself is by no means unanimous in its support of the measure is evident from the attitude of the Committee of the Bombay Chamber of Commerce to whom, in accordance with the established practice, the Bill has been referred by the local Government. In their reply the Committee state that they have reached the conclusion that the measure is not one to which the Chamber is able to accord its support. The Committee are aware that the Bill is merely a permissive measure, in virtue of which the Governor-General in Council may prescribe in respect of certain foods that the country of origin should be stated, but they feel that it would be difficult in practice to set a limit to the kinds or classes of goods which might be prescribed as requiring the place of origin to be shown. In their opinion legislation on such a subject is and should be confined to the prevention of misrepresentation. A plain unmarked article, the Committee point out, misrepresents nothing. Moreover, the Commerce Member, during the debate in the Legislative Assembly, clearly indicated the impracticability of clause 2 (2) (c) which proposes to empower the Government of India to make regulations for applying trade descriptions to goods, not only at the time of importation but also at the time of sale.

It has been suggested that a more practical remedy for the existing admittedly unsatisfactory state of affairs would be for the Indian manufacturer to mark his goods "made in India." On the other hand goods so marked might conceivably be handicapped in the export trade, as Indian manufactures, with a few exceptions, do not at present enjoy a particularly high reputation in foreign markets, though an improvement in that respect may be anticipated as a result of the activities of the Indian Trade Mission. The Bombay Chamber is not, therefore, prepared to endorse the view that it should be made obligatory either that certain classes of imported goods should show the country of origin or that Indian manufacturers should stamp their goods "made in India." The Committee of the Chamber contend that the country of origin will be shown on goods as soon as merchants think the sales are likely to be promoted thereby. And meanwhile they think that it is undesirable to go beyond the present statute for the prevention of false description.

Sericulture in India.

Some interesting particulars were given last week in this column regarding the progress of the Kashmir silk industry. But sericulture in India, we are reminded, is not restricted to Kashmir. Based on the mulberry tree, it is carried on in certain districts of Bengal and in the State of Mysore in South India. Other forms of the industry are widespread in Assam, Chota Nagpur, and in parts of the Central Provinces. Disease among the silkworms seems to be the silk-grower's chief difficulty; and the provincial Agricultural Departments are trying to help him to overcome this trouble. The Bengal Agricultural Department maintains about a dozen nurseries for the production and distribution of disease-free seed. The village seeds are said to be mostly cent per cent. infected with disease, with the result that the success of the crop cannot be relied upon. The Bengal industry is not so flourishing as is desirable; and the object of the Department is to resuscitate it. The production of silkworms' eggs—technically known as the "seed"—is a very important factor, the seed being a raw material for the production of cocoons. The Department is, therefore, well-advised in its efforts to place comparatively disease-free seed at the disposal of the rearers.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 16.

The Muslim Memorandum to the Simon Commission.

On behalf of the All-India Muslim League, Sir Mahomed Shafi and Sir Mahomed Iqbal have prepared a scheme of constitutional reforms to be submitted to the Statutory Commission. The League considers that the existing franchise for the legislative bodies, central as well as provincial, is far too high, with the result that only a very small proportion of the population exercise the right to vote. The Muslims further state that as all Indians who are neither Muslims nor Christians are included under the term "Hindu," caste Hindus are elected to represent even the depressed classes. The lowering of the franchise, it is contended, will result not only in making the councils more representative of the people, but will also make the existence of an oligarchy difficult. They, therefore, propose that (1) all persons who have now a right to vote at elections for the Legislative Assembly, should possess the vote for the Council of State; (2) those who now vote at the Provincial Council elections should have the vote in future in the Assembly elections; and (3), all those on the electoral rolls at present for the Municipal and District Boards should vote in the Provincial Council elections. The League does not believe that separate electorates can be dispensed with. The Council of State, the Legislative Assembly, and the Provincial Councils, in the opinion of the League, should also be considerably enlarged.

The proposal to extend the franchise is not a sound one, and the reasons advanced by the League are not at all convincing. The sponsors say: "Education has made considerable progress in the country, and a large section of the Indian population has already been exercising the right of vote," a statement which leads the casual observer to think that the section exercising the vote is the educated class. By giving the vote to the uneducated masses the forces of communalism will be strengthened, and the solution to the present problem lies not in an indiscriminate extension of the franchise, but in the education of those, who, under the 1919 Reforms, got their vote somewhat prematurely. The Muslim fear of an oligarchy is not easy to understand, seeing that most democracies have been preceded by oligarchies.

Asking for the Moon.

So much for the question of franchise. The Muslims, feeling that they have not enough share in the Government of the country, think that the most moderate demand they can now make is for a 33 per cent. representation in the Central Legislature. The question is: Are they prepared to make similar concessions to the Parsis, the Christians, etc.? A method of securing the interests of minorities, and at the same time keeping out the communal tendencies, is to regard the Hindus and the Muslims as the two large communities and to reserve 20 per cent. of the seats in the Lower House for each of them; the remaining seats may be distributed thus: 20 per cent. assigned to the other communities and the other 20 per cent. contested in general elections. Thus, in the Lower House, communal interests will be safeguarded, but not at the expense of the national interests. The Upper House may be organised on a territorial basis. It is absurd to expect one-third of the seats in both Houses to be reserved for any community, however important it may happen to be. Is not a Muslim oligarchy as dangerous to democracy as any other? The other demands of the League are the separation of Sind, purely to provide a majority for the Muslims in the newly-constituted province, and the introduction of reforms in the North-West Frontier Province. The second of these has been agreed to by all parties and presents no difficulty. But the Hindu Mahasabha will oppose the separation of Sind, as they have done all along.

The Punjab Committee.

The Punjab was the only province which appointed a committee to co-operate with the Simon Commission. The Committee, however, has turned the tables on the Council by passing a resolution at its first meeting to the effect that they cannot work with the Commission unless they have equality of status. A controversy has arisen between the Punjab and the *Pioneer* of Allahabad. In a leading article, the *Pioneer* wrote that, in spite of Sir Malcolm Hailey's communication to the Committee asking the members to record their opinion in favour of Dominion status for India at a distant date, the Committee has expressed its disapproval of the constitution of the Statutory Commission. The Punjab Government has stated in a communique that there was no interference on their part with the Committee, and that the remarks of the *Pioneer* were utterly unfounded. The Allahabad paper, however, still maintains that its remarks are true, and claims that it can substantiate its statements. It proposes to do so at a later date.

THE LORETO ORPHANAGE.

In response to an appeal from Sir Charles Tegart, the Bengal Chamber of Commerce has circularised an appeal on behalf of the Loreto Orphanage, which affords shelter, food, clothing, and education to 538 children comprising 16 Europeans, 338 Anglo-Indians, 4 Chinese, 3 Jews, and 127 Indians. In his appeal to the Chamber "on behalf of those who cannot speak for themselves," Sir Charles Tegart, who is President of the Committee of Management of the Orphanage, declares that:—

"The funds of the Institution are in a critical stage, firstly owing to the large sum of money which has had to be expended in re-constructing and repairing the buildings; secondly, owing to the complete failure of the Raffle this year (the Raffle in previous years has brought in about Rs.20,000). It has now been decided to give up the Raffle, a decision that I am glad of personally, as the legality of the Raffle was certainly doubtful; and thirdly, it is impossible for Government, in view of the present state of its finances, to contribute further to the funds of this Institution.

The Committee of Management believe that a considerable sum of money is distributed in charity by various firms in Calcutta. What the Committee would like to secure would be a promise from various firms of an annual contribution which could be definitely relied on and budgeted for. It will be seen that the Institute is run on the most economical lines possible. Rs.240 will keep a child for a whole year, paying all expenses in connexion with her education, board and lodging. The Committee think that it would be difficult to find better use for Rs.240 per annum, available for charitable purposes, than keeping a destitute child in this Orphanage."

It should be added that, according to accounts audited free of charge by Messrs. Price, Waterhouse, Peat and Co., the annual expenditure of the Orphanage totals approximately Rs.1½ lakhs; and, in addition to these charges, there remains the building debt. The children's diet is barely sufficient to keep them in health and the institution is hampered for lack of funds at every turn. The chief aim of the Orphanage training, it is emphasised, is to turn out self-reliant, upright and useful members of Society.

NEW CHIEF OF STAFF IN INDIA.

General Sir P. W. Chetwode, Bt. K.C.B., K.C.M.G., D.S.O., Aide-de-Camp General, has been appointed Chief of the General Staff in India, in succession to Lieutenant-General Sir A. Skeen, K.C.B., K.C.I.E., C.M.G., Indian Army, Aide-de-Camp General (October 26, 1928).

General Sir Philip Chetwode is an old Hussar. Before the Great War he had seen service in Burma and in South Africa, where he won the D.S.O. He went out to France in August, 1914, in command of a Cavalry Brigade, serving under General Allenby. Later he went to Egypt to command the Desert Mounted Corps in the summer of 1917. He was still in command of this corps during the last great advance in Palestine and Syria.

"BOMBAY TO-DAY AND TO-MORROW."

In the absence of H.H. the Aga Khan, detained in France by convalescence from his recent serious illness, Major-General Sir Frederick Sykes, Governor-Designate of Bombay, presided at a meeting of the East Indian Association on June 18, when Sir Stanley Reed spoke on "Bombay To-day and To-morrow."

After passing in brief review some of the outstanding changes which had been brought about since he first landed in Bombay thirty-one years ago the lecturer proceeded:—

"And whilst I am on the subject of topography, and the reconstruction of the city which is proceeding at such a furious pace, may I glimpse the morrow? In some respects Bombay is passing through the most uncomfortable stage of transition. When the Development Scheme was launched I ventured to remind Lord Lloyd that there were three stages in all great improvement works of this character—the enthusiasm of launching, the cold fit of construction when everyone was uncomfortable and toes were being trodden on, and the final stage of completion when everyone had forgotten the creators. We are now in the intermediary stage, and the mere mention of the Development Scheme is sufficient to raise sardonic laughter or furious protest. . . . But if we are going to talk about the Development Scheme, let us cast our minds back for nine years.

"It is easy to be wise after the event, but consider for a moment what were the conditions when this scheme was launched. For as long as I can remember the Back Bay Reclamation hung over the growth of Bombay like a nightmare. Whenever any scheme of public utility was proposed, the answer was always the same—'Wait for the Reclamation.' I believe it is correct to say that this work, which was in the doldrums of reaction after the Share mania, was first revived by a committee which sat in 1898. Certainly throughout the governorships of Lord Lamington and Lord Sydenham it was constantly in men's thoughts.

"Then came the War, and with it the greatest boom in land values the city has ever known. I believe it is correct to say that a small plot of land in Esplanade Road was sold for nearly Rs.3,000 a yard, and I know from painful experience that the question of those in business was not where they could get office accommodation, but whether any was to be had at all. The city was so desperately crowded that the Municipal Commissioner, who ought to know, estimated that 60,000 tenements were imperatively required. I was chairman of two committees appointed to inquire into the settlement of industrial disputes, and every witness who spoke with authority declared that housing was at the root of all industrial ills. Plans were being matured for the electrification of the railways, but there was no single authority responsible for the development of the land to the north; indeed, some parts of Salsette (I am thinking particularly of the malodorous village Khar) were really slums in the country. The Improvement Trust had dealt resolutely with the lands to the north-east, but in an evil moment Walter Hughes, then the chairman, was debarred from scheduling Mahim and confusion worse confounded was being created there.

"Certainly, the business men of Bombay were under no illusions on the subject. Two separate syndicates, comprising the best brains in the city, were anxious to reclaim Back Bay as private ventures; when they coalesced and sent in a joint application, the Government of the day, on the advice of the shrewdest judge of land I have known, came to the conclusion that the scheme was likely to be so profitable that Government should keep it in their own hands. If Lord Lloyd erred, it was in uncommonly good company. . . .

"Although the re-housing plans have been arrested, and scores of the new chawls lie empty, I believe that this is only a passing phase. It is not only in England that the slum mentality exists and a considerable section of the

community which would rather herd in a hovel than pay a little more for a decent room. But times are changing, the community will not indefinitely tolerate the slums which remain, and as they are razed—and may it not be long—shall find these new tenements none too many.

"In Bombay everyone is interested in the mill industry; it is part and parcel of our lives. That industry is passing through very hard times. It shares in the stagnation of the textile trade in every part of the world; it suffers in an acute degree from competition from the Far East and in India itself. We older folk can recall the days when Bombay ground out vast quantities of low-grade yarn and shipped it to China and Japan. That trade has gone; there are few merely spinning mills left. But it is not easy to switch mills constructed for yarn-spinning over to the production of cloth, and though it is being done, it is not easily done in competition with mills in the up-country centres which were laid out for cloth production from the first.

"We have to meet high rates and other charges, and electricity has not brought the cheap power anticipated. We have to deal with a very fluid labour force of limited efficiency. And I think we have something to complain of in the stepmotherly attitude of Government. The scandal of the cotton excise duties lingered until it was partly bought off, and finally disappeared because a bitter strike promised the Government neither excise revenue nor income tax. We criticize—I think reasonably—the attitude of the Government towards the competition of a country which evades the obligations of the Washington Convention to which it set its seal and thereby obtains a preference in our market, estimated at 4 per cent. on the lowest computation, and at 10 to 12 per cent. if a reasonable allowance is made for profit. No easy task or lies will bring us to our goal, but a good deal of iron sacrifice.

"Unless wages are to be reduced—and no one wants to see wages brought down—labour must, especially now it is so much better housed, give a better return for the wages it draws. The industry must be treated as a national enterprise, demanding the constant support of the Government, the local authorities, and the public. Shareholders must take to heart the advice which Mr. Baldwin gave to Lancashire. Capital which is lost cannot be regained by regarding the figures printed on share certificates as sacrosanct, though shareholders betray an invincible reluctance to recognize it, and some of the practices associated with the system of managing agents must go. Given these premises, I am no pessimist in regard to the Bombay industry; nothing was more heartening on my recent visit than to remark the energy and courage with which some of our millowners were adapting themselves and their industry to the changed conditions.

"No; when I look abroad my thoughts of Bombay are not greatly concerned with its material future; that is assured. We seem to have lost something of the spacious political days of Pherozeshah Mehta and Gokhale and Ranade; there is a note of acrimony in our politics somewhat foreign to the days when Bombay was the political lighthouse of India, towards which all turned in time of difficulty. How far this is induced by experiments in currency I will not this afternoon attempt to determine. But let me make one matter clear. Behind this political veil the heart of Bombay beats as warmly and generously, and it is as rich in friendship between all communities as ever, as none has more reason to know than myself.

"What does rather depress me is a note of materialism in our daily life. We miss the intellectual stimulus of men like Campbell, Enthoven, and Edwardes, of Ranade, Bhandarkar, Jackson, and Chandavarkar, and the robust Victorianism of Pherozeshah Mehta. We are in a little danger, I sometimes think, of the stage visioned by the cynic who said that no seaport can have a soul. Although times are hard, it is difficult to find signs of real economy, and the scale of expenditure on the racecourse and in the clubs is not a good thing. Looking on these things, it seems to me that the greatest service the leaders of

opinion can render to Bombay is to set the ginger-beer standard from the highest to the lowest, and to illuminate the materialism of the hour by a revival of the culture which was vivid in my early days. As I say this, I can almost hear our young folk saying, in the words of the Slav in Kipling's story—"Get away, you old people." The times have changed; new men are wanted to deal with them; but I often think regretfully of the simple, happy days we had.

"Mr. Chairman, I have no fears of the future of Bombay. It is a magnivcent city. . . . Nothing can impair the security of its geographical position. Nothing seems to weaken the currents which course through its generous heart, and we have a new generation of business men growing up to carry on the tradition of Jamsetji Tata, Dinsha Petit, and Nusserwanji Wadia."

In a letter expressing his regret at his inability to be present, "and to have presided at this lecture by one of the most distinguished of the citizens of Bombay on the past, present and future of a city to which my family and I have had the honour to belong during the last 75 years," the Aga Khan said that Sir Stanley Reed would have given a brilliant description of the Bombay of to-day and a prospect of the great future that lies before it. He had no doubt that, as a beautiful city built on the sea, it would hold its own for all time with Naples, Rio de Janeiro, Sydney and Melbourne, the only other cities he knew which could claim comparison with what Kipling has so rightly described as "the queen of all."

"I have had the advantage," the letter continued, "of perusing a proof of the paper, and I regret that I am not able to agree entirely with the optimistic expressions of my friend Sir Stanley Reed regarding the economic future of Bombay. I see little or no hope for the mill industry unless the Imperial Government, with the support of public opinion throughout India, recognises the necessity to adopt definitely protective measures for a few years, so that the industry may be readjusted to the changing conditions of the time. No doubt the further opening up of the agricultural resources of the great hinterland served by the port will go far to maintain the business of the city. The immense docks and maritime works to which Sir Stanley has referred will ensure its continued and increasing importance as a great port. But when all is said, the cotton mills cannot be replaced as the staple industry of the 'Town and Island.'"

"Many valuable subsidiary measures can be taken. Much can be done, especially during the winter months, to develop luxury trades, and to draw to Bombay fairly well-to-do people from the interior. We have in India only the cities of Bombay and Calcutta to play, on a more limited scale, the rôle that London, Paris and Rome play in Europe. The provision of furnished flats, of a satisfactory taxicab system, good theatres and cinemas, new clubs of the Willingdon Club type, racing, polo and sports generally, also fêtes such as those which were so successfully organised by Lord Willingdon and Lord Lloyd, and only last year by our deservedly popular Governor, Sir Leslie Wilson, will go a long way to encourage development. The tourists who visit India in increasing numbers in the cold weather will do much to develop the luxury trades beyond anything that has so far been realised—but here again we depend on our agricultural hinterland and the surrounding country for a steady and constant demand from visitors. While the foreign tourist trade must inevitably increase in importance, it can never play so large a part in a city with the climatic drawbacks of Bombay during the greater part of the year as in such centres as Cairo or Rome.

"At every point, however, the consideration I mentioned at the outset of this letter crops up. If the capital, energy and enterprise sunk in the mill industry is crippled, I see no great future for the developments, whether seawards or landwards, which are taking place; nor do I see anything to replace the mills as the backbone of Bombay prosperity. I can advocate their cause with detachment, for I have never put a penny into the mill industry and

I own no mill shares. I sold the four or five small holdings of these shares I inherited when I came of age. The question is not to be regarded only as one of local importance. It is not for Bombay alone but for the whole of India to see to it that what has been for two generations at least the prime industry of the second city of the British Empire should not be maimed by a blow from which it can and should be protected."

OBITUARY.

MAJOR-GENERAL SIR ALFRED BAYLY.

THE NEAR EAST AND INDIA regrets to record the death, which occurred at Amsterdam on June 27, of Major-General Sir Alfred Bayly, K.C.B., K.C.M.G., C.S.I., D.S.O. After long and distinguished service on the frontier in Egypt, Burma and South Africa Colonel Bayley was appointed A.Q.M.G. at Army Headquarters in India and afterwards D.A.G. of the Northern Command by Lord Kitchener, who early formed a high opinion of his keenness and capacity. Following the establishment of the first Indian Staff College at Quetta, as part of the Commander-in-Chief's reorganisation scheme, Bayly was selected to be the first Commandant. His success in that office was no less marked than in the even more difficult post of Secretary of the reconstituted Army Department to which he was shortly afterwards transferred. Created C.S.I. in 1919 and K.C.B. two years later, Major-General Bayly retired from the Indian Army early in 1912 but on the outbreak of war returned to special duty at the War Office under his old chief, being appointed Inspector of Temporary Non-Effectives, a post which he held until the end of the War.

MR. O. LLOYD EVANS.

His many friends, both in official circles and in the ranks of journalism, have learnt with great regret of the sudden death of Mr. Owen Lloyd Evans, Information Officer at the India Office since 1921. Called to the Bar by the Middle Temple in 1903, Lloyd Evans joined the staff of a London morning contemporary in 1905, which made particular use of his marked aptitude in the handling of maps during the War period. After the War the system of maintaining publicity officers at Government Departments was widely criticised, mainly on the score of economy, but the selection of Lloyd Evans as Information Officer at the India Office was so well justified by results that no demand for the abolition of the post arose. Although without personal knowledge of the country, Lloyd Evans proved a very genial and unconventional, but nevertheless efficient, liaison officer between the Press and the higher permanent officials or the Secretary of State and his place will not be an easy one to fill.

NEWS IN BRIEF.

The Calcutta Improvement Trust has decided to spend over five lakhs (£37,500) in acquiring land near the approaches to the new Beliaghata bridge.

It is understood that Sir John Simon and his colleagues of the Statutory Commission will leave London on September 27 on their second visit to India.

Mr. R. D. Blandy, who has been appointed Chief of the Tangerine Municipal Police, has had a good deal of experience in India, where he has been in charge of police in various large districts.

The Secretary of State has appointed Lieutenant-Colonel S. B. A. Patterson, C.S.I., C.I.E., Indian Army (retired) to be his Political A.D.C. in succession to Lieutenant-Colonel Sir A. D'A. G. Bannerman, K.C.V.O., C.I.E., with effect from September 12, 1928.

An India Office *communiqué*, dated June 27, states that the Secretary of State for India proposes shortly to make a certain number of appointments to permanent commission in His Majesty's Indian Medical Service. Those who desire to be considered for appointment should apply to the Military Department of the India Office.

According to a Reuter message the Indian Tariff Board's report on the question of the protection of the oil industry was signed last week. The Board was authorised to inquire into the question of the protection of Indian petroleum against the kerosene price "war."

A telegram from the Viceroy, Education, Health and Lands Department, to Secretary of State for India, dated June 27, 1928, states:—Rainfall, week ending June 27.—Excess: Upper Burma, Central India (East), Konkan, Hyderabad (North), Mysore and Madras (South-East). Fair: Bay Islands, Bihar, United Provinces, (?Kashmir), and Central India (West). Scanty: Chota Nagpur, Punjab, North-West Frontier Province, Baluchistan, Sind, Rajputana, Gujarat and Malabar. Normal elsewhere. Monsoon been fairly active, except North-West India.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Trade Barriers.

It is impossible to feel very hopeful that the efforts being made to remove the handicap to commerce arising from trade barriers of one description or another will be productive, at present at any rate, of any great results. The fact is, and it must be recognised, that conditions in many of the countries most directly concerned in the question are such that it is not only not easy to take steps in the desired direction but that the pressure of circumstances is influencing action in the contrary direction. Broadly speaking, however, this is not the case in the Near East where the obstacles to trade since the War have been particularly pronounced. There the influence of conditions is favouring the removal of trade barriers, because it is beginning to be appreciated that heavy duties on exports and heavy transport rates, etc., simply reduce the volume of commerce, and so month by month we learn from one country or another of reductions in taxes or rates. But the position of these countries which are simply endeavouring to export their produce—wheat, oil, maize, tobacco or whatever it may be—is very different from those whose commerce is in the main in manufactures, and it is here that the chief obstacle to the wholesale removal of trade barriers now arises. In Great Britain, for instance, world conditions—in which phase is summed up the entrance into the field of manufacturing countries of new nations, unequal competition and the like—have been responsible for a considerable extension in the last few years of the safeguarding of industries, and it is extremely probable that there will be further developments in this direction. It is unavoidable so long as the world situation remains as it is.

The Situation in Turkey.

In common with other Near Eastern regions conditions in Turkey last year were unfavourable. The country's staple industry is, of course, agriculture, and as a result of the Government's action in making new remissions of taxes there was an extension of the area under cultivation. Unfortunately climatic conditions were unfavourable, and the yield of cereals was 30 per cent. below that of 1926. Referring to this at the meeting of the Ottoman Bank Sir Herbert Lawrence said that it was a question whether the accumulated stocks would meet the country's needs this year without recourse to importation. Not only cereals but also other crops suffered such as tobacco, figs, and raisins, and the only satisfactory crops were olives and nuts. Industrial development was also checked, the causes in this case being the shortage of skilled labour and available capital. It is significant in the circumstances that the Turkish exchange should have shown greater stability in 1927. A factor which has helped this development, Sir Herbert Lawrence pointed out, has been the reduction in the adverse balance of trade. The Turkish authorities are anxious to stabilise the exchange, and Sir Herbert Lawrence lays stress on the point that stabilisation alone can give the money market the elasticity which it lacks.

Progress in Persia.

An interesting review of conditions in Persia was given by Sir Hugh Barnes at the general meeting of the Imperial Bank of Persia, a report of which will be found elsewhere in these columns. As is well known, Persia's

lack of railways has been a potent factor in preventing the development of the country, and as I have pointed out plans are on foot to remedy this to some extent by the construction of a trans-Persian railway. Sir Hugh Barnes touched briefly on this project, which he justly termed ambitious, and stated that as far as was known no estimate of the cost of the line has yet been prepared. Owing to the accumulation by the Persian Government of a large sum during the past 2½ years from the proceeds of the surtax on tea and sugar, he does not, however, anticipate that there will be difficulty in financing the initial stages of construction. Other matters on which he touched were the new British-Persian Treaty and the decision to establish a National Bank. As regards Persia's trade for the year ended March last, he pointed out that imports were up by 2,000,000 tomans at 81,000,000 tomans, but exports had declined by 3,000,000 tomans to 106,500,000 tomans. It appears that trade has been hampered by the scarcity of silver coin, and the Persian Government is now having minted equally in Great Britain and Russia a certain quantity of krans with a new design, the British share of the contract being done at the Birmingham Mint. Sir Hugh Barnes paid a tribute to the influence of the Shah in the furtherance of the development of Persia, evidence of which has been forthcoming in various schemes for the advancement of the country's industrial progress.

Sudan Cotton Growing.

The vicissitudes of cotton growing in the Gash Delta were plainly shown by the results of the Kassala Cotton Company for its last year in that region, the profits amounting to £111,143 as against £48,686 for the previous year. The crop actually totalled 54,128 kantars as against 22,547, and was of excellent quality while better prices were realised. The following crop, which belongs to the Government and the tenants, and which was harvested by the staff of the company, was actually a record, the total being 65,568 kantars. As we know by experience, however, the continuation of such results cannot be relied on in the Gash Delta. At the annual meeting particulars were given regarding developments on the company's new concession in the Gezira. It is planned to have a considerable area under cotton by July of next year, so that the company will have its first return from the crop in 1930.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch—11, CALEA VICTORIEI BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

British Consular Reports

II.—ROUMANIA.

The following extracts are taken from the report on economic conditions in Roumania to March last of Mr. R. J. E. Humphreys, Commercial Secretary, H.M. Legation, Bucharest:—

The year 1927 may be said to have been divided into two distinct half-yearly periods, the first ending approximately with the death of King Ferdinand. When in April last year the report on economic conditions in Roumania was written and the noticeable improvement since the preceding year was commented upon, the Averescu Government had been in power for a year. It had just brought into force a new, completely revised customs tariff which had been drawn up with the frank object of protecting the young Roumanian industries. This customs tariff was to be a prelude to the denouncement of old commercial agreements and the conclusion of new special treaties with each separate country, commencing with Italy.

Semi-official negotiations had been in progress for some time with Germany and other countries for a Railway and Stabilisation Loan, on which the public based optimistic hopes. A short term loan for 200 million lire from Italy had indeed been successfully arranged at the end of 1926. Anticipations of a second good harvest in succession were not unfounded, as the winter had been singularly mild and spring rains abundant. Trade returns showed an active balance, export taxes had been greatly reduced, and the usual complaints of tightness of money were conspicuous by their absence. Such was the state of affairs ruling at the end of May. In the beginning of June the King suddenly decided to call upon General Averescu and then Prince Stirbey to form a coalition Government, which, after a short lease of life, was succeeded by a Liberal Government under M. Ionel Bratianu on the very eve of the King's death, which took place in July, when Prince Mihai, a boy of six, the grandson of the late King, was proclaimed King under a Regency.

In some respects the new Government decided on a reversal of the policy of its predecessors, as it felt the necessity of taking stock of the financial situation before committing itself. For this reason the semi-official negotiations for a loan, above referred to, were suspended or abandoned; a call for tenders for passenger and cargo boats for the Service Maritime Roumain issued in April was also cancelled for the time being. Moreover, one of the first acts of the new Government was to repeal the modified railway law introduced in the beginning of the year by the Averescu Government—in spite of strenuous opposition—and to re-enact in its entirety the preceding law of 1925.

Another measure of considerable importance was the appointment of a commission to revise once more the customs tariff, which had but lately been decreed, in order, it was stated, to adopt a system more in harmony with the present requirements of the country and on which commercial treaty negotiations could be based. It was proposed also to give Parliament more voice in the matter of the customs tariff, which at present is fixed by royal decree. The labours of the Tariff Commission are still in progress at the time of writing and the relative Bill is unlikely to come before Parliament before November.

In October Mr. Ionel Bratianu suddenly died, and an internal crisis seemed imminent which, however, never materialised in spite of greatly exaggerated reports abroad. The harvest, on which great hopes had been built, proved a comparative failure, and taxation and high interest rates pressed heavily on the economic life of the country, so that towards the end of the year, a falling off in consumption was noticeable, due to the lowered purchasing power of the population. With all these difficulties, economic, political and financial, there would have been no cause for surprise, had the currency fluctuated

or depreciated, especially in the latter half of the year. The leu, however, had showed an upward tendency during the first quarter of 1927, and later assumed a remarkable steadiness, while during the first quarter of 1928 it may be said to have been practically stable at about 785-795 to the £.

There is little doubt that the excellent harvest of 1926 and the resulting increase of exports over imports in 1927 was the main cause of the *de facto* stabilisation. Official provisional statistics show that the export of cereals in 1927 was greater by 1,183,740 metric tons than in 1926, owing principally to the excellent maize crop of that year. The export of timber, however, was less by 120 million lei, and though oil production showed an increase of 28 per cent. over 1926 the drop in the value of exports owing to low prices amounted to nearly 2 milliard lei. However, taking the total combined exports of cereals, timber, cattle and petrol an increase was registered in 1927 as compared with 1926 of 1,210,869 metric tons, amounting in value to nearly one milliard lei.

The outlook for the present year (1928), is not at the present moment encouraging, on account of last year's poor harvest. Nearly all the five great cereals—wheat, barley, rye, oats and maize—showed a falling off, and the exportable surplus for this year is estimated at only 1,312,000 metric tons as against 4,230,000 metric tons in 1927. As agriculture plays the dominant part in the export possibilities of Roumania this reduction of the exportable surplus cannot but affect the purchasing power of the population and consequently the value of imports.

Again, the condition of the railways, of the postal, telegraph and telephone services hinders the development of trade—a fact that the Government, as well as public opinion, realises, and there is no doubt that intense efforts will be made to improve the condition of these services as soon as money can be found for this purpose.

Roumania, however, is on the whole much better off than many of her neighbours, as she possesses enormous latent reserves, and her agricultural production, if properly systematised, could be greatly increased. In this connection a law for the standardisation of cereals has just been passed by the Legislative Bodies (March, 1928). Large areas of inundated lands have still to be drained and exploited, while the timber, oil and other indigenous industries are only awaiting better transport and other economic conditions for their proper development to enable them to produce larger surplus quantities for export to compensate for the increased shipments of manufactured goods which have to be imported. To these imports British industry contributes largely and should have its full proportion of any increase of Roumania's import trade which might result from the further development of the country's internal resources, more especially as recent statistics show that British exports to Roumania are nearly balanced by Roumanian exports to Great Britain. Thus the two countries would benefit mutually by an extension of trade. Should the official negotiations for a stabilisation loan be successful there is little doubt that the economic situation of Roumania would begin to improve and stimulate trade.

Commerce.

Generally speaking the prices of goods remained fairly steady during the year in consequence of the comparative steadiness of the leu, but slight increases were registered owing to increased import duties on some commodities. Merchants complain that the fiscal taxes are too high and that the import duties have been increased to such a degree that a large proportion of their capital is required for the payment of customs duties, so that they are forced to borrow money, to carry on their business, at the high rates of interest still prevailing.

The number of merchants trading in Roumania is believed to be greatly in excess of the actual requirements

of the country, although a great many have been forced to liquidate during the last three years. This fact is a sign of a tendency towards normal conditions, but these frequent liquidations have also contributed to the feeling of general crisis on the market. Thus the smaller number of new firms registered during the last two years is not attributable only to the very restricted credits obtainable from the banks. The total capital of the limited commercial companies trading in Roumania has not increased during the last three years, although the number of companies has been slightly higher each year.

Tradesmen state that the volume of business in 1927 was relatively the same as that of the previous year. A great many merchants, more especially those dealing in textiles, have reduced their stocks by selling their goods at cost price, or even at a loss, in order to be able to pay their debts and free themselves from the burden of the high rates of interest charged, which were ruinous.

Over one-third of the total imports of the country are still textiles, although the Roumanian textile industry has greatly developed lately under the high customs tariff. Foreign goods are still preferred, however, being generally of a better quality. Roumanian merchants generally, and textile merchants in particular, prefer to make their purchases abroad, as they obtain longer credits (four to twelve months) and cheaper rates of interest (maximum 8 per cent. per annum), for the Roumanian industrialists, owing to lack of capital, are unable to compete with foreign firms in this respect.

During the first eleven months of 1927 the value of exports amounted to Lei 34,927,595,474, as against Lei 35,011,053,755 for the same period in 1926, while the value of imports during the eleven months was respectively Lei 31,145,026,795 in 1927 and Lei 31,686,407,599 in 1926. For the whole of the year 1926 the value of imports is recorded at Lei 34,101,578,859 and of exports Lei 38,012,069,388. These are the values actually declared by traders and recorded at the Customs Houses, but they are given as provisional figures. Converted into sterling at the average rates of exchange for each period they give the following equivalents:—

	Imports.		Exports.		Balance.
	£		£		£
1926	29,312,125	...	32,387,654	...	3,075,529
1927	38,028,115	...	42,646,636	...	4,618,521

In June, 1927, a committee was appointed to revise the import tariff which had come into force in April, as it was considered too highly protective of the home industries, and as it appeared to demand from consumers and from merchants too great a sacrifice, aiming, as it did, mainly at obtaining a favourable trade balance and increasing the revenues of the State. At the time of writing this revision has not yet been completed. It is, stated, however, that all the duties are being reduced, and that when ready it will be submitted to Parliament for approval and not passed by Royal Decree, as has been the case since 1920. The attention of the Roumanian Government has been drawn to the views of certain British firms and Chambers of Commerce in regard to the high customs duty on various commodities imported from Great Britain.

The export taxes on livestock and cereals were considerably reduced in January, 1927, and again in November, and the general policy of the present Government, as shown by the budget estimates for 1928, is in favour of a further reduction of all export taxes.

The only articles of which the import is prohibited are those included in the list of State monopolies, i.e., tobacco, matches, salt, playing cards, explosives, cigarette paper and also second-hand machinery for the textile, timber, leather and boot and shoe trades.

British Trade.

British manufacturers and exporters have shown increasing interest in the Roumanian market during the

past year. This has been particularly noticeable in the number of inquiries received as to trade openings and the number of representative members of certain industries who have visited Roumania.

Several long outstanding claims were finally settled last year. The Manchester and London scheme for the payment by instalments of both pre-War and post-War debts contracted by Roumanian merchants was carried out smoothly, with the occasional intervention of this Legation. A large proportion of the claims have been privately settled and therefore withdrawn from the scheme. Such settlements by compromise may generally be considered advisable.

The effects of the British coal stoppage were still traceable in the early part of the year, and the introduction of the new protective tariff in Roumania in April was possibly a handicap to trade and prevented large business being done. The imports of coloured cottons from Great Britain remained steady, and the total imports of piece-goods of all kinds, while larger in quantity than in the preceding year, were slightly less in value, but both in quantity and value they were about 50 per cent. less than in 1925. This falling off in imports was principally due to the high customs tariffs which enabled the home industries to increase their output.

Among the increased sales British gramophones and gramophone records probably take the first place. British motor cars, both passenger and commercial, began to be imported cautiously and in small quantities, but American cars, which have hitherto been better adapted to the bad Roumanian roads, still hold the market almost exclusively. The Roumanian statistics for the first six months of the year show that British internal combustion engines, especially of the smaller types, have been in great and growing demand, as these engines are well able to compete in price, quality and credit conditions with those offered by other countries. British colonial wares, and teas especially, are well represented on this market. Since the import prohibition was removed in April the sale of whisky and gin has recommenced and satisfactory business has been recorded. British motor tyres, india rubber goloshes and sports goods are said to be overcoming competition successfully.

It is to be expected that the foreign trade of Roumania will greatly expand after the country has become economically consolidated. For this reason it is advisable that British firms should not neglect this market, but should begin now to introduce their goods so as to be ready for an extension of sales when the opportunity occurs. It is true, that a certain amount of caution is necessary, and careful inquiries should be made, when credit is granted, as to the reputation and financial standing of prospective customers. It is not advisable to give open credits, but only against acceptances.

It is essential for British firms wishing to do business in this country, and who have not their own branch or local representative, to appoint a reliable agent to look after their interests, but here again careful inquiries should be made before such an agent is appointed and the Commercial Secretary holds himself at the disposal of British firms to assist them in this respect. Advertising propaganda is recommended more especially for articles not yet known on the Roumanian market. The most commonly used method is newspaper advertising.

Agriculture.

Up to the present the State has been unable, owing to lack of funds, to contribute much to the development of agricultural activities or the intensification of agricultural production. The Union of Agricultural Chambers of Commerce, however, created about a year ago, has shown great activity, and under its auspices the following exhibitions have been held:—One for fruit, one for poultry, 16 departmental exhibitions of a general character and 92 exhibitions of cattle and agricultural products. The

Union has also established 30 small nurseries for trees and two silkworm farms.

As the standard of education of the peasant is still very low scientific agriculture is yet in its infancy in Roumania, though modern methods are used by the gentlemen owners of larger estates who continue to attend themselves to the farming of the greatly reduced lands remaining to them after the agrarian reform had come into operation. Fertilisers and machinery for cleaning seed and grain are almost unknown to the Roumanian agriculturist. But great hopes are based on the activities of the Chambers of Agriculture and the Institute of Agricultural Research for the improvement of the present agricultural system with a view to the increase of production.

Comparatively few agriculturists, the majority of whom are peasants, possess any capital, and cheap credit facilities are not available to enable them to acquire modern machinery and implements, nor has the State the necessary funds to assist them in this respect. A promising feature, however, is the fact that the area sown has now reached the pre-war standard, which proves that the new peasant landowners are working hard and cultivating their land, though owing to the difficulties above cited, they are not yet able to produce crops equal to those of pre-war days under the old system of vast estates belonging to wealthy landlords.

The export duties, though recently considerably reduced, are still high enough to handicap the agriculturist. Maize is the favourite crop of the Roumanian peasant, as may be judged from the greatly increased area sown in this cereal since the agrarian reform came into force.

Roumania has over one million hectares of inundated lands which could easily be drained and made fertile, but the requisite funds have hitherto not been available.

At the end of March, 1928, a law for the standardisation of cereals was passed by Parliament. It is stated that the object of this law is to classify Roumanian grain so as to enable it to compete on the world market with that of other countries, to stimulate, improve and intensify production and to assist the agriculturists to increase their credit. This law is considered by the Government to afford great advantages to agriculturists, and it is hoped that it will enable them to sell their products at more advantageous prices. The standardisation will be obligatory for wheat, rye, barley, oats and probably maize, destined for export. Regulations are introduced by the law for the cleaning and grading of these cereals and for the provision of storage premises for them. It is intended later to extend the standardisation regulations to other grains for export and even to those sold on the home market.

As things stand at present there are not more than three points in the whole country where the cleaning and grading of grain could be effected, namely at the docks of Braila, Galatz and Constantza, where there are ade-

quate sorting stations, and storing silos. The lack of grain silos and grading stations in the grain centres and at the northern and western frontiers of the country is bound to prove a grave impediment to the effective carrying out of this law, until measures have been taken to supply the present wants. To this end it is intended to form several companies with State participation, under the Law for the Commercialisation of State Enterprises, to erect the necessary silos and cleaning and grading plant. The standardisation and control of grain will be made by the organs of the State, at the head of which will be a special Council nominated by the Government. The law governing the exploitation of forests has been enforced with much greater strictness than formerly; a rational exploitation was maintained during 1927 and replanting work was carried out on a large scale. The forest area of Roumania is 7,207,118 hectares (less 723,442 hectares of glades), which represents about 24 per cent. of the total area of the country. All the timber and firewood requirements of the country are supplied from home sources and there is a considerable surplus for export, which could be greatly increased if transport conditions were improved and new lines constructed to serve the forest districts.

(To be continued.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, July 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, July 12).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 11).

British India Line.—S.s. Margha for Colombo, Madras, and Calcutta (London, July 14); s.s. Mundra for Bombay and Karachi (London, July 21).

Cunard Line.—S.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool July 21, and in Swansea July 24); s.s. Bactria for Malta, Patras, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow July 20, Liverpool and Swansea July 21).

Johnston Line.—S.s. Aviemore for Smyrna and Constantinople (Liverpool, July 28); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 4); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1).

P. and O. Line.—S.s. Malwa for Bombay (London, July 20).

Prince Line.—S.s. Sicilian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, July 11); s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 21).

Ellerman and Papayanni Lines.—S.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool July 7, Swansea July 12); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa (Liverpool, July 11); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 11); s.s. Andalusian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 14, Swansea July 14); s.s. Fabian for Malta, Alexandria, Jaffa, and Haifa (Liverpool, July 28); s.s. Polo for Gibraltar, Algiers*, Patras, Smyrna, and Constantinople (Liverpool, August 4). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

Messrs. John Hetheringham and Sons, textile machinists, etc., have secured an order for a complete cotton mill in Egypt.

The Sudan Plantations Syndicate has declared an interim dividend of 10 per cent. (2s. per share), less tax, payable to shareholders registered at the close of July 17. The dividend will be payable on July 25 and warrants will be posted on July 24.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ... July 10	*CASTALIA ... Aug. 28
*ELYSIA ... Aug. 10	*CIRCASSIA ... Sept. 14

*First class passengers only. Specially low fares. †Calls Port Sudan

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvers and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 3.

The financial event of the week has been, of course, the definite stabilisation of the French franc on a gold basis. With this event the chapter of European post-War currency stabilisation is, happily, almost completed. M. Poincaré has been freely criticised for waiting so long to take this step; but he is justified by the fact that, thanks to his waiting, France has now been able to resume sound currency without any external assistance of credits whatever.

As far as the investment markets are concerned the franc stabilisation had practically no effect, for it merely regularised a position which had in fact existed for more than eighteen months. Markets have rallied this week on the cessation of American and Continental liquidation, and for the moment the set-back has been checked. Gilt-edged stocks have been quietly steady, and even the long-continued fall in Home Rails was checked. In the industrial sections the recovery was fairly general, recent favourites, such as artificial silk, newspaper, and gramophone shares, participating. One of the most active sections was that for cable and wireless shares in view of the approaching announcement regarding a merger scheme. This subject is referred to in a later paragraph.

Wireless-Cable Merger.

One of the outstanding features of the week has been the activity and strength of the wireless and cable companies' shares. The Marconi Company's 10s. shares have advanced to 67s. 6d. Eastern Telegraph stock rose to 240 and the stocks of the other telegraph companies were also buoyant. These upward movements were due to rumours that the negotiations for the merging of the cable and wireless companies are proceeding satisfactorily. These rumours so far lack official confirmation, but there is every reason to believe that a hopeful view is not unjustified. At the meeting of the Globe Telegraph and Trust Company, held this week, Sir John Denison-Pender referred to the negotiations, and the tone of his observations was distinctly encouraging. Negotiations for the merger, Sir John pointed out, have been conducted with

the Imperial Cable and Wireless Conference, which has been examining the matter with great care for nearly six months, and is still continuing its deliberations. Sir John expressed the opinion, which is shared by all well-informed observers, that it is not only desirable, but of the utmost importance on national grounds, that the merger should be carried through, and a British combination formed capable of holding its own with the great communication combines already made and contemplated elsewhere. He also declared that the Eastern associated companies continued to carry a much larger volume of traffic than the Government "beam" wireless services between the respective countries where they are in competition, in spite of the materially lower wireless rate.

The Heavy Industries.

During the week the meetings of a number of important companies engaged in the heavy industries—mainly coal, iron and steel—have been held and the industries' problems and prospects have been authoritatively discussed. None of the speeches gave ground for unqualified satisfaction, for they deal with a past that was difficult and a future that was hardly more encouraging. Several chairmen bestowed a word of praise upon the Government's new rating scheme. Dealing with coal, the chairman of the Ebbw Vale Company said that "the outlook is by no means promising," but there has been "a considerable improvement" in the iron and steel section. This experience seems to be more or less common to all the companies. Lord Aberconway, speaking at the meeting of John Brown and Company, declared that shipbuilding orders are falling off and "prices were cut to a very low point all round." The meeting of Baldwins, held to sanction the capital reduction scheme, was of exceptional interest. Sir Robert Horne, who presided, said that the "prospects of the company are stated to be improving." His point that the "necessary prelude to all amalgamations is such careful reconstruction of existing organisations such as is now being projected for this company" needs to be borne in mind. Incidentally, the revised terms offered the $7\frac{1}{2}$ per cent. debenture holders is an improvement upon the original scheme and is expected to ensure the adoption of the proposals. The chairman of Guest, Keen and Nettlefolds was obviously cautious in forecasting the future, but the company's excellent past justifies a continuance of the investor's confidence.

Oil Industry Developments.

The oil share market has derived considerable encouragement from the events of the last few days. There have been persistent rumours that an agreement to end the oil war in the East has been concluded, and though these at present lack confirmation, there are several factors which are read as suggesting that they are not entirely without substance. One of the most noteworthy is the issue of new capital on bonus terms by the "Shell" Company and the tone of the chairman's speech in announcing the issue. New ordinary shares in the proportion of one in five will be issued in January next at par. The present price of the shares is £5 $\frac{1}{2}$, the terms of issue thus representing a substantial bonus. The chairman of the Shell Company said that the present moment was opportune for increasing the capital, "because it is only recently that prices in the principal markets of the East have become re-established." On the other hand, he frankly acknowledged disquieting influences, including the continuance of over-production and unsettled conditions in the East. On balance, however, he was able "to face the future with the fullest confidence." But it is necessary to remember the diversified character of the Shell Company interests and its extremely strong financial position: the immediate outlook for the less well-established undertakings is not equally satisfactory. Speaking at the Lobitos meeting, Lord Forres declared that, though an improvement in the oil situation would undoubtedly come, he would not venture to predict the date.

Engineering Topics.

By G. B. B.

British Roads.

The recent annual conference of the Institution of Municipal and County Engineers is the fifty-fifth of its kind, and, judging by the papers which were read, is one of the most important that has yet been held. Mr. Dryland, engineer and surveyor, County of Middlesex, has been elected president for the year, and his presidential remarks made pleasant hearing for those who have of late had it constantly dinned into their ears that our roads are not safe, are inadequate for the traffic that they are asked to carry, and are not good value for the money spent upon them.

Mr. Dryland claimed, on the other hand, that our roads are better, so far as adequacy and conditions are concerned, than those of any other country, not excluding the United States of America. I gave a little private applause at that, as I know quite well the mixture of gravel mud, broken branches and chunks of stone that passes as a road in many parts of the States. We can truthfully say that we have nothing like them in this country!

The president added that it is equally true to say that the demands which are being made on our roads are not only heavy, but they are steadily increasing. We have a small and thickly populated country to serve, and the powers that be, wisely enough, have not placed any serious limits on the weight and actual speeds of the vehicles we use on our roads, it being considered that it was the duty of the road engineer to keep abreast of the times. The natural result of this has been better and still better roads, and everyone concerned in their construction has risen to the occasion. But the position, once easy, is now not only more difficult, but the engineers are asking themselves whether we shall, as roadmakers, be able to keep pace with the demands. Mr. Dryland said: "There may be political reasons of a very sound nature for restricting expenditure on roads temporarily, but so far as I can see no good purpose can be served by holding back, as all experience goes to show that the longer a desirable work is put off, the greater the cost." Everyone knows that from a commercial point of view money sunk in road construction is a sound and remunerative investment, a truth which people in the Near East are beginning to learn. But to return to this country: The improved road surfaces that have been provided during the past ten years or so, and, in fact, even since the State began to render tangible assistance, have shown that the better the construction the smaller the

amount that has to be spent in maintenance costs, in addition to the better and greater service they have afforded.

The Singapore Floating Dock.

One of the branches of engineering in which this country has always held the foremost position is that of floating dock building, and the work just completed by Swan, Hunter and Wigham Richardson shows that we are in no danger of losing the lead. To build the 50,000-ton floating dock for the new Singapore Naval base, to the order of the British Admiralty, in ten months, is a fine achievement, and one of which the firm may well feel proud. Ten months from the laying of the first plate to the launching of the last of the seven sections! The best piece of work carried out by the firm previously to this was, I suppose, the building of the 11,000-ton Stetin floating dock in 7½ months, which was closely followed by the building of a 12,000-ton floating dock for the Spanish Government. That was completed and towed to Habana within eleven months, and one of the other important contracts of the company was the construction of the 33,000-ton floating dock for use in the mouth of the Medway for the Admiralty.

A Record High Building.

If you cannot extend outwards, you must build upwards. New York engineers know no exception to this rule and so the city of skyscrapers is to beat its own record and put up a 52-story office building. This will be known as the Lincoln Building, and it will occupy an acre of ground, and have a total height of an eighth of a mile. The account reminds me that South America is experimenting in the direction of high buildings, the new Hotel Palacio Salvo at Montevideo being 28 stories in height and rising 338 feet above street level. New York has just been busy with the new Master Printers' building which is 20 stories high. I see that altogether 647 big buildings have been constructed in reinforced concrete in the United States recently of over 10 stories in height. The rapid increase in the use of the tall steel frame building, with concrete case is attributed, in engineering circles, to the cheapness of steel and concrete, to its great durability and fire proof character, and to the speed with which its erection can be carried out.

M. Michalakopoulos, the Greek Foreign Minister, denies the report that the Franco-Greek Commercial Treaty has been annulled.

A contract for eighteen locomotives for the Indian railways has been given to Nasmyth, Wilson, and Co., Manchester.

Roumania's Customs receipts from January 1 to April 30 were as follows:—Export taxes, 233,564,702 lei; import taxes, 2,116,886,127 lei; sundries, 109,291,567 lei; total, 2,459,742,395 lei.

Roumania's output of petroleum during the first quarter of 1928 was as follows (in Departments):—Prahova, 667,611 tons; Dambovitza, 251,155 tons; Buzan, 28,374 tons; Bacau, 15,761 tons; total, 962,901 tons.

It is anticipated that this year's plum crop in Yugoslavia will produce 3,500 and 4,000 tons of prunes, which will mean that a smaller quantity will be available for export than was the case last year.

A number of further alterations have been made in the regulations governing Roumania's exports. Some exports, which were prohibited, are now permitted, subject to a tax. The export tax on sugar is now 500 lei per wagon, and on wheaten flour 1,000 lei per wagon.

The output of minerals in Yugoslavia in 1927 was as follows:—Pyrites, 57,003 tons; copper ore, 288,040 tons; iron ore, 336,099 tons; zinc, 1,066 tons; chrome, 8,756 tons; manganese, 1,971 tons; antimony, 1,162 tons; marble, 3,070 tons; bauxite, 100,327 tons; magnesite, 1,030 tons; and gypsum, 1,063 tons.

Company Meetings.

IMPERIAL BANK OF PERSIA.

Projected Trans-Persian Railway.

Sir Hugh Barnes' Speech.

The thirty-ninth ordinary general meeting of the Imperial Bank of Persia was held on July 2 at the Cannon Street Hotel, Cannon Street, E.C., Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (Chairman), presiding.

The Manager (Mr. Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I feel my first duty to-day is to remind you of the loss the bank has sustained by the sudden death, on January 19, of our friend and colleague, Mr. David Gubbay, of Messrs. David Sassoon and Co. Many of you will remember that Mr. Gubbay was elected to the Board after the death of Mr. Frederick Sassoon in May, 1917. He had been with us, therefore, for 10½ years, a long and very pleasant association now sadly brought to a close. His knowledge of trade in the East was of great value in our discussions, and we have all felt his death very keenly both from the personal and the business point of view.

At one time it was supposed that Dr. Millspaugh's contract, which terminated last December, would be renewed, though with some diminution of his powers, as administrator-general, but this expectation was not realised, and only one of his financial staff, Major Davis, who has been acting as treasurer-general, now remains in Teheran. In the last few days we have learnt that he also is on the eve of departure, and that a Mr. Walder, a Swiss banker, has been appointed in his place.

Another very interesting move on the part of the Persian Government has been the decision to commence the construction of what is intended ultimately to be a Trans-Persian Railway, from the Persian Gulf to the Caspian Sea. Apparently it is not yet decided whether in the south the railway will start from Mohammerah or Khor Musa. It is, therefore, proposed to commence construction of the southern section from Ahwaz, on the Karun River, whence it is expected the line will run via Kermanshah, Hamadan, and Kazvin to Teheran, and thence through an eastern gap in the Elburz range to Bandar-i-gaz, on the south-east shore of the Caspian.

At first the Persian Government proposed to construct the line themselves, and tenders for material were invited, many of which passed through our London office. But the wiser course has now been adopted of constructing the line by contract, and I understand a syndicate has been formed for the purpose, composed of American, British, German, and French firms, to whom the contract will be given. It is proposed to begin construction simultaneously from both ends, the northern section being entrusted to the American, German, and French firms, and the southern to the American and British.

The project is certainly an ambitious one, and so far as we know no complete estimate of cost has yet been prepared. The total length of the line as planned can hardly be less than 800 miles, and if, as is reported, it is to be made on a gauge of 4 ft. 8½ in., it will certainly be very expensive, for much of the country through which it will pass is very difficult. But the Persian Government have accumulated a large sum from the proceeds during the past 2½ years of the surtax on tea and sugar, so there will probably be little difficulty in financing the initial stages of construction.

New Commercial Treaty.

I mentioned last year that in order to get rid of the capitulations conferring on foreigners resident in Persia the privilege of extra-territorial jurisdiction the Persian Government had denounced all its commercial treaties with the various European Powers and the United States. These treaties came to an end on May 10 last. With effect from that date the British Government have concluded a fresh treaty with Persia dealing with commercial matters only. The treaty recognises Persia's full autonomy in regard to Customs duties and provides that British goods entering Persia shall enjoy the benefit of the minimum rates of the Persian tariff in force, and shall not be subject to any import taxes higher than those imposed on similar goods imported from other foreign countries. As regards the exercise of their novel jurisdiction over foreigners, the Persian Government, in order to allay anxiety, have communicated to the British Minister a Note laying down in considerable detail the rules of procedure their Courts will be expected to observe in cases both civil and criminal in which British nationals may be concerned. These rules and the safeguards they provide are unexceptional so far as they go, and they are evidence of a sincere desire and determination on the part of the Persian Government to establish Courts and methods of procedure in which the foreigners may have confidence.

In all these matters it is possible to trace the influence of the commanding personality of His Majesty the Shah, and it is due to his zeal and determination that the railway project has at last taken a definite shape. There are indications also of a desire on his part to encourage the industrial development of the country, and schemes are said to be on foot for the erection of smelting works in the north to enable rails to be manufactured locally, and also for the establishment of a tannery and a paper manufactory near Teheran.

All these matters are, of course, of much interest to the bank as our business is closely bound up with the prosperity of the country and the increase of its trade.

Another matter which deserves mention is the decision to establish a Persian national bank. In May, 1927, the Persian Maglis passed a law providing for the establishment of a Government bank, to be called the National Bank of Persia, with a capital not exceeding 20,000,000 tomans, which, at the present rate of exchange, is about £4,500,000. The capital as required was to be provided by the Government at first out of any funds available, and ultimately out of the proceeds of the sale of the Crown jewels and Crown lands, and the bank was authorised to accept deposits and to lend money for the purpose of assisting trade, industry, and agriculture.

By the bank's statutes subsequently drawn up, the issued capital was limited for the time being to 2,000,000 tomans (£450,000), divided into 20,000 shares of 100 tomans each, of which 40 tomans were to be paid up. All the shares were to be held by Government and Dr. Lindenblatt, the Financial Adviser, was nominated the director of the bank. So far as we are aware, there is no immediate intention to sell the Crown jewels, and up to date only a small sum has been paid up as a first subscription towards the capital.

The Accounts.

As regards the accounts, gentlemen, I do not think you will expect me to say very much, as they are in the usual form. From the balance-sheet you will notice that our operations during the year show steady progress, which is a matter for congratulation, seeing that trade has not been as active as we hoped. But you will see that on the assets side of the account we possess no less than £5,753,685 in cash and money at call, and we also hold securities easily realisable to the amount of £3,003,719, so that we are in a position to deal with any demands that may be made on us if trade revives.

These two items show a marked increase on last year's figures, owing chiefly to the increased deposits lodged with us temporarily by the Persian Government, mainly out of the proceeds of the surtax on tea and sugar. These deposits will, no doubt, be gradually withdrawn when expenditure on the railway begins in earnest, and the circulation of the money should tend to improve trade.

On the liabilities side you will observe that notes in circulation show the considerable increase of £373,031. This is partly owing to the dearth of silver coin to which I have alluded, and I have already explained the reason for the increase in deposits, which have risen from £6,483,000 to £7,804,000. The profit and loss account needs no explanation. Our disposable balance is £169,646 5s. 4d., almost the same as last year, and we dealt with it in the same way, with the difference that in place of a dividend of 6s. and a bonus of 1s. per share, we propose to pay a final dividend of 7s.

You will see that, with the proposed transfer of £50,000 to the reserve account, our reserve will now stand at £570,000, or only £80,000 less than our issued capital. With ordinary good fortune we may hope that in two years at most it will equal our capital, an aim which, with your approval, we have always had in view. (Hear, hear.)

I must not conclude without a word of commendation of the excellent work done by our staff both here and in Persia, during the past year. They have well maintained their reputation for cheerful and willing service, and, with your approval, we propose to grant them the usual annual bonus.

I have now to move: "That the report presented be adopted, that the accounts to March 20 as rendered be accepted, and that a final dividend of 7s. per share, payable free of income tax, be and is hereby confirmed."

Colonel Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., seconded the resolution and, no questions being asked, it was at once put to the meeting and carried unanimously.

On the motion of Mr. V. A. Caesar Hawkins, seconded by Mr. E. A. Chettle, the retiring directors, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., and Mr. W. A. Buchanan, were re-elected.

The auditors, Messrs. Kemp Chatteris Nichols Sendell and Co., were reappointed on the proposition of Colonel Haig, seconded by Mr. McMurray.

Tribute to Directors.

Mr. Vere Herbert Smith said that he would like to propose a vote of thanks to the Chairman for his interesting speech, to the Board of Directors, and to the management and staff in London and abroad. He wished particularly to thank the members of the staff in Persia. That brought him to the interesting question of the remuneration of the directors. If any apology on his part was necessary for taking that business in hand, he would remind the proprietors that the charter of the bank was obtained in 1889 and he had become a shareholder in that year. He did not think it likely that any shareholder present at the meeting had been a shareholder for a longer period. Their valued manager, who was also now a director, Mr. Sydney Rogers, had joined the company in the year 1892.

At the meeting last year Mr. Wilson, a shareholder, had brought forward the proposal which he (the speaker) was about to bring forward on the present occasion, but, owing to the necessary notice not having been given, it could not be proceeded with on that occasion. Mr. Wilson had so thoroughly explained the reasons why it was desirable to increase the remuneration of the Board that

it was not necessary to say anything further on the present occasion, and he would therefore propose that the remuneration of the Board should be increased from £5,000 a year to £7,500 a year, and that they should be voted a bonus of £2,500, less income tax, for the year under review.

The motion was seconded by Colonel G. R. C. Westropp, C.B., and carried unanimously, and after a brief acknowledgment by the Chairman the proceedings terminated.

KASSALA COTTON COMPANY.

Prospects Under the New Concession.

The Hon. Arthur Asquith's Speech.

The fifth ordinary general meeting of the Kassala Cotton Company, Limited, was held on June 28 at Winchester House, Old Broad Street, E.C. The Hon. Arthur M. Asquith, D.S.O. (the Chairman), presided.

The Secretary (Mr. W. O. Simms) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—I presume you will agree to take the balance-sheet and accounts as read.

I take this opportunity of referring to the loss which the Sudan Government are suffering by the departure of Sir George Schuster, their late Financial Secretary, to take up his appointment as Financial Secretary to the Government of India.

If you will turn to the balance-sheet you will see on the liabilities side that another and final call of 10s. has been made on the preference shares, so that our whole share capital is now issued and fully paid up.

Creditors and credit balances stand at £62,022 14s. 10d. The main items which go to compose this figure are approximately £18,000 for taxation and £32,000 due to our tenants and since paid.

On the assets side, balance of expenditure in respect of the concession in the Gash Delta, surrendered as from June 30, 1927, stands at the figure of £545,184 15s. 4d., a figure arrived at by adding together our contribution to the cost of the Kassala Railway (which last year came under the heading of "concession account") and the company's other capital expenditure at Kassala up to the date of the surrender of its Kassala concession, less amounts recovered from the

Government in cash. As stated in the report, of this £545,184 15s. 4d., £329,969 10s. is to be refunded to us by the Government by forty-six half-yearly instalments, and of these one instalment has been received. For recovery of the balance—namely, £215,215 5s. 4d.—we depend upon our share of the proceeds of the cotton crops to be grown on our new concession area. Account has been taken of our having to recover this sum in calculating what our share of such proceeds should be, and our share is accordingly to be larger than would otherwise have been the case.

The arrangement for calculating it may appear to you to be rather complicated, but its effect is, briefly, that we receive 30 per cent. of the net proceeds of the crop up to a certain figure or datum line. If the net proceeds exceed that figure our share is calculated on a reduced scale.

To give concrete examples of how this would work—supposing the total net proceeds of the crop were £200,000, the tenants' share would be £80,000, and as the balance, i.e., £120,000, is below the £159,514 datum line, the company's share would be one-half of this £120,000, i.e., £60,000. If, on the other hand, the total net proceeds of the crop were £300,000, the tenants' 40 per cent. would take £120,000, and the 60 per cent. to be shared by the Government and the company would be £180,000. As this exceeds the £159,514 datum line the reduced scale would operate, and, instead of receiving half of £180,000—namely, £90,000—we should receive £57,953 plus one-quarter of the amount by which £180,000 exceeds £72,300, i.e., £26,925, or a total of £84,878.

To return to the balance-sheet, the balance payable by the Sudan Government (since paid), £53,217 6s. 11d., includes capital and running expenses incurred by the company on the Government's behalf after the date of the surrender of the concession. The Sudan Government, having taken over our position in Kassala, have now refunded us this sum.

Liquid Resources.

Cash at bankers and in hand is £358,993 7s. 1d. You will be glad to see that we are well provided with liquid resources. The increase here is, of course, due partly to our having called up during the year £125,000 on our preference shares, partly to our cotton profits, and partly to our expenses in the Gash Delta having ceased.

Turning to the profit and loss account, you will see that general expenses are down, in round figures, from £23,603 to £12,471. This is due to the fact that, under the terms of our settlement with the Sudan Government, they became responsible for all our expenses at Kassala and for certain other items of expenses as from July 1 last.

Mr. Fleming, our manager, and the other members of our local staff supervised the planting of the cotton last autumn. Mr. Fleming finished handing over to the representative of the Sudan Government early this year, and he and Mr. Telford, our chief engineer, proceeded to the Gezira to put in hand development work on our new area.

The rest of our local staff have remained at Kassala working under the Government's representative upon the harvesting of what has proved to be a record crop; 65,568 kantars have been picked, and this cotton will belong to the Government and the tenants. I am very glad that in this the last year of our work in the Gash Delta our staff should have been able to produce for the Government so fine a crop. In passing I may mention that the Government have asked us to market for them the 1928 and 1929 Kassala cotton crops, and we have agreed to do this work on the basis of a modest commission.

To return to the profit and loss account, you will see that we have provided £5,000 for taxation and £1,800 as a bonus to our Sudan staff. Our Sudan staff have done excellent work under trying conditions in producing the good crop, of which we see the results in the present accounts, and Mr. MacIntyre, to whom we are chiefly indebted for the smooth handing over to the Government of our affairs in Kassala, will, I think, bear me out when I say that the loyal co-operation of our local staff greatly helped him in his task. I feel sure that you will back the directors in this recognition of their good work. You will realise that the negotiations of last year threw an extra load of work also upon our secretary and other members of our London staff, and I should like to express our appreciation of the services they have rendered. (Hear, hear.)

Turning to the creditor side, you will observe that our cotton account and other receipts amounted last year to £111,143, as against £48,686 in the previous year. Our crop was much larger, 54,128 kantars as against 22,547 in the previous year; it was of excellent quality, and the prices realised were better than those realised in 1926. Our profit for the year was £91,269, and, after adding our balance brought forwards, £15,992, and deducting debenture interest, £30,000, we go out of the year 1927 with a carry-forward of £77,262. We can have no revenues from cotton in the year 1928, nor in the year 1929, and we must therefore carry forward this sum to meet our debenture interest and other expenses. We hope that cotton revenues will begin to accrue to us from our new concession area in the Gezira in 1930. I am afraid that shareholders have had to wait a long time for dividends, but, bearing in mind all the circumstances, I do not regret our exchange of concessions, as I am convinced that we have better prospects with the new concession than with the old, and I believe that, granted reasonable yields and prices, better times are ahead of us.

I now beg to move: "That the report of the directors and statement of accounts to December 31, 1927, now laid before the meeting, be and they are hereby received and adopted."

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent
on application to
the Secretary*

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

Managing Director's Statement.

Mr. Alexander MacIntyre (managing director).—Gentlemen,—Our chairman has asked me to say a few words about our new concession and the work done there so far.

The area comprises 45,000 acres of land, and is situated alongside the western boundary of the land already being cultivated by the Sudan Plantations Syndicate on the Gezira Plain. A soil survey was made jointly with the Sudan Government Agricultural Department for the selection of the most suitable land within the defined limits of the concession area, and it was agreed to eliminate certain plots of unsuitable land. The quality of the soil is good and is up to the standard of the average land cultivated by the Sudan Plantations Syndicate. Afterwards, in conjunction with the Sudan Government Irrigation Department, the layout of the major and minor canalisation systems was designed and agreed. The supply of water for the irrigation of our cotton and other crops will be from the Sennar Dam.

After settling all accounts and on handing over to the Sudan Government's representative the old Kassala concession, Mr. Fleming, our manager, arrived in the Gezira and took up his duties there in February last. At the moment the Sudan Government Irrigation Service are pushing ahead with the construction of the major canalisation to serve the new area, and we on our part are carrying out the development of the land, minor canalisation, erection of buildings, and providing the necessary light railways and ginning factories to serve our area, and I am pleased to be able to tell you that the work is proceeding smoothly and rapidly. This could only be achieved by our having an experienced staff accustomed to the country. The greater part of the minor canalisation has been completed on a block of 15,000 acres, and, in co-operation with the Sudan Plantations Syndicate, about 40 kilometres of light railway have been laid to link up with the existing system of light railway in order to transport materials required for our building programme and development.

During August and September—the rainy season in the Sudan—development work will have to be closed down, but in October we propose to canalise and develop a further block of 15,000 feddans and to have the greater part of this completed before July, 1929.

Now, with regard to our first cotton crop, we hope to get 5,000 acres—that is, one-third of the first 15,000-acre block—planted in cotton in July, 1929, and if all goes well we hope also to get a part of the second block of 15,000 acres of cotton planted at the same date. This means that we shall have to have our ploughing tackle ready and working in October of this year. I must, however, point out that the area which we shall get planted in July, 1929, must entirely depend on how far the Sudan Government Irrigation Department will have completed their works before that date. I thoroughly endorse our chairman's remarks regarding the loyal co-operation of our Sudan staff during the difficult period when handing over our original concession to the Sudan Government.

Gentlemen, I have much pleasure in seconding the motion put by our chairman. (Cheers.)

The Chairman having replied to questions, the resolution was carried unanimously.

The retiring directors (Lt.-Col. S. H. Pollen, C.M.G., and Mr. Alexander MacIntyre) were re-elected, and Messrs. Cooper Brothers and Co. were reappointed auditors.

A vote of thanks to the chairman and directors, as well as to the managing director and staff, concluded the proceedings.

EGYPTIAN HOTELS.

Prosperity Continued.

Sir William Peat's Speech.

The thirty-first annual general meeting of the Egyptian Hotels, Ltd., was held on June 29 at the registered offices of the company, 11, Ironmonger Lane, E.C., Sir William B. Peat, C.V.O. (the Chairman), presiding.

The notice convening the meeting and the report of the auditors having been read,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I am pleased to be able to inform you that the company has again experienced a very successful year, and a small increase of profit is shown when compared with the highly satisfactory results of the preceding year. The dividend recommended by the directors is at the same rate as that for the previous year—that is, 35 per cent., with a bonus of 4s. per share.

The company has now absorbed the whole of the business of the Societe Suisse Egyptienne des Hotels, and has acquired the whole of the assets of that undertaking. The assets so taken over comprise the hotel building known as the Semiramis Hotel, and plant and fixtures and furniture therein. The building and furniture have been maintained in an excellent state of repair, and sections thereof have been completely redecorated and furnished in modern fashion. Land adjoining the hotel has been acquired for the purpose of extending the existing hotel building, and it has been decided to settle plans and estimates in connexion with this extension during the ensuing year. It is hoped that the extension will be ready for the season 1929-30.

A new floor has been added to that part of Shepheards Hotel called the Annexe, giving additional accommodation of 21 rooms. The Annexe has been furnished in a most comfortable and luxurious

manner, and is a great improvement to the hotel. Some 30 rooms in the old section of the building have been entirely renovated and hot and cold-water fittings installed in a number of the rooms.

The Balance-sheet.

I have the following observations to make in regard to the balance-sheet of the company as at April 30, 1928.

It will be observed that additions of considerable amount have been made to the items of freehold and leasehold land and buildings, and plant and fixtures. These additions mainly comprise the Semiramis Hotel and plant and furniture therein, which, as already mentioned, has been acquired from the Societe Suisse Egyptienne des Hotels. The investments and advance to the Societe Suisse Egyptienne des Hotels, as shown in previous balance-sheets, have disappeared as the result of this transaction.

The loan from bankers, which at April 30, 1927, amounted to £32,281 9s. 10d., has been repaid during the year, and the liability to Les Grands Hotels d'Egypte has been reduced from £41,025 to £30,760. Apart from these items there is no material change to record in any of the other assets and liabilities appearing in the balance-sheet.

There is a balance of cash at bank and in hand of £94,175, which will be considerably reduced by the payment of the dividends and bonuses which the directors recommend for the year.

An amount of £6,936 has been written off for depreciation in respect of plant, fixtures, and fittings for the year to April 30, 1928; this sum is £600 in excess of the amount provided for the previous year, and in the opinion of the local Board is an adequate provision.

It will be observed from the balance-sheet that the fixed assets of the company, i.e., the freehold and leasehold land, buildings, plant, fixtures and furniture, including additions during the past year of £112,847, now total £363,000, which is £123,000 in excess of the subscribed capital of the company.

I cannot conclude without expressing to the local Board in Egypt and the managerial and other staff associated with them, our appreciation of their services. It is also my duty to convey to the managing director, Mr. Baehler, who is present to-day, our indebtedness to him for the unsparing efforts he has made in administering and developing the company's business, and to whose ability is so largely due the success which the company has attained.

Mr. Charles Baehler, in seconding the resolution, pointed out that before the War the company had about 500 beds, whereas to-day in their two hotels—Shepheards and Semiramis—they had 900, besides 1,300 which they had on lease from the Grand Hotel Company. The local Board entered into this lease—for the four hotels of the company—after very careful consideration. They had, of course, a very difficult problem to deal with in taking over a lease involving a rental of £40,000 per annum, but he was glad to say—as would, in fact, have been seen in the last three reports—that it had been very successful and had added greatly to the revenues of the company. They had thus now under control about 2,200 beds in the organisation of the Egyptian Hotels, and adding those of the Upper Egypt Company, which was in very intimate relationship with this company, they had altogether nearly 4,000 beds in Egypt.

This meant that they had practically all the first-class accommodation in Egypt, and, as was shown by the accounts presented, the results had been successful in every way. He wished also to point out to the shareholders that the company had absorbed the Semiramis Hotel, which was a magnificent building on the banks of the Nile. In 1910 they took over two-thirds of the shares, and since then they had absorbed the whole interest; that was to say, they had bought, out of their own resources, not only the freehold, but the furniture and everything, including the land adjoining, without any increase of capital.

Increasing Demand for Accommodation.

The local Board had done all in its power to cope with the increasing demand for accommodation, thus adding to the comfort of visitors to the hotels, especially by adding a number of rooms at Shepheards as well as in the hotels of the Grand Hotel Company. This had been absolutely necessary in view of the enormous demand at certain times of the year.

Shareholders would notice that an extraordinary general meeting had been called for the purpose of altering the articles of association with a view to enabling the shareholders in Egypt, who held about 97 per cent. of the shares, which were all Bearer shares, to vote by proxy at the meetings of the company. So far they had not been able to do this, but the demand on the part of the Egyptian shareholders was quite reasonable, seeing that they could not attend the meetings personally.

He would not like to conclude his remarks without pointing out that the management of the company's business now necessitated a large personnel, which, however, dealt with the work in a masterly way. He was sure they would be glad to know that the shareholders appreciated the efforts they were making towards the good conduct of affairs. Their task was by no means easy, because every autumn they had to begin their organisation over again. In an ordinary hotel business which went on from January to December the organisation was an easy matter to deal with, but in their own case they had to begin again every year, and in that respect he wished to say that the personnel merited the congratulations of the shareholders.

The resolution was then put to the meeting and carried unanimously, and the dividends recommended were declared.

Mr. Baehler, in proposing the re-election of Sir William B. Peat as a director of the company, spoke in appreciative terms of the

services he had been able to render in the interests of the shareholders since the foundation of the company.

Mr. H. M. Snow, M.V.O., seconded the motion, which was unanimously agreed to, and the Chairman expressed his thanks in suitable terms.

The auditors (Messrs. Turquand Youngs and Co.) were reappointed.

An extra-ordinary general meeting was afterwards held for the purpose of submitting a resolution altering the articles of association.

OTTOMAN BANK.

Conditions in Turkey.

The sixty-first annual general meeting of shareholders of the Ottoman Bank was held on June 27 at Winchester House, Old Broad Street, London, E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, reviewed the conditions in the various regions with which the bank is concerned. He said that Turkey, during 1927, continued to pursue its efforts for developing its natural resources, but circumstances arose which hampered the efforts for economic progress. Those circumstances were in the main due to climatic conditions unfavourable to agriculture. The new remissions of taxes in favour of agriculture encouraged an extension of the areas under cultivation. Unfortunately an intense and prolonged drought delayed sowings. The cereal yield, inferior by 30 per cent. to that of 1926, and hardly better than that of 1924, had been undeniably bad in the producing centres. It was a question whether the accumulated stocks of the previous campaigns would this year meet the country's needs without recourse to imports of foreign grain. The shortage of skilled labour and available capital was the cause of a lack of development in industry, and the installations during the year of a sawmill at Boz-Euyuk, a cement factory at Angora, and a few carpet looms could only be regarded as minor indications of development.

The execution of the extensive railway programme, which he mentioned on a former occasion, had been continued in spite of some difficulty. Up to December 31, 1927, 519 kilometres of new lines from Angora to Cesarea and from Samsoun to Amassia had been opened to traffic, and 2,000 kilometres were in course of construction. To carry out works of such importance the Government was obliged to enter into contracts which might affect future Budgets.

The policy of budgetary equilibrium upon which the Grand National Assembly showed itself firmly resolved in the recent vote of the Finance Law 1928-29 was praiseworthy. However, it had to be borne in mind that an expenditure of some 200 million Turkish pounds, or even 270 million Turkish pounds if account is taken of municipal taxes, demanded, from a population of about 13,500,000 inhabitants, one-third of the national revenue, estimated by experts at 800 million Turkish pounds. Such a charge could not fail to influence commercial transactions, especially in a period of depression such as that prevailing during the past year.

The only Customs statistics available for 1927 related to the month of January, and it was therefore not yet possible to appreciate the influence of the crisis on foreign trade, which must have been, on the other hand, favoured by the conclusion of several commercial agreements. Compared with those of 1925 the round figures of exports in 1926 showed, on the one hand, a slight expansion in quantities (771,410,000 kilogrammes against 668,851,000), and, on the other hand, a falling off in values (187 million Turkish pounds against 193 million Turkish pounds), mainly due to the fall in prices. Imports, thanks to the abundant harvests of 1925 and 1926, showed a reduction in foodstuffs, totalling in weight and value 628,017,000 kilogrammes, against 732,234,000 kilogrammes, and 234 million Turkish pounds, against 242 million Turkish pounds. Other purchases and sales, comparing 1925 and 1926, remained about stationary from the one year to the next, and the adverse commercial balance has been reduced by some three million Turkish pounds—i.e., from 50 millions to 47 millions. This reduction, though small, had been a factor in creating greater stability of exchange during 1927.

To take one example only: the pound sterling had varied only for short periods, and then to a small extent, from the mean of 950 piastres, having been at the highest 970 and at the lowest 808. This tendency towards greater stability in the rates of the Turkish pound had inspired the authorities for some months past with a legitimate desire to secure for the exchange a durable and eventually a legal basis. Stabilisation alone could give the money market the elasticity which it now lacked. Under present conditions the market suffered from periodical tightness, which assumed last autumn, for some two to three weeks, a disturbing aspect.

In view of the economic depression, their head office at Constantinople and their branches in Turkish territory had had to exercise during the year particular vigilance with regard to the credits accorded by them, without departing from the principles of liquidity and division of risks. Their results had been thereby affected. In accordance with the engagements taken at the time of the renewal of their privileges, they had pursued their programme of extension by installing themselves at Kirklar-Ili, Tchoum, Bairbourt, and Milas, and reopening the branches closed during the War at Aidin and Bolou.

The influx into Greece of a population from Asia Minor, which

had already formed part of their *clientèle*, had decided them to establish at Athens an affiliated bank under the title of the British-French Discount Bank, Ltd., which was registered in London on March 12, 1928, and which had just started operations. In Greek Macedonia their Salonika and Cavalla branches had felt the effects of the stagnation which was persistent in the market for Oriental tobaccos.

The Chairman went on to deal with conditions in Egypt, Cyprus, Iraq, Persia, Roumania, the Levant, and Yugoslavia, and then referred briefly to the accounts. He said that the assets and liabilities in foreign currencies had, in all cases, been converted into sterling at the rates in force at December 31, 1927. Provision for doubtful debts had been constituted from the profits of the year, as well as from reserves previously made.

The accounts thus made up showed an available balance of £274,244, taking into account the amount of £27,653 4s. brought forward from the preceding year. This balance they proposed to apply as follows:—Payment of a dividend at 5s. per share, absorbing £125,000; carrying to provision for contingencies a sum of £125,000, thus leaving £24,244 to be carried forward for the current year. This policy of prudence, which the committee recommended as the most advisable in the existing circumstances, he hoped would meet with their approval.

The motion was carried unanimously.

CYPRUS CROP PROSPECTS.

The following report has been issued on Cyprus crops in May:—

Wheat.—Harvesting continues; production is estimated to be about 40 per cent. less than that of last year. Rust has appeared in several localities and the quality is poor. Price between 8s. and 9s. a bushel.

Barley.—Threshing has begun. Production is up to the average in quality, but in certain places the crop has suffered from rust and hot winds. Price: 2s. 8d. to 3s. 6d. per bushel.

Oats.—The harvest is in progress. A small crop. Price about 3s. per bushel.

Vetch, Chickling Vetch, Ochrus Vetch, Lentils, and Chick Peas.—Production poor on account of lack of rain during the last few months. The crop is estimated to be about 30 per cent. less than that of last year.

Broad Beans.—Production average.

Onions.—Great demand and high prices have combined to encourage extended planting. A heavy crop is expected.

White Cumin and Aniseed.—Crop below average in quantity owing to shortage of rain.

Potatoes.—The growth is normal, but the plants have shown a tendency to send out strong shoots instead of producing tubers. This phenomenon has been noticed before in plants grown from local seed, but to a very small extent in plants from imported seed. This year, however, it has been generally observed, and the cause is under investigation.

Carobs.—Production is estimated to be between 30 and 40 per cent. less than that of last year.

Oranges and Lemons.—Florescence has been affected by slight frost and later by hot winds. No opinion can be expressed yet on the probable production of the coming season. The price of lemons has been high.

Vines.—Vines are growing normally and the crop is estimated to be very good. Weather at present very favourable.

Cotton.—The area under this crop, for lack of adequate rains, especially under "dry" cotton, is considerably less than that of last year. It is also feared that the production of "wet" cotton will be affected by shortage of irrigation water.

Sericulture.—The production of cocoons is very good in both quantity and quality. Price of fresh cocoons ranges from 13s. 6d. to 16s. 8d. per stone.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Paper, Binding Cloth, and Stitching Wire, Etc.—The Egyptian Ministry of Finance invites tenders for the supply of paper, boards, binding cloth, stitching wire, ink, etc., required during the year 1928-29. July 21. (D.O.T.)

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons (8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

Steel Plates.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 58 steel plates for renewals of four swing bridges. August 23.

Water Filters.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply and erection of four mechanical water filters at Gira and Gezira Water Works at Giza. August 2.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 27:—

Egyptian Futures.—Sakel Contract.—Whilst values in this option show a fair appreciation on the week the undertone has throughout inclined to the heavy side. Probably the most apt description of what has taken place is to state that we have somewhat reluctantly followed in the wake of the American markets. At the present juncture outside speculative interest in Sakel is restricted by the following factors, the heavy premium at which we stand over other cottons, continued poor trade reports from the local fine spinning section, and satisfactory new crop reports. In addition to the above, some pressure has latterly been experienced owing to pre-July liquidation; this has forced the month in question to 70 points under November and is an accurate reflection on the poor character of spinners' business recently transacted. Certainly the trade outlook, as far as Lancashire is concerned, is rather depressing at the moment, and all we can say is that although spinners have little cotton on hand, rising values will probably ultimately be for the benefit of consumers both from the view of rendering the carrying of yarn stocks easier and perhaps also of stimulating activity in the overseas markets for the finished product. It rather appears to us that the majority of the "bearish" points have been made too much of by the market during the past two or three weeks; certainly, under their influence, a good proportion of the speculative "long" account has been liquidated, and in addition it would appear that certain interests have latterly started to work on the "short" side. The statistical position increases in strength from week to week, but in spite of this, the Alexandria market has given the same luke-warm reception to the strong American advices as has been experienced at this side.

Upper Contract.—The strongly advancing tendency of the American market since the commencement of the week has reacted materially on the outlook in this contract and prices have advanced 63 to 81 points since our last report. The appreciation has been in face of very moderate trade support, but there are signs that the higher levels obtaining to-day are having the effect of bringing in more trade inquiry. Should this develop, the market will probably respond materially, as, in our opinion, there is a fairly important "short" straddle interest outstanding which will probably be forced to cover, especially should American crop reports continue to give cause for alarm. Cable advices from Egypt report a good demand for the medium grades and also state that the crop continues to make satisfactory progress.

Egyptian Spot.—Both Sakel and Uppers have only been in moderate demand for the greater part of the past week, but to-day there are signs of a considerable broadening in the inquiry, and it appears probable, should the recent advance be maintained, that spinners will start to operate with greater freedom. The turnover transacted during the week has been fairly evenly balanced between Sakel and Uppers. In the former variety, cotton grading from Fair to Good Fair has been in request, but only isolated sales have been recorded in the higher qualities. In Uppers, cotton ranging in value from 30 off to 30 on contracts continues to monopolise the majority of buyers' attention, the top grades attracting very little business from spinners. The lower and inferior qualities of all varieties have been well combed out during recent weeks, and the selection in these now leaves a good deal to be desired. Pilon has been rather neglected and only very occasional transactions in the top grades of this variety have been recorded. Both Sudan and Tokar Sakels have been rather slow of sale, but the basis remains firm, and it appears probable that on any signs of a resumption of activity in the fine sections these qualities will be amongst the first to attract business.

Forwardings to the trade for the week ending the 22nd inst. were returned as 3,803 bales Egyptian and 1,865 bales Sudan. Estimated sales for the week, 1,300 bales Egyptian and 600 bales Sudan. Quotations have been advanced 55 points for Sakel, 60 points for Upper and Pilon. F.G.F. Sakel to-day, 21.05d. F.G.F. Upper to-day, 15.00d. F.G.F. Pilon to-day, 15.60d.

At a meeting of the directors of the P. and O. Banking Corporation, Ltd., it was resolved to recommend at the annual general meeting to be held at 122, Leadenhall Street, London, E.C.3, on July 6, that a dividend of 5 per cent., less tax at 3s. 6d., be paid for the twelve months ended March 31, 1928, leaving £20,494 18s. 10d. to be carried forward.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 21, state:—

Since our last report the futures market has been fairly active, but the tone is somewhat uncertain. The week's summary of price movements is as follows:—Sakellaridis: July, 41 dollars, 0.60 dollars up; November, 42.16 dollars, 0.66 dollars up; January, 41.95 dollars, 0.65 dollars up. Ashmouni: June, 27.20 dollars, 0.85 dollars up; August, 27.35 dollars, 0.65 dollars up; October, 27.78 dollars, 0.71 dollars up; December, 28.25 dollars, 0.95 dollars up.

Sakellaridis.—Prices have fluctuated rather wildly, and to-day's close shows an advance of about $\frac{3}{4}$ of a dollar from yesterday. The market is purely a speculative one and the rise is nothing more than the result of fresh purchases by small speculators, some of them being those who sold out last week. The speculative interests are divided and it is almost impossible to anticipate from one day to another which way the market will move. The commercial houses have done very little in the futures market this week.

The demand from abroad shows little change on the week. Apart from France, reports from the consuming countries are very poor reading and all agree that Sakellaridis at present prices leaves no margin of profit. On the other hand, mill stocks are apparently very small and it is on the assumption that spinners must sooner or later come in and buy that the speculators base their hopes. To what extent spinners can cut consumption may prove to be a surprise.

The Sakel/Ashmouni straddle stands to-day at 14.38 dollars, against 14.43 dollars a week ago; the July-November straddle is quoted at 1.16 dollars. The position of Sakellaridis has, in our opinion, not changed from last week; prices are slightly up, but the position remains the same.

Uppers.—This market has been rather better than that of Sakellaridis. There has been less selling this week and there has been some commercial buying. The demand from abroad for this variety has been small but regular, and spinners do not, apparently, consider present prices unreasonable. The June/October straddle stands at 0.58 dollars, against 0.72 dollars last week.

Exports show a drop this week compared with recent weeks, but they must, nevertheless, be considered good in the face of the unsatisfactory state of trade generally.

Spot: The market was closed on Tuesday last for the Muhammadan New Year's Day. Total sales amount to about 7,900 bales, of which we estimate 4,000 bales Sakellaridis, 3,500 bales Ashmouni and Zagora, 300 bales Pilon, and 100 bales other varieties.

Sakellaridis: At the beginning of the week very little interest was shown in this variety; during the last two days, however, the demand has revived and a fair business has been done in all grades up to Fully Good Fair to Good, without much change in spot differences.

Ashmouni and Zagora: Have been in very good demand during the whole week for all grades. Spot differences have stiffened up all round, sellers insisting on the same differences on August as they were previously accepting on June.

Pilon: Is in good demand, but of the better grades there is practically nothing in the market for sale.

Other Varieties: A small business has been done in Nahda and Maarad at about last week's differences.

Crop, 1928.—Crop news is about the same as last week and is satisfactory. The plants are strong and flowering and fruiting well. The leaf worm menace is practically over, but wilt has had a larger toll than usual this year. Water is plentiful, but the requirements are increasing now and isolated complaints are heard; these complaints do not, however, reflect the real position, which is that water is sufficient. Temperature has been favourable.

H.E. Ahmed Ziwar Pasha, Mr. Nicholas G. Cambas and Mr. Robert Rolo have been appointed directors of the New Egyptian Company.

The directors of the Bank of Roumania recommend a final dividend for 1927 of 3s., less tax, per share, again making 6s., less tax, for the year on the fully-paid shares of £6 each.

During the first quarter of 1928 the value of Yugoslavia's imports was 1,915 million dinars; that of the exports being 1,372.5 million dinars, leaving an adverse trade balance of 542.5 millions.

The traffic receipts of the South Indian Railway Company for the week ended June 2 amounted to Rs.13,09,447, making the total from April 1 Rs.1,13,75,309. So far the traffic returns show an increase of Rs.4,65,050 on the figures for the corresponding period of the previous year.

The Eastern Telegraph Company, Ltd., announce the payment of July 14 next of a dividend at the rate of 3½ per cent. per annum, less income tax, on the preference stock of the company for the quarter ending June 30, 1928, and a first quarterly interim dividend of 2½ per cent. on the ordinary stock, free of income tax, in respect of profits for the year ending December 31, 1928. The transfer books of the ordinary stock will be closed from July 2 to July 9, both days inclusive.

Notes of the Week.

The Political Crisis in Yugoslavia.

The political crisis which has been latent in Yugoslavia since the murders in the Skupshtina on June 20 has come to a head with the resignation of M. Voukitchevitch's Government. By delaying this step the Radical leader has done a grave disservice to his own Party and to the cause of unity in the country. If he had resigned at once and identified himself with the Opposition leaders in a joint denunciation of the tragic *dénouement* given to party quarrels, common ground for co-operation might have been discovered under the shadow of a national catastrophe. M. Voukitchevitch has given the Croats an opportunity to regard the murders as involving at most the Skupshtina—if not the Radical Party exclusively—instead of constituting a humiliation for the whole kingdom. In the view, therefore, of the Peasant-Democrat group there can be no further contact between them and this particular Parliament, nor can the Opposition co-operate with the Government even for the sole purpose of dissolving the Skupshtina and holding new elections. There can be little doubt that M. Raditch will have the support of the great mass of the non-Serb section of the Yugoslav people in his refusal to co-operate with M. Voukitchevitch and the present Parliament. This attitude will not make King Alexander's task any easier. The Radical Party remains the strongest in the Skupshtina, and, if its advice is asked, it will be opposed to any Government that has not a Radical at its head. There is also the desirability, if not the actual necessity, of rati-

fying the Nettuno Conventions without further delay. The only alternative to a new Radical Government would be a Cabinet of Affairs under a Prime Minister not attached to any Party, who would be charged with the task of carrying on the administration until new elections could be held. This was the scheme suggested by M. Raditch several months ago, but it has required a tragic experience on Yugoslavia's part to win general support for it.

The Nettuno Conventions.

The question of the ratification of the Nettuno Conventions is likely to play a large part in the settlement of the Yugoslav crisis. For the late Government, and in particular for the Foreign Minister, it had become a *sine qua non*, and the Radical majority in the Skupshtina was to be used to force ratification through Parliament. Yet Dr. Marinkovitch was careful to state explicitly that no pressure was being brought to bear upon the Yugoslav Government to ratify the Conventions. M. Voukitchevitch's Cabinet, however, remained until the end insistent that Yugoslav interests required their immediate ratification. In the circumstances it is not a matter for surprise that the Croat Opposition refuses to be impressed by the alleged urgency; it accuses the Radical Party of using the Conventions as a means for the retention of, and possibly a return to, office. In view of the fact that the Croats have withdrawn from the Skupshtina, it is obvious that the value of ratification in such circum-

stances would be problematical. Although the text of the Conventions has not been published, enough is known of their terms to suggest that they concern in their actual application Croats, especially Dalmatians, more than Serbs. The agreements are understood to cover a wide field in the economic and social relations of Italians and Yugoslavs; to embody conditions exceptionally favourable for Italians resident on the Dalmatian coast, who in certain circumstances are exempted from compulsory expropriation of real property, and to make provision for the importation of Italian labour. If these concessions were to be accorded by Yugoslavia without Croat acquiescence, the chances of their successful application in the face of local hostility would be remote. From Italy's point of view, therefore, it would seem better to postpone ratification until some attempt had been made to meet Croat susceptibilities. A difficulty in the way is the Italo-Yugoslav Pact of Friendship, which ought to have been renewed last January; an extension of the time limit to the end of July was agreed upon by both parties in the hope that the ratification of the Nettuno Conventions would remove the main obstacle to the renewal of the Pact. Italy would not seem to have much to lose by allowing Yugoslavia longer time to settle her internal differences.

M. Venizelos in Power.

The Ministerial crisis in Greece, which had been brought about by M. Venizelos's challenge of the Government's financial policy, ended, as was anticipated, in the formation of a new Ministry by M. Venizelos himself. He enters upon his fifth premiership at a time when Greece's main need, after more than a decade of internal dissension, is stable government. His name is still one to conjure with for one half of the Greek nation, and even the other half, to which he is anathema, is wearied of political strife, of the indeterminate struggle over the form of government, and it can put up no serious rival to M. Venizelos as a leader of people. The new Prime Minister starts with the great advantage of representing the rule of one mind instead of perpetuating the administrative stagnation that resulted from the attempt to reconcile various conflicting views and personal rivalries before any Cabinet decision could be recorded. It would seem, therefore, to require only a tactful gesture on M. Venizelos's part, if not to win the great majority of the people to his side, at least to secure their acquiescence in his régime, as a means of escape from the barren contests of rival political leaders. Whether he is capable of such a gesture remains to be seen. Between him and the people stand the numerous

party leaders, who find themselves dwarfed by the Colossus and will be at pains to keep him embroiled in political squabbles.

The First Tug-of-War.

The first item on the political leaders' programme for stultifying as far as possible M. Venizelos's tenure of office turns on the merits of the two electoral systems, proportional representation and the majority system with small constituencies. The former was introduced in the Republican Constitution, and, being found to be favourable to the multiplicity of political parties, is strongly established in the favour of the leaders, of both Monarchist and Republican leanings. M. Venizelos, who has always been conspicuous for the independence of his opinions, is opposed to the manifest shortcomings of proportional representation in Greece, and would have the country return at the next elections to the majority system. Parliament, however, has now been dissolved, and elections are to take place on August 19. If a change in the electoral system is to be made, it can be done only by Presidential decree. On the legality of this step the political leaders join issue at once with the Prime Minister, and are thereby saved from having to defend proportional representation in their own interests. They are able to transfer the dispute to the vantage ground that support of constitutionalism affords them. If M. Venizelos yields, he will have lost ground in the first encounter, and will probably have helped to prolong the existence of numerous parties of no political merit in the Greek Chamber. If he stands firm and insists on the majority system, his breach of a Constitution of dubious constitutionalism, will be a useful handle to other party leaders.

The Murder of General Protogueroff.

The murder in Sofia of General Alexander Protogueroff, head of the Macedonian Internal Revolutionary Organisation, removes the last of the three chiefs who in recent years have made that body a substantial thorn in the side of Europe, or at least of its south-eastern portion. Todor Alexandroff was assassinated in August, 1924; Peter Chauleff, who had seceded, as it was supposed, in response to Communist blandishments, was killed in Italy in the following December, and now on July 7 Protogueroff himself dies a violent death. It is unnecessary to attempt to follow the course of the vendetta which has successively removed the most prominent members of a blood-stained organisation. Patriots at heart, they were the victims of an environment which they tried unsuccessfully to mould to their own views. The only methods known to them, or at least that commended themselves to them, entailed resort to arms, at first open guerilla warfare and finally cowardly assassination. Whether in the end their power rested solely on intimidation or was helped by personal devotion on the part of the followers cannot be accurately gauged. Hitherto, Macedonian sufferings and Macedonian outrages have formed a vicious circle. It is conceivable that, if before other chiefs step into the position of General Protogueroff, a conscientious effort were made to remove the grievance, the record of outrages might be terminated. All Macedonians are not committed to the methods of the Internal Revolutionary Organisation; but so long as they can point to deeds of violence, torture and oppression by uniformed officials, it is not surprising that assassins can be found to avenge the wrongs of their fellow-countrymen. It is alleged, with what truth we do not know, that since February last eighty-three Macedonians have been placed on trial by the Serbian authorities, and nine death sentences passed. Revelations in the Skupshtina suggest that the fate of even Serb prisoners in Serbian prisons is enough to make potential assassins of all their relatives, and it is certain that Macedonian suspects will not be more favourably treated. A political amnesty for all Macedonians at this particular moment would raise the reputation of Serbia in Europe and might well lead to a marked improvement in

the state of Southern Serbia. If it were followed by long-overdue concessions to minorities in that province, Europe would be well on the way to hearing the last of the Macedonian movement.

Suspense in Syria.

In the interregnum between the gathering of the Constituent Assembly at Damascus and the actual promulgation of the Constitution for Syria, rumour is succeeding rumour upon the nature of that Constitution, and particularly, if Syria is to be a monarchy, upon the occupant of the Throne at Damascus. It is stated, for instance, by one of the local Arab papers that the French have been considering seriously the possibility of Faisal as Saoud's becoming King; it is asserted elsewhere, on the other hand, that they are all in favour of a Republic for their mandated territory. Prognostication is impossible amid this welter of reports. There are some Royalists who hold that a monarchy would be best for Syria but for the impossibility of obtaining a King who, being almost of necessity, a non-Syrian, would not command universal assent; and there are other Royalists who, although supporting a monarchy for a country like Iraq, are actually advocating a republic in Syria for fear that some rival of the Hashimite family might obtain the coveted honour. All that can be said at the present moment, therefore, is that the probabilities, so far as opinion in Syria has disclosed itself, are in favour of the form of government which the French Mandatory Power finds to work best in France. But what a weapon of influence the French would have in Arabia were they to have King Ibn Saoud's son as King of Syria!

Trans-Jordan's Electoral Law.

The system of communal representation which is so bitterly assailed by certain critics of the Palestine Administration is being adopted in Trans-Jordan also, where the Electoral Law has just been published. In this Arab Amirate there is to be a Christian returned in all the four electoral districts except that of Maan, while Al Balqah is to return four Muslims, Ajlun, three, and Kerak, two Muslims. The Badawin in the north and south of Trans-Jordan are also to have two members in the Legislative Assembly. This Electoral Law will no doubt permit of a good deal of centralisation, but that is more or less inevitable in so primitive and artificial a State as is Trans-Jordan. It is interesting, by the way, to note that Maan is to be represented in the Majlis at Amman, and since, not long ago, a fishing concession at Aqaba was granted to subjects of the Trans-Jordan Government, it certainly looks as if there existed no intention north of the Gulf of Aqaba to treat Maan and Aqaba as possible future parts of the Kingdom of the Hijaz. Incidentally, one is prompted to wonder what the brothers of the subjects of the Amir Abdullah across the Jordan are thinking of this grant to their less civilised relations, for Palestinian Arabs now enjoy the unique distinction of inhabiting the only Mandated State in the Middle East to lack a popular franchise and a democratic Parliament.

A Middle Eastern Conference?

The report of the North African Conference which the French held last week at Rabat is apt to make one speculate whether the British might not usefully imitate this example in the Middle East. Admittedly, the problems affecting Egypt and the Arab countries of Asia are not so closely linked together as those relating to Morocco, Algeria, and Tunis, but there is certainly a case for all British Middle Eastern commitments to be viewed comprehensively. The fact that some of the problems affect the Foreign Office and others the Colonial Office can impress none but the mind bound with red-tape; infinite gain might accrue from an attempt to break down the watertight departments into which certain Eastern countries are apt occasionally to be placed by officials. The Cairo Conference of 1921 was not a perfect conference, but its conception was brilliant. Could not it be revived, on the lines of the French North African Conference?

NEWS IN BRIEF.

An earthquake was reported early last week from Tiflis (Transcaucasia). No damage has been done.

A new direct telephone service between Belgrade and Paris was inaugurated on July 5 in the presence of the local postal and telegraph authorities.

More than 270 square miles of forest were destroyed by fire on July 4 on the continental shore of the Gulf of Eubœa between Raphina and Marathon, in Attica.

It has been stated in Sofia that M. Liaptcheff, Bulgarian Prime Minister, has submitted proposals to the Yugoslav Government for the conclusion of a pact of arbitration.

General Protogeroff, head of the Macedonian Revolutionary Committee, was shot at and killed in Sofia on July 7 by unknown persons, who succeeded in escaping. A reward was recently offered across the frontier for the death of General Protogeroff.

Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, left Angora at the end of last week for a holiday in Central Europe. During his absence Sarajoglou Shukry Bey, Minister of Finance, will be in charge of the Foreign Office.

During the discussion of the Budget of the Bulgarian Ministry of Justice in Sofia on July 5 there was a scene in the Chamber which led to the expulsion from the House of an Independent Labour deputy, M. Abram Stoyanoff, who was to be excluded from three sittings of the Chamber.

A Turk, Mehmet-Mi Mulla-Zade, has been appointed by the Pope as head of the Papal Delegation to the 17th Orientalist Congress which opens at Oxford on August 27. Dr. Mulla, who has just been created a domestic prelate, is a leading authority on Islamic history and doctrine, and is Professor at the Oriental Institute in Rome.

The Air Ministry announces that as the result of an accident at Mosul to a Bristol fighter machine of No. 6 (Army Co-operation) Squadron, Mosul, on July 5, Flying Officer Alexander Bruce Kay, the pilot of the aircraft, died from his injuries. The passenger, 357013 Leading Aircraftman Alfred Harry Bolton, was slightly injured.

The Yugoslav Cabinet met on July 4 and considered resolutions adopted the previous day by the Radical and Democratic parties in favour of the formation of a "broad-based" Cabinet, and then decided to resign. The third Voukitchevitch Ministry came to power on February 23, 1928.

When the engine of the Princess Xenia—the aeroplane in which the Duchess of Bedford recently attempted a record flight to India, but which was forced down at Bishire with engine trouble—is returned from Cairo, where it is being overhauled, Captain Barnard, the pilot, intends to fly to Karachi, whence he will attempt a record flight home.

The Reparations Commission has officially notified the Bulgarian Government that the latter is accorded a six months' moratorium, under the head of Reparation payments, in consideration of the grave damage caused to Bulgaria by the recent earthquake disasters. Accordingly, the payment of an instalment of £200,000 on account of Reparations by Bulgaria, which would normally have been due on October 1, has been postponed to April 1, 1929.

The *Morning Post* correspondent in Athens reports that the Greek Government has ordered the Public Prosecutor to inquire into the circumstances attending five fatal accidents alleged to be due to the supply of high-power current to private houses. The matter is attracting general public attention, and the Press is calling upon all citizens to protest. Insurance companies also are protesting against the great danger of fires.

Promotions in the Royal Marine Corps which are officially announced include that of Captain and Brevet Major G. H. Seath, D.S.O., to the rank of major. In the War he was commended for service in action at the Dardanelles, where he acted as naval observation officer at Helles. He was appointed D.S.O. and promoted temporary major in 1916, and during 1917 was twice mentioned in dispatches for service at Salonika. In 1922-23 he studied at the R.N. Staff College, and graduated p.s.c. (n), and in 1923-26 was on the staff of the Commander-in-Chief, Mediterranean, for duty as S.O. (1), Gibraltar.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association will be held on July 10, at 8.30 p.m., to discuss "The Problem of the Two Indias." The Rt. Hon. Sir Leslie Scott, K.C., M.P., will be the principal speaker, and Captain E. N. Bennett, J.P., will preside at the meeting, which will be held, by kind permission of Mrs. Beauchamp Tufnell, at 14, Queensberry Place, S.W.7.

POLITICS AND ECONOMICS IN PALESTINE.

No two things could more completely demonstrate the fact that, in the official British view, the acute problems of Palestine have become sufficiently blunted to permit the instalment of a system of non-political routine, than the appointment of a trained Colonial Office official, Sir Robert Chancellor, to the High Commissionership, and the contents of the last Report (for 1927) made by the British Government to the League of Nations. The High Commissioner Designate will succeed two men, Sir Herbert Samuel and Lord Plumer, who were deliberately chosen for the possession of virtues other than that of Civil Service experience and efficiency. These two last virtues were not in the first years of the great Palestine experiment so much required as the larger virtues of impartiality and inflexibility. The exercise of these two British characteristics has now had its effect; neither Arab nor Jew now hopes to sway the mind of the Administration by unconstitutional action. For the next few years, in other words, Palestine (and Trans-Jordan with it) must proceed "according to plan," and it is in recognition of this fact, which implies that the capital necessity now is a tightening up of the administrative machinery in the Holy Land rather than any new "gesture" towards old or new inhabitant, that the former Governor of Rhodesia has been appointed to the task for which he is eminently fitted. This interpretation of the appointment is confirmed by a reading of the Report for 1927 (Colonial No. 31), which contains no political news of much account, but concentrates upon the economic aspect of the country. Politics, after all, are of little importance compared with earthquakes, droughts, and unemployment, the first two of which afflicted so distressingly the Arabs, and the third the Jewish settlers. To the impartial mind, therefore, the Government is well advised to concentrate upon the economic issues of Palestine, to wait for prosperity to follow peace and security, and then for politics to follow prosperity. Of no country in the East than in Palestine is the axiom more true that economic power precedes political power, and particularly is the statement (contained in the Report) welcome that "the difficulties through which Zionist enterprise in the country is now passing will serve a useful purpose if they compel realisation that the Jewish National Home cannot be well and truly built on any other than a sound economic foundation." This is the doctrine which THE NEAR EAST AND INDIA has adopted from the beginning of the Zionist experiment in Palestine, and, although we have from time to time been reproved for it by the more impatient and idealistic Zionists, the present position, attained after some seven or eight years of intense Jewish endeavour, appears to afford ample justification of our point of view.

In these circumstances, it is regrettable to note that such publicity is being given to the treatment by the Palestine Administration of certain Jewish Communists who refused to conform with the discipline of prison life. It is precisely upon this sort of thing that the Jewish Nationalist is apt to lose his sense of values, with results that are pleasing neither to himself nor to the Arabs of Palestine with whom the Zionist immigrant has to live. Our Jerusalem Correspondent has in past letters called attention to the multiplicity of the organs of Jewish opinion in Palestine, and the ease, consequently, with which the wood is occasionally lost for the trees. Why should there be all this pother, in Jewish circles both within and outside Palestine, on behalf of a handful of men who happen to be Communists? Are these Jews who flare up passionately at the "barbarous" action of the Mandatory Power really convinced that leniency towards these Communists—a few men guilty of prison rioting—would advance the "Jewish National Home"? Or are they in ignorance of the report that certain Jewish Communists have, so to speak, offered their services to the Arab extremists, and have harmonised in the refrain, scarcely pleasing to Zionist ears, of: "Down with the Balfour Declaration! Down with the Mandate! Long live free Palestine"? *Non tali auxilio*, it would seem, will the Jewish Nationalists realise their dreams in Palestine. If there is any principle of the "right" of a Jew to stay in his "National Home," obviously it must apply to the Jew who opposes the Zionists and the Mandatory Power as well as to the Jew who supports them. But in truth the Jewish Nationalists would do well to drop this over advertised affair of the floggings and the deportations, and to concentrate upon the task of facilitating the entry into Palestine of more desirables, instead of uselessly maintaining their "right" to conserve a few undesirables within the confines of the "National Home." There is more virtue in adding one tree to the Balfour Forest than in flourishing shrill trumpets in honour of Jewish Communists whose heroism consisted of throwing stones at their warders. For the first is of benefit to the whole country, the second is an asset to no one.

Fortunately, however, the number of Zionists is increasing who realise that, while continual and larger efforts must be made to buttress up the position of the immigrants, this process can endure only on the basis of Arab-Jewish co-operation. Such men see clearly that any undue insistence upon, any over-proud claim to, special privileges in Palestine, can result only in a stiffening of the resistance of the Arabs, and also in a probable growth of aloofness on the part of the British Administration in Palestine. The Palestine Arabs are not, as the Zionists well know, a united body; there is a considerable section, which increases slowly but surely, that fain would take the advantages which the Zionists have to offer and trust the Administration to see that their own Arab interests are not neglected. It is the wisest policy of both the British and the Zionists to cultivate this section, for if to the Arab majority neither economic nor political benefit be extended, its opposition must become automatic and unanimous. Patiently, modestly, and fraternally, therefore, the Jews should now set to work in Palestine along the lines just laid down by the Survey Commission, and in two or three generations there may—who knows?—be realised in fact that Palestinian nation, consisting of awakened Arab and home-loving Jew, which has been the goal of all statesmen and officials in Palestine who acknowledged and were determined that the promises, however vague, extended to both Arab and Jew, should be realised under the aegis of Great Britain.

*The Near and Middle East

From Our Own Correspondents.

Cairo, June 30.

The Political Situation.

The dismissal of the Prime Minister, Nahas Pasha, entailing the fall of his Cabinet, the formation of a new Cabinet under Mohamed Pasha Mahmoud, and the adjournment of the Chamber for a month, took place without any untoward incidents, and the country still maintains a calm attitude. The dismissal of the Prime Minister was the logical outcome of the situation. On the one hand, the Coalition had come to an end, and the resignation of two other Ministers, which would certainly have been followed in time by at least one, if not two, of the more prominent Wafdist members of the Cabinet, had revealed, if not a split, at any rate serious discord in the higher ranks of the Wafd. On the other hand, there were the revelations made by the local Press in the Seif-ed-din case which, whether eventually he might prove to have transgressed the law and professional etiquette or not, made it extremely delicate for the Prime Minister to remain in office so long as the accusations rested upon him. In view of what for all practical purposes was an order to Nahas Pasha from the Wafd to remain in office the King used his own judgment of what was in the public interest when he decided to dismiss him and to entrust the formation of a Cabinet to other than Wafdist hands.

The adjournment of Parliament was likewise essential, since the new Cabinet could not possibly expect the Chamber forthwith to give to it the confidence which it had extended to Nahas Pasha, and because the only hope of securing a *modus vivendi* resides in having a truce to political debates for a time. The hope that the coming month, the maximum period for which the King, under the Constitution, can adjourn Parliament, will witness the desired improvement in relations between the Wafd and the other parties, which will make it possible for the present Cabinet or any other Ministry, that is not Wafdist, to carry on with the existing Parliament, is, however, very slender, and it looks to-day highly probable that Parliament will have to be dissolved when the time comes for it to reassemble.

Educational Reforms.

Two interesting laws dealing with the Government Schools have been passed by the Chamber. The one deals with the vexed question of examinations, and the other

with free education, in both cases in primary and secondary schools. Hitherto on the application of unsuccessful students the Government has invariably agreed to hold supplementary examinations in the subjects in which they have failed and it has happened in the past that a series of supplementary examinations have had to be held in one year. This procedure was fast becoming a scandal, because it served as a useful source of patronage for the political element, which made use of the students for purpose of propaganda and was able to recompense them by supplementary examinations for the loss of time which their political activities caused them to lose in their studies. The new law lays down that there shall be two regular sessions of examinations every year and that unsuccessful candidates at the first will be allowed to sit at the second, provided that they have obtained 40 per cent. of the aggregate maximum marks obtainable at the written section and that at the second attempt they take all the subjects for which they entered at the first examination, but for candidates who fail only at the oral examination the re-examination will be confined to all the subjects in that section.

In regard to free education it is laid down that no more than six per cent. of the total number of pupils in the schools shall be exempted from fees. In the past there has been no such limitation and in some cases the percentage of free pupils has risen to as much as 40 per cent. of the total number in the schools. Of this six per cent., four per cent will be pupils of parents who cannot afford the fee, one per cent. for those who after starting their studies on a paying basis find that owing to the intervention of circumstances they cannot continue to do so—in both these cases, however, the pupils must have secured 65 per cent. of the total marks at the entrance examination—and one per cent. as scholarships for pupils who obtain 75 per cent. of the total marks at the entrance examination. Free education will be given for a year, renewable subject to satisfactory progress of the pupils in question and not as at present for the whole period of study. Both these innovations are due to the initiative of the late Minister of Education, Aly Pasha Ely Shamsy, whose enlightened conduct of his administration, since he took office two years ago, has contributed enormously to the improvement of the organisation of public instruction in this country, and whose relinquishment of that post, owing to the dismissal of the Nahas Cabinet, is a real loss to the cause of education.

The Question of Communications.

Abdel Hamid Pasha Soliman, Director-General of the State Railways (now Minister of Communications), has presented an interesting note on the working of the Railways and their future. The Council of Ministers had decided that the Exchequer would satisfy itself with a five per cent. annual yield on the capital value of the Railways estimated by agreement at thirty million pounds, leaving

EGYPTIAN MINISTRY OF EDUCATION.

APPPLICATIONS are invited for Assistant Masterships in Commercial Schools to teach English and Commercial Subjects.

Candidates, who should be between 24 and 34 years of age, must have University Degrees (preferably in Honours) and should have experience of teaching. Diploma in Education is desirable; those who are to teach Commercial Subjects must have the degree of B.Com.

Initial Salary, £E450 (about £461).

Full particulars and Form of Application may be obtained from the Director, Egyptian Educational Mission, 39, Victoria Street, London, S.W.1.

EGYPTIAN MINISTRY OF EDUCATION.

APPPLICATIONS are invited for Posts of Assistant Masters to teach English in Egyptian Government Secondary Schools.

Candidates, who should be between 24 and 34 years of age, should have University Degrees (preferably in Honours) and should have experience of teaching in Secondary Schools. Diploma in Education is desirable.

Initial Salary, £E450 (about £461) for those who have a University Degree, £E420 (about £431) for those who have only a Diploma.

Full particulars and Form of Application may be obtained from the Director, Egyptian Education Offices, 39, Victoria Street, London, S.W. 1.

the balance of the annual profit to be applied to the development of the railways to meet the needs of the country. Abdel Hamid Pasha points out that in spite of the heavy renewal work in 1923-24 the Railways gave a much higher return than five per cent. and that during the last four years the cost of manipulation represented only 63 per cent. of the gross receipts, which is less than the pre-War figure and considerably less than the majority of foreign railways.

The Ministry of Finance had, however, become considerably alarmed to find that the net receipts had been decreasing, and the General Manager, while pointing out that the return was still eight and a quarter per cent. on the capital value, states that the reduction, such as there has been, has been caused not only by the reduction in the railway-tariff and the increase in the number of trains, but also by the fact that the Administration pays Customs duty on all its imports, has had considerably to increase its wages-bill, and does not receive a proper re-imbursment for the services it renders to other Departments. He expresses the view that the improvements which will have to be introduced, and the extensions which will have to be made to meet the growing needs of the country, cannot fail further to reduce the net profit, and he goes on to say that two important factors likely seriously to affect the Railways are the increase in roads and the development of river traffic.

In regard to roads he expresses the opinion that an entirely wrong policy has been followed. Instead of the communications between the Railways and the interior being improved, the Government has concentrated its attention on creating roads parallel to the Railways, with the result that instead of outlying areas being linked up with the railway system and the traffic of the latter increased by the goods thus brought in from areas which

had in the past found difficulty in getting to the markets. the Railways now suffer from the very serious competition of motor transport along the main lines.

In regard to river traffic this must also be properly regulated in order not to prejudice the Railways, and various projects are at present under consideration with a view to protecting the interests of the latter while encouraging as much as possible the use of the wonderful water communications which Egypt possesses. One of these schemes, which has now been adopted, refers to the important areas of the east bank of the river between Assiut and Nag Hamadi and on the west bank between Nag Hamadi and Asswan, which have at present no rail connexion with the north or south. The construction of lines to connect the various towns and villages situated in these areas would be out of all proportion to the possible return within the near future. It has, however, been decided to set up in these areas stations at five kilometres distance one from the other, where passengers could obtain tickets and goods could be received for all destinations. Barges would ply along the river in these areas transporting goods from one station to the other and across the river to and from the main line, while passengers would similarly be conveyed by launches to and from the opposite bank, all at the expense of the Administration. Thus direct connexion would be established with the rest of the country, while the various villages in these regions would at the same time be linked up more closely with one another. This will safeguard the Railways from the competition of water traffic, while benefiting these areas and encouraging their development—a very different policy from that which has been followed in the past where, whether the interests of a region were affected thereby or not, river and road development has been rigorously discouraged whenever there appeared to be the slightest doubt that it would compete with the Railways.

Jerusalem, June 23.

The Seventh Arab Congress.

The Seventh Arab Congress which met, conducted, and concluded its full business sessions all within a single day, Wednesday, June 20, is in itself a triumph for the local Arab leaders. The negotiations of the preceding weeks—with the Christian Arabs and "Opposition Arabs" making their own terms of representation and mode of election, as against the "Mejlissites" (namely, the Husseini adherents and followers of the small group of Muslim families who provide the members of the Muslim Supreme Council), who preferred to have a Congress made up of the more calculable element of nominees—all seemed to make it in the highest degree unlikely that an agreed basis of representation could be found for a long time to come to suit the competing claims of the three main parties among the Arab politicals. But at the last minute the organisers of the Congress compromised on generous terms—terms which no longer left the "Mejlissites" in control of the Congress and the consequent permanent executive body which was to be set up by the Congress.

The next stroke of wisdom by the Congress management was the limiting of the full gathering to a single day and the concentration of the discussion on one main item and three or four lesser grievances, about which there could be no conceivable difference of opinion in any politically-minded Arab. In principle Palestinian Arabs find themselves falling into four divisions; the *istiqlal-it-tâm* element, "complete independence," free from all mandatory supervision; a less extreme element which can endure, temporarily at least, and in diminishing quantities, the Mandatory Power, but will not suffer the British Zionist policy nor co-operate with the local Government on any such terms; a third element is prepared to co-operate on terms which will not leave the Arab representatives in a position to be outvoted in any decision taken by the constituted legislative body; while yet a fourth section is prepared to cooperate on the Government's own terms, trusting to time and British fairness to remove the present misguided policy of the British Government and the Zionist error.

With such material to make up the body of the Seventh Congress it was obviously impracticable to thrash out a detailed programme of the Arab attitude to the Mandatory Power. On the other hand, moved by an instinct that some radical change in Government policy might well be imminent during the next few months, with a new Chief Secretary and (as is confidently assumed) a new High Commissioner—it was all-essential to show a united

Arab front on the main issue, namely, that Palestine, no less than Iraq, Trans-Jordan, and Syria, was entitled to, and even more ready for, the benefit of a freely elected, wholly representative parliamentary body. All four sections of Arab politicals could be depended upon to agree on that. And they did. And before the close of the gathering they collected sixty-seven pounds from members of the Congress to send a long cable to that effect to all whose business it was to know, and take account of the Palestinian Arab mind.

There were a few other unanimously-agreed-upon resolutions—to abolish the *ushr*, to let Palestinians have all the benefits of the Dead Sea exploitation, to protest against the mass of legislation that was being ground out by the present wholly British Advisory Council, without, or against, the will of the people—and the like.

The New Arab Executive.

The immediate consequences of any impetus given to Arab claims by this Seventh Congress will turn on the work of the new "Arab Executive." This is a bulky body of forty-eight members. It is made up of 36 Muslims and 12 Christians. The Muslims' places are shared equally by "Mejlissites" and "Opposition," while of the Christians, eight are supposed to be supporters of the "Opposition" and only four of the "Mejlissites"—giving the "Opposition" a small majority in the Executive.

An "Executive" of this unwieldy Arab Executive has been set up, six in number, carefully chosen to include all opinions: President, Musa Kazim Pasha; Vice-presidents, Yakub Faraj (a Christian) and Tewfik Abdullah; together with Elias Mughannam (a Christian), Auni Bey Abdul Hadi (a supporter of the "Opposition"), and Jamal Effendi al-Husseini, as Secretaries.

Belgrade, July 5.

The Political Situation.

There is general thanksgiving in Yugoslavia that M. Stepan Raditch, whose pluck in the operating room won the admiration of all who saw it, including King Alexander himself, is now well on the road to convalescence and is able to walk a little in his room and to sit up all day. The riots in Zagreb which followed news that M. Raditch was worse and ill-based reports that he was on the point of death showed how seriously his death would have affected the situation. The Croats deny that these riots, during which three youths were killed and over sixty wounded, were the result of Communist activity, as has

been suggested in Belgrade, and accuse the police of having been unnecessarily brutal in dealing with the demonstrators. The unanimity and discipline of the Croatian masses was shown during the funeral of Pavle Raditch and Basaritchek when over 200,000 peasants and town-folk, Croats and "prechanski" Serbs, rich and poor alike, paid tribute to their fallen leaders and protested mutely against the system which made their murder possible. Despite their great emotion, the huge crowd kept perfect order and silence—a far more impressive method of protest than shouting and violence. When disorder threatened, it was enough for one of the leaders to raise his hand and order was restored. Perhaps the most significant movement in what for want of the better translation of the word "prechanski," (literally meaning "from across the Sava and Drina,") we must call the new provinces is that of the breaking down of the last barriers between the Croats and the Serbs of the district. Until quite recently they were bitterly opposed, largely as a result of M. Pribitchevitch's earlier policy, but now they are all united in their opposition to the present form of government in Belgrade, and many of the best known of them who were members of the Radical or Democrat parties have resigned in protest against the refusal of the Government to take what they considered the necessary steps to make amends for the crime committed in the Skupshtina.

The Opposition parties remain firm in their belief that the only settlement of the present crisis which will have permanent effect is the resignation of the present Government, the dissolution of Parliament, the conducting of free elections under some non-party President, and eventually the changing of the Constitution in the direction of giving far greater and more real self-government to the new provinces. They have left Belgrade and refuse even to negotiate with the members of the present Government.

The Resignation of the Government.

The Democrats under M. Davidovitch at first took the line that, while the Government cannot be held responsible for a crime committed by an irresponsible private member of the Skupshtina, yet, in order to enable political passions to calm down, it was essential for the Government to resign and for some Government able to command the support of all sections to take its place. But after the return of M. Marinkovitch they seemed to evolve rather in the direction of agreeing with the Radicals of M. Voukitchevitch's immediate entourage that an immediate resignation was not necessary, and that they must remain in office, to keep peace and order in the country, and because of the threats of danger from abroad, as reflected in reports of an Italian fleet off the Dalmatian coast and of the strengthening of the police forces on the Hungarian-Yugoslav frontier. The *Pravda* began by demanding root and branch changes in the whole system of government and ended by suggesting that resignation in the immediate present was unnecessary and unwise.

The Radicals were divided again. Those nearest to the Central Executive, which by its memorandum had shown itself for some months strongly against the present régime, which it termed "unconstitutional" and "incapable," called for the immediate resignation of the whole Cabinet and the formation of a Government of new people with new methods. M. Voukitchevitch's friends urged that there was absolutely no need for resignation, since they had still a large majority in Parliament and there was no change in their relations with other Coalition groups or with their own members. They claimed still to have the confidence of both the constitutional factors and would continue to work at the mass of urgent legislation ever growing during these continual political disorders, whether the Peasant-Democrat bloc co-operated or not.

But when, after a delay which caused still greater embitterment among the Opposition parties, the matter was finally discussed by the political clubs it was obvious that there was a considerable majority in favour of resigning,

and on Wednesday morning M. Voukitchevitch handed his Cabinet's resignation to the King, who at once accepted it.

Negotiations are now proceeding for the formation of a wide concentration Government, but the situation is full of difficulties. M. Atza Stanoyevitch, the veteran Radical leader, a contemporary of the late Nikola Pashitch, was called at once to the Court and asked to begin negotiations for the formation of a Government. But M. Raditch refused to receive him or any other member of the majority parties who had a mandate for the formation of a working Government, since his party insisted on elections. M. Stanoyevitch, therefore, refused to accept the mission offered him. M. Raditch was called to-day to the Court and, being unable to go in person, sent M. Pribitchevitch to represent him. M. Pribitchevitch was in audience for an hour and a half, and on leaving went straight to see M. Raditch, stating that it was suggested that M. Raditch should try to form a Government. It is possible that nothing definite will be done until M. Raditch is well enough to be able to carry on negotiations himself. The Opposition have expressed their desire that the mandate should be entrusted to M. Raditch to show that Belgrade realises the full significance of the effect of recent events on the new provinces. The Radicals oppose this, as they want a Radical to remain at the head of the Government.

The Nettuno Conventions.

It is now obvious that, owing to the internal situation resulting from the Skupshtina murders and the resignation of the Government, Parliament cannot ratify the Nettuno Conventions in time for the Pact of Friendship with Italy to be renewed before July 27. It is hoped that Italy, realising the difficulties of the Yugoslav Government and taking into account the desperate efforts which it has already made to get the Conventions ratified, will extend the term during which the Pact of Friendship may be renewed. M. Marinkovitch issued an official declaration, in confirmation of his statements in Bucharest, that the Yugoslav Government cannot accept responsibility for what might happen, if the Conventions are not ratified, and it is believed that the first task of any new Government will be the difficult and dangerous one of trying to solve the question of the ratification or non-ratification in a way which will offend neither Italy nor the western provinces of Yugoslavia.

Constantinople, July 4.

Drought in Asia Minor.

At a time when economic conditions throughout Turkey are anything but promising and when so much depended upon Nature's bounty in the matter of this year's cereal crop, it is disheartening to read the daily reports which have latterly been coming in from up-country stations. The Konia plateau, the most fertile of wheat-producing areas in the whole of Anatolia, has been completely deprived of rain for weeks past and, as a consequence, the crops in some districts have withered away and are completely lost. Indeed, the spectre of famine has become so threatening in certain outlying regions that truck-loads of flour are being rushed to the spot both from Smyrna and Constantinople.

The Government has voted an extraordinary credit of

£100,000 for the relief of the distressed peasantry, the Red Crescent is distributing a similar amount, mostly in food-stuffs, whilst the Anatolian Railway have offered to carry up to 100,000 liras worth of flour to the affected area free of transport charges and to reduce railway fares by 70 per cent. for all husbandmen and labourers desiring to proceed to other districts in search of work.

It is feared that this year's failure of Turkey's staple crop, especially after last season's comparatively poor yield, may have serious economic consequences, and some criticism has been levelled at the Ministry of Agriculture in the vernacular Press for not having devoted more attention to irrigation instead of allowing the success of the crops to depend entirely on the rainfall.

The scarcity of fodder, moreover, has become so acute that farmers have been disposing of good milch cows for sums in the neighbourhood of 18 shillings per head, and an agglomeration of cattle, sheep and goats is reported at Konia, where it is becoming increasingly difficult to feed them. The south-westerly portion of the plateau leading up to the spurs of the Taurus Mountains is fortunately immune, thanks to the Lake Beychehir irrigation system, which was carried out by German enterprise before the War for account of the old Unionist Government.

Law of Nationality.

There will shortly disappear the last vestiges of the old Capitulations, some of which dated back to the days of good Queen Bess and all of which received their death-blow at the Peace Conference at Lausanne. In one aspect of the question, the new legislative measures recently promulgated by the National Assembly have a grave bearing on the national status of children born in this country of foreign parents. As from January 1, 1929, all children of foreigners themselves born in this country will be considered and registered as Turkish nationals. They are to be assimilated in all respects to Turks, even in the matter of military service, but will be given an opportunity, should they so choose, of reverting to their father's foreign nationality on attaining their majority, i.e., when they reach the age of 18. Should they opt for the national status of their forbears, however, they must leave the country for good. Diplomatic and Consular officers—in fact all such as enjoy diplomatic immunity by reason of their occupation—are excluded from the operation of this law.

The whole point at issue, of course, strikes at the very root of the question of domicile and residence of foreigners in this country. So far as the bulk of the British element is concerned—a steadily diminishing element, be it observed, as matters already are—there can be little doubt that, even with the friendliest feelings for the Turks, the prospect of the abandonment of possibly century-old national status and tradition, the break with the past in such momentous matters as Public School and Varsity upbringing, the weakening influence of the very sanctity of English home-life which the change must necessarily imply, will by degrees impel Britons of the younger generation, who by reason of their occupations might have looked forward to settling down and founding a family in this country, to emigrate.

A unique feature in this recent Turkish legislation affecting nationality is the provision whereby Turkish women who marry foreign nationals shall retain their Turkish status, the implication being that the offspring of such unions, when born in Turkey, shall also be Turkish subjects.

A further recent legislative enactment of the National Assembly provides that any Turkish military, naval or air force officer henceforth marrying a foreign woman shall cease *ipso facto* to belong to the armed forces of Turkey.

The High Cost of Living.

As a sequel to almost daily leading articles in the Turkish papers complaining of the high cost of living, possibly also as a corollary to the ever-deepening inroads

which the enhanced cost of life is making into the pockets of the Municipal officials themselves, Mouhieddine Bey, Prefect of the City of Constantinople, has appointed a Commission to inquire into the whole position.

That profiteering is freely indulged in by many middle-men and by certain classes of purveyors, such as market-gardeners, poultrymen and dairymen, is notorious, but with regard to the price of such indispensable articles of daily consumption as bread and meat, one cannot help feeling that the fault lies to a great extent with the Municipal mandarins themselves. The Prefecture, for instance, holds a monopoly for slaughtering beasts of all classes, which brings in a considerable yearly revenue, the slaughter-tax being a relatively high one. Certain parts of the offal, moreover, become the property of the Prefecture. A suggestion lately put forward by Anatolian and Thracian breeders and herdsmen that home-killed meat, especially mutton and lamb, should be allowed to enter Constantinople, whereby a considerable drop in prices would automatically follow, was immediately vetoed by the Prefecture on the ground that sanitary control would be absent and that public health might be endangered.

The bread question is a more complex one. Although a price called the "Narkh," which should regulate all sales, is fixed at regular intervals by the Prefecture, it has been found of late that certain bakeries using the prescribed flour can undercut and sell below the price fixed by the Prefecture. As the bakers cannot conceivably be selling at a loss on either humanitarian or patriotic grounds, one can only conclude that there is a flaw somewhere in the system of establishing Municipal prices.

ANGLO-EGYPTIAN STUDENTS' CONFERENCE.

For the third year in succession the happy idea of collecting in joint conference a number of Egyptian and English University students during the Summer Vacation was carried out last week. This year's Conference met at Welwyn Garden City from July 3 to July 7, under the chairmanship of Mr. W. Roushdy. Lady Jardine had kindly consented to act as hostess; Mr. K. W. S. Jardine was Hon. Secretary and Mr. A. H. Samaha, Assistant Secretary and Treasurer. The Conference was opened by Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, who has taken a special interest in these gatherings and to whose generosity the students are in no small measure indebted. More than forty students, among them several Egyptian lady students, were in session at Welwyn this year. The programme included the following items:—Reports from Colleges, Addresses by Dr. Awad (Lecturer in Cairo University), Miss Asma Fahmy ("Women in Modern Egypt"), Mr. M. H. Fahmy ("The History of the Suez Canal"), Mr. C. Robertson ("The Sudan"), Prof. G. Young and Mr. Osban ("Welwyn Garden City"). A visit to the Shredded Wheat Factory, Sports, a Garden Party and a Concert were also items on the programme.

In his opening address Sesostris Sidarouss Bey emphasised the advantages of these meetings, which were inspired by the love of peace and mutual understanding. There could hardly be anything more binding than the spirit of studentship, with its happy associations of education and sport, while those who had not the privilege of working together and playing together had the bond of humanity at large to bring a clear understanding to them. There were difficulties in the way owing to differences of temperament, race and culture, but he was confident that their labours would be rewarded, as there was really no great obstacle that could not be surmounted in the way of enabling the two countries to work harmoniously towards the common goal of civilisation. Sidarouss Bey paid a tribute to the helpful and valuable assistance which the Egyptian community in England received from Mr. Robertson, who, not content with what he did in Egypt during his education work there, had been unflagging in his efforts for the success of the Conference, and from Mr. G. Young.

PERSIAN AFFAIRS.

(From a Correspondent.)

June 22.

The Royal Afghan Visit.

The King and Queen of Afghanistan left Teheran on the 16th instant after nearly two weeks' residence in the Persian capital. They proceeded by car to Meshed and thence proceeded to Herat and Kabul. The latter part of their journey may be completed in one of the three aeroplanes presented to them by Germany, which are expected daily in Teheran, one being a ten-seater and the others the usual Junkers four-passenger monoplanes, the arrival of which has been delayed owing to transit difficulties raised by the Soviet.

The Royal visit to Teheran was marked by much splendour and ceremonial. Their Majesties made themselves very popular with all classes, and the visit is generally regarded as having been successful. Two Treaties of Friendship and Co-operation were completed with Persia and the terms thereof published. The Queen took no part in public ceremonies, but was frequently seen out driving, wearing a very thin motoring veil. The King made a point of meeting all classes, moving about with the utmost freedom and achieving much personal popularity by his democratic bearing. Many incidents are related to show his democratic views and actions.

The Railway Administration Dissolved.

The Railway Administration has been dissolved and replaced by a Council of Control. Mr. Poland, the eminent Director-General of Railways, has resigned his post, and Mr. Carrol, Chief Director of Surveys, will assume his duties. Many former employees of the Government Department are being absorbed by the contracting syndicate of Messrs. Ulen and Co., the famous American engineering firm, which, with German interests co-operating, is now actively at work on survey and construction. The Majlis recently voted a sum of approximately £450,000 for expenditure as necessary, directly or by contractors, on purchases of railway material. It is considered probable that the entire construction of the line and termini at Bandar-i-Gaz and Khor Musa will shortly be added to the original contract.

It is of interest to note that, for three successive years, twenty students are to be sent annually to Europe, for practical and technical railway engineering study.

When announcing the charges to the contract system for railway construction on June 10, the Under Secretary for Works intimated that Government's expenses on railway construction amounted to £160,000 up to that date.

National Bank.

The Director of the new National Bank, Dr. Lindenblatt (German), is now at work preparing for the establishment of the National Bank.

Dr. Walder, a Swiss subject, the new Treasurer-General, has recently arrived in Teheran and taken over his duties from Major Davis (American).

Advisers.

The contracts of Dr. Bonne, mineralogist, Mr. Clapp, the American geologist, and Mr. Martin, foundry expert, are not being renewed, and their appointments will lapse.

Education.

Seven French teachers are to be engaged for the Education Department, and over 100 students are to be sent

to Europe during the current year. The Government is making every effort in this way to modernize and bring up to date its educational establishments.

Customs.

It is announced in the papers that negotiations are now in progress for a new minimum tariff with Russia. In accordance with recent agreements made with leading Powers the 1927 Tariff, modified to some extent, is now in force and apparently working satisfactorily.

Elections.

The results of elections are known for most districts, and the representatives in all cases are persons approved by Government interests, who will assure a strong majority for the execution of current projects. The results of Teheran City elections are not yet decided, but it appears that one or two People's Representatives are likely to lose their places in the next Majlis.

Archæology.

The announcement that Professor Herzfeld, the Government archæologist, has recently excavated a new statue of Cyrus, and disclosed the existence of ruins comparable in many respects with those of Persepolis, has created very considerable interest. Professor Herzfeld has been invited to visit Teheran to discuss ways and means of further excavation.

Motor Traffic.

The expansion of motor traffic continues by leaps and bounds, thanks to the great improvements carried out by the Roads Department. With the improvement of roads in and around Teheran there is a noticeable increase in motor cycles, side cars and small cars there. All principal roads in and around the city have been doubled in width and many new side roads made.

Apart from steady progress on the Khoramabad Road, a new road is being constructed along the shores of the Caspian, which will link Resht and Pahlavi (Enzeli) to Barfarush and Bandar-i-Gaz, and form a link between the two main routes from the Caspian to Teheran. The road will traverse rich forest and rice country, and be of much value to the tea and silk industries, both of which are rapidly expanding. Lahigan tea is of excellent quality and meets with a ready sale, though, locally, Indian teas are preferred as more economical.

THE CENTRAL ASIAN SOCIETY.

Annual Dinner.

The Central Asian Society held its annual dinner at the Hotel Cecil on July 5. Lord Peel presided. It had been announced that Sir John Simon and Sir Harcourt Butler would be the chief guests on this occasion, and it was a cause of disappointment to many to learn at the dinner that Sir John had accepted the invitation on the strict understanding that he would not be called upon to speak.

The toast of the Central Asian Society was proposed by Sir Ronald Storrs, Governor of Cyprus, who explained that, according to his "terms of reference," he was under obligation to incorporate in his speech remarks on Cyprus and Palestine. Having discharged this duty, he referred to the work of the Society, and pointed out that its interests might be said to be comprised within that great triangle based on Constantinople and Cairo, with its apex at Calcutta, within which had been produced the four great religions of the world. It was of paramount importance to the British Empire and, therefore, to the peace of the world also, that we should have at our disposal all the available knowledge dealing with that triangle, and this the Central Asian Society set itself to obtain.

Lord Peel, in responding to the toast, spoke of the part that the Society played in collating and disseminating

knowledge regarding the whole of Asia. In that Society the ynever talk of the unchanging East, rather were they impressed by the kaleidiscopic rapidity of the changes that are now going on in those countries. The East was far more critical of the West than it was thirty or forty years ago, and they of the West must view Eastern problems with a tolerance born of full knowledge.

The toast of "The Guests" was proposed by Field-Marshal Lord Allenby, who pointed out that the Chairman's remarks about Sir John Simon and Sir Harcourt Butler left him little to say about two of the principal guests. They had also with them the Persian Minister, Jaafar Pasha al Askari and Sir Ronald Storrs. After reference to the representatives of Persia and Iraq, Lord Allenby paid a warm tribute to the services Sir Ronald Storrs had rendered as Military Governor of Jerusalem in the early days of the Occupation, when the difficulties of the administration were probably greater than anyone apart from himself and Sir Ronald Storrs had realised.

Replying on behalf of the guests, Sir Harcourt Butler said that the silence of Sir John Simon reminded him of animal fights in India, where occasionally the more formidable beasts refused to perform their part. The present occasion recalled one in particular where none of the animals would fight. In despair, the Prince, his host, ordered all to be driven into the arena—tiger, leopard, cheetah, wolf, donkey, pig, and so on, all together—but the only one that showed fight was the donkey, who used his heels to such good effect that all others were cowed and slunk for cover to the sides. So he replied on behalf of the guests. He was in no way a pessimist in regard to those parts of Asia with which he was acquainted, and he was confident that in the great task which was before Sir John Simon and his colleagues they would be able in the end to work out some solution which would add to the happiness of the great Continent. While there were many difficulties ahead in India, there were none which in time would not be solved with the help of the Indians themselves. There were many reassuring signs for those who looked for them. There was undoubtedly a growing number of Indian people who were beginning to appreciate the blessings that British rule had conferred on India. He had no doubt whatever that there was a far wider and more reasoned appreciation of the advantages of British rule than there had been at any time during the last forty years. A great deal was heard from time to time on the commercial exploitation of India. One reassuring sign in this respect was the extent to which Indians were now investing in concerns which depended on the maintenance of British rule. In all the troubles of recent years—which he maintained were not greater than those in certain other countries—there had been no attempt on the part of those who had been our strongest critics to break away from the West and go back to the East.

Among those present were:—

The Persian Minister, Jaafar Pasha al Askari, Lord and Lady Allenby, Lord and Lady Manners, Viscountess Mountgarret, Lord Lamington, Sir John and Lady Simon, Sir Montague Barlow, Sir George and Lady Barnes, Sir Hugh and Lady Barnes, General Sir George and Lady Barrow, Maharaja of Burdwan, Sir Henry and Lady Bax-Ironside, Sir Charles and Lady Bayley, Major-General Sir William and Lady Beynon, Sir E. and Lady Bonham-Carter, General the Hon. C. G. and Mrs. Bruce, Sir Maurice de Bunsen, Lady Cable, Sir Edward and Lady Chamier, Sir Gilbert Clayton, Sir Percy and Lady Cox, Lt.-Colonel F. and Mrs. Cunliffe-Owen, General Sir Ralph Egerton, Sir Edward and Lady Every, Sir Walter and Lady Fletcher, Sir George Stuart and Lady Forbes, Sir Stuart Fraser, Lt.-Colonel F. E. Fremantle, M.P., General Sir Webb and Lady Gillman, Dame Alice Godman, Lady Gowers, Admiral V. H. Haggard, Colonel Sir Wolseley Haig, Air Vice-Marshal Sir John and Lady Higgins, Sir Arthur and Lady Hirtzel, Sir Lionel and Lady Jacob, Lt.-General Sir George and Lady Kirkpatrick, Major-General Sir Neill and Lady Malcolm, General Sir Charles Melliss, Sir Samuel and Lady O'Donnell, Sir Michael and Lady O'Dwyer, Sir E. Penton, Hon. and Mrs. E. C. Pery, Lady Robson, Sir Denison and Lady Ross, Lt.-General Sir Thomas and Lady Scott, Master of Sempill, Sir Malcolm and Lady Seton, Sir Ronald and Lady Storrs, Mrs. F. E. Storrs, Brigadier-General Sir Percy and Lady Sykes, Lady Trotter, Mrs. Alec Tweedie, Sir Arnold and Lady Wilson, Mr. and Mrs. C. L. Woolley.

THE BALFOUR FOREST.

The site of the Balfour Forest, which is to be planted in Palestine to commemorate Lord Balfour's identification, as spokesman of the British Government, with the creation of the Jewish National Home, lies on the high road from Haifa to Nazareth. Five thousand trees have already been planted, and it is proposed to plant others at the rate of fifty thousand a year, until the reserved area of two hundred acres has been covered with three thousand trees, which are to be mostly Aleppo pine trees. The dinner given at the Guildhall on July 3 by the Balfour Forest Committee served the double object of a tribute from the Anglo-Jewish community to the Earl of Balfour and of a means of raising the necessary funds for the planting of the first fifty thousand trees. Both purposes were well served. The great Hall was filled for the first time in its history with a gathering almost exclusively Jewish—the guests numbering over 650—and subscriptions given or announced at the dinner amounted to nearly £16,000. Major H. L. Nathan, Chairman of the Balfour Forest Committee, presided, and among those present were:—

Lord Birkenhead, Lord Reading, Lord and Lady Melchett, Lord and Lady Erleigh, Lord Rothschild, the Lord Mayor and Lady Batho, the Very Rev. Dr. Hertz (Chief Rabbi), Sir John and Lady Shuckburgh, Lt.-Col. Sir Stewart and Lady Symes, Sir Meyer and Lady Spielman, Mr. James de Rothschild, Sir Frederick Keeble, Sir Frederick and Lady Nathan, Sir Edward Stern, Sir Israel and Lady Gallancz, Sir Philip Magnus, Lady Samuel, Lady Fitzgerald, Mrs. H. L. Nathan, Mr. N. Sokolow, Hon. Mrs. Clive Behrens, Hon. Henry and Mrs. Mond, Mr. and Mrs. Robert Mond, Mrs. Philip Snowden, Mrs. F. S. Franklin, Mr. and Mrs. Albert Levy, Alderman L. Jacobs, Mr. Sheriff Davenport, Mr. Sheriff and Mrs. Green, and Mr. D. D. Collins.

The following letter from Lord Balfour was read at the Dinner:—

I am profoundly touched by the action of the Anglo-Jewish community in bringing into existence a living and enduring symbol of their participation in the regeneration and development of Palestine.

I like to think of the Balfour Forest not merely as evidence of good will to myself personally, but as a token of the loyal co-operation between Anglo-Jewry and the British people in the fulfilment of a great enterprise.

Lord Melchett proposed the toast of His Majesty's Government. It was due to a British Government, he said, that it had been possible for them to meet in support of the Balfour Forest, and it was to the British Government as the Mandatory Power that they had to look for the carrying out of the Treaty, and on whom they relied to make a success of the task of upbuilding Palestine. As one of those privileged to plant the first trees in the Balfour Forest, he could tell them that where there were once malarial swamps there now stood smiling homesteads. Much remained to be done both by the Jews and by the Government. The Joint Palestine Survey Commission, who had recently completed their work, drew up a document in which they had laid down their views as to the programme which had to be carried out in order to make a success of the National Home. The co-operation of all Jews in the stupendous task of the upbuilding of Palestine was invited. It was hoped that the Mandatory would continue its help, especially by extending to Palestine the benefit of Imperial Preference.

Replying to the toast, Lord Birkenhead paid a tribute to Lord Balfour who, in his judgment, was the most

eminent figure who still survived from a glorious past. With Disraeli and the late Lord Salisbury he attended the Berlin Congress, and now, in the evening of an honourable and distinguished life, was an influential member of the Cabinet. The Zionist experiment was as novel as it was difficult. Its complete success, although he shared Lord Melchett's views as to its prospects, was not yet completely determined. Many racial problems still existed in Palestine which required for their complete solution all the statecraft which the Zionists possessed. The population of Palestine was not homogeneous; there were people there who founded their claims to generous recognition and fair treatment upon a long history, and the Zionists' ability to adapt themselves to the just appreciation and treatment of those with whom their future lives must be lived would be a measure of their statecraft.

The toast of "The Balfour Forest" was proposed by Mrs. Snowden, who said that the enterprise was a very big one, but for immediate purposes a sum of £15,000 was required to enable some fifty thousand trees to be planted. In an eloquent speech, Lord Reading supported the appeal, and urged the gathering to provide much more than the sum mentioned by Mrs. Snowden. Mr. James de Rothschild proposed the health of the Lord Mayor and Corporation; he was supported by Dr. Hertz, Chief Rabbi, and Sir Charles Batho responded. Mr. Henry Mond proposed the health of Major H. L. Nathan, who in his reply, announced that, inclusive of the sums previously promised, among which were £5,000 from Mr. Bernhard Baron, and £1,050 each from Lord Melchett and Dr. Henry Dreyfus, the amount raised as the result of the appeal that evening was £15,590.

Book Reviews

IMHOTEP.

"IMHOTEP, THE VIZIER AND PHYSICIAN OF KING ZOSER." By J. B. Hurry, M.D. Second and Revised Edition. (Oxford University Press. 10s. 6d.)

Nearly two years ago we had the pleasure of reviewing the first edition of Dr Hurry's pious work on his predecessor by some thirty-two centuries in the healing art. We are glad to find that he has not ceased working at his deeply interesting study. His second edition is, in every way, fuller and more interesting than the first, is, indeed, a monumental monograph worthy of his professional zeal. Not only is the matter, specially as regards early Egyptian medical practice, much more complete, but additions

have also been made to the excellent illustrations. Some pages as well have, of course, had to be given to the recent finds at the great Step Pyramid. It is a pity that Dr. Hurry should have left standing the assertion that "it never had the continuous casing of stone which marks the true pyramid," now that he has to add, a few pages later, that "the latest discoveries have revealed that the Step Pyramid was covered with a coating of fine limestone." This slip, however, can easily be corrected in the third edition, to which we look forward. C. S. W.

A GIRL-BOY AMONG THE SERBS.

"CLAUDIA DECIDES." By Prudence Cadey. (London: Constable 7s. 6d. net.)

If incident were all that was necessary for the successful novel, this story of a young Englishwoman who did hospital work in the War, first in Serbia and then at Salonika, and who, nevertheless, gained little knowledge of the "world," must win considerable renown. For without question, Miss Cadey makes her scenes live; her description of the work of the Women's Hospital Unit in Serbia, as of various types thrown up by the War, Serbian, Austrian, and German, is both acute and veracious. It is rather in her characterisation, and in her philosophical sense of the probabilities that she fails. The yarns in fact one of incident piled on incident; there is no development in the strict sense of the word, no real continuity.

Claudia was an independent young female of the pre-War generation, whose adoration of parental and scholastic authority was not profound. Running away from home, she encountered the War in a mood of ready adventure. Fate took her as a motor driver in the Women's Hospital Unit in Serbia. The hospital was overrun in the German advance. Having helped several Serbs to escape from the Austrians and Germans—largely owing to her dressing and acting as, and being mistaken for, a young man—she herself escaped with a young Serb officer whose mode of veneration of the innocent "girl-boy" was so misconstrued by her that she led the all-too-willing Serb into Orthodox matrimony. But married, she hated herself, and fled across the Macedonian hills far, far away from her husband. To cut a fairly long and not too convincing story short, she arrived back in England after the Armistice still a mere "slip of a thing" who really needed looking after by a strong and faithful male. He, alas! was some years in materialising, and the intervening period was one of considerable, though not so inevitable inconvenience, for the strangely indecisive Claudia. In the end, however, the young subaltern friend of her killed brother turns up, and almost (though not quite, Miss Cadey being resolved on improbable, yet interesting incident) for ever afterwards the young heroine finds rest in conforming with the decisions of someone else. Altogether a not unattractive novel, with the pages on Serbia freshly and shrewdly written.

THE WEEK AT HOME

London, Tuesday Morning.

Labour's Election Programme.

The Labour Party has just published its draft programme, and it is seen to have cast its net very wide. The Socialism which is adumbrated is strictly of the constitutional, or evolutionary variety; there is nothing of the class-war in these proposals, and it is easy to see how their eminently "fair" nature was gall to the more ardent spirits of the I.L.P., while to followers of Marx they must seem so much pious nonsense. What the Labour Party lays down is a policy of peaceful transition, "without disorder or confusion, with the consent of the majority of the electors and by the use of the ordinary machinery of democratic government."

In many places this programme approaches the Liberal attitude, and there is some little enthusiasm in Liberal quarters at the prospect of a *rapprochement* with Labour in order to form a "progressive" Administration. Among the Labour Party, however, a similar desire to link up with the Liberals is not so evident.

Lord Byng's Appointment.

The reported resignation of Sir William Horwood from the Chief Commissionership of the Metropolitan Police and the appointment of Lord Byng to succeed him have fluttered considerably the minds of the politically-minded. The Labour Party, indeed, is furious at the appointment of a General, a man outside the Police Force, to succeed a man whose resignation occurs in circumstances in which the whole administration of the Police Force is being questioned. And it cannot be said that the Government has very happily managed its proclamation of the change.

That, however, is by no means saying that the new appointment is a bad appointment. There is ample precedent and there is ample justification for going to the Army for the supreme controller of the Police, and no one who knows the record of Lord Byng can fail to be struck by the fact that he is a man of remarkable quality.

The Police's Gum.

The Home Secretary, whose life seems to be spent in the fashioning of inhibitions, has now decreed that the habit of chewing gum among the Police cease. A short debate in the House upon the edict proved that the chewing habit has its defenders—not that such a trifle as this would make Sir William Joynson-Hicks swerve a hairbreadth from what he knew to be the path of duty.

The habit of chewing gum seems to me wholly reprehensible: for it is American in origin. I often wonder how much those dreary men know who drearily drag along our London streets vehicles bearing the ubiquitous Spearmint of the degeneration which this habit has introduced into the manners of the middle-classes. With the chewing of tobacco, a man's habit when all was said and done, this effeminate chewing of gum has nothing in common: it is the application of the second-rate and compromising mind to the first-rate problem of long physical endurance.

The "Mond" Conference.

The "Mond" conference between employers and Trade Unionists has published its reports, and it is for those who can to see what has been achieved. To the outsider there appears to be considerable cry but very little wool. True, agreement has been reached on a few matters—currency, victimisation, Trade Union recognition, nationalisation, and the setting up of a National Industrial Council.

But all this is, so to speak, tentative, binding on neither all the employers nor all the employed. It may be that Capitalism will be saved as a social system through the instrumentality of some such machinery as will be threshed out between the various members of the "Mond" conference, but there still remain many sceptics. Yet it is undoubtedly an achievement to have thus fostered the growth of good will but a year or two after the General Strike.

The Literary Weeklies.

The suspended publication of the *Outlook*, the weekly with which many permanent names in Literature are linked, is melancholy news indeed, particularly to those who are seriously concerned at the decline of free, independent criticism in England. There is, of course, still abundant vocal criticism left in the long-suffering souls of Englishmen, but it finds its way into print with increasing difficulty. The way of those journals which refuse to pander to proprietary fancies or to the dictates of advertisers is very hard.

Certainly the *Outlook*, which in later years was marked by the whimsical yet realistic individuality of Mr. Wyatt Tilby, its Editor, will be missed. Let us hope that, despite its impartial agnosticism, it will suffer timely resurrection.

The Dethronement of "Queen's."

This is an age when kings are broken and the populace exults on proletarian stilts. It is no surprise, then, to learn that Queen's Club is to be converted wholly to the use of Lawn Tennis players, that the famous cinder track is to be abolished, and that, therefore, the University sports in all probability will be seen there no more. Of course it was bound to come; one felt it when the Rugger and Soccer matches were moved to Twickenham and Stamford Bridge. For we live in an age of progress, when sport is become primarily a game worth the watching, but too dangerous to be worth the playing.

But what a sigh there will be over Queen's! Some think of Brooks' high jump there in the 'seventies, others of the quarter-miles of Jordan and Fitzherbert in the 'nineties, myself of Ashington and MacMillan and Sproule in the years before the War. . . . Ah, well! as we all, sooner or later, come to say.

London's Attractions.

London really could pride itself on the attractions which it held out last week—Wimbledon, Henley, Hurlingham, the A.A.A. Championships at Stamford Bridge, and cheap opera at Covent Garden. Is there a city in the world which could equal it?

At Wimbledon the main English consolations were in the fact that the ladies' doubles final was a wholly English affair, and that Austin got so near to the eventual and worthy winner, Lacoste. The passing out of Tilden, a player of whose renown and genius the world may be talking years hence, was to many people a surprise. To Americans it must have been something worse than that.

PERSONAL AND GENERAL

TO-DAY

July 12, 1928 (New Style).

June 29, 1928 (Old Style).

Muharram 23, 1347 A.H., of the Muslim Calendar.

Tammuz 24, 5689, of the Jewish Calendar.

The Prince of Wales received the Maharaja of Jammu and Kashmir at St. James's Palace on July 3.

Sir Grimwood and Lady Mears arrived at the Hotel Belgravia, Grosvenor Gardens, on July 3.

The Maharanee of Kapurthala arrived at Claridge's Hotel last week from Paris.

The Raja and Ranee of Jasdan, Kathiawar, have arrived in London and are staying at the Royal Palace Hotel.

Prince and Princess Nicholas of Greece visited their Majesties at Buckingham Palace on July 3.

Princess Andrew of Greece, with Princess Cecile of Greece, visited their Majesties at Buckingham Palace on July 8.

Princess Aspasia of Greece honoured Lady Demetriadi with her presence at a luncheon party at Claridge's Hotel on July 3.

The Maharaja of Kashmir and the Nawab of Palanpur were among the guests at a luncheon given by Earl and Countess Winterton at Clardige's Hotel on July 5.

Viscount Inchcape, who returned from Paris on July 2, left London for Glenapp the following day, to be with Viscountess Inchcape, who is still far from well.

General Sir Philip and Lady Chetwode will leave England early in October for India, where he will take up his new duties as Chief of the Staff.

Sir Ahmed Hassanein Bey arrived in London at the end of last month and is staying at 38, St. James's Place. He hopes to remain in England for about six weeks.

The Maharaja of Karpurthala and the Nawab of Palanpur were present at a luncheon given by the Earl and Countess of Birkenhead on July 6 at 32, Grosvenor Gardens.

Sir Maneckji and Lady Dadabhoi are this afternoon giving a garden party in connexion with the British Indian Union, from three till six p.m., at Kingsnympton Hall, Kingston Hall.

The ex-King of the Hellenes, attended by Colonel D. Levidis, honoured Dr. and Mme. Cawadias with his presence at dinner on July 2 at 52, Wimpole Street. Many prominent members of the Greek colony were present.

Air Vice-Marshal Sir Robert Brooke-Popham has been selected to succeed Air Vice-Marshal Sir Edward L. Ellington as Air Officer Commanding the Iraq Command towards the middle of November next, on completion by Sir Edward Ellington of two years' service there. Sir Robert Brooke-Popham became Director of Research at the Air Ministry after the War, and in 1921 was appointed Commandant of the then newly-constituted Royal Air Force Staff College. He became Air Officer Commanding, Fighting Area, Air Defence of Great Britain, in April, 1926.

It is announced by the Colonial Office that the King has approved the appointment of Sir John Robert Chancellor, G.C.M.G., G.C.V.O., D.S.O., to be His Majesty's High Commissioner and Commander-in-Chief for Palestine and High Commissioner for Trans-Jordan, in the place of

Field-Marshal Lord Plumer, G.C.B., G.C.M.G., G.C.V.O., G.B.E., whose tenure of these offices will shortly end. Sir John Chancellor was the first Governor of Southern Rhodesia, being appointed in 1923, when that Colony was granted self-government. He left Rhodesia last month. Born in 1870, Sir John Chancellor joined the Royal Engineers in 1890 and saw active service in the Sudan and on the Indian frontier, gaining the D.S.O. After service at War Office he was appointed Governor of Mauritius in 1911, and was transferred to Trinidad in 1916.

NEW GREEK CABINET.

The new Cabinet was sworn in on July 4. It consists as follows:—
M. Venizelos. Premier (without portfolio).
M. Karapanos. Foreign Affairs.
M. Zavitsianos. Interior.
M. Maris. Finance.
M. Sophoulis. War.
M. Argyropoulos. The Navy.
M. Gondikas. Public Instruction.
M. Christomanos. Communications.
M. Vouloumis. National Economy.
M. Petrides. Justice.
M. Emmanouilides. Public Assistance.
M. Kannavos. Agriculture.
M. Papadatos. Sub-Minister for the Exchange of Populations.

Where to stay in the East

CYPRUS.

SAVOY HOTEL : Port of Famagusta.	PALACE HOTEL : Inland City of Nicosia.
-------------------------------------	---

OLYMPUS HOTEL : Port of Limassol.

(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by :

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE EGYPTIAN HOTELS Ltd.

General Management: Sheppard's Hotel, Cairo.
Telegr. add.: "Shepheards Cairo."

CAIRO.

SHEPHEARD'S—World-renowned.

The CONTINENTAL-SAVOY—facing the Royal Opera House and Ezbekieh Gardens.

The SEMIRAMIS—overlooking the Nile. **The fashionable Hotel MENA-HOUSE**—an ideal spot for repose at the foot of the Great Pyramid. All sports.

HELOUAN GRAND HOTEL—Health resort. Sulphur Baths and Thermal Establishment.

THE UPPER EGYPT HOTELS Co.

General Management: Winter Palace, Luxor.

LUXOR: The centre of the recent discoveries.

The LUXOR WINTER PALACE—The most up-to-date; beautifully situated.

The LUXOR HOTEL—Entirely re-built with all modern requisites **ASSOUAN**: Ideal Winter Climate. **The place for a rest cure.**

The CATARACT HOTEL—On the banks of the Nile.

The GRAND HOTEL—Entirely renovated.
Golf, Tennis and Excursions

BARDOLI.

Recent developments in the Bardoli dispute serve only to confirm the view taken from the outset of the controversy in these columns that the increase in the land assessment has absolutely nothing to do with the latest example of Satyagraha. The real issue at stake, it cannot be too often or too clearly emphasised, is not that of the financial ability of the people of Bardoli to pay an enhanced assessment; it is the attempted revival of civil disobedience, with the support, this time, of an organised Communist movement. Not many years ago the same taluka in the Surat district was singled out by Mr. Gandhi for special training in the art of civil disobedience, and was widely advertised as the place which was to set an example to the rest of India in the forthcoming campaign. Bardoli was represented as being fully prepared for its responsible task; but on the eve of the demonstration certain events occurred in other parts of India, which had not had the advantage of the same intensive training, which convinced Mr. Gandhi that civil disobedience was, in face of the conditions so blatantly revealed, "a Himalayan blunder," with the result that the whole project was abandoned.

The history of the means by which it has been sought to revive a political experiment of which the author himself has shown the folly may be briefly narrated. According to the land revenue code of the Bombay Presidency, the land revenue is assessed every thirty years. The occupants of agricultural land in Bardoli Taluka and Valod Mahal in the Surat district—one of the wealthiest in the Presidency—combined in February last, at the instigation and with the assistance of outsiders, to refuse to pay the revised assessment, the last revision being made in 1896-97. The Settlement officer had originally proposed an increase of 30 per cent. The Land Settlement Commissioner's recommendations reduced the ratio to 29 per cent. After the most careful inquiry and the fullest consideration of all the objections raised by both the cultivators and certain members of the Legislative Council, the Bombay Government fixed the ratio at 20 per cent. in excess of those paid during the thirty years' currency of the previous settlement. Until the middle of April the Revenue officers confined their action to notices of demand and attempts at distraint. The latter were frustrated by organised evasion, the locking up of houses and threats to the village Patels and Vethyas of boycott and excommunication. The Government then reluctantly resorted to the forfeiture of land and organised attachment of buffaloes and movable property. Twenty-five Pathans were obtained to assist

the Manlatda and Mahalkaris in the work of attachment and the care of the animals attached. Attempts have been made to represent the behaviour of these foreign mercenaries, who have worked under the strict superintendence of Government officials, in the worst possible light, but the allegations have not been substantiated, and they have since been displaced. The non-agricultural defaulters were served with notices of forfeiture, accompanied by a special warning that their lands would be entered as Government unoccupied waste on the expiry of the period of such notice and disposed of to persons applying for the occupancy as opportunity occurred. A very small area of land belonging to agriculturists with large holdings has been similarly dealt with.

The non-co-operation leaders have declared that Government would be afraid to forfeit any land, and that, if they did, no one would dare to come forward to take up the occupancy. The large number of applicants, many of them residents of the Surat district, forthcoming shows how erroneous was this belief and incidentally disproves the suggestion that the enhanced assessments are prohibitive. It has further been suggested that none of the land revenue would be paid. In point of fact, we understand that payments received from occupants of all classes and castes, under the seal of secrecy, total more than one lakh of rupees, or nearly one-fifth of the aggregate receipts from the Taluka and Mahal. And here it may be noted that in the neighbouring Taluka of Chorasi, where the revised rates are higher than in Bardoli and have also been introduced this year, over nine-tenths of the land revenue, the normal collection, have been paid up.

It has been suggested that the Bombay Government has not until recently realised the gravity of the situation, and that in refusing to give way to popular clamour by "a little gesture of solicitude," it is trying to maintain its prestige. Nobody who has seen the correspondence which has passed between the Governor and a member of the Legislative Council who pressed for an independent inquiry can for a moment entertain such a view. It is not a case of prestige but of fundamental principle; not merely the right but the duty of the Administration to uphold its authority against those who claim that they can with impunity defy it. "No Government can concede the right of private individuals to usurp the functions of the Government, and no Government would be worth the name of Government which allowed such a thing to happen." Sir Leslie Wilson, whose last few months in office bid fair to prove the most difficult of the whole five years, has, in one sentence, made clear alike the issue and its import.

CURRENT TOPICS.

The Late Sir David Yule.

By the death of Sir David Yule India has lost a merchant and an industrialist of the very highest ability. Sir David was connected with the trade of Calcutta for upwards of fifty years, having joined the firm of Andrew Yule and Co. as far back as 1875. His uncle, Mr. George Yule, was at that time the head of the firm, and was a well-known and popular figure in mercantile circles. Among his various activities he was President of the Bengal Chamber of Commerce for nearly two years—1878 to 1880. He was also a keen sympathiser with the Indian political movement which began to take shape during the Viceroyalty of Lord Ripon, and which crystallised into the Indian National Congress in the time of the next Viceroy, Lord Dufferin. Mr. George Yule was the President of the Congress which was held at Allahabad in the later 'eighties; and he gave a presidential address which was afterwards described by Sir William Wedderburn as having been animated "by a spirit of wise discretion and convincing common sense."

Sir David Yule, unlike his uncle, was not a politician, although he was always understood to be sympathetic to Indian political aspirations. He was first and last a business man. In his early days he took some part in the work of the Bengal Chamber of Commerce, but not for long; and for forty years or so he had nothing to do with that institution except as an ordinary member. His life work was the building up of the commercial and industrial house of Andrew Yule and Co., with the active direction of which he was for so long associated. He was one of the pioneers of the great jute manufacturing industry on the Hughli; and the mills controlled by his firm are now, and have always been, conspicuously successful. Together they form one of the largest groups of mills on the river, and they owe much of their success to Sir David's great ability. In the development of the Bengal coalfields he was also prominent; and by the acquisition, some twenty years ago, of a controlling interest in the Bengal Coal Company—the largest of the colliery companies—he took the leading place in the industry. While he was Chairman of the company his addresses at the half-yearly meetings were read with great interest throughout India, so keenly were his views on commercial and financial problems sought after by the public. The banking business which was conducted a long time ago by Messrs. Andrew Yule and Co. was launched by him as a separate local bank under the name of the Bank of Calcutta; and after years of extraordinary and uninterrupted prosperity it was merged in the Mercantile Bank of India, of which he became a director. It is also not without interest to note that the recent purchase of a morning contemporary was not the first of Sir David's ventures into newspaper ownership. He was associated years ago with a Calcutta newspaper which, curiously enough, was styled the *Indian Daily News*, and which was in its day a well-known and recognised organ of European opinion.

The attention which Sir David Yule gave to his business was extraordinarily close. No detail was too insignificant to be beneath his notice; and nothing eluded his vigilant eye. He was a tireless worker, attending his office in even the hottest weather for many hours daily, beginning at an earlier and ending at a later hour than most Calcutta merchants. It was by this extraordinary concentration of his undoubtedly great powers on the affairs of his firm that he amassed his colossal fortune, and made the business into one of the largest and best-organised in the East. As has been mentioned more than once since his death, he was not, in the ordinary sense, well known in Calcutta. For although he lived there for a great many years, comparatively few of the residents were personally acquainted with him, apart from those whose business concerns took them to his office. Outside the office he led a secluded life, but in commercial circles he was a great power, and Clive Street was always keenly anxious to

know his views when any important question was to the fore.

A Happy Ending?

The absence of an official statement by the companies concerned notwithstanding, recent reports of the settlement of the destructive oil rate war in India, appear to have been substantially correct. According to the latest advices, the basis of what is understood to be an amicable settlement is that, while the Standard Oil Company of New York reserves the right to continue its purchases of Russian oil under its contract with the Soviet Government, it agrees to recognise the claim, maintained by the Royal Dutch Shell group, of the right of the former owners of the oil properties in Russia to compensation. In this connection, it will be recalled that as far back as February last it was reported that the Standard Oil Company had agreed to earmark annually a part of the proceeds from the sale of the Russian products as an indemnity fund for the benefit of the dispossessed owners of the oil properties seized by the U.S.S.R. The difficulties in the way of a solution on such lines were obviously formidable, and little surprise will be expressed at the more general terms in which the present assurance is phrased. In any case, the practical consequences of the welcome, if tardy, recognition of the rights of the dispossessed proprietors are likely to be the same in existing circumstances.

Whether there is any connection between the reported settlement and the announcement a few days previously that the Indian Tariff Board had presented its report on the question of whether and to what extent the indigenous oil interests required protection is not revealed. Certainly the news of the settlement will nowhere be received with greater relief than by the authorities at Simla, to whom the Board's report, whatever its contents, must have been a source of serious embarrassment. The case put forward by the Indian industry has been received with mixed feelings in India, where the price fixing policy of the companies has wholly failed to conciliate public opinion, and the likelihood of the Legislature agreeing to any increase in the cost of either petrol or kerosene was very remote. All the parties concerned are therefore to be congratulated on the termination of a costly struggle, and the American combine in particular for its recognition, if somewhat belated, of the theory of sanctity of contracts which its action has gone so far to destroy.

Commerce and the Commission.

Although, in contrast to the practice of the corresponding Indian organisations, the Chambers of Commerce in India have always made it a rule to eschew politics as far as possible, they are naturally greatly interested in the outcome of the labours of the Statutory Commission. As foreshadowed in the outgoing President's address at the annual meeting of the Association last December, the Associated Chambers of Commerce of India and Ceylon are accordingly endeavouring to present the considered views of the constituent Chambers before the Commission in as effective a form as possible. To that end there is now in course of preparation a joint memorandum embodying the views of all the European Chambers, and one of the principal points for consideration will no doubt be the provision of satisfactory safeguards against legislation discriminating against British commercial interests. Readers of THE NEAR EAST AND INDIA do not require to be reminded of the necessity of such a course, the present position in that respect having been the subject of many references in these columns since the meeting held last year under the auspices of the East Indian section of the London Chamber of Commerce. Nor is there any reason why insistence upon the inclusion of safeguards of this nature should in any way offend Indian susceptibilities, since such a provision is a familiar feature of commercial treaties concluded on a most-favoured-nation basis between Sovereign States of every degree

While the Associated Chambers, it is understood, will submit a memorandum on the general scheme of reforms, it has been decided that the interests of the various Chambers are too conflicting for them to agree upon a joint expression of opinion on the subject of the financial relations between the Central and the Provincial Government—one of the most thorny of all the difficult problems confronting Sir John Simon and his colleagues. The Associated Chambers, we are informed, have contented themselves with recommending the appointment, under the aegis of the Commission, of a special Finance Committee consisting of experts in financial matters who should examine this particular aspect of the inquiry and report their conclusions, as in the case of the Committee on Education, to the main body. It is, at the same time, left to the individual Chambers to put up a case, having regard to the special circumstances of their own provinces, for the revision of the Meston Settlement and a more equitable division of sources of revenue between the Central and Provincial Governments. We can imagine the comment of Sir Basil Blackett when the news of the decision, which is as unfortunate as it seems inevitable, reaches the late Finance Member on his travels.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 21.

Politics.

The most careful scrutiny of the newspaper files since the date of my last letter shows but little political news. Apart from the short-lived Ministerial crisis in the United Provinces, there has been only one matter to attract attention—the publication on June 6 of a manifesto by a new political organisation, the Country League. This was sent out with the authority of the Maharajas of Darbhanga and Burdwan, the Nawab of Aligarh, Mr. C. T. Allen of Cawnpore, Mr. John Langford James of Calcutta and other leading Indians and Europeans. Those are the moderate men; this is their attempt to assert themselves. They are justified, for it is no secret that the active politicians, with the honourable exceptions of Mr. Gandhi, Pandit Madan Mohan Malaviya, and a bare handful of others, are far from disinterested in the expression of their views. If a man wants to hear the worst that can be said of them, it is not to the Bengal Club he should go; he should draw apart in private with some Indian who has had good opportunities of judging, as some official of the ruler of a Native State close by, say, the Punjab. He will then hear the political legions up and down the country denounced in unsparing terms. We Europeans have all had our time of listening, and it may have been not once but many times.

The manifesto of the Country League, after an opening paragraph of no great interest, continued:—

“For the past eight years India, with varying degrees of success, has been experimenting with responsible government in a restricted form. There is nothing to be gained by referring to old controversies, but it is certain that large sections of India’s responsible citizens, accustomed to the traditional methods of making their wishes and requirements known to Government, failed to recognise the significance of the drastic changes that accompanied the introduction of the Montagu-Chelmsford Reforms. The result has been that a small section of India, which may be described broadly as representing local urban interests (at least in the Legislative Assembly and in most of the Provincial Councils), has, by intensive methods of political organisation, secured for itself a predominant portion of the power handed over under the Reforms, to the definite detriment of more solid, and perhaps more sober elements.”

There could not be language of a more studied moderation. The objects of the League are as moderate. They are to secure the maintenance of an administration favour-

able to agricultural prosperity and commercial development and for the protection of commercial and landed rights. The further objects of the League include the progressive realisation of responsible government in India, and the establishment of Second Chambers and some simple form of government in the Provinces. It cannot be too simple.

The Education Committee of the Indian Statutory Commission.

The Education Committee of the Indian Statutory Commission is now fully constituted under Sir Philip Hartog as Chairman, and the members who were in India after assembled in Simla. The Committee will tour India after Sir Philip Hartog’s return from England; for no Committee or Commission ever ventures to express its mind without first going a tour of the country. One may be forgiven for thinking that Sir Philip Hartog and his colleagues, who must already know all that can be known of the state of education in India, for they are a body of experienced educationists, would employ their time better in clarifying their views round a table in Simla, a *modus operandi* which would, incidentally, save the country some money. What one wants is not an attempt, certain to be vain, to learn more of the already so well known, but a statement of the position so well drawn up that a better could never be written. That would secure the attention for it, not merely of those interested in education in India at the time of its publication, but two or three generations of readers. But that is a counsel of perfection.

The Strikes.

After the announcement that the Lillooah workshops of the East Indian Railway would be re-opened on May 25, after being closed for eleven weeks, and after they had been re-opened, but only to be the scene of that strange Indian thing, a performance of *satyagraha*, the position reverted to that of an obstinate strike, and subsequently the trouble spread to Asansol. Things have looked brighter these last two or three days, men, both at Lillooah and at Asansol, being reported to have resumed work. The numbers are small and the men are all said to be Muslims; but that anyone, in a strike, should resume work, is always a certain sign of the end. Most well-informed people hold the opinion that the end of the railway strike is in sight. There was a strike, but happily it was short-lived, at the Kesoram Cotton Mills at Garden Reach. Mr. Bepin Chandra Pal, one notices, has been trying to bring about a saner handling of industrial disputes. The trouble, according to Mr. Pal, is that the workers never have proper leaders, but are led on each occasion by some legal person from outside the industry, his hope being that, if an increase of wages comes of the strike, he may come in for a percentage. That will always be bait big enough to attract someone; so it is greatly to be wished that trade unionism in India should be better organised, and that the workers had natural leaders.

Sir Alexander Muddiman.

I was in Simla, but on the point of returning to Calcutta, when the news came of the sudden and unexpected death of the new Governor of the United Provinces. From the hotel window I could see only one flag at half-mast, the flag on the tower of Christ Church; but those who know Simla know how rare is a building on which there can be a flagstaff. The regret of all classes was deep and sincere. Sir Alexander was only in his fifty-third year and had only been Governor of the United Provinces for half a year. Death takes a heavy toll of Europeans in India, but Viceroys and Governors of Provinces have usually been spared. Sir John Woodburn, Lieutenant-Governor of Bengal twenty-five or more years ago, died at his post; but one cannot remember the name of any other head of a province who did not live to retire at the end of his term.

A High Court of two Judges, constituting the final Court of Appeal for Jind State, in the Punjab, was opened on July 2.

BOMBAY LETTER.*(From Our Own Correspondent.)**Bombay, June 23.***Sir Alexander Muddiman.**

The death of Sir Alexander Muddiman, who was appointed Governor to the United Provinces last year, comes as a great shock to the country since few people had realised, when he cancelled the tour in the Kumaon Hills which he was to have made this week, that he was seriously ill. Recent reports that he was recovering from his indisposition, had led people to believe that he was not in any danger. The end came with dramatic suddenness. Sir Alexander was taking a quiet stroll after luncheon when he collapsed and died before medical aid could be procured. Sir Alexander had a distinguished career, extending over thirty years, in the Indian Civil Service which he entered before his twenty-fourth birthday. During the last ten years Sir Alexander had occupied three of the most responsible positions in India—he was, successively, President of the Council of State, Home Member in the Legislative Assembly, and Governor of the United Provinces. From each of these high offices he emerged with distinction. Of his governorship of the United Provinces it is not easy to judge, but he threw himself wholeheartedly into his work. His Excellency had made friends among persons of all classes and political creeds and his death will be widely mourned all over India.

The Nawab of Chattari.

Nawab Sir Ahmad Said Khan of Chattari has taken over the Governorship of the United Provinces until a successor is nominated by the Viceroy. The Nawab as Vice-President of the Executive Council, has done so under the section of the Government of India Act which provides that if a vacancy occurs in the office of Governor when no successor is on the spot to fill the vacancy, the vice-president or in his absence the senior member of the Governor's Executive Council shall hold the office until the successor arrives. The Nawab of Chattari is the first Indian to assume the office of Governor under this section.

An All-Indian Memorial.

On Saturday the 16th, the unveiling ceremony of the equestrian statue of the Mahratta warrior, Shivaji, took place at Poona. It will be remembered that in 1921 the Prince of Wales had laid the foundation of this memorial. The Maharaja of Kolhapur, in an address delivered prior to the unveiling, recalled that the movement was originated in 1921 by his father and by the late Maharaja of Gwalior and that a Committee was appointed to undertake the arrangements in connexion with a national memorial. The cherished desire of the Committee was to get the work executed by Indian artists and it was entrusted to Mr. Karmarkar, who had done the work with great credit to himself. Two lakhs had already been spent on the memorial and the Committee held a balance of five lakhs and was assured of two and a half lakhs more from Indore. This amount was to be utilised for a great historical institution which soon would be established on the same ground. The unveiling of the memorial was staged in fine weather and amidst scenes of great enthusiasm. The Governor arrived with Lady Wilson in a magnificent procession from Shanwarda and was received by the Maharaja of Kolhapur and the Deccan Chiefs, many of whom had sent their retinue to take part in the procession. The Indian Army Regiment of Poona took a very prominent part in the celebrations. Unveiling the statue, Sir Leslie Wilson read a number of messages. In his speech the Governor paid eloquent tribute to the greatness of Shivaji. He said: "Shivaji is now rightly regarded as an Indian hero and I trust this memorial will be a sign of unity and will be accepted as celebrating not merely a great Mahratta but a great Indian." The recognition of Shivaji's greatness by European writers and speakers is of recent growth. It is largely due to authorities like Mr. C. A. Kincaid and Mr. H. Rawlinson of the Education Service,

who in his monograph on Shivaji justified some of Shivaji's deeds which Grant Duff and the writers coming after him, all of whom drew largely from his Mahratta history, had strongly condemned. We have also had in recent years Indian historians who have drawn from Mahratta sources, unlike Duff, who has gathered his materials from the chronicles of the Moghul historians. Sir Leslie Wilson himself has supported the movement, and last year, when the centenary celebrations were held in Bombay, the Provincial Government declared a public holiday in honour of the Mahratta soldier-statesman.

The Bardoli Dispute.

One more public body has entered into the Bardoli dispute. The Indian Merchants' Chamber has been trying to bring about a settlement and correspondence has passed between the President of the Chamber, Mr. H. P. Mody, and the Governor. It is generally believed that the demand for an independent and impartial inquiry into the question has been given up for obvious reasons. The Chamber will now ask for a round-table conference. It is very likely that the Governor will receive a deputation of the Chamber, consisting of Mr. H. P. Mody, Sir Purshottamdas Thakurdas and Mr. Lalji Naranji. The last two members of the Chamber have gone to consult Mr. Gandhi at Ahmedabad.

SURVEY OF NEPAL.

The Survey of India General Report for 1926-27, issued last month, contains an interesting article on the first survey of Nepal, the successful completion of which, in the short time of three years, in spite of the difficulties of climate and topography is a notable achievement and reflects great credit on all the officers and surveyors concerned.

It was in 1924, the Report recalls, that His Highness Maharaja Sir Chandra Shamsher Jung Bahadur asked for the co-operation of Indian Surveyors of the Survey of India in preparing complete modern maps of the whole of Nepal. This enlightened act has resulted in one of the greatest single contributions to Himalayan geography which has ever been made. Accurate knowledge is for the first time available of the drainage and structure of 55,000 square miles of country (an area approximately equal to that of England and Wales), extending over some of the greatest mountains of the world, and including the highest known peak, Mount Everest, which is over 29,000 feet above sea level.

EGYPT-INDIA AIR ROUTE.

In the House of Commons on July 4, Lieut.-Com. Kenworthy (Hull, Central, Lab.) asked the Secretary for Air what subsidy for Imperial Airways, Limited, was allowed for in last year's Estimates and this year's Estimates, respectively, for the purpose of operating an air service between Baghdad and Karachi; and what reductions had been made in these payments on account of the non-establishment and non-operation of this service pending agreement with the Persian Government.

Sir S. Hoare replied that the air service was planned in two sections, Egypt-Basra and Basra-Karachi, and the provision for subsidies for the latter section was £31,200 in last year's and £46,800 in the present year's Estimates, these sums being the aggregate of the subsidies for the maximum number of flights on the section at the rates specified in Clause 14 of the agreement published in White Paper Cmd. 2758. As a result of the Persian difficulty it was agreed with Imperial Airways, Limited, that the fortnightly service on the Egypt-Basra section should be augmented for the time being to a weekly one, and that the extra flights so made should be treated as though they were made on the Basra-Karachi section for the purpose of earning subsidy. There was consequently no reduction of subsidy.

In reply to a supplementary question by Lieut.-Com. Kenworthy, who asked if the Minister did not see that this policy was putting a premium on the Imperial Airways Company not pushing on with this section of the scheme, as obviously they made more money by not flying the service than by operating it, the Secretary for Air said that that was not the case. Imperial Airways were most anxious to open the whole section, and it was only the Persian difficulty, over which the company had no control, that had held it up. The company and the British Government were taking every possible step to open the whole route.

Lord Irwin, the Viceroy, has sent a telegram to King Amanullah on the latter's return to Kabul from his European tour, expressing his warmest congratulations and best wishes for the future.

INDIAN OILSEEDS.

(From a Correspondent.)

It is satisfactory to see that the Royal Commission on Indian Agriculture has rejected without hesitation the proposal to levy export duties on oilseeds. In most countries the economic objections to export duties, except on monopoly articles, are deemed to be conclusive; but in India this form of taxation still finds advocates. It may be that the idea is a survival from the past, for in the earlier customs tariffs export duties were levied on quite a number of articles. But in course of time these were all removed except the duty on rice which, from 1880 to 1916, was the only export tax in force. By 1916 revenue needs had become urgent, by reason of the War, and the Government of India then determined to levy—for revenue purposes—export duties on tea and jute. In 1919 they similarly taxed hides and skins, but not exclusively for revenue purposes. The Government were, of course, alive to the economic objections, but they had to find revenue. The Indian Fiscal Commission of 1921 rightly made it clear in their report that export duties ought not to be levied except on monopoly articles, or at any rate, articles enjoying a partial monopoly. A majority of the members of the Indian Taxation Enquiry Committee of 1924 thought differently, and expressed themselves in favour of duties on oilseeds, and on bones and other forms of manure. They held that in the interests of Indian agriculture the use of fertilisers should be encouraged; and that the supply of a nourishing food for cattle should be increased. And they believed that the best way of achieving these objects would be to impose an export duty which would promote the crushing of oilseeds in India, and would cheapen the cost of oilcake and other forms of manure to the Indian cultivator.

It appears from the report of the Royal Commission that many witnesses emphasised this view of the question, some favouring the total prohibition of export. They pointed to the loss which accrues to India, by the export of oilseeds, of a valuable source of combined nitrogen. The quantity exported of the various seeds—cotton, groundnut, rape, mustard, linseed and sesamum—is on the average about eighteen per cent. of the out-turn. Those who favour restriction seem to base their argument on the assumption that the whole of the nitrogen contained in this quantity would be returned to the soil. But, as the Commission points out, much of the material would probably be used for feeding cattle, and would be subsequently dissipated as fuel. The Commission recognises that Indian agriculture would benefit if certain oilcakes were used more extensively as a manure for the more valuable crops. But as is pointed out in the Report, India has no monopoly of the world's supplies of oilseeds. She is not even the largest supplier of these seeds. It follows that an export duty would be paid by the producer, who would receive a lower price for the seeds exported. The present time would also seem to be particularly inopportune for the imposition of duties. For the acreage under oilseeds in British India is still considerably below the pre-War figure. There is, that is to say, a tendency to replace oilseeds by other crops; and the fall in price which would follow restriction of export would certainly accentuate this tendency. Then, again, the Indian market for oil is limited, and any great extension of the oil-crushing industry would mean that Indian oil-crushers would have to compete in the world's markets. And it is doubtful if their costs of production, and the quality of their product, would enable them to compete successfully.

Oilcakes were exported from India during the five years ending 1925-26 to the extent of 165,000 tons. This means, as the Commission observes, that they are an even less important factor in the world's supply than are oilseeds. The burden of an export duty would be, therefore, in their case, borne entirely by the producer, that is the oil-crushing industry. And in these circumstances

the conclusion at which the Commission has arrived is that the effect of a duty on oilcakes "with or without a duty on oilseeds would be the curtailment of oil-crushing activities and a diminution in the available supply of oilcakes, in other words it would have effects entirely different from those desired by its advocates. It is not, therefore, by any restriction on trade that Indian agriculture is likely to reap greater advantages from the supply of combined nitrogen available in the large crops of oilseeds she produces. The only methods by which these advantages can be secured are by the natural development of the oil-crushing industry coupled with great changes in cattle management and in the use of fuel."

Similarly the Commission is opposed to anything in the way of a restriction on the exports of bones in any form. Bones are useful chiefly for supplying phosphates to the soil, although they can also rectify to some extent a deficiency of nitrogen. The exports from India aggregate about 100,000 tons, or rather less, yearly; and they are almost entirely in the form of crushed bones and bone-meal, uncrushed bones being exported to a very small extent only. The Report states that many witnesses advocated the total prohibition of export; but the Commission declined to accept any such proposal. For it is, of course, obvious that most of the arguments against the levy of an export duty on oilseeds are applicable to bones also. And furthermore, the local consumption of bones is very small, and has shown no tendency to increase even in the favourable conditions of recent years. A restriction on exports would consequently menace the existence of the crushing industry in India by closing its markets. It would be, in fact, as was shown some time ago, be more profitable for India to export bones and to buy in their place equivalent quantities of artificial fertilisers than to restrict the export of bones and to use them as fertilisers. The reason is that crushed bones realise a higher price for export than they do locally because they are used in Europe for industries—gelatine, glue, etc.—which are not in existence in India.

INDIAN INCOME TAX.

By a recent amendment of the Indian Income-tax Act, refunds under section 48 of the Act are now based, in the case of non-residents in British India, not as heretofore on the portion of their income which arises, accrues or is received in British India, but on their total income wherever arising, accruing or received. No refund is due to non-residents unless they are either British subjects or subjects of an Indian State. All applications for refunds for 1928-29, which should be addressed to the Income-tax Officer, Non-resident Refunds Circle, 5, Wallace Street, Bombay, should be made on the official form (obtainable from the Office of the High Commissioner for India), and should include:—(a) a statement of the applicant's total income of the preceding year from all sources, and (b) a declaration as to the applicant's nationality.

No refund is admissible when the total income of the preceding year is Rs.40,000 (£3,000) or more. Within that limit, the rate of refund is graduated according to the amount of total income.

A motion to appoint a committee to co-operate with the Simon Commission is likely to be made in the Legislative Council of the Central Provinces during the August session.

The Indian delegates to the British Commonwealth Labour Conference have withdrawn from the Conference as a protest against the Labour Party's action in appointing members to the Simon Commission. The decision was reached at a meeting of the Indian delegates held on July 4, the majority being in favour of withdrawal.

The Calcutta scavengers' strike was settled on July 5 on terms representing a victory for the men, who, excluding certain classes, will get an increase of one rupee (1s. 6d.) a month. Pay for the strike period was also conceded, and it was agreed that impending prosecutions should be withdrawn and that there should be no victimisation.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Outlook in Palestine.

A very frank statement of the economic position in Palestine is made in the report by H. M. Government to the League of Nations on the administration of Palestine and Trans-Jordan in 1927. From causes in the main unconnected with Palestine that country suffered last year from marked economic depression with the result that there was an exodus from Palestine of many who had come in the last few years to settle there. The view taken in the report as to the outlook is not on the whole favourable. It is stated that it is improbable that there will be any immediate improvement and that the problem of the Government for the next few years will be to find the means to meet its essential liabilities "without imposing undue burdens on the people of a small and little-developed country." The result of the continuance of adverse conditions has been that the movement to emigrate from Palestine is still maintained though to a much less extent than in 1927. As I have explained on previous occasions the chief explanation is that a considerable proportion of the wrong type of settlers for an undeveloped region was attracted in the first place. As this will not be the case in the future it may be assumed that before long the balance of arrivals and departures will be redressed. The favourable side of the picture of Palestine to-day, on which emphasis is rightly laid in the report, is that despite the economic depression there has been development in a number of directions. Thus the value of the exports last year showed a marked increase, while for the first time since the War exports exceeded imports of agricultural products and by no less than £P282,274. Then the area under orange trees has been further increased, while steady progress has been made by various industries, notably by the soap, tobacco, cement, and flour industries. A particularly satisfactory feature is the fact that export markets are now being found for an increasing number of commodities.

Roumanian Loan Negotiations.

Of the Near Eastern loans at present on the tapis, that for Roumania is by far the most important from the point of view of the developments which may be expected to follow from its issue. At the present time progress in Roumania is absolutely retarded by the lack of finance, which is felt particularly in the spheres of agriculture and transport, and the effect of which is that the country which should have shown most progress in South-Eastern Europe is far behind some of its neighbours in economic development since the War. Negotiations for the loan have been carried on here and in America, but so far without a definite agreement having been made. It has been reported that the American negotiations have fallen through, but there is reason for thinking that this report is pre-

mature, and that all that has happened is that there has been a temporary postponement. There was no question in any case of the issue of the loan before the autumn, and while there is opposition in some quarters to the loan on account of the Hungarian question there is no reason to suppose at present that it will not materialise. It must be emphasised that the failure to obtain a loan would have serious consequences for Roumania, and might well bring about new political complications.

The Other Two Loans.

Of the other Near Eastern loans—those for Yugoslavia and Bulgaria—the negotiations for the former have not yet been concluded, while the latter is expected to make its appearance in October. The difficulty with regard to the Bulgarian Loan has been over Bulgaria's pre-War obligations to the Disconto-Gesellschaft. It was anticipated that this difficulty would be smoothed over, but conversations in London were not productive of any result, and it is now understood that the loan will be secured on revenues other than those allocated to the 1914 Loan. Various developments have affected the negotiations for the Yugoslav Loan, notably the adverse economic conditions in the country and recent political developments. It is no doubt felt that in the prevailing circumstances the terms on which the loan could be raised would be affected. This loan, like that for Roumania, it may be emphasised, should mean much for British trade, despite the fact that, unwisely as some think, we do not follow the American practice and insert a clause providing that a substantial proportion of whatever material is required must be obtained from this country.

British Trade with Roumania.

It is clear from what Mr. R. J. E. Humphreys says in his interesting report on Roumania, further extracts from which are given elsewhere in this issue, that there are very considerable prospects for the development of British trade in Roumania. Its expansion, however, will naturally

depend on the economic recovery of Roumania, and it can therefore be said that this country is considerably concerned in the favourable issue of the loan negotiations. At the present time trade between the two countries is on a relatively small scale though it is growing. Last year the value of Roumania's imports from Great Britain was £2,683,000 as against £2,596,000 in 1926, while Great Britain imported from Roumania goods to the value of £2,376,000 as compared with £2,663,000 in 1926. It will be seen from these figures that the trade is mutual, a fact which is all in favour of its growth. Mr. Humphreys, it may be noted has much to say of the past year which is encouraging. Thus he states that British manufactures and exporters have shown an increasing interest in the market, and he is able to give a number of instances in which British goods have met with an increasing demand. Among these commodities may be mentioned gramophones, internal combustion engines, and teas. He also makes the very satisfactory statement that British motor tyres, india rubber goloshes and sports goods are overcoming competition successfully, while it is of interest to note that since the removal of the import prohibition good business has been done in whisky and gin. Mr. Humphreys' reminder that the foreign trade of Roumania will greatly expand after the economic consolidation of the country is followed by the timely suggestion that the means of advertising should be utilised to introduce goods to this market. It is one of the points which British firms have still to learn with regard to the Near East.

Roumania's Transport Problem.

Mr. Humphrey deals in detail with the transport situation in Roumania, and gives a long list of some of the improvements which are thought to be most urgently needed. From the figures he gives it will be seen that except for goods trucks and tank wagons there was less rolling stock in use in 1927 than in the previous year and it throws an illuminating light on the situation that goods trucks had to be borrowed from neighbouring countries. At the present time the utilisation of the country's great economic resources is seriously handicapped by the transport position. As I have indicated, it is largely for the railways that the loan is required, and its urgency may be gathered from Mr. Humphrey's statement that it is highly probable that the system will decline unless the necessary funds are forthcoming to enable the railways to meet their requirements.

P. & O. Banking Corporation.

At the meeting of the P. and O. Banking Corporation, Mr. W. E. Preston, who presided in the absence of Lord Inchcape, was able to show a record of satisfactory progress during the year. Mr. Preston briefly reviewed the position in Eastern countries during the year, and what he said made it evident that the results obtained by the bank were even more satisfactory than they appear. The crop conditions in India were good, but trade conditions were not, and Mr. Preston described the competition as being ultra keen. He was of the opinion that developments in China were in the right direction, but the volume of business in the Straits was naturally affected by the fall in rubber and tin.

COMMENTATOR.

DEVELOPMENT IN THE YUGOSLAV TEXTILE INDUSTRY.

Textile products form an important part of the Yugoslav import trade, comprising as they do approximately one-third of the total. Owing to the development of the domestic industry, however, the importation of manufactured textiles has been decreasing during recent years (says the American Consul at Zagreb, Mr. Leslie A. Davis, in a recent report). The importation of raw materials for use by the Yugoslav industry, at the same time, has been increasing. Of the total textile products imported into the Kingdom, cotton and cotton manufactures comprise between 60 and 70 per cent.

The protective and high import duty on cotton textiles has led to the development of the domestic industry, and a number of mills have been established in the country by foreign manufacturers during the last few years. Serbia has the largest number of textile mills, but Slovenia leads the country in capacity of production and Croatia-Slavonia follows. The total number of establishments in the country was reported in 1927 as 20; the number of spindles 112,907; looms, 5,951; employees, 9,450; annual production capacity for yarn, 5,650,000 kilos, and for cloth, 51,150,000 metres. In comparing these figures with the estimates made for 1921 it will be observed that 10 new weaving mills have been established; the number of spindles has increased by 34 per cent.; the production of yarn 60 per cent.; and the production of cloth, 150 per cent.

The total value of the yearly production of the spinning mills now amounts to about £714,500 and that of the weaving mills to £2,321,400.

Adding the total average imports and domestic production, it appears that there is need for cotton manufactures in the Kingdom amounting to about 17,000,000 kilos per year. The production of the domestic industry totals approximately 5,000,000 kilos. The remainder of the annual consumption has to be met by imports.

Coincident with the growth of the domestic manufacturing industry has been the increase in the importation of raw cotton and cotton yarn. Receipts of raw cotton from abroad amounted to 237 metric tons in 1920, 4,554 tons in 1923, and 6,893 in 1926. Imports of cotton yarn increased from 3,541 tons in 1920 to 5,585 in 1923 and 7,606 in 1926.

The Yugoslav wool industry is represented by 15 mills, of which 11 are comparatively large and 4 are somewhat smaller. A large mill is now being organised in Bosnia. The wool-spinning industry centres in Serbia and the weaving in Croatia and Serbia. The annual production of wool cloth amounts to about 6,740,000 metres. Considering that Serbia only had one mill in operation prior to 1913, the progress made by the industry is considered quite satisfactory. The demand for wool manufactures is very keen, and the mills are now operating with two, and, in some instances, three shifts.

With the growth of the domestic wool-manufacturing industry, the importation of finished wool products has shown a steady decline—from 5,200 metric tons in 1923 to 3,600 in 1926. This decrease has been evident in the imports of hosiery, gloves, sewn goods, and cloth. The receipts of foreign-made wool piece goods continued to

GLASGOW

show this decreasing tendency during the first six months of 1927. The development of this particular branch of the domestic industry has taken place principally since 1923. Before that year the domestic production was for the use of the army alone.

The growth of the wool industry can be viewed also from the angle of the imports of raw material, which increased from 188 metric tons in 1920 to 1,735 tons in 1923 and 3,826 in 1926. The production of raw wool in the Kingdom amounts to 16,000,000 kilos annually, of which only 5 to 10 per cent. is exported. A large portion of this wool is used by the peasants for home spinning and weaving, especially in the mountainous and southern parts of the country. The domestic wool is inferior and the better quality used in the manufacturing industry is imported.

A small part of the wool and wool yarn imported is used by the carpet industry which is represented by 4 factories having 389 looms. The carpet industry employs about 575 labourers and produces annually 55,500 square metres of hand-made rugs and 33,500 lineal metres of carpets, while the State-owned rug factory in Sarajevo produces about 5,000 fine rug.

Some cotton and cheap rayon hosiery is manufactured in Yugoslavia. Most of the knit goods, however, found in this market are imported from Europe, chiefly from Germany.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Filter.—Tenders in respect of the contract for the installation of a third filter at the Damanhour waterworks are invited by the Municipalities and Local Commission Section, Ministry of the Interior, Cairo. August 4. (D.O.T.)

Filters.—The Tanzim Department, Egyptian Public Works Ministry invites tenders for the supply and erection of four mechanical water filters. These filters are required to have a total output capacity of two million gallons of water per 24 hours. August 2. (D.O.T.)

Buffers.—The Egyptian State Railways, Telegraphs, and Telephones, invites tenders for 60 buffers complete.

The date of the adjudication for the construction of an overhead bridge at Minia, originally fixed for August 4, has been postponed to September 4.

Telephone Trunk Cable.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply and laying of Cairo-Alexandria telephone trunk cable. October 3.

Ejectors and Accessories.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for supplying ejectors and accessories for stations Nos. 1, 2, 3, and 4 (Damanhour Drainage). October 15.

Paper, Binding Cloth, and Stitching Wire, Etc.—The Egyptian Ministry of Finance invites tenders for the supply of paper, boards, binding cloth, stitching wire, ink, etc., required during the year 1928-29. July 21. (D.O.T.)

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons (8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

Steel Plates.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 58 steel plates for renewals of four swing bridges. August 23.

Fire Float.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of a fire float for Suez Harbour as per conditions of tender and specification. August 31.

Flat Mild Steel.—The General Management, Egyptian State Railways, Telegraphs, and Telephones invites tenders for the supply of 472,800 kilos flat mild steel. August 29.

Spare Parts for Machines, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of spare parts for machines, leather, belts, iron goods, paints powder, nails, files, etc., to Tura Mills. July 28.

Pumping Sets, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of two pumping sets and two water tanks to the Ministry of War. July 25.

Soap.—The Egyptian State Railways, Telegraphs, and Telephones, invites tenders for 30 tons of soft soap to specification.

Iron Sheets.—The Egyptian State Railways, Telegraphs, and Telephones invite tenders for 144,300 kilos galvanised corrugated iron sheets of various dimensions with accessories.

INDIA.

The Indian Stores Department invites tenders in respect of their requirements in relation to galvanised wrought iron or mild steel tubes and fittings for gas, tested to 10 lb. hydraulic pressure per square inch, for the period from September 1, 1928, to August 31, 1929. July 23. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, July 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, July 24).

Bibby Line.—S.s. Derbyshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 26).

British India Line.—S.s. Mundra for Bombay and Karachi (London, July 21); s.s. Morvada for Colombo, Madras, and Calcutta (London, July 28).

Cunard Line.—S.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool July 21, and in Swansea July 24); s.s. Bactria for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow July 20, Liverpool and Swansea July 21).

Johnston Line.—S.s. Aviemore for Smyrna and Constantinople (Liverpool, July 28); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 4); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1).

P. and O. Line.—S.s. Malwa for Bombay (London, July 20).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 21); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, August 1).

Ellerman and Papayanni Lines.—S.s. Roumelian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 14, Swansea July 14); s.s. Fabian for Malta, Alexandria, Jaffa, and Haifa (Liverpool, July 28); s.s. Polo for Algiers*, Patras, Smyrna, and Constantinople (Liverpool, August 4); s.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 4); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool August 4, Swansea August 6). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria, Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 10.

The Stock Exchange week was progressing quietly and without special feature when on Thursday came the news of the tragic death of the Belgian millionaire financier, Captain Lowenstein. The range of his recent operations had been so wide that all the principal Bourses of the world were affected, and a severe slump took place in the shares of those companies to which his recent activities have been principally devoted—namely, Hydro Electric Securities Corporation and International Holdings. The shares of these concerns lost half their market value, but recovered nearly half the loss on the issue by the companies of a reassuring statement. In an affair of this kind some little time must elapse before it is known what the ramifications of effect will be. So far as London is concerned no major disaster need be expected. But on the other hand the markets, both here and abroad, are not in the best condition to resist a new adverse factor which may be of considerable dimensions. Moreover, the season of the year is advancing and the holidays are near. It is now less probable than ever than any substantial resumption of the market activity, which broke in June, will take place until the holiday season is over.

The Home Railway Position.

The week has been of exceptional interest to home railway stockholders. The chief event has been the publication of the final revenue figures for the first half of the year, and other developments have also focussed attention upon the home railway position. These have not been interpreted optimistically, but we consider that pessimism has proceeded to unreasonable lengths. There are certainly depressing influences, the revenue figures in particular being disappointing. Compared with the corre-

sponding period of 1927, the London Midland and Scottish shows a decline in gross revenue of £2,129,000, the London and North Eastern £1,457,000, the Great Western £832,000, and the Southern £359,000. It should be remembered, however, that the figures for the first half of 1927 cover a period when the arrears of business in 1926 due to the coal stoppage were being overtaken while the revenue figures, being gross figures, give no clue to any economies that may have been effected. Moreover, the Select Committee examining the companies' Road Transport Bill have conceded in principle the companies' right to use the roads. Finally, the railwaymen's chief trade union is facing the companies' problem in a helpful spirit. Thus, despite the gloomy views of certain highly placed observers, the situation is not without redeeming features and we suggest that a careful search among the companies' stocks should reveal several good bargains. For instance, the Southern preferred ordinary stock, the interest on which is well covered by earnings, can be obtained to give a return of £7 2s. per cent.

Mond Nickel Progress.

During recent months the ordinary shares of the Mond Nickel Company have been a feature of the Stock Markets. To-day the shares stand at around £9, but at one time this year they could have been bought for £6½, while last year they fell as low as £1 27-32. The dividend announcement, made this week, is proof that the recent rise has not been entirely without justification. The shareholders are to receive a final dividend of 4s. making 5s. 6d. for the year ended April 30, which is equal to 27½ per cent. This compares with 12½ per cent. paid for some years past, and therefore represents a substantial addition to the shareholders' return. But this is not the limit of their good fortune. The directors propose to obtain powers to subdivide the existing £1 ordinary shares into ordinary shares of 10s. each, while they also propose to increase the capital by the creation of 1,200,000 new ordinary shares. It is intended forthwith to give the ordinary shareholders the right to subscribe for 600,000 new shares at a premium. Shareholders will naturally be anxious to learn the price of issue of the new shares, but the quotation of the existing shares clearly points to the possibility of the bonus being substantial. Moreover, they will be interested to hear the chairman's review of the company's past and his forecast of the future, for it has lately been the subject of many rumours.

A Promising Industrial Investment.

The recently published report of the General Electric Company created a very favourable impression, the ordinary dividend being raised from 7½ per cent. to 10 per cent. The Company is one of the few progressive units in the electric equipment manufacturing industry. The meeting was, therefore, awaited with interest and the tone of the chairman's speech was in no sense disappointing. As regards the electrical industry itself, "it is, as ever," he said, "full of promise. The working of the Electricity Act is progressing satisfactorily, but has, as yet, not influenced our accounts." Dealing with the consequences to the company, he declared, "I have always maintained it will take some four or five years before the Act makes an imprint on our balance sheet." It has, however, been of great value in educating the public and the "increased production of appliances cheapens the price and should thus prove a distinct aid to the expansion of our export business." The company is already doing a considerable export business. Moreover, it is obviously pursuing a policy of vigorous and enlightened expansion, much attention being paid to research; and the company's interests are very diversified. At present the ordinary shares give the somewhat modest return of slightly over £5 per cent., but it seems highly probable that in the long run they will well reward the investor.

Motors and Motoring.

By G. B. B.

The Fire Danger.

One of the ever-present dangers that threaten the car owner is that of fire. A skid on a slippery road may bring about the destruction of the car by fire just as easily as could a carelessly thrown match in a garage or a little thoughtlessness during a picnic. Petrol, whether of high or low grade, is always dangerous, and one of the most curious things about the whole business is that whilst Parliament has laid down elaborate regulations relating to the storage of petrol, once it is out of the hands of the storekeeper its use, either on a private motor car or in a private garage is quite unfettered and left to the private owner. Chassis may be, and are, constructed without the slightest regard being paid to the fire risk. No one seems to trouble as to how the occupants of a car are to get clear in the case of an outbreak; in fact, in large number of commercial vehicles petrol tanks are placed under drivers' seats, a position which may save space but which is decidedly dangerous for the driver. Again, a little more investigation might be given with advantage to the causes of fire on petrol-carrying vehicles. What, for instance, really ignites the petrol, as it often does, when a car collides or capsizes? Some say it is a spark from the magneto; others that it is invariably caused by a sparking to earth or between leads of disrupted battery cables. Other, again, say it is always caused by the exhaust, or by the hot exhaust pipe. This all seems to point to the need of a little research work. But, pending that, we may take it that fires do occur and, so far as I am aware, there is nothing, this side of a powder explosion, that is quite so swift or so terrible as a petrol fire.

A number of devices are on the market designed to prevent petrol fires on cars, most, if not all, of which depend on the action of some mechanism cutting off the supply of petrol from the service pipe and carburettor. One appliance is a ball valve in a short nozzle in the petrol tank, which comes into action the moment the tank begins to take a vertical rather than a horizontal angle. In another there is a tube made of a special alloy through which the petrol passes, and the moment this gets hot, through fire, it expands so much and so rapidly that it doubles itself up and so cuts off the petrol supply. A German inventor has a small fire extinguisher filled with the usual carbonic acid-soap mixture under pressure fixed over the carburettor and so arranged that the driver can operate it instantly by means of a push-button. Then, of course, there are all sorts of projects, some of which have already met with more or less success, by which the petrol itself is rendered non-flammable.

Motor Cycle Tour.

The motor cycle tour of Europe, just completed, of the three English lady riders, Miss Marjorie Cottle, of Liverpool, Mrs. L. McLean, of Bristol, and Miss Edyth Foley, of Stockport, should do much to stimulate business. The thorough reliability shown by the motor cycles ridden must have proved a magnificent advertisement for this country. Everywhere the riders went the machines were inspected by numbers of potential buyers, and at times the crowds were so great that the local police had to be requisitioned to clear a way. Altogether 5,110 miles were ridden and the only troubles were six successive punctures, on some of the worst roads. No mechanical trouble of any kind was experienced and the engines ran perfectly throughout.

Roads in Ceylon.

Some discussion has taken place in the motoring Press regarding the gradients of a certain road in Ceylon. I have mentioned before in these columns that Ceylon can boast some excellent roads and has none which could be really called bad, taking everything into consideration. The gradients have been given as most severe and, as a matter of fact, the various correspondents have been in error in their figures. The road in question is that from Colombo to Kandy, by way of Kadugannawa. There are on its route very few hills and the steepest, about 60 miles from Colombo, is one in eleven. There are fairly stiff hills on the Nuwara-Eliya-Welimada road and on the road between Ramboda and Eliya, but they do not exceed one in eight at the steepest parts. No one thinking of visiting that part of the Empire need worry about hills, and no British maker seeking to sell cars should neglect Ceylon as a most promising market.

British Motor Cycles' Success.

The third meeting of the Kesselberg races, of which the first was held in 1905, took place recently. The course is one of considerable difficulty, owing to the many curves and, therefore, the speeds obtained were not very high, although in consideration of the course they were good. Solo motor cycles, sidecars, and cars participated. In the 500 c.c. class, British motor cycles were well to the fore, the winner being Max Seltsmann Immenstadt on an Ariel; fourth place was gained by a Sunbeam and fifth place by another Ariel.

At the Bournemouth motor rally, just concluded, one of the great events was the Concours d'Elegance, a competition in which the winner is he, or she, who exhibits the car with the finest coachwork and fittings. This year there were over 260 entries from all parts of the world and amongst them was one from the Maharanee of Baroda.

British Consular Reports

H.—ROUMANIA.

(Continued from page 24.)

During the year 1927 the Roumanian industries were adversely affected by the rise in the value of the national currency and the continued rise in wages due to the increase in the cost of living caused largely by the high import tariff and other fiscal taxation. The poor harvest of the year also affected them indirectly, as it lowered the purchasing power of the population. On the other hand, however, the metallurgical, leather, boot and shoe and textile industries benefited by the protective customs tariff and received large orders from State institutions. The paper and sugar industries were also busy.

During the second half of the year and the beginning of 1928 the industries in general were more or less freed from the dread of currency fluctuations and were able to look forward with more confidence to the future with the hope that when the legal stabilisation of the leu is effected they will be able to procure the financial assistance they require for a wider development of their activities.

Petroleum.

The production of crude oil in 1927 was higher than in the previous year, viz., 3,650,000 metric tons, as against 3,244,415 metric tons in 1926. Drilling activities increased in the beginning of the year, when the oil companies hoped that the world prices for petroleum products would rise, though they were low at that time. When it became evident that there was no immediate prospect of any improvement in prices most of the companies reduced their drilling programmes and proceeded to cut down their administrative expenses. The low prices obtainable were partly compensated for by the reduction of export taxes to almost nominal figures and the substantial reduction of railway freights, which were granted by the Government authorities in consideration of the difficulties with which the industry was contending. These difficulties were enhanced by fluctuations in the value of the currency at the beginning of the year and by high fiscal taxation as well as by various unexpected municipal charges, so that the companies have been obliged to continue their policy of restriction of the cost of production, while endeavouring to extend the sale of their products both at home and abroad.

During the year 1927 the home and export prices of petroleum products were very little over cost price, and indeed some of the products were sold abroad below cost price in order to retain their foreign markets. About the end of September prices rose slightly and remained

steady until the end of the first quarter of 1928 at figures which allow a narrow margin of profit.

During the whole of the year 1927 and the first three months of 1928 transports were effected satisfactorily and there were no complaints of delay. With a view to reducing further the cost of transport the Government has decided to lay new pipe lines from the oil fields to the port of Constantza, and for this purpose a company is to be formed with State participation, under the Law for the Commercialisation of State Enterprises. The Bill proposing the formation of this company was laid before Parliament in the beginning of March, 1928. The total production of refined products in 1927 amounted to about 3,533,346 metric tons, as compared with 3,031,428 metric tons in 1926. The internal consumption of petroleum products increased from 1,292,649 metric tons in 1926 to about 1,367,757 metric tons in 1927. The exports for the whole year are recorded at 1,912,982 metric tons, as against 1,492,953 metric tons in 1926, making an increase of 29.2 per cent. The following are the detailed figures of the exports during these two years:—

	1927.	1928.	Increase.
		(Metric tons)	
Motor spirit	543,502	424,967	118,535
Lamp oil	610,634	527,069	83,565
Gas oil	215,510	199,808	15,702
Lubricating oil	64,097	42,396	21,701
Fuel oil	479,239	298,713	180,526
Total	1,912,982	1,492,953	420,029

The following countries were the principal purchasers: Italy, 348,310 metric tons; Egypt, 287,390; Great Britain, 226,807; Austria, 175,772; Hungary, 144,068; Germany, 141,869; France, 108,623.

The Transport Problem.

The Roumanian railway system has now reached a point when it is highly probable that a decline will set in, in the near future, and all the achievements of the last few years will be forfeited, unless a large foreign loan is obtained to enable them to meet their most urgent requirements and to increase their capacity in proportion to the ever-expanding economic needs of the country.

The following are some of the improvements thought to be most urgently needed:—(1) The relaying of some of the lines with a heavier type of rail, these lines being destined to serve as principal arteries of circulation both for local and international traffic. It is officially stated that about 1,000 kilometres of rails of type 45 are required and 700 km. type 40 will have to be renewed, the old rails being completely worn out, causing many accidents. In connection with these 1,500 points are required, type 45, and 1,000 of type 40, as well as the relative quantities of double crossings of both types. (2) It is also urgently necessary to double some of the existing lines (425 km.), the transport capacity of which has reached the maximum. For these type 45 rails will be required. (3) The modification of some stretches of the permanent way so as to reduce the incline, which greatly adds to the expense. (4) The laying of new connecting lines so as to secure a better service and a more complete system, and the completion of the five lines already under construction. (5) The construction of new sidings so as to increase the circulation capacity. (6) The construction of two large shunting stations imperatively needed at Marashesti and Brashov. (7) To increase the number of locomotive sheds and procure much new systematic loading plant for coal. (8) To replace many of the worn out bridges and install new turntables. (9) To provide the existing workshops with further modern machine tools and install water-softening plant in various stations. (10) For the safety of traffic it is essential that telegraph and telephone lines and electric signals and other modern improvements should be installed.

FOREIGN EXCHANGES.

Sofia	Leva to £	25.22½	674
Teheran	Krans to £	47	47
Vienna	Sch to £	34.58	34.55
Warsaw	Zloty to £	25.22½	43½

Up to the present time no attempt has been made to do more than purchase the most indispensable materials to maintain the *status quo*. The law of 1925 for the re-organisation of the administration of the Roumanian railways was re-enacted in 1927.

The present Director-General of the railways has decided that all small repairs of wagons and locomotives shall be carried out only by the railway workshops and not by private concerns. The capacity of the repair shops has been greatly increased by the installation of new plant obtained from Germany on account of war reparations.

The following table shows the qualities of the various kinds of rolling stock in service during 1927, as compared with the two previous years:—

	1925.	1926.	1927.
Locomotives	2,191	2,160	2,139
Passenger carriages	2,227	2,252	2,032
Goods trucks	35,842	33,276	41,560
Tank wagons	5,668	7,170	8,871

It will be seen that the number of goods trucks and tank wagons had increased in 1927, whereas there were fewer locomotives and passenger carriages in service than during the previous years. Additional goods trucks were also borrowed by the railway administration from neighbouring countries, chiefly for international trade.

On January 1, 1928, a greatly reduced railway tariff for goods and passengers was introduced, but the administration is convinced that the advantages offered to both services will so stimulate traffic as to more than compensate for this reduction.

At the International Railway Conference held at Dresden in the course of the year proposals were discussed for facilitating the transit of passengers and goods from the northern countries through Roumania (Braila, Galatz, Constantza) to Turkey, the eastern Mediterranean and Egypt.

During the year the railway administration received delivery of several passenger carriages and goods locomotives and wagons from the Astra Company of Arad, the Union Company of Satu Mare and the Reshitza Works, and a contract has recently been signed with the Reshitza Works for a large quantity of rails. A certain quantity of rails of a heavy type were purchased in Germany on account of reparations.

It is stated to be the aim of the new Director of the railway administration to overcome all financial difficulties as soon as possible in order that work may be begun on the improvement of the present railway system and the reorganisation of the administrative offices.

Roumanian Ports.

The following information is given by H.M. Consul-General at Galatz:—

The total number of vessels cleared from the Danube in 1927 was 806, with a total tonnage of 1,491,741 tons net. These 806 ships sailed under 19 different flags.

During the last two years a marked increase in Greek shipping has been noticeable, due no doubt to the following causes: lower working costs, especially in the Mediterranean ports, where the crews are paid in Greek currency at rates little more than half those paid on British ships; the geographical position of Greece; frequent overloading with heavy grain and excessive deck loads of timber (this is possible because there is no control of the load lines or seaworthiness of vessels leaving the Danube); purchase of second tonnage from British and other owners, much of which is unsuitable for the longer trader; the reduced dues hitherto charged by the European Commission of the Danube on vessels under 1,500 Danube register tons.

Freights in the opening months of the year were still high from the effects of the British coal stoppage, but were steadily declining towards normal figures. The early and sudden closing of navigation by ice on December 21 found numerous steamers and loaded lighters in the Danube ports, and caused serious losses to owners of vessels and cargoes. There is no ice-breaker on the Danube, and every year the same difficulty occurs.

There was a noticeable increase in the shipments from the port of Reni. This was mainly due to the fact that it is the nearest port connected by rail with Bessarabia which had the richest harvest in 1926. It was the Bessarabian harvest for 1926 which also increased the shipments of cereals from Galatz as compared with those from Braila, which lies furthest of these ports from Bessarabia and is fed mainly by lighters from up-river. Reni is also conveniently served by barges coming down the Pruth, which enters the Danube just above the port. It is likely that the experience of 1927 will tend to make Reni a more important port of shipment in the future, and that a part of the traffic of Galatz and Braila will be diverted to it. There is no dock or quay, but railway wagons run alongside the steamer and their contents can be loaded directly on board.

Constantza is the principal petroleum exporting port of this country and is fitted with all the necessary plant for the purpose. H.M. Vice-Consul at Constantza reports that in June, 1927, the State pumping station in the port was almost completely gutted by fire together with its pipeline connexion. Owing to the urgent necessity of devising some means of loading the tankers immediately after the fire, the principal oil companies joined forces and conferred with the authorities, and finally temporary pumps were procured in haste from the oilfields by the oil companies. The pumping station has now been reinstalled, and there is no longer any danger of a recurrence of the cause of the fire. Space has been left in the pump house for further new pumps or for a compressor. The purchase of a compressor is now projected.

The entrance to the petroleum basin is now found to be too narrow for the tankers of ever increasing dimensions of vessels which come to Constantza for loading (ships of up to 11,000 tons are now regular visitors), particularly in view of the total absence of tugs of even normal power in the whole port. It has been proposed to widen the entrance by about 16 feet by cutting off the north mole, and it is expected that the work will be begun during the spring of 1928. The construction of a new 10-inch pipeline from the oilfields to Constantza is also under consideration. It is estimated that the improvements already effected and those in course of construction or projected will have the effect, if and when completed, of doubling the exporting capacity of the Constantza plant. Three electric cranes of three tons lifting capacity have been received, and one is already in working order.

TURKISH MARKET FOR SECOND-HAND CLOTHING.

Although the sale of new ready-made clothing in Turkey is limited at the present time there is an important trade in used clothing. These garments, chiefly men's overcoats, coats, and vests, are widely sold to the poorer classes (says an American Consular report). According to the latest Turkish Custom figures, the total imports of all types of ready-made clothing into that country during 1926 were valued at £T3,030,028. Imports of all types of ready-made clothing from the United States were valued at £T1,172,242, of which, it is estimated, 95 per cent. consisted of used clothing. France is the only other country exporting important quantities of used clothing to Turkey.

Eight per cent. of the winter corn is reported to have been frozen in the Ukraine and the harvest outlook is grave.

The Lloyd Triestino Line has decided to place in hand at once, in their yards at Trieste, the construction of a large new liner for their weekly express service from the Adriatic to Alexandria. This vessel will attain a speed of 21 knots, making it the fastest ship in the Mediterranean. This high speed will enable the duration of the sea passage to be substantially reduced. The vessel is to maintain a regular weekly service from Trieste (or Venice) and Brindisi, and the journey from London to Egypt will be performed in three and a half days. The service will also provide the shortest sea passage—less than 40 hours from Brindisi. At the present time the Helouan and Vienna, vessels of the Lloyd Triestino, enable the journey from London to Egypt to be performed in four days.

Company Meetings.

THE P. AND O. BANKING CORPORATION.

Review of the Year.

Eastern Trade Conditions.

The eighth ordinary general meeting of the P. and O. Banking Corporation, Ltd., was held on July 6 at 122, Leadenhall Street, E.C. Mr. W. E. Preston (Deputy Chairman) presided.

Lord Inchcape's Letter.

The Chairman said:—Gentlemen,—Before we proceed to the business of the meeting I desire to read to you a letter which Lord Inchcape has addressed to me under date June 27, 1928:—"My dear Preston,—On account of the recent tragic blow which my family has received, I do not feel equal to presiding at the annual general meeting of the P. and O. Banking Corporation, to be held on July 6. I am sure the shareholders will excuse my absence from this meeting in the circumstances. The interest which I have always taken in the bank, whose welfare has had the first call upon me, is unabated, and I confidently anticipate that the bank has an important and independent future before it. It will be my care and wish, as it has always been in the past, to forward the interests of the bank in all respects to the best of my power. Would you then, in the circumstances, take the chair at the annual meeting in my absence, and assure the shareholders, to whom I should like this letter to be read, of my deep regret at not being able to meet them this year as I have done in each of the last seven years?"

I need hardly say, gentlemen, that I voice your feelings when I say how very deeply and sincerely we all regret the circumstances which have occasioned our chairman's absence from us this afternoon, and, with your permission, I propose to ask our secretary to convey those regrets to his lordship in writing. (Hear, hear.)

A Vote of Condolence.

Mr. E. T. Hargreaves: May I be allowed, sir, on behalf of the shareholders, to say how much I echo what you have said with regard to Lord Inchcape? I should like to suggest that we should rise in our places and pass a silent vote of sympathy and condolence to Lord Inchcape and his family in the irreparable loss which they have sustained. Will those gentlemen who support me in that suggestion kindly rise? The meeting then stood for a moment in silence.

The Accounts.

The report and accounts having been taken as read, the Chairman said, commenting on the balance-sheet, that the totals this year were £18,500,000, as against £16,900,000 in 1927. Last year Lord Inchcape had had occasion to point out that the figures differed from those of 1926 owing to book parities, but there was no such question this year, the turnover showing a genuine increase over the 1927 figures.

With regard to the individual items in the balance-sheet, their cash had gone up from £1,655,000 to £1,861,000; bills receivable were £4,600,000, against £4,300,000 in 1927; investments £2,900,000, against £2,297,000. Amongst those investments the reduction of Indian Government securities to £548,000, as against the 1927 figure of £1,071,000, represented a good move on their part, because they had had to write off a certain amount for depreciation of the Indian Government securities which otherwise would have gone to the benefit of the profit and loss account.

Their Allahabad bank holding stood unchanged at £589,659. The business of the Allahabad bank was proceeding most satisfactorily under the able management of the new manager, Mr. Lamb. (Hear, hear.)

In loans against security there was little or no change; advances to customers were slightly in excess of the 1927 figures.

The capital account remained unchanged. In this connexion he referred to Lord Inchcape's private circular on October 17 last, in which he submitted to shareholders an offer made by the Chartered Bank of India, Australia and China to purchase a block of P. and O. shares on specified conditions. They, the shareholders, would be interested to know that holders had availed themselves of the opportunity to the extent of 208,601 shares.

Their profit and loss account total amounted to £127,012 4s. 8d., and included £19,380 5s. 2d. brought forward.

Trade Conditions in the East.

Whilst the crop conditions in India during the period had been satisfactory, trading conditions had not, and competition in their particular markets had been ultra keen, profits having in many cases shaded away to vanishing point. Whilst conditions in China move slowly, he thought he was justified in saying that the movement

was in the right direction, but the fall in rubber and tin prices in the Straits had naturally been reflected in the volume of business there.

On the whole, profitable trading in the respective spheres in which this bank operated had been somewhat difficult, and this led him to speak of the tribute due to their general manager, to his colleagues, and to the Eastern officers and their respective staffs for the great care and attention which they had given to the satisfactory conduct of the affairs of the bank. (Applause.)

The report and accounts were adopted and it was resolved that a dividend of 5 per cent. per annum, less income tax, at 3s. 6d., be paid on July 13, 1928.

The directors retiring by rotation, the Hon. Alexander Shaw, Mr. F. A. Johnston, and Mr. M. M. S. Gubbay, were re-elected, as, in connexion with the affiliation of the Corporation's interests with those of the Chartered Bank, were Mr. W. E. Preston, Mr. Henry Bateson, Mr. Colin F. Campbell, and Mr. Edward F. Mackay.

Messrs. Peat, Marwick, Mitchell and Co. were reappointed auditors.

Mr. Hargreaves, a shareholder, moved a vote of thanks to Mr. Preston for his conduct in the chair, and to the directors for the results which the chairman had placed before the meeting. They all felt how pleasant it would have been to have had their friend, Lord Inchcape, with them. He appreciated that the past year had been a difficult one for the board and for those who represented the bank in the Far East—hear, hear—to whom they felt a debt of gratitude.

Mr. A. Pitt seconded the vote, which was unanimously accorded, and, with a brief acknowledgment by the chairman, the proceedings terminated.

BANK OF ROUMANIA.

Improvement in Trade.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held on July 4 at Winchester House.

General the Hon. Sir H. A. Lawrence, G.C.B., who presided, in moving the adoption of the report and accounts, said:—The balance available, after making provision for bad debts, income-tax, etc., amounts to £12,223. An interim dividend of 3s. per share, less income-tax, was paid on December 22 last, and the board now recommends the payment of a final dividend of 3s. per share, less income-tax, which will absorb a further £6,000, and the transference of the balance of £223 to contingency account. The severe stringency of money, the disappointing result of the harvest, and the unsatisfactory state of the oil industry had a restrictive influence on trade generally in Roumania last year, particularly in the closing months, and this, of course, affected banking transactions and consequently earnings. The rate of exchange, however, has in the circumstances remained surprisingly steady. When I addressed you in August last the rate stood at 800 lei to the £, and it has remained at approximately that figure up to the present. The absence of any violent fluctuations in the rate has served to attract a certain amount of foreign money to Roumanian industries. The note issue of the National Bank has remained more or less stationary—a slight increase being registered from 20,950 million lei to 21,026 million. The index figure of the cost of living remained stationary throughout the year at 50 times the 1916 figure. This, of course, keeps our working expenses at a very high figure.

Commerce.

Turning now to the commerce of Roumania for 1927, it is interesting to see that the exports again exceed imports in spite of an indifferent harvest. In 1925 there was an adverse trade balance of 1,000 million lei, but in 1926 the exports exceeded imports by 4,000 million lei. In 1927 the trade balance was again favourable by the same margin as in 1926—namely, 4,000 million lei.

This satisfactory state of affairs proves that progress has been made in some directions, but the shortage of money and deficient transport services have prevented the realisation of the great progress hoped for.

Trade between Great Britain and Roumania remained steady. Commodities to the value of £2,376,000 were exported from Roumania to this country as against £2,663,000 in 1926. Of this total £1,300,000 represented oil and £920,000 represented grain. Imports

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester, and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

amounted to £2,683,000, as against £2,596,000 in 1926. Of this total £1,279,000 represented cotton goods and £688,000 represented metals and machinery.

The Budget.

The Budget for this year shows little change and, excluding railways and postal and telegraphic services as formerly, provides for an expenditure of 38 milliards of lei as against 34 milliards last year—the difference being accounted for by a general increase in all departments. Mr. Vintila Bratianu points out that the present Budget is the sixth period in which expenditure has been kept within the margin permitted by revenue. The increase year by year of the revenues, he explains, has been utilised to make more adequate provision for the public services, to provide for the gradual liquidation of the burdens left by the War, and to cover the needs arising through the increase of territory under the Peace Treaty. A sum of 1,250 million lei has been earmarked in the 1928 Budget for the reduction of the State Debt to the National Bank—which is twice the amount devoted to this purpose in 1927. The only War debt which previously remained unsettled—namely, that due to France—was arranged last March on similar lines to the War debt due to Great Britain. With regard to the service of debts in sterling, francs, etc., the sum of 3,430 million lei is earmarked in the Budget as being ample to meet all liabilities. This sum is easily covered by the Customs receipts, which amounted in 1927 to 9,287 million lei. The total of export taxes collected in sterling amounted to nearly £3,000,000.

The 1927 crops were disappointing and although the area sown was approximately the same as that of 1926, the production of grain scarcely reached 9 million tons, as against over 14 million tons in 1926. The main cause of this decrease was the comparative failure of the maize crop, owing to the excessive dryness the production falling from 6 million tons to 3½ million. Exports of grain rose from 1,800,000 tons to about 3 million tons, an increase of 66 per cent. in quantity, but 35 per cent. only in value.

The increased exports were principally due to the shipping of the unusually large balance left over from the 1926 crops. To assist the sale of Roumanian grain abroad, the Government has decided to standardise all cereals destined for export. The prospects of an improved harvest this year are good. The area sown is equal to that of last year and rather more wheat has been sown. The following wire has just been received from our Bucharest manager:—“Plentiful rains all districts. Harvest about one month late, but fair average crop expected. Available export probably 40 to 50,000 waggons wheat. 120,000 waggons barley and oats. Maize showing well but too early estimate.”

Some progress has been made to ameliorate the condition of the railways and considerable purchases of locomotives and waggons were made. During the export season the goods traffic was adequate to meet the needs of the export trade for the first time since the War. Very large sums, however, are needed for the construction of new lines to provide direct and rapid communication between the old Kingdom and the new Provinces.

Before resuming my seat, I desire, on behalf of the Board, to thank the managers and staff, both here and in Roumania, for their loyal co-operation in carrying out the affairs of the bank.

Mr. E. W. H. Barry seconded the motion, which was carried unanimously.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at April 30, 1928, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (£300,000 fully-paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E15,127,618; Egyptian Government, £E15,069,277; Sudan Government, £E218,696; Mixed Tribunals, £E2,011,842; bankers' accounts, £E563,905; cheques and bills payable, £E322,008; sundry other accounts, £E1,533,581—£E41,377,552. Assets: Government securities and securities guaranteed by the Egyptian Government, £E21,373,454; sundry securities, £E453,258; advances on merchandise, £E3,622,372; advances on securities, £E4,416,650; advances otherwise secured, £E1,407,950; sundry other advances, £E1,015,260; bills of exchange, £E3,427,389; local bills discounted, £E625,707; buildings and furniture, £E230,553; money at call and at short notice, £E1,092,000; bankers' accounts, £E408,264; sundry other accounts, £E989,192. Cash: Notes, £E1,486,230; gold, £E499,681; silver, nickel, etc., £E329,574—£E2,315,485—£E41,377,552. Issue Department.—Notes issued, £E27,800,000—£E27,800,000. Gold, £E3,339,570; *British Treasury Bills, £E10,500,430—£E13,900,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills and National War Bonds, £E12,400,000—£E13,900,000—£E27,800,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Official* of October 30, 1916.)

The Central Bank of India reports net profits for the past half-year, including the balance brought forward of Rs.12,08,330. A dividend at the rate of 8 per cent. has been declared, and the balance of Rs.5,35,800 carried forward.

CHESS.

By “CARO-KANN.”

The solution to the end game which I gave recently is as follows:—

1, . . . Q—Q7; 2, Q—K5 (ch), K—Kt6; 3, Q—Kt2 (ch), K—R7; 4, Q—R3 (ch), K—Kt8; 5, Q—Kt4 (ch), Q—Kt7; 6, Q—KB4 (ch), P—B7; P—R5, K—B8; 8, Q—Kt3, K—Q8; 9, P—R6, P—B8 (=Q); 10, resigns.

I give this week another end game.

Black to play. What result?

NEAR EAST MARKET REPORTS.

The current issue of the monthly review of Barclays Bank Ltd, contains the following reports:—

Egypt.

The cotton market has fluctuated within narrow limits, with no definite tendency. The margin between Uppers and Americans has contracted, and at one time was as small as 6 dollars. Sakellaridis, especially staple lots, has been in better demand, although the old crop has been neglected. News regarding the crop is good; water is plentiful and there is a noticeable absence of insect pests. During the period under review, prices for cotton goods have ruled steady, and stocks, which are of poor selection, have been reduced, while fresh arrivals have been readily sold at satisfactory prices. The stock of Manchester goods is unchanged and the market is quiet, prices being slightly lower.

The Statistical Department of the Ministry of Finance announces that total imports for Egypt for the month ending May 31 were £E4,266,860, against £E3,898,798 for the corresponding month last year, and exports totalled £E4,660,034, against £E3,433,051. Of this total, cotton exports accounted for £E3,608,137, against £E2,579,506.

The Sudan.

Markets generally have been weak, as the dull season is now commencing and will continue until the harvest in December. The Agricultural Department estimate the total yield of Sakel cotton at 457.425 kantars. The import market in cotton goods has been steady.

Palestine.

Owing to the lack of rain and to excessive heat, from which many areas are suffering, the season's crops have been poor, and, in consequence, purchasing power has been restricted. Business conditions generally, therefore, have continued dull. The forthcoming construction of the harbour at Haifa, the official announcement of which has been made by the High Commissioner, will doubtless be an important factor in contributing to an improvement in the trade situation.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 4:—

Egyptian Futures.—Sakel Contract.—This market has been adversely affected by several factors during the past week and at times a very weak tone has been in evidence. In the first place, trade support has been unsatisfactory for some time and whilst up to recently this was neutralised by speculative purchases, encouraged mainly by the advancing tendency of the American markets, at the first signs of the latter developing a reactionary tendency our values broke rapidly. In addition, for some time past, Alexandria has been offering a very lukewarm response to any advances at this side and, judging from the tone of advices received from there, some pretty drastic liquidation has been effected during the past few seasons.

Another depressing factor encountered since our last report was the amount of pre-July liquidation encountered just prior to the first notice day; this unsettled the whole list and forced the month in question to 80 points below November; 1,150 bales were tendered, mostly old dockets, which have since passed into the hands of various spot interests. Manchester reports continue to be unsatisfactory and spinners are finding little business, the general lack of demand being further accentuated by the holiday season and the prolonging of the Nelson dispute. Crop advices from Egypt are still very favourable, but we have yet to pass through the critical period when no doubt the usual scares will be in evidence. After some stop-loss cotton had been uncovered this morning, the market commenced to develop a better tone and prices started to react, the movement being helped by a recovery in the American departments; in addition, more trade interest appears to be developing at the present level.

Upper Contract.—Values in this market have been mainly governed by American advices recently; thus, up to the week-end following our last report further advances were registered. Subsequently, a sharp reaction was recorded, a particularly weak session being experienced yesterday, "stop-loss" and liquidation orders being uncovered on the decline. The tone to-day, however, shows considerable improvement and prices have readily responded, to-night's close being one point advance for near and 9 to 14 points decline for distant positions since we last wrote. Some fairly heavy selling of July came into the market just prior to the first tender day, bringing the month in question at the widest to 40 points under November. On the 2nd inst. 1,000 bales were tendered, but were quickly taken up by trade interests, and this has caused the above difference to close in to 16 points, and also contributed to the healthier outlook now in evidence.

Trade reports continue rather unsatisfactory, but spinners' purchases of actual, whilst only of moderate weight, are consistent; we believe American buyers have shown more interest this week than for some time past. New crop reports are still satisfactory.

Egyptian Spot.—We have again experienced a quiet week in this department, spinners' activities being checked by the poor yarn demand, the continuation of the Nelson dispute, and the erratic fluctuations that have taken place in the value of the raw material. During the earlier days of the week the demand was particularly thin, and more latterly the sharp drop in values failed to bring in business. To-day, however, with the market developing a healthy reaction, spinners have shown more interest and there are evidences of a broadening inquiry, provided that values show a more settled tendency. Business transacted throughout the week has been fairly evenly divided between Sakels and Uppers, and premiums for good-stapled lots of both these varieties are inclined to harden in Sakels; cotton grading from Good Fair to Fully Good Fair has been inquired for, but only isolated sales have been concluded in the top qualities. In the shorter-stapled varieties the popular range has been from 25 off to 25 on contracts with few transactions in the dearer styles. All qualities grading from Good Fair downwards are beginning to be scarce, not only at this side but also in Alexandria. Pilon has only been occasionally asked for, but the selection of this variety is limited and holders are in a position to wait for their price. Both Sudan and Tokar Sakels have been rather neglected but maintain their basis.

Forwardings to spinners for the week ending June 29 were returned at 7,649 bales Egyptian and 1,733 bales Sudan. Estimated spot sales for the week, 1,500 bales Egyptian and 650 bales Sudan. Quotations of Sakel have been reduced 30 points on the week, whilst those of Upper and Pilon have been advanced 10 points. F.G.F. Sakel to-day, 20.75d. F.G.F. Upper to-day, 15.10d. F.G.F. Pilon to-day, 15.70d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 28, state:—

Since our last report the futures market has been fairly active, but the tone has not been too good. The week's summary of price movements is as follows:—Sakellaridis: July, 40.90 dollars, 0.10 dollars down; November, 42.50 dollars, 0.34 dollars up; January,

42.42 dollars, 0.47 dollars up. Ashmouni: August, 27.88 dollars, 0.53 dollars up; October, 28.43 dollars, 0.65 dollars up; December, 28.65 dollars, 0.40 dollars up.

Sakellaridis: Business has again consisted principally of speculative operations, but the buying has been more cautious and operators have not shown themselves disposed to push prices up on the same scale as the American advance; thus, we have an advance of only 35 points here against a rise of 120 points in New York. The demand from abroad has run very much on the same lines as recently, although reports generally indicate a revival of interest on the part of spinners; for the time being, however, the revival has been more inquiry than actual business. The near position has had to stand the weight of considerable liquidation this week and the July/November straddle has been pushed out to 150 points. It does not seem logic to anticipate a further widening, but it is possible. The Sakel/Ashmouni straddle (new crop) is 1,407 points.

Uppers.—This market also has been loth to follow the American advance and prices show only a rise of 60 points. The American/Ashmouni straddle is down to 610 points. Sellers of October have not been so much in evidence this week and there has been but little straddle selling against Sakellaridis. Spinners' demand has been more or less the same, and the remarks in this connexion with regard to Sakellaridis apply equally to Ashmouni. The August/October straddle has widened out to 55 points against 43 points a week ago, which is indicative of the demand; at the same time, however, it should be mentioned that the quantity of desirable cotton for sale is comparatively small.

The future course of the market depends a good deal on American, although it is probable that a decline in New York would not be reflected here to the full extent.

The week's receipts amount to 5,650 kantars, against exports 108,225 kantars; the stock in Alexandria stands at 2,107,742 kantars. **Spot.**—The spot market this week has been fairly active on the whole; sales amount to about 8,400 bales, of which we estimate 3,700 bales Sakellaridis, 4,200 bales Ashmouni and Zagora, 400 bales Pilon, and 100 bales other varieties.

Sakellaridis: The demand for this variety has been somewhat restricted; the high and low grades have been almost entirely neglected, the business registered being mainly in the medium grades. Spot differences do not show much change.

Ashmouni and Zagora: These varieties are still very much in demand, especially from Fully Fair up to Fully Good Fair/Good, and spot differences have stiffened somewhat for these grades. The higher

grades have been rather neglected. Low grades are becoming somewhat scarce, that is to say in good style of cotton.

Pillion: The many buyers of this cotton find difficulty in fulfilling their requirements owing to the scarcity, and premiums have, in consequence, hardened.

Other Varieties: There continues to be a small demand for White and Nahda, but the stocks of the latter are now practically nil and any odd lots appearing on the market fetch very fancy prices.

Crop, 1928: There is very little to report on the new crop. The plants are growing and maturing normally. In the North Delta there are still complaints of leaf worm and wilt, but this is but natural, as these districts are the last to pass the period of these attacks; we do not find, however, that the damage is at all serious. Temperature has been about normal, but some nights have been rather fresh. Water is ample for requirements.

The French Lawn Tennis Association has decided that Dunlop balls shall be used in the challenge round of the Davis Cup.

The traffic receipts of the South Indian Railway Company for the week ended June 9 amounted to Rs.12,69,065, making the total from April 1 Rs.1,26,44,324.

The latest report of the Roumanian Ministry of Agriculture states that fruit trees have suffered from the cold weather, and crops are expected to be much below normal.

The arrivals at the port of Varna during 1927 included 468 steamers, of which 140 were under the Belgian flag, 113 Italian, 63 British, 41 German, 37 French, and 35 Dutch. There were also 274 sailing ships.

NEWS FROM ALL SOURCES.

The traffic receipts of the Suez Canal for the first half of the year 1928 amount approximately to 111,500,000 gold francs, compared with 103,820,000 for the corresponding period last year.

An agreement has been arrived at between the Roumanian Government and Dutch holders of Roumanian pre-War loans, in virtue of which the latter will receive the same treatment as the French, Belgian, and Italian bondholders.

According to official statistics the Greek merchant fleet consisted, on December 31, 1927, of 504 steamers of 1,111,050 tons and 726 sailing ships of 58,684 tons, making a total of 1,230 vessels of 1,169,734 tons.

The construction of the Abu Deleig road and railway bridge across the river Atbara, 250 miles east of Khartoum, has been completed by Dorman, Long, and Co. five months ahead of contract time. The river at the point of crossing is 1,050 ft. wide, and the bridge, with the new railway extension, will open up an important cotton-growing area.

The Northern Sudan Estates has been registered as a private company with a capital of £25,000 (24,000 Eight per Cent. Cumulative £1 Preference and 2,000 Ordinary of 10s. each), to acquire lands for the planting and cultivation of cotton in the Sudan and elsewhere, etc. The subscribers are: M. Bakirgian, Bowdon Old Hall, Bowdon, Cheshire, merchant, 1 Pref. share; H. C. Bardsley, Chesham Place, Bowdon, Cheshire, cotton broker, 1 Ord. share. The first directors are to be appointed by the subscribers.

Notes of the Week.

The Greek Political Situation.

M. Venizelos has defeated the numerous political leaders who joined issue with him on the subject of the electoral system. The Prime Minister favoured the abandonment of Proportional Representation and a return to the majority system. The leaders objected on the ground that the change could be legalised only by a vote of the Chamber, relying on its rejection by that body or on the fact that, if it were dissolved, the matter could not be submitted to it. M. Venizelos, however, has dissolved the Chamber and has persuaded the President to abolish Proportional Representation by Decree in favour of the majority system for the forthcoming elections on August 19. He has given way to Admiral Coundouriotis in regard to the election of a Senate, which is not to be carried out simultaneously with the election of deputies to the Chamber, but will wait until the latter body is in existence and can nominate its own quota of Senators in accordance with the Constitution. Their defeat will furnish the political leaders with fresh fuel for their attacks on M. Venizelos; but it is unlikely that public excitement over the matter will be aroused in their favour. The Greek electorate continues to be more or less apathetic to the quarrels of the Athens politicians, and sections of it which are not well disposed towards M. Venizelos will be content that he should be given an opportunity of showing what he can accomplish in contradistinction to the ineffective administration of the last two Cabinets, in which M. Zaimis found his time and energies absorbed in keeping the peace between the component elements of his Ministry.

The Liberation of General Pangalos.

Although from the point of view of so many of his countrymen M. Venizelos suffers from lack of touch with Greek affairs as they are, and from a desire, which is not shared by the whole nation, to see them as he thinks that they ought to be, he has, within a short time of reassuming office, done, as a good European, a signal service to

Greece by setting General Pangalos at liberty. For nearly two whole years successive Greek Governments have shown themselves so remote from the accepted principles of civilised justice that, apparently without the least compunction and without even recognising the enormity of their action, they have kept the ex-Dictator in prison without trial, and with only mock efforts to carry out what were supposed to be investigations preliminary to a trial. M. Venizelos has realised that he could not well show himself in any European capital, if he were responsible for the continued perpetration of such flagrant injustice, and he ordered the immediate release of General Pangalos. It will be left to the new Chamber to decide whether the ex-Dictator is still to be prosecuted; but it should be difficult for a Parliament, in all the circumstances of the case, to order him to stand his trial without impeaching all those Ministers who since August, 1926, have been responsible for the violation of the law in keeping a Greek citizen in prison indefinitely without trial. If the hatchet of Greek political strife is ever to be buried, the first step must be the drawing of a veil over the political past, and the amnesty, which must be based on the national conscience as much as on any form of constitutional enactment, must apply not only to those who were responsible for the judicial murder of Ministers, but also to those who, like General Pangalos, tried, however mistakenly, to save Greece from the folly and crimes of her political leaders. Now that tardy justice has been done him, it is to be hoped that General Pangalos will recognise that he too lives in a glass house and will, on that account, not start to throw stones.

Macedonian Activities.

The murder of General Protogueroff, the Macedonian leader, has been followed by an attempt to kill M. Lazitch, Chief of the Yugoslav Department of Public Security, in Belgrade. There seems to be no reason to doubt the confident assertion that both these crimes are to be attributed

to the Macedonian Revolutionary Organisation. Apart from the personal antagonisms that had sprung up in the executive committee of that organisation, the rival leaders stood for conflicting policies. General Protogueroff may have been killed in revenge for the death of the murderers of Todor Alexandroff, but he was credited with being ready to endorse a policy of reconciliation between Bulgaria and Yugoslavia, one effect of which would be to put the Revolutionary Organisation out of action. His rival, Ivanche Mihailoff, stands for the old methods of murder and war to the knife, and his entourage does not seem anxious to dissociate him with the new developments. The removal of Protogueroff would thus be intended to introduce a return to terrorist methods, and the first instance has been provided by the attack, happily unsuccessful, on M. Lazitch.

Yugoslav and Bulgarian Responsibilities.

The first duty of both the Yugoslav and the Bulgarian Government in the face of a fresh campaign of Macedonian terrorism is for each to keep its head; their second duty is to see that their respective Presses keep theirs. The two Governments are assured of their mutual good faith in the attempt that has been made to lead the countries to a friendly agreement. It is, therefore, certain that their interests are identical when they are threatened with further Macedonian excesses. A statement issued by the Belgrade police to the effect that the attempt on M. Lazitch was organised in Zagreb by Bulgarian exiles is two-edged. It may point to the necessity of the Bulgarian Government to exercise a close watch on the leaders of the Macedonian Revolutionary Organisation; but it also shows from Yugoslavia's own experience the difficulty experienced by a Government in carrying out that close watch. For the moment the Yugoslav people appear to be anxious to make the Macedonian outrages serve their own party quarrels. A Belgrade newspaper, which acquired unenviable notoriety in its open advocacy of the methods which recently disposed of two Croat deputies in the Skupshtina, now accuses M. Raditch of being the murderer of M. Lazitch, who has so far not succumbed to his wounds. It is to be hoped that one of the steps taken by General Hajitch's non-party Government will be to restrain the activities of their murder-Press with the ruthlessness with which Yugoslavia expects Bulgaria to deal with Macedonian activities. It will not be encroaching on the liberty of the Press, for such prints have as little claim to the dignity of membership of the Press as the Macedonian Revolutionary Organisation has to the status of an independent Government.

Progress in Afghanistan.

King Amanullah has lost no time in reminding his subjects that his tour abroad has confirmed him in his intention to press forward with the reforms that he had already decided upon for the "up-lift" of Afghanistan. Very shrewdly he has fixed upon two basic reforms as the foundation of the new order—education and *purdah*. The Afghan people are to be educated, and to this end education has been made compulsory and, wherever the need exists, free. It is obvious that a State cannot be modernised if the people remain steeped in ignorance. On the other hand, any wide increase of knowledge must, sooner or later, be accompanied by a demand for constitutional changes, which will make Afghanistan more democratic than it is at present. The King, however, is clearly prepared to face this eventuality. *Purdah*, or the seclusion of women, is to be abolished. Queen Surraya, with the King's consent, has already set the example, by appearing unveiled at a dinner and reception at Kabul. This innovation has shocked the mullahs, who, in deputation to King Amanullah, have denounced the step as an insult to Islam, but only to be sent about their business by his Majesty. King Amanullah probably realises, as other good Muslims have before his time, that the practice of keeping the womenfolk of the nation veiled and secluded reacts on the upbringing of the children, and in a variety of ways is a handicap to a country in the modern struggle for national existence and development. Industrial activities can follow as education progresses, the standard of living improves, and the requirements of the people increase. Communications are a necessary preliminary, and, if he had not realised the fact before, King Amanullah must, on many occasions during his long tour, have been reminded of the part played by good roads in any country that aspires to be regarded as civilized.

Peace with the Yaman.

It is a curious fact that, whereas in the rest of Arabia Great Britain has managed affairs with considerable enterprise and a fair measure of success, her dealings with the Imam Yaliya of the Yaman have so far met with signal lack of fortune. Nor can it be honestly said that prospects of a *rapprochement* have grown brighter since the Colonial Office and the Royal Air Force assumed control at Aden. In the view of Sanaa, at any rate, Aden has in recent months become peculiarly difficult to deal with, and the Imam's advisers feel certain that, if they could only obtain connexion with the British Government through some other medium than that of the Protectorate, a beneficial peace between the Yaman and Great Britain could speedily be obtained. As things are, continued infringements and bombings would appear to lead nowhere, for the simple reason that they cannot be indefinitely pursued. There are grounds for believing, indeed, that the Yaman is psychologically ripe for a change of relationship with Great Britain. It is whispered that she is not entirely content with the alleged benefits arising from her Treaty with Italy, and is now realising that Great Britain is the only strong and stable Power which could facilitate development along the lines wished by the Imam. In these circumstances, would it not be a wise step to invite to London a mission from the Yaman, which could discuss in a calm atmosphere the various points at issue between the Zaidi State and the Protectorate and the rest of Arabia? Without question the Yamanis would respond eagerly to such an invitation, which would seem to be precisely one of the sort which a Great Power can fitly and without the slightest loss of prestige make to a backward but aspiring nation. Doubtless the British Government has in mind the failure of the Clayton Mission in 1926, but certain circumstances have changed since that date. It is in the highest degree improbable that a Royal Yamani Mission to London could return empty-handed. Something, at any rate, must be done to check the threatened increase of military activity in South-Western Arabia.

THE YUGOSLAV CRISIS.

Although the course of political affairs in Yugoslavia may yet have certain surprises in store, it would appear as if a settlement of the crisis has been found for the time being in the appointment of General Hajitch, Minister of War in recent Cabinets, as the new Prime Minister. His task is to form a Government representative of the different elements of the Yugoslav population with a view to holding fresh elections at an early date. To this end the new Ministry will comprise a number of Serbs, one Bosnian, one Montenegrin, one representative of the Voivodina, three Croats and one Slovene. Not the least interesting appointment is that of Dr. Juritch, Yugoslav Minister in London, to the Ministry of Finance. His inclusion in the Cabinet is eloquent of the straits to which Yugoslavia finds herself reduced. Dr. Juritch is essentially a diplomatist, and not a politician; he has been strikingly successful in his post in London, and there could be no question of recalling him, if the need of the country had not been great. Dr. Juritch is a sound economist and has rendered yeoman service in the settlement of Yugoslav debts to the United States and Great Britain; but it is reasonable to suppose that his presence in Belgrade is desired less for the purpose of introducing any new financial policy during the tenure of office of a provisional Government, than in the expectation that his acceptance of a portfolio will win for the new Ministry the confidence of foreign Governments and enable the negotiations for a loan to be carried to a conclusion. In other words, Dr. Juritch's light instead of being (relatively speaking) hidden under a London bushel is to be set high in a Belgrade candelstick, in order that it may illumine the whole sphere of Yugoslav foreign relations. Finally, the presence of Dr. Juritch in the Cabinet is the best possible guarantee for Yugoslavs and foreigners alike that there is to be nothing in the nature of a military régime in General Hajitch's assumption of office.

One of the most interesting features in the situation in Yugoslavia is the apparent vindication of Croat belief in M. Raditch. It has been difficult for any foreigner to regard him hitherto as anything but an irresponsible demagogue with an amazing capacity for making himself a nuisance to his compatriots. His coquetting with Soviet Russia, his adoption of republican views and almost equally rapid reversion to monarchical principles, his unmeasured denunciation of Italy and the intemperance of his language in all his political utterances marked him as

politician seemingly devoid of all ballast and even of a rudimentary sense of responsibility. Croat support of M. Raditch, however, has never wavered to any serious extent, and gradually his uncompromising hostility to Serb domination is seen to be coming into its own. His chief, if not only, constructive contribution to the solution of Yugoslavia's difficulties was made several months ago, when he proposed that the Voukitchevitch Cabinet should make way for a Ministry of non-politicians under a high military officer. There can be no doubt that in M. Raditch's view a dictatorship pure and simple would have been preferable to the domination of Serb politicians; but his instinct was right, that the country would have no respite from political quarrels until some authority was established over the politicians, which would introduce into the administration justice, equality, and efficiency without regard for the interests of particular parties. M. Raditch's scheme has now been adopted by King Alexander, and he has improved upon it by calling upon the former Minister of War, instead of introducing at the head of the Government a military officer from outside, entirely unversed in administrative affairs. General Hajitch's appointment appears to have been well received in Yugoslavia, even by the politicians whose shortcomings are responsible for the tragic situation in which the country finds itself. If, therefore, M. Raditch, having so far gained his point, can now show a capacity for working in harness with others equally concerned to promote the interests of Yugoslavia, a brighter day will have dawned for the Kingdom.

It is unfortunate that the splendid qualities shown by Serbia in the War should have proved so ineffective for the administration of the State in peace time. The art of seeing themselves as others see them has not been cultivated by Serb patriots, whose resentment over the Croat claim to an equal status in the Triune Kingdom has been so strong that, but for the pressure of possible complications resulting from the hostility of neighbours, the State must before now have been resolved into its component elements. The spirit of compromise plays no part in the Serb nature. The obtuseness and obstinacy that were responsible for the maintenance of an intransigent attitude towards Bulgarian claims in 1914-15, until it was too late, have been manifested in Serb dealings with Croats over the Vidovdan Constitution and the routine work of the Administration. Whether in regard to Montenegro, Southern Serbia or Croatia the Belgrade authorities have shown consistent lack of statesmanship. A capacity for adopting a hard-and-fast policy and for seeing it through ruthlessly to the end, however prejudicial to the general interests of the country that end may be, has been their guiding principle, and all other considerations are subordinated to it. These methods are successful neither in statecraft, nor in business, and the prejudice done to Yugoslavia as a result of their adoption for the last ten years has been greater than is realized in Serbia. There could be no better foundation for the new State than Serbian grit, to which the world bears testimony; but, until it is amalgamated with the wider outlook and the tactfulness which the Croat and Slovene elements can contribute, Yugoslavia is likely to prove a problem to herself and a restless partner to all her neighbours.

*The Near and Middle East

From Our Own Correspondents.

CYPRUS.

Nicosia, July 14.

A Rumour.

One of the principal topics of discussion and of comment in the Greek press relates to a rumour, now current, that the British and Italian Governments contemplate a change of administration in Cyprus and the Dodecanese. According to this report the two Powers are considering the appointment of an independent Governor-General, to be elected by the Hellenic Government, but subject to British and Italian ratification. The arrangement would resemble that applied to Crete in 1897-1912, and to Samos. The idea, whatever its origin and value, does not meet with favour, as might be expected, in Cyprus. Such a policy, it is said, while recognising, and making concessions to, Greek aspirations, could only be temporary, and a step towards the only change which would be acceptable, either in Cyprus or the Dodecanese, viz. complete union with Greece.

A Church for Mt. Troodos.

A proposal is on foot for the building of an English Church in the summer quarters of the garrison and of many civilians. Subscriptions are already being received towards a fund for this purpose. Hitherto one of the military buildings has been used for Church of England Services, and tents for Presbyterian, or other denominations.

The "Leper Farm."

Improvements on the Leper Farm continue to be carried out. It is said that the existing Greek Chapel at this establishment is in a dangerous condition, from the foundations upwards, and a new building is required, at a cost of about £500.

Sir Ronald Storrs.

Reports of speeches of the Governor, Sir Ronald Storrs, are read with interest. Much is expected from his visit to England. It is regarded as certain that a loan for at least £500,000 will be sanctioned. Agriculturists hope to see the establishment of an Agricultural Bank that will bring relief to the depressed and heavily indebted peasantry, and further borings for artesian water are awaited.

American Tourists for Cyprus.

A large number of visitors from the United States is expected by the steamer Byron, leaving America on June 26. Many Cypriots settled in the States will probably take the opportunity of running home to see their families. The tourists, after visiting Greece, are expected to arrive about the middle of July.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

General News.

Great heat has set in, and all who can afford to leave the towns are visiting the various hill-stations.

Olive trees of the island, which form a very important branch of arboriculture, but one far too much neglected, are attacked rather seriously by a parasite. The Agricultural Department is about to carry out a spraying campaign over large areas of the olive growing districts.

FROM LONDON TO THE BLACK SEA BY CAR.

BY FEODORA STANCIOFF.

A journey from London to the Black Sea in a 12 h.p. "Standard" car, is a very mild performance. It would be hardly worth mentioning in the light of the dazzling achievements of the past year, if touring Europe during the holidays were not such a fascinating experience.

Judging from personal observations I would add that expenses are very moderate, roads good, with a few exceptions, and that the *Tryptiques* and *Carnets* of the Automobile Associations have solved the problem of frontiers in a most welcome manner.

France.

I can imagine no greater sense of freedom than that which my brother and I experienced on that bright May morning in Paris, when he had finally secured our luggage on the back seats, and settled a burly Airedale in their midst. There was some difficulty in persuading this dog to adopt a dignified and restful attitude in preference to a precarious position between a tennis racquet and a kettle, but he soon curled up and slept through the Paris traffic, a sign of iron nerves.

We had reached Paris the night before, via Dieppe, and our plans were made while we looked out on the Place de la Concorde and on the fresh green tree-tops of the Champs-Élysées, from a hotel window. Paris seemed to be singing and laughing in the sunset . . . so many voices, so many throbbing pulsations; motion reigned supreme, tearing at millions of lives. The frenzied mood of the city remained with us for many hours, as we drove into the restful country roads, those wide straight roads of France, that the genius of Napoleon, a hundred years ahead of his time, contrived for the needs of our restless age.

We were bound for Strasbourg, a run of nearly 300 miles, and eastwards we sped, like the couriers of old times who ran their war-like errands for Emperor or King, linking Paris with the towns of Lorraine or Alsace. Near Sezanne (Marne) we were informed by local motorists that we were not far from the marshes of St. Gond, where the clash of the Marne Victory had doomed the German armies. No sign of war, now, in the gay fields where peasants are bending over their ploughs, except a sign-post to a side track: Cimetière Allemand. Probably an isolated burial ground. Sezanne was our first stop; we strolled into the 15th century old church through a massive oak porch of great beauty. The square solid tower and gabled roof, the exquisite workmanship of stone carving, seem to radiate peace and harmony on the little "place" where a fountain plays to an audience of discreet shutters, as very few people are visible on this summer morning. The grey walls of grey dwellings have a fine sense of proportion and dignity, and Sezanne's hospitable welcome was typical of the French provinces: excellent food, delicious wine and smiling inn-keepers.

Then to Vitry-le-François and across the wooded stillness of Champagne, we drove on towards Nancy. Still no signs of War, and yet we were passing Perthes and St. Dizier; Vitry-le-François had been Joffre's headquarters, but France is a past master in trimming up war-wrecked

lands; it is such an old habit of hers. The French farmer is as steady as his mottled stately *percheron* and they make a fine pair, the man in his flowing blue blouse, and the grey horse towering and clattering on the white roads. There is a line of poplars in the distance.

After Toul, a hive of barracks, colonial troops, and French soldiers, Nancy seemed a gracious queen of Lorraine, with her exquisite *Hotel de Ville* and 18th century architectural refinement. The sun was setting as we neared the pre-War frontiers of France and passed into Alsace; the long one-street villages were strangely silent; great piles of timber, from the surrounding forests flanked the cottages, and very few lights shone through the low windows; a slanting thatched or slate roof assumed mountainous proportions in the twilight and the air grew chilly as we gradually approached the Vosges. Sarrebourg's ruined town-walls look austere in the panorama of receding hills. At Saverne we began our descent towards Strasbourg. Rain set in, and the last 40 miles seemed for ever stretching on. Though our lively engine showed its usual pluck, darkness on unknown wet roads is depressing, and our arrival at Strasbourg was distinctly gloomy. Later we were to learn that the town authorities had restricted the lights in the streets to an almost uncanny minimum as a measure of economy after the financial chaos of War. Passers-by directed us in most guttural French to the *Maison Rouge* hotel. The car was safely disposed of, and our dog raced round and round Kleber's statue on the square in the uncongenial darkness.

The next day was Sunday and Mass in the Cathedral was a scene of great beauty, lit up by the mystic light that poured into the aisle from the great "rosace" above the porch. The Cathedral has a single spire, a façade of exquisite proportions: every detail is perfect and inspiring. Other Gothic treasures are hidden in the old quarters, where you get medieval glimpses of huddled buildings and dreamy canals. But Strasbourg is elusive: it has no wish to explain itself; it is silent, cautious, and maybe thinking deeply; surely from the Cathedral spire, you can see far into Germany, as you can see far into France.

Germany.

The bridge of Kehl, on the Rhine, is only 2½ miles from Strasbourg. Before crossing it, you are stopped by the blue-clad French *douanier*, on the opposite side you deal with the green-clad officials of the Reich. You pay 15 marks for touring rights and your papers are duly and efficiently stamped.

There was some sort of *Blumen-Fest* in Baden on that particular Sunday, and in the first villages we saw signs of rural rejoicings, arches of fir branches, garlands of spring flowers over cottage doors, and, in spite of showers, many a troop of hefty young men hatless, care-free, and friendly, marching along the pretty country lanes. Our route, however, was not through Baden. In spite of this we felt the *Blumen-Fest* atmosphere in the whole province, and sounded our horn to countless merry-makers, as we drove towards the Schwarzwald. Apple-blossom, iris and pæonies were in all the small gardens, and we met pretty girls in tight bodices and flowing skirts, fair-haired

and shy, who gave the human touch to this "Werther" scenery. That whole morning we did not pass a factory or a lorry, and enjoyed 18 miles of the soothing *pastorale* after which the serious business of a 1,000 metres climb in the Schwarzwald began, a test that our car stood without a hitch.

The road we took via Peterstahl, Griesbach, and Kniebis to Freudenstadt is one of the most direct across the mountains, and the relatively stiff climb is well worth doing. Griesbach is a touring centre with medical waters and ideal surroundings: Kniebis, too, is attractive. During the ascent, when the fragrant gloom of the pine forest is broken by a sudden clearing, the views are superb, then the Black Forest closes round you once more.

Freudenstadt is on the open wooded plateau at an altitude of 750 metres. We lunched in a crowded *Gasthaus* where young students on a walking tour were resting. Bunches of mountain lilac and glasses of beer were on the tables and snatches of song seemed unavoidable. I could not say what they were singing, but the rhythm suggested medieval Germany, and the taverns of old, old times. Did they take walking tours in those days with the same odd mixture of deliberate co-operation and Nature worship?

During the afternoon, driving across Wurtemberg, we lost the medieval feeling and were steeped in the 16th and 17th centuries, when the Lords of the land hunted in the Neckar Valley, and the Dukes of Wurtemberg drove in state to the provincial towns from their palace in Stuttgart. These towns have not lost their picturesque character, and the wooded, hilly, countryside makes an ideal background for the browns and greys of town-wall or watch-tower. The clear, dry air adds to the general enjoyment. Our eastward course led us through Horb, once a fortified town, and Rottenburg where an etcher could spend many a day in the shade of a big chestnut tree that overhangs the old stone bridge on the river. Then on to Tubingen where steep narrow streets lead up to the Rathaus and church, towering above serried ranks of quaint, pointed roofs. Reutlingen was the last town on our way to Ulm where we decided to spend the night, after the day's moderate run of 130 miles. Long before Ulm was reached, we could see the Cathedral spire, the highest in the world (528 ft.) soaring up into the evening sky. Surely very few people ever mention this "record" of inspired art, and yet to gaze on it and wonder, and listen to its silent message has been the privilege of Ulm for five centuries.

We wandered through the dark, quiet city to the banks of the Danube: the rushing, black waters had a sinister appeal; later we discovered the Market Place and its very fine fountain. This trip of ours was decidedly in favour of sight-seeing at night. It has its charms. The long day on the road has strained every nerve, and your cramped limbs enjoy the exercise, just as your tired eyes relish the failing light. If you have a locating instinct, you bless the absence of guide books and you sacrifice efficiency to romance. The spirits and ghosts of the past linger in the empty streets, but the hotel you eventually retire to has enough commonplace comfort to ensure

dreamless slumbers. In the case of Ulm, the hotel was very cheap and our bill the next morning was a small draw on our little pile of marks. There were so many currencies to come yet—Austrian “shillings,” Hungarian *pengos*, Roumanian *lei*, and Bulgarian *leva*. Still, everything goes well, provided that you do not buy too much of each currency at a time; the League of Nations might well provide Europe with an international method of payment.

Meanwhile we started on our way from Ulm to Augsburg and Munich, a smooth run on excellent roads, though we found the country a little uninteresting compared to the previous day. We realised that we were in Bavaria when we saw the village churches, round-domed and white-washed, looking very much like the church of a toy village in the distance. Augsburg struck me as a very prosperous town, and while the car was being treated to petrol I spent a few minutes in the beautiful church of Sainte Anne, in happy oblivion of the nearness of a garage. Two hours later we were at Munich, and towards evening the enchanted shores of the Chiem See appeared in a mist of rain, for we were making a “detour” on our way to Vienna, so as to break our journey at Salzburg. The road along the lake is a poem in itself; an old monastery stands on a small island, where the “Ugly Duchess” of Carinthia is said to have brooded on her sad fate. South and east the blurred contours of the Tyrolean mountains grow more defined until the snowy peaks of the Kapuzinerberg and Gaisberg show their curious silhouettes and broken lines: they are Salzburg’s lofty guardians.

Austria.

We saw the last German official at Freilassing and the first Austrians at Rott, both localities being only 7 miles from Salzburg. Soon the fortress was in sight, standing stern and haughty above the town. Salzburg, as usual, was in the throes of a musical centenary (Beethoven), and some investigations were necessary to secure rooms; but Austria is the home of good manners and grace, and help is always forthcoming from this eminently courteous nation.

There are several roads from Salzburg to Vienna; we went by Frankenmarkt, Lambach and St. Polten, leaving Linz on our left. The distance is about 190 miles, but we were often delayed by road repairs, and commented patiently on the noble efforts of an impoverished State to improve its highways. The fields were gay with masses of flowers, so varied and scented that the thought of hay-making suggested the destruction of an enchanted garden. Lambach is the ancient seat of a Benedictine Abbey, which history traces back to the 11th century. The present building, despite huge and noble proportions, looks somewhat desolate and we were more interested in a white marble memorial to the Russian and Austrian generals killed in the war of 1805 in their united struggle against Napoleon. Broken armies, broken alliances, heroes of past and present ages, ever laying down their lives in the great game of destiny! Already at Ulm Napoleon’s first big victory as an Emperor had haunted us, and that same evening we approached Vienna *via* the plains of Wagram.

But to return to our little English car on the roads of Austria. We lunched at Enns, a pretty town on the river of the same name, after passing Wels on the Traun. The Danube, to which both rivers flow, was not visible until we reached Melk, where the monastery, famous since the Middle Ages, shows no signs of old sieges by Turk or Christian. As Melk and its domes fade in the distance, somehow the road becomes a blank in my recollections. There are tiring rows of factories near St. Polten, and the last 30 miles of hilly country to Vienna are devoid of meaning because of villas, summer resorts, suburbs and traffic. Moreover, the great capital of belittled Austria yields none of its beauty or grandeur to the motorist who enters by the Linzer-strasse, leading to the endless, commercial and noisy Mariahilfer-strasse, with its shrieking trams and cheap shops. Eventually we found the better quarters of Europe’s best-built town, but oh! the diffi-

culty of convincing a Viennese hotel manager that an Airedale is a suitable client! Police regulations in Vienna would humble gentler animals than ours perhaps, but we spent an awkward evening trying to reduce his bark and stride with so little result that we had to feed and sleep in modest places where tolerance went hand in hand with shabbiness.

(To be continued.)

NEWS IN BRIEF.

A beginning has been made in Constantinople on a dictionary giving the official Latin spelling of all Turkish words.

At an international congress of deaf mutes held in Prague last week the delegates included representatives from Yugoslavia and Roumania.

Major Charles Glynn Hughes Bellamy (41), R.E., O.B.E., P.W.D., India, of Rajpur, Central Provinces, India, left £1,957 (net personalty £830).

The sudden resignation is reported of Midhat Bey, Vali of Constantinople. It is expected that the post of Vali may be merged in that of Prefect, in which case Mouheddin Bey, the present Prefect, will probably be appointed to the joint office.

Mustapha Kemal Pasha, the Turkish President, has given Turkey an example in the use of the new Latin alphabet by autographing a photograph of himself in Turkish written with Latin letters as follows: “8 Temmuz, 1928, Hickmet Beye Gazi Mustapha Kemal” (“July 8, 1928, to Hickmet Bey from the Gazi Mustapha Kemal.”)

A report emanating from steamers plying from the Arabian coast states that fighting broke out on June 25 between Yamanites and British forces from Aden over a boundary dispute. Since that date British aeroplanes are stated to have bombed several towns in Southern Yaman.

The Greek Cabinet agreed on July 7 to negotiate with a British company, with a view to granting a 25 years’ lease of the Achilleion at Corfu, formerly the property of the Kaiser. The proposal is to establish a casino, erect an hotel of 450 rooms, instal electric light and tramways in Corfu, and execute other works. The Achilleion was purchased by the Greek Government for 15,000,000 drachmæ, under the German-Greek debts settlement.

The King of Afghanistan, as an expression of his appreciation of services rendered during his recent visit to London, conferred upon Sir Josiah Stamp, Chairman and President of the London Midland and Scottish Railway Company, the Order of Astaur, first class, and upon Mr. Horace Ernest Horne, Passenger Service Assistant to Chief General Superintendent, the Order of Astaur, third class. The Order of Astaur, fourth class, has been conferred upon a number of officials of the L.M. and S. Railway.

The International Congress of Orientalists, which used to meet once every three years in some important city, held its last meeting at Athens in 1912. Oxford was selected for the next meeting, but the War intervened, and it was not possible to resume the gatherings till this year. During the last week of August the 17th Congress will be held at Oxford, as decided on 16 years ago. A large number of delegates will attend, representing various Governments, universities, and learned societies.

Continuing their cruise in the eastern part of the Station, ships of the Mediterranean Fleet, under the command of Admiral Sir Frederick Field, left Navarino on July 10 for Skiathos, where they will be until July 23. There are present with the flag the battleships Queen Elizabeth, Warspite, Royal Oak, Valiant, Resolution, and Ramilles; the aircraft-carrier Eagle; the First and Third Cruiser Squadrons; the Coventry and First and Second Destroyer Flotillas; and certain auxiliary vessels. The Douglas, Cyclops, and First Submarine Flotilla, which had been at Navarino for a fortnight, proceeded thence to Suda Bay, Crete. After they leave Skiathos the ships will separate for a number of independent visits to Athens, Nauplia, Milo, Kavala, Probakia Bay, and other places.

THE CENTRAL ASIAN SOCIETY “JOURNAL.”

The *Journal* of the Central Asian Society (Vol. XV. Part III.) contains some excellent reading matter. In addition to the full text of lectures already reported in *THE NEAR EAST AND INDIA*, there are useful articles on Cis-Caspia and on “Arab and Indian Ships and Seafarers of the Indian Ocean.” The reviews of books are comprehensive and authoritative.

NOTES OF THE WEEK

(Continued from page 66.)

The Points at Issue.

The attitude of the British Government towards the Yaman, seems, superficially, so plain that there must be some strong reason still in existence against the signing of a Treaty. Great Britain is prepared to recognise the independence of the Imam Yahya, provided that he recognises the boundaries of the Aden Protectorate and the obligations which are due from Great Britain to certain tribes within the borders of the Protectorate. Further, Great Britain is known to be willing to accord to the Imam such assistance as is possible within the limits of her international obligations. Why, then, this delay, this report of the resumption of hostilities? The ill-faith of Sanaa, says Aden: the hostility and insatiableness of Aden, says Sanaa. At this distance from the scene of operations it is difficult to judge who has the better cause, but the case would seem to be established for a frank discussion of the matter directly with the British Government. For there is no finality about the present policy; it brings no fruit, but only falsified promise of fruit. If British interests and British prestige are really compromised by a recognition of the Imam's pretensions, the fact could most effectively be proved in the presence of Yamani delegates in London; if they are not so compromised, a Treaty of Friendship and Commerce could here be swiftly agreed upon. After all, such a step does not lack precedent. There is really no need for the British Government, having given to imagination a free run in Arabia during the Lawrence régime, now to hold it back altogether.

By Air to India.

The inauguration of a weekly air service in each direction between England and India is now promised for April, 1929, under the new agreement which has just been signed between the British Government and Imperial Airways, Ltd. The through service will terminate at Karachi; but the Government of India has under consideration proposals for civil air transport services operating from that port to connect with the Croydon-Karachi mail. Imperial Airways will, at the same time, maintain their European services, and the section to Egypt will be operated for the first time. In the light of experience gained under the former arrangement the Company's contract is extended from ten to fifteen years, as it has been found that the longer period is required to give commercial air transport an adequate chance of becoming self-supporting. The total subsidy which is to be paid to Imperial Airways amounts to £2,490,000, spread over ten years from next April, in addition to the sums that will have been paid under the old agreements. A noticeable feature of the new agreement is that the Company is encouraged to take advantage of improvements in the design of aircraft, with special attention to the ratio of paying load to running costs. Provision is made for the replacement of a quarter of the air fleet each year, unless in special circumstances the Secretary of State for Air shall otherwise determine; so that during the ten years for which the agreement holds good two complete replacements of types should have been introduced. At the end of that period it is hoped that, "given a reasonable increase in the volume of traffic, a fully paying type of machine, with consequent low obsolescence rate, will have been evolved" and subsidies from the Exchequer will no longer be required.

Troodos Church Fund.

Cyprus as a summer resort is making an increasing appeal to a large number of residents in the Near and Middle East, who either do not wish to go farther afield for a holiday or are satisfied that they might be much worse off in many other places. The time has, therefore, come for the erection of a permanent English Church at Troodos,

the popular hill-station, and on another page (page 77) we publish an appeal from the Committee appointed by the Bishop of the Diocese for funds for the construction of the new Church. As the amount asked for is so moderate—only some £500—it is to be hoped that the response to this appeal will be a wide and generous one, even if individual contributions are small. Already nearly £100 have been promised. If there is an early prospect of the balance being subscribed, a start can be made this year with the construction of the Church.

"THE MOSLEM WORLD."

The July issue of the missionary Quarterly, the *Moslem World*, contains many valuable articles. Of particular use to the general student of Islam will be found those on "New Developments in Moslem Lands," "The Turkish Press as a Mirror of Thought," and "Family Life in Shi'ah Islam." This is one of the periodicals with which no serious observer of events in Western Asia should be unacquainted.

Fethy Bey, Turkish Ambassador to France, is returning from Constantinople to Paris, where he will represent Turkey on the new Council of the Ottoman Debt.

The examiners at Oxford University have reported to the Vice-Chancellor that they have awarded the James Mew Arabic scholarship for 1928 to H. Doniach, B.A., Wadham.

General Pangalos, the former Dictator, who has been in prison since his fall from power in August, 1926, was released on July 10 by order of the Greek Cabinet, which is leaving it to the new Chamber to decide during its first session as to his penal prosecution.

It is stated that M. Juritch, Yugoslav Minister in London, has received an urgent message from the new Yugoslav Premier-designate General Hajitch, summoning him to Belgrade. It is suggested that M. Juritch will be offered the Ministry of Foreign Affairs for the duration of the transition Business Cabinet.

Alfred Berry Brewster Bey died on July 10 in Cairo, aged 71. Brewster Bey, who had previously served in the British Army, became a member of the Household of the Khedive Abbas Hilmi Pasha and remained for many years in his service as English Private Secretary. He was well known in Cairo and was a prominent Freemason.

Captain Angus McLeod Grieve, who had been relieving the President of the District Court, Jerusalem, died from dysentery in that city on July 11. Captain Grieve was transferred from a magistracy at Zanzibar three months ago. He was called to the Bar by the Inner Temple in May, 1911.

ISLAMIC LITERATURE.

ENGLISH TRANSLATION OF THE HOLY QURAN WITH NOTES. By Maulvi Muhammad Ali, M.A., LL.B., President, Ahmadiyya Anjuman Ishaat-i-Islam, Lahore. Leather Bound, 50s.; Plavinson, 40s.; Cloth Bound, 30s.

TURKEY IN 1927.

Captain Harold Armstrong took as his subject "Turkey in 1927" for the address that he gave to the Central Asian Society at the Royal United Service Institution at 5 p.m. on July 11. He had spent a large part of that year in Anatolia on behalf of the Inter-Allied Commission for the Assessment of Damage suffered in Turkey, and set himself to describe to his audience only what he had seen, without attempting to fill in gaps from any other source. His route had taken him first to Cyprus and then to Syria. In a passing reference to the latter the lecturer drew attention to the rôle that the northern portion was playing as a buffer State. Northern Syria was largely Turkish; its money was Turkish, the Turkish language was understood, there were Turks in Syrian police posts. The frontier with its tariffs and regulations was gradually killing Aleppo and Alexandretta.

Continuing the rôle of a guide escorting his audience on a personally-conducted tour, Captain Armstrong confined his lecture to a series of pregnant utterances prompted by the various points reached in the tour, which, as far as Anatolia was concerned, began at Mersina and passed in turn through Adana, Eregli and Caesarea to Angora, thence back to the southern coast and up the western coast by Smyrna to Skutari.

It was a mistake, he pointed out, to regard the Turks as set upon Europeanising themselves. They were out to borrow from the West what they thought good, without sacrificing the advantages of their position in the Orient. He experienced no difficulties in travelling about Turkey; true, he had a diplomatic passport; everywhere he met with courtesy, but was conscious of being shadowed wherever he went. Anatolia was a country of large uncultivated tracts; the Turkish census gave it thirteen millions; it could quite well hold fifty millions. It was better for an Englishman to go about his business "on his own," than to rely on the help of diplomatists and Consuls, of whom the Turks were still suspicious lest they should arrogate old-time powers of interference. The country between Mersina and Adana grew a short-staple cotton, of inferior quality; if it were properly irrigated, it could grow the finest American long-staple cotton. Adana gave the impression of having failed in the great attempt made in 1926 to convert it into an important manufacturing and commercial centre, and to be suffering from reaction after the efforts which had been put forth on its behalf. There were numerous Germans in Adana and wherever money was to be made: they were highly skilled mechanics, content to work at their jobs and not seeking control. The villages of Turkey revealed for the most part incredible poverty. In the towns the Turks had done their best to take the place of the displaced Greeks and Armenians, but on the whole did not take kindly to the work of these people; they had failed in the way of small shops and as money-lenders, and the Armenians were back again; not so the Greeks. The country displayed a bewildering mixture of efficiency and inefficiency. The railways Captain Armstrong found well run; in other matters one was up against the inevitable procrastination. The whole country west of the Euphrates (of which alone he had experience) was absolutely safe for travellers. Caesarea, always a reactionary centre, was still

one; whether this aspect would survive the advent of the railway remained to be seen. Here the men wore caps with the flap over the left ear as a mark of their devotion to Islam, and a larger proportion of women than elsewhere still went veiled. As one approached Angora from Caesarea one was conscious of the military activity of the present Turkey; ammunition factories and barracks were prominent features. Angora could not possess the glamour of Stamboul; the Turk looked upon life in the capital as exile, but he was not going back to Constantinople. Captain Armstrong hoped that it would not be long before the British Embassy was moved to Angora.

Summing up his impressions, the lecturer said that he found Turkey run by two per cent., perhaps one per cent., of the population on sound and efficient lines, with good intentions. Of subordinate officials the same could not be said; they were called upon to do more work and received less money. The great mass of the Turks remained untouched. If Mustapha Kemal Pasha lived long enough, he might succeed in moving the great mass of inertia with which he was confronted. The country was poor, and the taxes were very heavy. An ominous tendency was the practice of multiplying monopolies. He thought the Turkish dislike of the British could be overcome. The Turks were still afraid of the capitalist, but could not do without capital. Whatever might be thought of Bolshevism it was almost certain that something would emerge out of it as a factor in world-development. Nothing promised to come out of what Turkey was doing, as far as any contribution to world tendencies was concerned; for the Turks were still bent on destroying, as their attitude to Islam witnessed. But they were undoubtedly set on improving their own country and they were entitled to the full sympathy of Great Britain, as their progress was of value to the British Empire.

Viscount Allenby presided. In the brief discussion that followed the lecture Colonel E. H. Keeling pointed out that, whereas the lecturer had been told in 1927 that the country east of the Euphrates was unsafe and exposed to brigandage, his own information of conditions to-day was emphatically that this part, including the formerly disturbed area of Kurdistan, was as safe and as peaceful as any other part of Anatolia.

THE EGYPTIAN ARMY (1883-1925) AND SUDAN DEFENCE FORCE.

The Egyptian Army (1883-1925) and Sudan Defence Force annual dinner took place on July 10 at Claridge's Hotel. General Sir Reginald Wingate presided. Those present included General Sir J. J. Asser, Lieutenant-Colonel C. R. K. Bacon, Major W. E. Bailey, Major E. A. T. Bayly, Major H. Beaumont, Major R. B. Black, Major G. C. S. Brander, Captain F. Burges, Captain G. A. H. Buxton, Dr. W. Byam, Captain P. K. Campbell, Colonel F. F. Carroll, Major-General C. E. C. G. Charlton, Captain J. I. Chrystall, Captain T. R. Colville, Lieutenant-Colonel A. Craufurd, Mr. E. S. Crispin, Colonel A. L. Clive-Davies, Major L. A. Deane, Colonel R. J. Done, Colonel W. H. Drake, Captain N. W. Eastwood, Lieutenant-Colonel R. W. Eaton, Major R. P. S. Elderton, Major S. K. Flint, Lieutenant-Colonel N. B. de L. Forth, Major-General Sir T. J. Gallwey, Major N. W. Gardner, Major-General Lord Edward Gleichen, Colonel A. McD. Gordon, Lieutenant-General Sir G. F. Gorrings, Major R. C. Greenwood, Lieutenant-Colonel A. L. Hadow, Major Viscount Hawarden, Engineer Rear-Admiral W. Scott-Hill, Major G. F. Hudson-Kinahan, Colonel P. C. Joyce, Major A. J. R. Lamb, Lieutenant G. C. R. Leacroft, Lieutenant-Colonel C. H. Leveson, Lieutenant-Colonel M. H. Logan, Major P. C. Lord, Colonel Sir H. Lyons, Colonel W. H. McCowan, Captain C. McKey, Mr. H. A. MacMichael, Sir John L. Maffey, Captain J. Menzies, Major H. C. Maydon, Captain Sir E. Midwinter, Lieutenant-Colonel J. P. L. Mostyn, Major C. S. Northcote, Captain F. G. Peake, Lieutenant-Colonel W. H. Persse, Major F. J. M. Postlethwaite, Brigadier-General R. I. Rawson, Lieutenant-Colonel H. V. Ravenscroft, Lieutenant-Colonel R. V. Savile, Mr. E. G. Sarsfield-Hall, General Sir H. L. Smith-Dorrien, Lieutenant-Colonel W. F. Stirling, Major J. J. M. Soutar, Lieutenant-Colonel L. D. Spencer, Colonel E. A. Stanton, Lieutenant-Colonel J. L. F. Tweedie, Major D. H. Thorburn, Captain A. F. Vingoe, Major R. H. Walsh, Major M. J. Wheatley, Lieutenant-Colonel R. S. Wilson, Major A. Wise, Major R. H. W. Worsley, and Major G. R. Worthington-Wilmer.

SULAIMANI.

BY MARJORIE VERNON.

A small round brown pancake lying at the foot of smooth green hills is Sulaimani as seen from an aeroplane, with the open smiling valley stretching away from it on its other sides. Yet it is reputed to have 10,000 inhabitants. It certainly has three schools, a big bazaar and about twenty mosques (though only one minaret) together with two churches and a synagogue, and is, in short, a great centre of population. The road, as it enters the town from Kirkuk, is first-rate, wide and open, but once you are actually in the town, the European note vanishes and you are again in the East with narrow covered bazaars and the eternal coffee-shop at every corner. As a matter of fact in Sulaimani they are not coffee but tea shops or *chai khanah*, the Persian habit of drinking tea from small glasses having spread over the border to Kurdistan. The Kurd is a fine, upstanding fellow, a real mountaineer with strong nationalist feelings and a profound contempt, if not dislike, for the plain-bred Arab. He almost always wears his Kurdish dress, loose homespun brown Turkish trousers, a tunic with curious long loose white cotton sleeves which hang down over his hands or are twisted round his wrists, and over the top a short sleeveless padded felt jacket. A gaily-flowered sash wound several times round his waist and stuck across with a curved dagger completes the costume. On his head he wears an embroidered skull cap, and his *kafiyah* or scarf is twisted turban-wise round it, one end jauntily hanging down over his shoulder. On his feet he wears home-made shapeless woollen socks, usually of white wool, with either black or coloured embroidery round the ankle. His shoes are either of scarlet or black leather with curling toes, or else they are cleverly woven of string and rags with gay little tufts at the toe and heel. The women are harder to describe, being very shy. They are usually dressed in European materials, though designed for the Eastern market, their head-dress being the most distinctive thing about them. This consists of a high black turban, occasionally decorated with coloured beads, with the *aba* over it. They veil their faces very little, and rightly, for they are beautiful, with the beauty which comes from purity of race.

The bazaars are full of life and colour, though many of the goods sold are European. The bakers' shops have existed, I am sure, since bread was first baked. At the back of the shop is a great brick oven heated with wood. Once the oven is thoroughly hot the fire is pushed to one side and the thin flat slabs of unleavened bread are thrown in the middle. After a few minutes they are pushed on to the cool side to finish browning, whilst fresh ones take their place near the fire. There are usually three men at work; one moulds the dough into balls and throws them on a tray, the second flattens out the ball into a thin sheet, pressing it into a light pattern with his finger tips, while the third, with a long-handled shovel, throws the finished article into the oven, turns it and takes it out when it is fully baked.

Then there is the cheese and *lebban* seller. His wares are placed in rough earthenware bowls, locally made and glazed a lovely blue. The cheeses are usually made of skim milk, and are about the size of a man's fist, and quite as irregular in shape. What is here known as *lebban* is what we in England would call sour milk on its way to turning into cheese. It is a favourite dish throughout the Near and Middle East, either beaten up and mixed with water, so as to become a drink, known as *shanina*, or left rather like junket, and eaten with a wooden spoon. It is supposed to be extremely wholesome and to kill all typhoid and other germs.

The Kurds have few native handicrafts and those are of the simplest. They make wooden bowls and deeply hollowed wooden spoons, roughly decorated.

But their most glorious product is the sugar breaker, for use on the sugar cones which hang from the roof of every grocer's shop in Sulaimani. This sugar breaker

is shaped rather like a small axe, about fifteen inches long. It is made of some brass alloy, and the whole head is studded with every kind of garish stone sunk in the metal, while the head of a stag or the little figure of a cock usually decorates the end. It is roughly made and the materials are European, and shoddy at that—the stones being often coloured beads—but the general effect is very gay and amusing.

The Schools of "Sul" are fairly new institutions. The Girls' School has been in existence for some two years only and the Boys' not much longer. The Girls' headmistress is a very beautiful Turkish lady, and she has two assistants. Of course, all the children are strictly *purdah*, and so are the two assistants. My visit was rather an amusing one, because the charming Turk knew no European language, so we had to get a little Government clerk to lend a hand. Veils were immediately brought into play and the plain faces of the two assistants were covered at once, while only the radiant young Turk, tempting the world with her sparkling beauty, faced the young clerk unashamed. She told me that they had about 150 girls on the roll, but that not more than half put in a regular attendance. The education is still very elementary, as the School had been in existence for such a short time. They have only two classes, a very small top class and a very large bottom one!

The Boys' School is much bigger and more elaborate. There are about 500 boys on the roll and the attendance is good. The top classes all learn English, and very good they are. They have taken up the Boy Scout movement with almost terrifying enthusiasm, and charming Kurdish boys, beautiful in their native dress, are only happy when clad in khaki drill with red glengarries on their heads and a brass band braying beside them. I was specially requested to come on the following day and to photograph the whole school in Scout dress. This I did, only stipulating that I should be allowed to photograph a few boys in their full Kurdish clothes as well.

Such is Sulaimani to-day, still little touched by the disturbing West, though subsisting on its goods. But schools, though desirable in themselves, do tend to level everyone up—or down—and my gay Kurdish boys of to-day, still full of their own traditions and folklore, though they may remain strong Nationalists, will in all probability soon be clad in the shop clothing and cloth-topped boots of the Levantine West. Unfortunately the Government, no doubt largely for the sake of peace and order, does its best to Westernise the people. All clerks in Government offices have to wear European clothes, whilst the national dress is discouraged as much as possible.

Still, there is always more hope for a mountain race, and the Kurds are proud of their nationality, insist on speaking their own language, and the Government is bound by Treaty to teach it in the schools.

As I left the little town, lying so compactly on its mountain slopes, I sincerely wished it well, but prayed that its prosperity would not be bought at the price of its personality.

Colonel R. A. Steel, of Lye Mead, Ditchling, Sussex, elder brother of Sir Arthur Steel Maitland, M.P., who died suddenly on July 12, joined the 17th Cavalry, Indian Army, in 1896 and served on the North-West Frontier in 1897-8. He was Military Attaché in Teheran in 1913-14, and in the Great War he was in charge of the section of the Imperial General Staff dealing with operations in Mesopotamia, East Africa, and Russia, and was created C.M.G. and C.I.E., and awarded French, Russian, Belgian, Italian, Japanese, and Serbian Orders.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE SITUATION IN ROUMANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In view of the interest that I find taken abroad in the affairs of the Near East, it will, I hope, serve a useful purpose, if I take advantage of my stay in England to give you in brief compass a statement, in my capacity as a former Roumanian Minister, regarding the actual situation in my country.

As is known, the economic relations between Great Britain and the Old Kingdom of Roumania were of considerable importance before the War. Since the creation of Greater Roumania these relations unfortunately have not expanded. Successive Roumanian Governments have devoted their attention in the first place to the re-organisation of the administration of the State within its greatly increased boundaries, and have endeavoured, at considerable sacrifice, to balance the country's Budgets in the hope that by so doing they would more easily be able to secure the co-operation of foreign capital. In the meantime, however, in spite of the high taxation imposed, Roumania found herself unable to meet her foreign obligations punctually, and this started that attitude of distrust towards her which later took so strong a hold in foreign financial circles. When further the Liberal leaders, overestimating the capital resources of their country, unwisely adopted an attitude adverse to foreign capital the interest of England in the Roumanian market naturally declined to a considerable extent. It need hardly be said that Roumania suffered greatly on this account, especially after the wave of inflation had been checked, when she was in the greatest need of foreign capital to revive her industries.

In view of the financial stringency and lack of credit now existing in Roumania and also of the prospective falling off of revenue from taxation, the Liberal Party now in power has at last come to see that it is only by means of loyal co-operation with foreign capital that both State and private enterprise can be adequately developed.

The loan negotiations now in progress show that their former errors will have to be paid for and can only be made good by grave sacrifices; and the willingness of the Liberal Party to accept the terms now offered proves that they have at last abandoned the attitude that they have hitherto held in spite of the opposition of all the other parties, particularly the National-Peasants.

Thus, the Liberal Party having now adopted a policy favourable to foreign capital, nothing more stands in the way of a further development of Roumania's economic relations with Great Britain.

It only remains for me to say a word on the internal political situation in Roumania, as this is, of course, of the greatest importance from the point of view of "safety" for foreign capital.

All reports tending to hint at insecurity are utterly unfounded. The Roumanian people desires nothing more than peace and quiet, law and order, good administration and economic development.

The tension that exists between the two main parties, the Liberal and the National-Peasants, and which is so often commented on in the foreign Press, has no other cause than the anxiety of the Nationalists to insist that the wishes of the Roumanian people in this respect shall be fulfilled to the greatest extent possible, and also that future Governments shall be elected by the free vote of the people.

It is generally expected that, after stabilisation has been effected, the National Peasants Party will be called to power, and there is no reason to believe that this change of Government will not come about in a peaceful con-

stitutional manner. As by this means the long desired balance of party power would at last be attained, it is clear a normal development of party politics can be reckoned on in the future.

In the light of these facts it is evident from every point of view that the necessary conditions exist in the internal political situation to enable foreign countries to regard all future developments in Roumania with the fullest confidence.—I am, etc.,

DORI POPOVICI.

[Dr. Dori Popovitch was, under the Austro-Hungarian régime, one of the Roumanian leaders in the Bukovina, and a deputy in the local Diet. After the incorporation of Bukovina in Greater Roumania Dr. Popovitch was at first a member of the People's Party and held office in the Government in 1921 and again in 1926-7. He is now a member of the National-Peasants' Party.—Ed.]

Book Review

"MODERN" ISLAM AND CHRISTIANITY.

"**MOSLEM MENTALITY.**" By L. Levonian. (London: Allen and Unwin, Ltd. 5s. net.)

The more considerable part of this very useful little book, the purpose of which is to discuss the presentation of Christianity to Muslims, is devoted to changes at work in the minds of Mussulmans, particularly of Mussulmans in the Near East. The author, Professor Levonian, an Armenian who taught Turkish Literature for fourteen years in the colleges of Asia Minor, and who is Dean of the School of Religion at Athens, has gone to Turkish, Arabic, and Persian sources for his text; with the result that there is here presented abundant material, not only for a real understanding of the "modern" or untraditional Muslim mind, but also for many speculations upon the future. Professor Levonian's chief object of speculation is the possibility of turning this awakening Muslim mind towards Christianity; but of that more in a minute.

The old attitude of Muslims towards non-Muslims (that is, Christians) was that they were inferior, infidels, slaves, whose property and lives should be at the disposal of the Muslims. Their ethical principles, made up out of inconsistencies, were set in a rigid mould, reflected in their legal system. "It is a significant thing," says Professor Levonian, "that there is not a moral code like the Ten Commandments in the Moslem Law or the Holy Books." But the new movements in Islam are thought to be changing all this. Mention has been made before in THE NEAR EAST AND INDIA of Abel Adam's book on Mustapha Kemal, and our author quotes freely from it in order to demonstrate the modern Turk's realisation that "the Asiatic mentality must be rejected totally, and the European mentality must be adopted totally; there is no other way for salvation." In this Turkish book the emphasis laid on the opinion that Western civilisation is by no means synonymous with Christian civilisation is remarkable: the modern Turks (and many other nominal Mussulmans) believe that it was the Roman, not the Christian idea of law which became dominant in Europe. This thought is developed in Jelal Nouri Bey's book on "The Turkish Revolution," in which a kind of paganism is implicitly advocated. Nouri Bey has spoken of the

differences between Islam and Christianity, for in the latter religion great efforts had been made at reform. Of this he says:—

The Reformation under Martin Luther is a great epoch in the history of the Christian Church. Perhaps no one has served Christianity more than Luther. If this reform had not occurred, Christianity would have collapsed long ago, and would have gone into the records of past history like many other religions. In Islam we never see such an earnest fundamental effort for reform.

He says again:—

Fortunately humanity was not vanquished for ever by the barricades of the Apostle Paul. In our age humanity has been freed from the despotism of Christianity which Nietzsche called the chief cause of decline and degradation. Humanity is now turning back to the ancient Greek and Roman civilisation. Minds are becoming awakened from the slumber of the Middle Ages, and begin to aspire to the freedom they had before Christianity.

Now during the last century or so the Turks, who are considered to be the eventual leaders of a reformed Islam, have made several attempts at social reformation. To-day they base the justification of their actions on the fact that orthodox Islam is the product of the untutored Arab mind, and since they wish to be Westernised completely, everything savouring of Arab reactionaryism must go. This attitude, as the author points out, is "really unique in the whole history of Islam."

It has, however, its shortcomings, and Professor Levonian, whose book for the most part is sustained on a high level of impartiality, does well to emphasise them. These shortcomings derive from, or can be enumerated in accordance with, one's philosophy of civilisation. Is the basis of civilisation moral and spiritual or not? The Turks themselves, many Egyptians and Arabs, and other Muslims are inclined to answer in the negative. They are supported by writers who find merely in the statistics of a country—relating to population, railways, commerce, finance, education, and so forth—ample evidence for the existence or non-existence of civilisation. But Professor Levonian in our view is emphatically right when he says:—

Western civilisation contains much that is directly or indirectly due to the influence of the Christian religion and which is not found in non-Christian countries.

The Muslim Nationalist, unless he perceive that fundamental truth, will find disappointment in the process of his "Westernisation." To believe, as he seems too often inclined to believe, that human nature is essentially selfish and must always be so, that the law of the jungle must govern international relationships, that this dictum, however lamentable, is the only working basis for action, can lead, in the reviewer's opinion, only to a militant Nationalism far less beneficial to the world than the old ideal of a democratic Islam. These things are, however, matters of opinion; and it must be admitted that Muslim Nationalists can find abundant support in the West for their view, which is informing all their present actions, that Western civilisation is but Science applied to life. Courage and open-mindedness are great virtues, conspicuous particularly in the reformers of modern Turkey; but is it not a new moral conscience that is mostly wanting? Perhaps it was some such conviction that made the Editor of the *Iqdam* write in 1925: "To change our habits, we shall need perhaps a century still."

There are, of course, real, disinterested scholars among "modern" Muslims, whose one aim is to bring Islam into conformity with present necessities and realities; such men are notable in Egypt. But a more raucous voice is heard elsewhere; and here the menacing hand of militant Nationalism is raised. Again and again the cry is heard that during this process of Westernisation Christianity must be opposed. For instance, Ibrahim Hilmi Bey is quoted as having written in his book, "Europeanisation":—

European civilisation is not a Christian civilisation. . . It is a conglomerate of the old European and Greek and Roman and Arab

civilisations, and has taken its present form from the activities of the enlightened minds in Europe. Thus its technical part is quite applicable to all countries; in fact, this civilisation has been produced about fifteen centuries after the introduction of Christianity into Europe. It has been obliged to fight against Christianity and the Christian Church and the clergy, and only by overpowering their resistance has it established itself in Europe.

The latter part of Professor Levonian's book, which deals with the contact of the Muslim Near East with Oriental and Occidental Christians may be more controversial than the first, but there is no question of his sincerity. He does not hesitate to criticise the former work of Protestant missionaries in Near Eastern lands—"many missionaries," he says, "have forfeited their usefulness through an awkward temperament of unsociability and a spirit of non-co-operation." The missionary service, he says, has been too much dominated by the business spirit. And he makes various practical suggestions for the undogmatic presentation of Christianity to Muslims.

This little book then, quite apart from its evangelical purpose, is to be heartily welcomed, as supplying first-hand information upon the way in which Muslims of the present day are regarding the problems of life. It may be that Professor Levonian is apt to under-rate the services performed by Islam to humanity, but he might defend himself by saying that he deals primarily with a region of the Muslim Near East which has not contributed, from the Muslim stock, very conspicuously to the resources of civilisation. It may be that certain parts of his evidence are of trivial importance compared with others, but he might say that since significant tallies with insignificant testimony, the diagnosis is doubly correct. In any case, students of the Near East are under a debt to him for uncovering the workings of the mind in an important section of Mussulmans.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

THE WEEK AT HOME

London, Tuesday Morning.

Labour's Progress.

Conservatives affect to regard with equanimity the Labour gain at the Halifax by-election. Actually the seat was well won from the Liberals, and the Labour people have every reason to be pleased with themselves. True, the combined anti-Socialist vote was nearly 6,000 more than the winning candidate obtained, but in that argument there is nowadays nothing of real comfort to either the Liberals or the Conservatives, who are really as bent on defeating each other as they are on eliminating the Socialist.

The Savidge Report.

It was, I think, generally expected that there would be a Majority and a Minority Report upon the Savidge case, to which I have referred in these columns. But why such differences should have taken seven weeks to be published is one of those puzzling things explicable only to the official mind.

The ordinary man has no means of judging between the merits of the two Reports, and would certainly have preferred unanimity, in whatever sense. Those who zealously espouse either Report have, generally, nothing but prejudice in support of their choice.

This particular case has, however, to some extent been overshadowed by the appointment of General Byng to succeed Sir William Horwood and by the charge of corruption among the police force. It may be taken for granted that, as a result of the Hyde Park case and of its developments, the liberty of the subject in England will be much more carefully guarded in the future. Interest is now directed to (and possibly a Royal Commission is to inquire into) the question of corruption, which Mr. O'Connor so strikingly brought up in the House of Commons. This, again, is a problem on which many people are ready with an opinion, but few with indisputable facts. It is precisely the facts of the case, however, which are worth having and so hard to come by. Even the Savidge Tribunal could not agree upon the facts. How then can the man-in-the-street, who is even less likely to be partisan than the Judge, the Conservative, and the Labour man who composed that Tribunal?

Uninvited Guests.

As we always have been, we are now going to the dogs. Manners are not as they were. Ladies are no longer ladies, nor gentlemen gentlemen. Colossal ignorance is shamelessly displayed upon things that are and things that are not "done."

Last week a mild storm of publicity burst about the actions of two conspicuous young men who took to a Ball uninvited partners. For such an action the post-War slackness of hostesses is partly responsible, but also the impudence of the modern youth. Heaven above knows what amusement hostesses find in entertaining hundreds of people half of whom they do not know, or what entertainment-jaded young men and girls find in "blowing in" for an hour or so to a ball to which they have received but a semi-invitation. There are, of course, some people whose sense of decorum is guided by formal code; there are others whose amusement consists in the bored ignoring of such a code. But for neither of these classes and their little worries do those who are ladies and gentlemen by instinct really care a button, a hair-pin, or anything else that is as old-fashioned as they themselves.

Heat.

When Summer began with the week-end before last, the hearts of all of us leaped for joy. The sun for which we had waited so patiently beamed on us his apologies for turning up so late, and the breezes, by no means "gate-crashers," combined with him most harmoniously. But as the week went on, the harmony dropped out, and the sun, having come in meekness, stayed on to abuse his power.

Really last week-end was something to which we in England are not accustomed, and for which we (at least the male section of us) are quite unprepared. When deaths are caused by the heat, it is time to wish for the autumn.

It was trying in the country, but in London the artificial conditions imposed made things extremely uncomfortable. To have to travel home in a crowded train which has been standing out in a baking sun all day is at least one of those things which those who have to endure higher temperatures in the East have the pleasure of missing.

Crowding the British Museum.

One has recently heard many complaints that the reading-room in the British Museum was becoming uncomfortably crowded, and that this is so is proved by the annual report of the Museum. For last year there were nearly 10,000 more entries of the reading-room than in 1926. The whole Museum is becoming increasingly popular, but this particular crowding of the reading-room does not appear to be due to increase of the national desire for edification.

It is due simply to the fact that students have at last found out that the Museum contains the ordinary textbooks, which they read at the desks, and so debar the genuine research-student from fulfilling the real purpose of the reading-room. This sort of conduct on the part of the ordinary student argues a serious decline either in financial standing or in morals: in any case, it should be stopped. It is quite intolerable that specialists should be ousted by the unimportant and out-of-place student reading for examinations.

England, Art and Sport.

It is the English fashion, it is a very healthy fashion, to distrust the man who advertises himself. This applies in every sphere of life—except, possibly, in business. Certainly it is true of the Arts. Hence, for instance, the unpopularity or dislike of the Sitwells.

But these public-baiters sometimes speak the truth. For example, Mr. Osbert Sitwell, in opening an art exhibition at Liverpool recently, said that the causes of the widespread hatred of beauty in England were three: mistaken religious zeal, commercial greed of the people, and the insane love of sport. And he told a story of a painter,

the one member of a family of eleven to show any ability, who explained the matter by the fact that as a child he was never allowed to play games.

Why this should be so it is not easy to say. Prowess in games often enough, of course, goes with mediocrity in art, and vice versa. One supposes that the conception of a team game could not be tolerated by the individualistic, creative artist.

Cricket.

There was at Lords last week cricket which will live for ever in the memory of those who saw it. The very sporting victory of Eton over Harrow by 28 runs came probably as a general disappointment—for it was decidedly Harrow's turn, and they had the chance, to win. But without question Eton played fine cricket to win after being skittled out in the first innings.

Even more ungrudgingly must praise be given to Oxford for the most magnificent draw that I have seen. The cricket on the first two days was of poor enough quality; all sorts of balls on the off were repeatedly left alone; no batsman, in fact, except Robins and Garland-Wells played winning cricket. But in the second knock, what a change! Robins' century was brilliantly unselfish and skilful, and while he and his partners were in we had real 'Varsity cricket.

The early fall of Oxford's wickets brought gloating jubilation to the hearts of the Cambridge men, and even Garland-Wells' most admirable 70 seemed merely to be delaying the inevitable. But as the clock crept round inexorably to seven o'clock, the red-haired Hill-Wood seemed to take on the shape of diabolical permanence; nor did, first Macintosh, and then Benson, fail to shine with Satanic brightness. As the precious minutes sped by, shadows cast across the pitch seemed full of foreboding. In vain the Light Blue fast or medium bowlers hurled the bolts of righteousness at them; in vain did the fielders crowd around the wickets in an optimistic attempt to support the slow bowlers. The Lost Cause triumphed in the end: and the Oxford tail entered into the most deserved immortality ever given to non-scoring batsmen.

ALTER EGO.

It is stated from Bucharest that, in response to invitations, Queen Marie proposes to pay a visit to the United States and Canada towards the end of the year. She will be accompanied by Princess Ileana, and the trip is expected to last about three months.

Contracts are reported to have been signed at Teheran on July 10 with a German-American group for the construction of two ports, one on the Caspian and the other on the Persian Gulf, and for the construction of a dam at Ahwaz.

M. Venizelos visited Corinth on July 15, and declared that the first care of the Greek Government would be to rebuild the city. It is considered probable that after his visit to Geneva, M. Venizelos will go to Paris, London, and Rome in September.

President Koundouriotis has agreed to the proposal, urged by M. Venizelos, that the General Election in Greece should be held on the "majority" system (practically equivalent to the English system) instead of the proportional system introduced some time ago, which, it is contended, leads to confusion by not producing clear-cut majorities. The decree providing for the change was duly signed by the President on July 10.

PROPOSED CHURCH AT TROODOS, CYPRUS.

To meet the needs not only of residents (military and civilian) at Troodos, Cyprus, but also of visitors who are coming in increasing numbers each year to this attractive hill-station, it has been decided to build a permanent Church on a site to be allocated by the War Office, near the Parade Ground.

A Special Committee has been appointed by Bishop MacInnes, English Bishop in Jerusalem, to collect funds and to make as soon as possible the necessary arrangements for the building of the Church, the cost of which should not greatly exceed £500.

To obtain this sum the Committee makes an urgent appeal for help.

All contributions should be sent to TROODOS CHURCH FUND, c/o H. L. Jones, Esq., Ottoman Bank, Nicosia.

PERSONAL AND GENERAL

TO-DAY

July 19, 1928 (New Style).

July 6, 1928 (Old Style).

Muharram 30, 1347 A.H., of the Muslim Calendar.

Ab 2, 5689, of the Jewish Calendar.

Princess Bibesco has arrived in London from Athens.

Taher Pasha has arrived at the Carlton Hotel from Cairo.

The Rani of Pudukota has arrived at Claridge's from Paris.

The Court of King Fuad of Egypt has now been moved from Cairo to Alexandria.

The Nawab of Palanpur has left the Hotel Cecil for a month's tour on the Continent.

Sir Kay and Lady Muir have returned from the Continent to Blair Drummond, Perthshire.

The Maharaja of Nawanagar has returned to Jamnagar House, Staines, from Ballynahinch Castle, Co. Galway.

Prince Habib Lotfallah, who has been on a visit to London, left Claridge's Hotel last week for the Continent.

Princess Aspasia of Greece honoured Mr. George A. Pirelli with her presence at luncheon at Claridge's on July 12.

The Maharaja of Kapurthala is staying at the May Fair Hotel. The Maharani of Kapurthala is remaining in India, and will not be visiting Europe this season.

H.H. the Maharaja of Jammu and Kashmir had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on July 15.

The Burton Memorial Triennial Medal of the Royal Asiatic Society is to be presented to Mr. H. A. MacMichael, Civil Secretary of the Sudan Government, by the President of the Society, the Earl of Ronaldshay.

The archaeological objects found by Miss G. Caton-Thompson during the 1927-28 expedition of the Royal Anthropological Institute to the Fayum will remain on view at 52, Upper Bedford Place, W.C.1. until next Saturday (July 21).

THE COMMISSION AND THE INDIAN LEGISLATURES.

The Swaraj party in Bengal has been in a bad way for some time, and now that the provincial Legislative Council has resolved to co-operate with the Statutory Commission its position must be distinctly precarious. Its recent failure to retain its hold on the Municipal Corporation of Calcutta suggested that its popularity was on the downgrade; and the vote of the Bengal Council is clear evidence that this downward movement is still very much in progress. But what else is to be expected of any party that is pledged to so hopeless a policy as non-co-operation? Not in Bengal only but throughout India the record of the non-co-operators is simply a record of failure. They at first refused to enter the new legislatures, and when that policy failed they decided to enter them merely in order to destroy them. But the new Councils, far from having been destroyed, are now firmly established; and, as we have said on more than one occasion, it is in them that the political life of India is now really centred. Last year the non-co-operators loudly proclaimed, for an altogether inadequate reason, a complete boycott of the Statutory Commission; and they succeeded in persuading the Legislative Assembly to endorse this foolish policy. Three of the provincial legislatures, namely, the United Provinces, the Central Provinces and Madras, took the same line, although, as regards Madras, it must be remembered that Sir John Simon and his colleagues were cordially welcomed when, at a later date, they visited the presidency. Of the six other provinces, three—Assam, Burma, and the Punjab—decided to co-operate with the Commission, while the remaining three—Bengal, Bombay, and Bihar and Orissa—kept the question pending. The Bengal Council came to a decision last week, resolving by a large majority—seventy-two votes to fifty—to appoint a Committee to co-operate with the Commission.

This is distinctly a step in the right direction, and it supports the view that the boycott movement, like all the other movements started by the non-co-operators, will end in failure. It now remains for Bombay and Bihar and Orissa to come to a decision on the question of appointing Committees; and it is greatly to be hoped that they will follow Bengal's wise lead. Should they do so, then it will not be easy for Madras, the Central Provinces and the United Provinces to refuse to reconsider their previous adverse votes. And anything approaching to unanimity in the provinces ought to lead the Assembly to rescind its resolution—which was carried by only a small majority—and to co-operate with the Commission. The concession which was wisely made by Sir John Simon the other day, at the instance of the Punjab Committee, doubtless to some extent influenced moderate opinion in Bengal; and, if so, then it may be expected similarly to influence opinion in other provinces. It is, as we remarked at the time, a concession of importance, for it means that the Indian Committees, whether central or provincial, will be treated by the Commission as being in all respects on equal terms with itself. According to the original proposal the Com-

mission and the Committees were to meet in "joint free conference," and to receive evidence from public bodies and from individuals. But the Commission reserved to itself the right to hold separate sittings for the examination of witnesses who might not be prepared to give evidence otherwise. The idea underlying the proposal was that such an arrangement would be necessary for the protection of representatives of the depressed classes and other minorities. The same right of holding separate sittings was, of course, to be given to the Committees. But, as the Punjab Committee pointed out, the proposal really meant that there would be a distinction drawn between the members of the Commission and their members. This contention was not without force, and the Commission accordingly decided to withdraw the proposal and to make no distinction. They think that the reservation which they had in view can be secured by the power which rests with the Chairman to protect any witness and by his discretionary power to exclude the Press from joint sittings where necessary.

On the whole it seems to us that the position in India to-day is distinctly more favourable to the Commission than it was a few months ago. This improvement is largely attributable, no doubt, to the tactful handling of the situation by the Commissioners during their recent preliminary visit; and it should be maintained and extended by the concession which they have now made. It has always been very difficult to believe that the boycott movement would be persisted in by the moderate politicians when they came more clearly to understand the aims and objects of the Commission. For they cannot fail to realise that the Commission gives them an unexampled opportunity of advancing India on the road to self-government, which is the goal that they have in view. No such chance of influencing Parliament as is afforded by the Commission has ever been offered before to the Indians, and we cannot believe that they will let it escape them. Those communities that are in a minority certainly appear to be alive to the importance of co-operation with the Commission. For we gather that most of them have already framed, or are framing, their statements. Muhammadan opinion seems to be still divided, but we notice that an elaborate memorandum has been prepared, chiefly it is understood by Sir Mahomed Shafi, on behalf of the All-India Muslim League. The retention of the system of communal electorates is deemed, by the League, to be essential. It does not admit that the system is the cause of the tension between Hindus and Muslims: on the contrary, it holds that the system has removed periodically recurring causes of friction between them. Responsible government within the Empire is accepted by the League as the goal of its policy. It recognises that the ultimate Constitution of India, when full responsible government is granted, must be framed on democratic lines. But it expresses the opinion that, unless all the principal communities into which the population is divided are adequately represented, the result will not be a representative government but an oligarchy. With this view most impartial students of the political situation in India will be, we think, in cordial agreement.

CURRENT TOPICS.

The Country League.

Latest advices from India show that the Country League, the formation of which was announced in THE NEAR EAST AND INDIA of June 7, continues to attract considerable attention to that country. Applications for membership, congratulatory messages and promises of active support have, it is understood, reached the organisers of the movement from nearly every corner of India. The general trend of newspaper comment and criticism was indicated in our issue of June 28, but even more reliable indications of the interest aroused, and of the extent to which the objects of the League, as set out in the original Manifesto, have found favour with responsible Indian moderate opinion is probably provided by the Correspondence Columns of the same journals.

Alone, among the Anglo-Indian Press, the *Pioneer*, which has temporarily forsaken its self-imposed task of "Bridging the Gulf" for the easier but less laudable pastime of attacking one of the most capable of all the Provincial Governors, refrains from editorial comment, favourable or otherwise. Fortunately for the sake of its readers the gap to some extent is filled by the particularly well-informed contributor who writes under the nom de plume of "A Student of Indian Politics." Writing in the same columns in January last he observed: "The anti-boycott groups—they are not coherent enough to be called a party—are strong in numbers and the immensity of their stake in the country. The *vis inertiae* characteristic of the race will be their undoing, unless the new Party, so long in the dawning, is formally inaugurated and places before the lethargic electorate the vital nature of the issues that confront the country."

In welcoming the advent of the Country League the same writer reiterates a warning which is not likely to be ignored by its energetic sponsors. "The organisers, however, will be wise in their generation," he remarks, "if they take warning from the fate of the old Moderate Party. That Party began, and was always a party of gentlemen, who had not the courage of the faith in them, but meekly paved the way for their political adversaries who made up in energy what they lacked in the graces of the drawing room. If the Country League will have the courage of its faith and go forth with an evangelical zeal, it will find that conservatism, a deep-rooted respect for law and order are quite as inborn in the horny handed sons of toil as in those who boast of purple blood."

"Already the Extremist batteries are uncovered. The distinguished Swarajist leader of Allahabad has come out with what is perhaps the most inept comment on the new League. Even vituperative elegance is no compensation for the ignorance and smug self-righteousness which have dictated the Pandit Motilal's pontifical pronouncement that the League enables one to fix without much ado on the enemies of the country."

In a letter to the Editor of the *Karachi Daily Gazette*, Mr. E. L. Price, whose work as a member of the Legislative Assembly is familiar to all students of contemporary Indian politics, writes enthusiastically in support of a movement, the need of which he was among the first to foresee. "The Country League's objection to the type of men," he recalls, "who have now become legislators is exactly what any student of history would expect. The same thing has always happened East and West when great political changes have been in course of hatching. Always noisy fellows of no particular capacity or standing, who tend to adopt *doctrinaire* methods as a cloak for the bareness of their minds, get in first. Then men of substance and standing wake up and take their places. And the Country League is obviously this awakening in India. When the League gets going no longer will demagogues, agitators, four-anna mystic Congresswalas and cadgers for political funds that mysteriously disappear have a monopoly of putative patriotism. Standing and reputation will again be political assets."

The Indian High Courts Bill.

The relatively small amount of interest taken in the Indian High Courts Bill during its passage through the House of Lords, whence it has now been sent to the Commons, is in striking contrast to the wide divergence of opinion to which the measure appears to have given rise in India. The opposition to the Bill, as we have indicated, is by no means united. On the contrary, a great deal of it appears to be mutually destructive. The only common ground is, seemingly, that the provisions of the Bill go very much further than the situation demands. On the Bombay side the decision to throw open the office of Chief Justice not only to pleaders and vakils but also to members of the Indian Civil Service is the chief bone of contention. In Bengal, judging from the cable of protest which has been received from the Advocate-General, it is the proposal to make a practising vakil eligible for the office, which has aroused the greatest opposition. In neither case was the opposition entirely unexpected, and although Lord Birkenhead assured the Upper House that the Bill had received the support of his predecessor, Lord Olivier, as Secretary of State, of Lord Reading and his Government, and that "it has equally received the support of myself, of Lord Irwin, and the Government of India as at present constituted," we are inclined to agree with an Indian contemporary's contention that the omission to consult public opinion in India upon the actual changes proposed was a mistake.

The constitution of the High Courts in India is now governed by section 101 of the Government of India Act, which is practically the same as Section 2 of the High Courts Act or Charter Act of 1861, except for the power given in the Act of 1915 to the Governor-General in Council to appoint additional judges. The judges must have been either barristers called to the Bar in this country or members of the Indian Civil Service with not less than three years' experience in the judicial branch, or members of the Provincial Judicial service, with equally long judicial experience, or lastly pleaders practising for an aggregate period of not less than ten years at a High Court Bar in India. It is enacted by a proviso to the foregoing section that "not less than one-third of the judges of a High Court, including the Chief Justice but excluding additional judges, must be such barristers or advocates as aforesaid, and that not less than one-third must be members of the Indian Civil Service." This proviso has always been understood to debar any person who has not the qualification of a barrister from eligibility for the post of Chief Justice, and in practice hitherto none other than a barrister has ever been appointed to be the Chief Justice of any of the High Courts in India. A succession of authorities for many years past has contended that it is no longer defensible or logical that any class of men capable of being elected to the puisnes in a court of first instance should be excluded if recommended on their merits for the senior post. The principal change effected by the Bill is therefore the removal of this restriction by enabling any person qualified to be a puisne judge to be appointed Chief Justice.

The existing proviso has also tended to result in the necessity for selecting a barrister for a vacancy in preference to a vakil whose qualification may be markedly superior. It is the purpose of the Bill now to assimilate the position of the two, at the same time increasing the pre-judicial qualifying period from five to ten years and making it the same in both cases. Whether the removal of this anomaly will, as Sir Brojendra Mitter and the numerous members of the English Bar in India who agree with him contend, bring about a decline in the personnel and tradition of the Indian High Courts, time alone will reveal. But neither in this matter nor in regard to the consequent opening of the door also to members of the Indian Civil Service should it be impossible to find a *via media* inconsistent with the primary purpose of the Bill—to permit the selection for the office of Chief Justice of any person who is best fitted to hold it.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 28.

The Statutory Commission.

The text of the telegram from the Secretary of State for India to the Viceroy, conveying the decision of the Statutory Commission to accept the proposals of the Punjab Council Committee regarding the taking of evidence *in camera*, published in India last Saturday, will have been published that same day in England, and need not, therefore, be repeated here. "I think Your Excellency," the message said, "will share my satisfaction at this decision." All that need be said here is that that satisfaction is shared by all classes in India, if it is not shared by those individual persons whose book the decision does not quite suit. That there are such cannot be denied. Mr. S. Srinivasa Iyengar is one of them; his pronouncement that this last decision of Sir John Simon and his colleagues changed nothing fundamentally, having been made in London, needs but a bare mention here; his further pronouncement also, that the boycott must be stiffened. Our interest is not in any "must be" of Mr. Iyengar, but in what good men judge will be, and they are rather of Sir Mohamed Shafi's way of regarding the situation, and share his expressed hope "that all sincere well-wishers of India's constitutional progress towards the goal of full responsible Government would now be satisfied and take active steps to help the Commission."

The Old Constitution.

By the old Constitution is meant the existing dyarchy, which in truth is not old, but very young, but is the old Constitution in so far that there is a new one on the anvil. The Governments of Bengal, Bombay, the Punjab, and Bihar and Orissa followed, a day later, by other Governments, have published reports on the working of the Montagu-Chelmsford Reforms. There has not been time yet for a study of these reports in full. The report of the Bengal Government is naturally the one that has had the greatest attention paid it in Calcutta, and the passages dealing with our Corporation, and its deeds and misdeeds, are those that we feel concern us most. We have had so far to be content with summaries. In the *Statesman* of yesterday the summary began with these disquieting words: "There is little check on the extravagance of the Calcutta Corporation consequent upon the authority of the Chief Executive Officer having been reduced to a mere shadow. There is a growing indiscipline among the staff. No progress has been made with the solution of the pressing drainage problems of water supply [*sic*]. There has been a most objectionable relaxation of building rules and unpaid taxes [*sic*] with the result that the Corporation's balances are depleted, and borrowing capacity reduced. Until the administration is conducted in the interest of the inhabitants of Calcutta and not a political party, chances of improved administration are small." Bad buildings, unpaid taxes, indiscipline, political manipulation—it does not make a story that reads well exactly, unless for those who like their colours to be lurid. The picture (for all that is the outcome of a few years' administration on those particular lines) shows up the kind of grist that the mill of the Statutory Commission has been set to grind.

In the same issue of the *Statesman* there was published the current year's Loan Statement of the Calcutta Corporation, the writer being the Second Deputy Executive Officer. The Corporation has in mind to borrow this year a crore and more of rupees, a sum that, after the publication of the Government Report, it may not find lenders enough to give. Whether it would or would not was not, however, the question that the Second Deputy Executive Officer set himself to answer, but whether the Corporation ought not to borrow less and reserve some

borrowing capacity for the future. The conclusion he came to, after analysing the situation, was that no more than 85 lakhs should be borrowed this year. The Chief Executive Officer is reported to dissent from the view of his subordinate. What we are concerned with is not, however, so much that, but that, if his authority has been reduced to "a mere shadow," he should regain it. He might do that all the quicker by agreeing with the Second Deputy.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 30.

An Attempt at Conciliation.

On June 2 the Committee of the Punjab Legislative Council issued a statement to the effect that they should have access to all the materials placed before the Simon Commission and that they strongly objected to the reservation made in Sir John Simon's letter to the Viceroy that the Statutory Commission would in some cases receive evidence *in camera* and that on these occasions the Indian Members of the Joint Free Conference would have to content themselves with an account of the matter from Sir John. Indian politicians objected to the idea of *in camera* evidence on the grounds that it encouraged reactionary witnesses—both Indian and English—by affording them protection. Lord Birkenhead in a telegram to the Viceroy, communicated through him to the Punjab Government, now states that "the Commission has decided to draw no distinction between its own members and the members of the Indian Committees. It considers that the reservation made by Sir John which, in any event, would have been put into effect very rarely, if at all, can be adequately secured by the power which rests with the Chairman to protect any witness and by his discretionary power to exclude the Press from the joint sittings when necessary." So far as Indian leaders are concerned, the situation has not been affected at all by this announcement. Those who were opposed to the boycott welcome it as an important concession, whilst the leaders of the boycott movement hold that "the so-called concession merely removes a glaring defect in the procedure."

The Working of the Reformed Constitution.

The reports of the working of the Reforms in the various provinces are issued at last. Although the problems confronting the Executive—for these reports are, it is believed, drafted by the Executive alone—are the same in all the provinces, each province has emphasised a particular aspect of the position. Moreover, in the Presidencies, where the Governor is a man from English public life, the reports have a more detached and impartial outlook than in the provinces where the head of the executive is generally an I.C.S. man, who finds it difficult to shake off his old prejudices. The reports were prepared, we are informed, prior to the constitution of the Statutory Commission and are not to be confused with the memoranda submitted by the various provinces to that body. It will be interested to compare the memoranda with the reports, as we can then have a rough idea of how far the members of the Executive agree with the Ministers, who will also have a share in drafting the memoranda. The reports were ready in last December, but were not issued then, as it was feared that the people would be prejudiced against the Commission.

Of the provincial reports the two most important are those of the Punjab and the United Provinces, which represent two very different points of view. The Punjab reports the communal bitterness existing in that province and seems to be opposed to a policy of Indianisation at even a moderate pace. The U.P. report takes a less pessimistic view of the situation. It holds that Ministers have gained an insight into public problems and that there has been a general quickening of interest in public affairs.

WHAT THE INDIAN PRINCES WANT.

(From a Correspondent.)

The Simon Commission has attracted so much attention, both from the importance of its task and from the controversies to which its appointment gave rise, that the parallel inquiry conducted by Sir Harcourt Butler has aroused, relatively speaking, little interest. To say that the one is a Statutory Commission, containing a large number of public men, while the latter is a small departmental committee, consisting of a few specialists, is by no means a complete explanation: the real fact probably is that while many people in England are interested in, and know something of, the problems of British India, very few indeed are aware that there are problems connected with the Indian States at all. Yet the task of Sir John Simon and his colleagues, formidable though it is, is certainly no more important than the work which lies before the Indian States Committee: for while the Statutory Commission is inquiring into the progress of what is, after all, an experiment, Sir Harcourt Butler is examining problems which lie at the very heart of the whole system of British rule in India.

To the truth of this statement the facts of political geography bear witness. It is said that the Indian States occupy only one-third of the area of the Indian Empire: but in this calculation Burma is included. Leaving out Burma, a glance at the map of India itself will show that the States occupy almost half the total area of the peninsula proper. They lie in great blocks across the vertical and lateral communications: solid islands round which British territory flows like a stream—and frequently a very narrow stream at that. Thus viewed, the States appear what in fact they are—the pillars upon which British power in India was originally founded and still largely depends. For it must not be forgotten that only by our alliances with some States, and our agreements with others, did we ultimately crush those who would not enter our system. We think of British India, and our achievements therein, with legitimate pride. We sometimes forget those trusty friends, the Indian Princes, who stood by us so staunchly in our weakness as well as in our strength. We forgot them before the Mutiny: but when that terrible conflagration broke out, they did not forget us. If we did not altogether forget them in the days before the Great War, at least we underrated their influence. Yet their unanimous rally to the King-Emperor's call steadied the whole of Britain's possessions in the East. Are we going to forget them again? They, at least, believe that we shall not do so.

That we did not remember them sufficiently in 1919, when the last Government of India Act was passed, seems to-day clear enough. This remarkable piece of legislation, which is the genesis of the Simon Commission, may be said also to have originated Sir Harcourt Butler's Committee. For those who were in India in 1918 will recall that when Mr. Montagu and Lord Chelmsford were engaged in the rather difficult task of finding out what British India wanted, they also devoted some time—if not very much—to the much easier task of finding out what the Princes wanted. British India—or rather that portion of British India which is interested in politics—wanted some form of Home Rule. Just what form was not quite clear either to themselves or to other people. The form they got did not satisfy them; but at least it was a beginning. The Princes, who take no particular stock of catchwords, wanted three quite distinct things, which experience had convinced them were indispensable. They wanted some machinery that would give them a voice in shaping those aspects of all-India policy which concerned them in common with British India: they wanted a share in shaping those executive decisions of the Political Department upon which their fate frequently hung: and they wanted matters in dispute between the Government of India and themselves referred for decision to a third—and disinterested—party. Mr. Montagu and Lord Chelmsford admitted, with some reservations, the

reasonable character of these requests. But in the event, not one single item did the Princes get, at least in the shape in which it would function as they had hoped. The Chamber of Princes, which they designed as the basis of the machinery for joint discussion of matters of common concern with British India, became a mere Diet, whose stereotyped agenda and hidebound rules—neither shaped by the Princes—disgusted some of the most powerful and progressive Rulers in India. The Permanent Advisory Committee, which was to have been associated with the Political Secretary in the management of daily relations between the Crown and the States, became the Standing Committee of the Chamber, with little initiative, less power, and no control of policy. The arbitral machinery was represented by a Government Resolution, providing for a form of reference at the pleasure of Government, and leaving it open to Government to accept or refuse the results.

But while the proposals of the Princes, which after all were purely defensive, came to nothing, the new Constitution of British India assumed just the form which made these proposals essential, if there was to be fair play between the two parts of India. For mark what has happened since 1919. India has become a protectionist country with a high tariff. Why? "Because powerful interests in British India wanted this. Were the Princes consulted? No. This instance is typical of what has occurred in many other directions, which is, that British India has settled all-India matters, without consulting the Princes at all. Is this fair? The Princes at least do not think so. And that is why they have pressed for the inquiry that Sir Harcourt Butler is conducting.

Broadly speaking, what they wanted—and did not get—in 1918, they want—and hope to get—in 1928. Only their ideas have become more precise, and their determination greater, for their experience of the new régime in India has revealed much to them. They realise more clearly than ever that, unless they bestir themselves, their treaties alone will not protect them, as times change. They are modernising their administrations: they are combining for their common defence. Further, they are convinced that unless there is a radical change in the present system by which their relations with the Crown are conducted, it will shortly be out of their power to help either themselves or their British allies when need arises. They believe that, if they should come to such a pass, it would be unfortunate alike for the Empire, for India, and for themselves. They stand firm for the British connexion, for peace, and for ordered progress. They have no desire to interfere with British India: but they have every sort of objection to being dragged at the heels of British India. They offer co-operation: they desire to foster in every way the advance of the whole country. But they object profoundly to a system which places them, contrary to what they believe are their rights secured by Treaty, at the mercy of a machine whose movements are directed more and more openly by British India—whom they will welcome as a partner but cannot tolerate as a dictator.

By 72 votes to 50 the Bengal Legislative Council on July 10 adopted the Government motion to appoint a committee of the Council to co-operate with the Simon Commission.

The Royal Commission on Agriculture in India has presented its 15th Interim Report (Cmd. 3139, price 1d.) together with vol. xi., evidence taken in Sind (70-186-11, price 3s. 9d.).

At Chittagong session on July 10 a young Muslim, Kazi Buzlar Rahman, was found guilty of murdering Mr. G. H. W. Davies, District Magistrate and Collector, Chittagong, in April last, and was sentenced to death.

A suggested change in the organisation of the Light Horse regiments is being put forward by Auxiliary Force officers for the consideration of Army Headquarters. The proposal is partially to mechanise these units on a motor car and cycle basis for use as patrols. Many of the men have given up horses in favour of cars and cycles, and some of the regiments could mechanise at once into light motor units for local emergency work.

THE REPORT OF THE ROYAL COMMISSION ON AGRICULTURE.

BY P. R. CADELL, C.S.I., C.I.E.

The appointment of Commissions and Committees to consider problems affecting the welfare of the people has been a recurring and possibly an inevitable feature of the administration of India. It is a somewhat saddening reflection to consider how few of the proposals which they recommended have been brought into effective working : and to what even smaller an extent the expectations based on these proposals have been realised. The Report which we are now examining contains numerous references to the work of previous Committees, or of Commissions which were but Committees writ large. Many of these special bodies are forgotten, and little trace remains of their labours, and little result of the money they cost. For example, the Royal Commission on Horsebreeding, though dealing with a subject in which the landholder is interested, especially as considerable areas of land in the Punjab were granted, and are still held, on condition that equine stock is reared, is not even mentioned in this comprehensive report on the welfare of the countryside. It is perhaps natural, therefore, that the Report should at the outset lay particular stress on the practical results which followed from the appointment of various Famine Commissions and of the Irrigation Commission of 1903. These Commissions dealt with problems of enormous importance indeed, but of an interest and diversity which can only be called fractional when compared with the complex task which has faced the present Commission.

The members of the Commission are entitled to hope that their Report will form at least as prominent a landmark in the history of Indian Administration as has been attained by the report of any Commission that has preceded them. We may readily share in that hope. When, however, we consider the possibility of practical results, we must remember that the task of the Irrigation and Famine Commissions, and of the officials who had to consider and execute their recommendations, was infinitely more simple. The evils and defects that caused famine or prevented the spread of cultivation could for the most be removed by concrete action. The works that were necessary depended naturally for their execution on the departments of Government, on which with equal propriety fell the burden of providing the funds. In the case of irrigation, moreover, the expenditure was for the most part of the nature of an extremely remunerative investment. Far more difficult and complex is the regeneration and improvement of agriculture. While the Commission's Report insists that the ultimate responsibility rests upon the various Governments, it realises that the chief task is to remove the inertia of ages : to change the whole outlook of the agriculturist, and to induce in him a change of heart. *Hic labor, hoc opus est.* To attain this object, the Report appeals to the patriotism of the Universities, and to the public spirit of social workers. While it is not always clear as to the agency by which improvements are to be carried out, it is still more indefinite as to the expenditure involved and the allotment of its burden.

The difficulty of the task of the Commission, however, and the apparently remote fruition of its proposals, must not be allowed to obscure the good qualities of the Report. As might be expected from the character of its distinguished Chairman, it is eminently sensible and free from "hot air." It is no mean performance in these days to have obtained a unanimous report : and this unanimity should have much weight towards the acceptance of its recommendations by the Indian Legislatures. It must, however, be recognised that this result has been reached only by a spirit of compromise and an absence of definite, or at least drastic, recommendations which will be regarded

by many as a weakness in the Report. No one will be prepared to underrate the difficulties of the signatories or to condemn their spirit of moderation. Any hesitancy in their recommendations, or postponement of the execution of them to an unspecified future, will, however, obviously give a handle to those to whom, for whatever reason, the recommendations are unpleasing.

The more, indeed, one considers the problems of Indian agriculture, the more one regrets the absence of the drastic power to remove admitted evils or anachronisms, which has been exercised in the only other Asiatic countries which have attempted to reach Western standards. In Japan the action of an efficient oligarchy swept away a weight of custom and inertia at least comparable with that of India. In Turkey ancient habits which interfered with modern developments have been wiped out with a ruthlessness which, however excessive, has at least left a *tabula rasa* for development. India, however, has no Council of Elder Statesmen, no Ghazi Kemal Pasha. On the contrary, the difficulties already inherent in the problems of agriculture have been enormously increased by recent political changes. With the exception of the control of a Central Research Institute, the Government of India has been practically divorced from the administration of agriculture, which has been entirely entrusted to local administrations. Unkind critics may suggest that this separation from the Government of India does not imply any great loss to agriculture, while no branch of the administration could be more suitable for transfer to the control of Ministers drawn from the people. The introduction of the methods and changes recommended by the Commission, however, inevitably involve heavy expenditure, which must be met by increased provincial taxation and by local rates. Rates and taxes are, unfortunately, the point on which Provincial Ministers, and their constituents, are most sensitive : and though we may hope that the democratic changes in the Provinces will justify themselves by providing the money required for the measures involved, the hope cannot be entertained with great confidence.

It was at least unfortunate that the transfer to Provincial control should have taken place when agricultural research was yet in its infancy. The Pusa Institute only remained with the Government of India : and that Institute, it would appear, was notoriously out of touch with the departments, and the Agricultural Colleges of the Provinces. In order to co-ordinate research work throughout India and presumably to keep the Government of India in touch with such work, the Commission has made the most definite of its recommendations in its proposal for an Imperial Council of Agricultural Research, and has in this case alone fixed a sum as the definite minimum contribution of Government towards the expense involved. Much could doubtless be said in support of the proposal, but it is open to obvious attack. The Council is to be purely advisory : it is to have no voice in the administration even of the Pusa Institute, still less in the Colleges in the Provinces. Its somewhat unwieldy numbers are to meet only twice in the year : the main direction of affairs must clearly remain with the three permanent officials, the head of whom is to be an administrator of recognised standing, and proportionate expense. It may well be suggested that, if such a body is required for co-ordination of Provincial experience and maintenance of touch with the Government of India, its work should not be confined to research only : and that a reorganisation of the Board of Agriculture and its development into an advisory Agricultural Council might be preferable, more especially as that Board has recognised relations with the Indian States.

In dealing with the subject of agriculture in general, the Commission has naturally divided the subject into the technical improvement of cultivation, the improvement of the machinery necessary to make such cultivation profitable, such as capital, credit, communications and marketing, and finally the general social uplift and change of outlook of the cultivator himself. It would not appear unfair to say that the main object of the Commission is to sug-

gest that the cultivator should realise the necessity for a fuller life. The suggestions for improvement in the actual methods of cultivation are few and eminently cautious.

Considerable disappointment will probably be felt that a stronger line has not been taken regarding the admitted evils of sub-division and fragmentation. The Commission states that much evidence has been offered to it in favour of drastic legislation, and recognises that an element of compulsion may be inevitable in dealing with it. Yet when a constructive scheme is produced by so experienced an officer as Mr. Keatinge, the Report quotes, with apparent approval, the objections to that scheme formulated by the Madras Government. That these objections exist, no one will deny; but the question is whether they are more serious than the evils which, as observers so different as Dr. Slater and Dr. Mann point out, render remunerative cultivation by the peasant proprietor impossible. The Commission refers to the success attained in the arrest of fragmentation through co-operative effort in the Punjab. That success is indeed remarkable, but it can apply only to one part of the evil. It can have no effect on sub-division, the evils of which, when carried beyond a certain point, no consolidation can check. Moreover, as the Report itself indicates, co-operation has been far less successful in some other parts of India than it has been in the Punjab.

The Report emphasises the importance to the cultivator of his cattle, and points out the increasing deterioration which most people believe to exist. If the cattle are not, as a whole, deteriorating, it is at least becoming increasingly difficult for the cultivator to obtain his requirements at a price within his means. The Report points out the necessity for reducing the number of plough cattle by increasing the efficiency of those that have to be retained. It does not, however, give any very clear indication how the limitation of numbers, and the required efficiency are to be attained. Among the reasons given for the present unsatisfactory conditions are the Hindu veneration for cattle in general, and the objections to, and the carelessness concerning, early castration; but no suggestion is made for action whereby the second, at least, of these difficulties could be overcome. A similar caution marks the proposals for the check of cattle disease. It is stated that the adoption of western methods is impracticable in India, and that even compulsory inoculation is at present undesirable. It is difficult to understand why measures that have been successfully applied in Egypt should be impossible in India; more especially when the experience of the Mysore State shows that they are readily accepted by the cultivator. The Commission urges the necessity for an enormous increase in the number of veterinary officers, both for dispensaries and for combating outbreaks of disease. The main burden of their cost is to fall, however, on the Local Boards, and it is difficult to see how these will find the money. It is satisfactory to find that the Commission has found little subject of complaint in the management of the forests. The Report recommends the increase of village forests. Experience in the past has hardly been encouraging, but this has been largely due to lack of knowledge and lack of control. The proposal to place forest officers definitely in charge of such village forests appears excellent, if panchayets can be formed for the control of grazing, and the collection of fees.

Perhaps in no respect has the British administration in India been more open to reproach than in the failure to create and maintain roads. The Commission believes the roads to have deteriorated of late years; but it is the increased use that is sought to be made of them, especially for motor traffic, that has brought their deficiencies into such prominence. In the British Colonies in Africa, with a rainfall at least as destructive as that of India, it is found possible to make up "dirt roads" capable of carrying fair weather traffic. Such roads would be equally possible in India, if the co-operative spirit were forthcoming. Here again, however, it must be recognised that the Local Boards must receive far greater financial aid from

Government than has been afforded in the past.

On the very important subject of agricultural finance the Commission recognises generally that legislative measures designed to deal with rural indebtedness have proved a failure. In some cases they have even strengthened the position of the moneylender. Restrictions on the alienation of land have on the other hand been on the whole successful. This has been particularly the case, by practically unanimous testimony, in the Punjab. In spite of this, it is unlikely that a similar measure asked for by the cultivators of the neighbouring Province of Sind will be successful, owing to the objection of the Hindu minority. The Commission recommends, though somewhat haltingly, the automatic redemption of usufructuary mortgages of agricultural land. Their principal reliance for the redemption of debt is, however, on the co-operative movement. Their attitude towards that movement appears somewhat mixed. The value of the rural credit society is fully admitted. Much doubt is, however, expressed as to the continuing value of the assistance of the honorary workers; and a strong recommendation is made for the building up of an official staff, and, in addition, for the continuance of the control and guidance of the Registrar. Nor is the Report more than luke-warm regarding the activities of the movement, apart from the credit societies. The usefulness of the co-operators is regarded as consisting principally in their being suitable *media* for useful propaganda and as a link between Government Departments and the cultivators. The usefulness of the rôle thus allotted to the co-operative movement is indisputable; but it may be questioned whether it will be sufficient to maintain the enthusiasm for work which is probably necessary, if the success of the movement is to be maintained.

(To be concluded.)

NEWS IN BRIEF.

The Indian Council of State will meet on September 11 next, and the Assembly on September 4. Both sessions are likely to be short.

A "Report on Labour Conditions in India," by Mr. A. A. Purcell, M.P., and Mr. J. Hallsworth, who recently made a tour in India as a T.U.C. delegation, has been published by the Trades Union Congress General Council, price 1s.

The King has been pleased to approve the appointment of Sir Ghulam Husain Hidayatallah to be a Member of the Executive Council of the Governor of Bombay, in succession to Sir Cowasji Jehangir, K.C.I.E., O.B.E., whose period of office will expire on June 22.

His Majesty has also been pleased to approve the extension of the term of appointment of Sir Chunilal Mehta, K.C.S.I., as Member of the Executive Council of the Governor of Bombay for a period of three months with effect from June 22.

The Indian Army Service Corps is to be further strengthened by the enrolment of 410 bakers, kneaders, and weighmen and by a reserve of 144 butchers on terms prescribed by Lieutenant-General Sir Cyril J. Deverell, the Quartermaster-General. Transfers from the British Service to the Indian Army Service Corps continue to be made, and the development of the mechanical transport branch is well advanced towards a sufficiency of units for field service.

The fourth annual Indian Empire garden party was held at Ranelagh on June 27. The Kneller Hall band and string orchestra played, and a polo match was played between India and the Royal Artillery. The guests were received by the Marquess of Reading, the Countess Dowager of Minto, Field-Marshal Sir William and Lady Robertson, Field-Marshal Sir Claud Jacob, Vice-Admiral Sir Herbert and Lady Richmond, and Air Vice-Marshal Sir John and Lady Higgins. Among those who accepted invitations to be present were:—The Maharaja of Jammu and Kashmir, the Nawab of Cambay, the Rane of Sarawak, the Maharaja of Burdwan, the Persian Minister, the Chinese Chargé d'Affaires, the Earl and Countess of Birkenhead, Lady Eleanor and Lady Pamela Smith, Lady Irwin and the Hon. Anne Wood, Sir Laming and Lady Worthington-Evans, Viscount and Viscountess Burnham, Lord and Lady Strathcona, Sir John and Lady Simon, the Hon. Edward Cadogan, Colonel and the Hon. Mrs. Lane-Fox, Mr. and Mrs. C. R. Attlee, Sir Thomas and Lady Middleton, and Countess Roberts.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The 1929 Fair.

One British Industries Fair is no sooner over before preparations are made for its successor, and judging from the reports already made with regard to the next Fair the 1929 event promises to be a record both from the point of view of size and the number of firms exhibiting. At the White City there is to be an additional 100,000 square feet of exhibiting space while a further area of 40,000 to 80,000 square feet is to be provided at Birmingham. As the Fair has now an established place in the annual events of world commerce it is only natural to anticipate even greater interest in it abroad, and consequently a new record in the business done. The conditions are set fair for that, for there is no question that the position abroad is steadily improving whatever may be the situation at home where we have problems to deal with which are peculiarly our own.

Roumanian Loan Negotiations.

In the past week there have been interesting developments with regard to the Roumanian Loan. The scene of the negotiations has been transferred to Bucharest, where are at present representatives of four leading financial houses representing Great Britain, France, and the United States. France, as was to be expected, is playing a prominent part in the negotiations, and the report that the Bank of France has offered Roumania a substantial advance on the loan suggests that French houses will take the leading part in the issuing of the loan. In any case it is not thought likely that the British share of the loan will be very large. This turn in the negotiations encourages the expectation that, despite the opposition to a loan in certain quarters on account of the Hungarian question, the loan will be a *fait accompli* by the autumn. The importance of the issue to Roumania scarcely needs any further emphasis in these columns. Money is urgently needed by Roumania not merely for the stabilisation of the currency but for the improvement of the transport position, which, as I pointed out last week, is impeding the country's progress and promises to grow worse in default of speedy remedial measures. As regards the stabilisation question it is understood that an endeavour will be made to fix the rate of the leu at 800 which is 32 times the pre-War parity and indicates very plainly how little progress Roumania has been able to make since the War. As in the case of other countries the measure will no doubt be followed by the adoption of a new unit of currency.

The Position in the Sudan.

On the whole it may, I think, be taken for granted that the outlook for the Sudan is now more hopeful than it has been for a considerable period. The index to conditions in a country situated as the Sudan is, is the develop-

ment of the import trade, and as I had occasion to point out recently the public imports of the Sudan have shown a marked tendency to increase, a feature of the trade being the buying of cotton piece-goods. That tendency points to the fact that money is now circulating freely, and that the natives generally are beginning to enjoy a greater measure of prosperity. The dura position, a key to the situation in the country, is no longer a problem owing to the good harvest last year which it is anticipated will be repeated again. Again cotton, so important a factor for the country, may be expected to make a more important contribution to the Sudan's resources in the next twelve months, especially if, as will probably be the case in view of the American crop situation, fairly high prices are realised. It is important to note that the growing of American cotton in the Southern Sudan continues to make steady headway. The natives are coming more and more to appreciate the value of cotton as a crop, and it is now obvious that given the development of communications in that region and adequate marketing facilities, in both of which directions the Government is making most praiseworthy progress, the Sudan American cotton crop will soon be of considerable importance. If one takes into consideration also the various works of development which are going on throughout the country—works which will ultimately make their contribution in one way or another to the prosperity of the region—it is impossible not to be hopeful about the future of the Sudan. Undue optimism would be misplaced, but now that the foundations of the country are being well and truly laid, it is possible to look forward to a period of steady, and, it may be hoped, continuous, progress.

Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways for the past year makes an unsatisfactory showing. The traffic receipts show a considerable decrease while the proportion of working expenses to gross earnings has risen to 82.71 per cent. Since the close of the year, as will have been noticed from the figures given in these columns,

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch—11, CALEA VICTORIEI BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

the traffic receipts have continued to fall. In the past year the company was affected in the main by two factors—cotton and road competition. The Egyptian Government restricted the cotton acreage, and the result naturally was less tonnage from this source. It was, however, the increasing road competition which was the principal factor in the reduced receipts, and it is noteworthy that this competition is now affecting not only passenger traffic but also goods traffic. It is stated in the report that no adequate regulations appear to exist in Egypt for the control of motor vehicles and that representations have been made to the Egyptian Government on the subject. Clearly the solution for the line is that which is being adopted elsewhere, namely, for the Egyptian Delta Light Railways to meet this competition by running its own motor services, and it is interesting to note that the company is inaugurating experimental services in certain selected districts.

Motors v. Railways.

The experience of the Egyptian Delta Light Railways adds one more to the long list of instances which show the advantage the motor has over the railway in certain circumstances. As a matter of fact, the countries in which this condition obtains present very varied conditions. In Great Britain which has the most highly-organised railway system in the world competition by motors has been most severe on account, in the first place, of the high fares. The position is the same in Roumania, where the high charges have given the motor a considerable field for enterprise. Naturally where the railways are few the scope for the motor is greatest, and it is obvious, as I have pointed out, that where communications have still to be developed the construction of railways will present very great difficulties, for capital can only be obtained if there is an assurance of an adequate return on it, and the advent of the motor age has made such a prospect at least extremely doubtful. But there must be railways, for while railways and motors clash in many directions the railways perform functions with regard to heavy traffic which it is difficult to see how motors can ever carry out. As regards all but the heaviest goods, however, the motor can obviously offer most serious competition, provided, of course, that the roads are adequate. One visualises, indeed, the opening up of undeveloped countries by a series of main highways along which will

pass the heavy lorries to take up or set down their loads at conveniently situated smaller roads leading to the interior of the country.

Furness Withy's Results.

A further improvement is shown in the results obtained by Furness Withy and Co. for the past year. The profits amounted to £627,750 as compared with £603,511 for the year ended April 30, 1927, and £523,044 for the previous twelve months. The dividend for the year is 10 per cent. less tax which represents a slight increase on the previous distribution of 7½ per cent., tax free. To what extent shipping receipts contributed to the increased profits must remain to be seen. It may be pointed out that a large part of the assets of the company consist of British Government and other securities, and this item figures in the balance sheet for £125,000 more than a year ago.

COMMENTATOR.

NEWS FROM ALL SOURCES.

It is reported that Bulgarian tobacco growers are negotiating for the formation of a cartel.

The Greek Budget for the financial year 1928-29, totals 11,114,652,333 drachmæ for both revenue and expenditure.

The Attock Oil Company, Ltd., announces that a well has been drilled into the 3,300 ft. sand, giving satisfactory initial production.

The traffic receipts of the South Indian Railway Company for the week ended June 16 amounted to Rs.12,54,382, making the total from April 1 Rs.1,38,98,756.

The Eastern Telegraph Company, Ltd., announce that the annual general meeting of the company will be held at Electra House, Moorgate, E.C., on July 24.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for June amounted to 42,744 barrels.

The number of immigrants who entered Palestine in April was 179, while 138 emigrants and 102 returning immigrants left the country permanently during the month.

The Government of India has referred to the Tariff Board the question of protection for sulphuric, hydrochloric, and nitric acids, and other chemicals manufactured in India.

Roumania's Customs receipts for the first four months of the year were as follows:—Import taxes, 2,116,886,128 lei; export taxes, 233,564,702; various taxes, 109,291,567; total, 2,459,742,397.

Sir W. G. Armstrong Whitworth and Co. have been awarded a contract for the construction of a large number of super-heated locomotive boilers and other locomotive details for the Indian State Railways.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 20 amounted to £E6,870, making the total from April 1 £E54,621 as compared with £E58,743 for the corresponding period of the previous year.

There is a favourable market for corset materials, trimmings, and accessories used in the corset industry in Greece (says an American Consular Report). Imports of the finished article have been negligible during recent years because of the high protective tariff.

The directors of the Westminster Bank, Ltd., have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares, and the maximum dividend of 6½ per cent. on the £1 shares for the same period. The dividends, 10s. per share and 1s. 3d. per share respectively (both less income tax), will be payable on August 1.

The traffic receipts of the Manchester Ship Canal for the half-year ended June 30 amount to £729,025, as compared with £759,052 for the corresponding period of last year, a decrease of £30,027. The revenue of the whole of the undertaking for the half-year (after providing for interest and fixed charges, including £18,373 increased interest payments in respect of new capital works) was £138,939, as compared with £187,232 in the corresponding period of 1927. The traffic receipts for June amounted to £121,779, against £140,240 in June last year, a decrease of £18,461.

Engineering Topics.

By G. B. B.

The question has been asked as to the steps taken to prevent, in the new Mersey Tunnel, a pollution of the atmosphere similar to that which gave such trouble in the case of the Thames Tunnel. The official view is that there is no need for uneasiness regarding the ventilation, as exceptional measures have been taken to prevent vitiation of the atmosphere and powerful fans will force in, underneath the roadway level, fresh air from the river, through openings close to the street walks of the tunnel and above the carriage ways. I am informed that there is also to be an upper casing which will in turn, through the media of exhaust fans, take the products of combustion and the vitiated atmosphere and deliver them in the open air over the river. The whole question of the ventilation of tunnels of this kind has been gone into carefully in connexion with the new tunnels which have just been completed under the river at New York, and Liverpool is naturally taking advantage of the information placed at its disposal by the engineers of the American undertaking. It must not be forgotten that proposals are afoot in regard to the construction of an Everton Tunnel as a link between the East Lancashire road and the Mersey Tunnel. I understand that the Corporation have been acquiring such property as has come into the market along that line, but the actual construction of the tunnel is dependent upon the final decision of the Council, when the complete scheme is made public. The tunnel will be cut through the solid rock, and the more optimistic hope that it will be completed by the time that the new roadway under the Mersey is ready, so as to allow of the transport of goods from East Lancashire to the Birkenhead Docks without transshipment or delay. Liverpool, as Mr. J. A. Brodie told us the other day, is fortunate in having a series of fairly wide roads leading from the line of the new road within the city down to the docks at distances of approximately one mile apart, so that, with the exception of the one main road by itself down to the end of the new tunnel, no very heavy expenditure will be necessary on these streets.

Roadless Traction.

I have just been reading some information regarding the progress of roadless traction, which, as I suppose all readers are aware, is a method by which wheeled vehicles

are provided with their own tracks, rotating in the form of an endless band round the wheels and so allowing the weight to be well distributed whilst at the same time road obstacles are overcome. The system was familiar to us all during the later phases of the War, in connexion with tanks and heavy tractors, and I see there are those who are convinced that the next big step in the material development of the world is the introduction into its sparsely populated and agricultural areas, of a means of mechanical movement, such as this, which meets fully the conditions under which it has to operate. These conditions are, of course, infinitely varied in detail, but in the main it is true that in the absence of a hard, well-made roadway or railway the prime necessity for any vehicle operating over the earth surface is a low pressure per square inch transmitted to the ground. The way in which these low pressures can be obtained, the effect of them in practice, and the many other considerations which have to be borne in mind in mechanical vehicles of this nature are all matters for consideration on the part of both engineers and prospective users. It seems certain that this form of traction has come to stay, and it would seem that the Near and Middle Easts offer a wide field for its development.

Flood Protection Works.

Some interesting information is to hand regarding the construction of the flood protection works near Beira, on the flats of the Pungwe Valley. The catchment of the area drained by the Pungwe and its tributaries is estimated at about 3,000,000,000 tons of water, and the eight viaducts are being built to provide for the passage of water which, during the rainy season, converts the flats into an inland sea. The viaducts have a total length of 2,553 yards, and the old bridge across the river is to be replaced, the new structure being a five-span girder bridge. The spans are to be carried on six piers, sunk to from 75 to 90 feet below the bed of the river. The viaducts will be carried on concrete trestles and piles on the Vibro system, cast at the site of the works. The piling plant consists of a 20-ton piling frame, 60 ft. high, on a carriage which also carries the boiler, engine, and winches. The raising of the necessary earth embankment will mean moving 500,000 cubic yards of soil, and about 60,000 cubic yards of stone, for pitching the embankment, will have to be brought over 40 miles. About 2,000 men are employed on the work, which is being carried out by Messrs. Dorman and Long, Ltd.

DULL TRADE AT BRAILA AND SULINA IN 1927.

H.M. Vice-Consul at Braila reports that the port of Braila has experienced a dull year, as regards the export trade, owing to the fact that grain, especially maize, has mostly been exported from other ports up-river by lighters direct to Central European destinations. Imports, on the other hand, greatly increased in 1927, thanks to the installation of a rice-shelling factory, "Orezul" S.A.R., which imported 10,000 tons of raw rice.

Some cargoes of phosphates were also imported, and several hundred tons of British coal were shipped to Braila during the year. There was a slight increase in the quantities of goods arriving via the Danube from Central Europe, viz., 16,319 metric tons in 1927 as against 14,305 metric tons in 1926.

The port of Sulina is controlled by the European Commission of the Danube, which guarantees absolute equality of treatment to the vessels of all nations. H.M. Vice-Consul at Sulina reports that this port has not yet regained its pre-War status, and shippers of grain, notwithstanding the improved bar-depth conditions, have not made full use of the advantages which the port presents to the shipping community. The labour question has proved a serious obstacle, and the main reason why practically no loading operations were carried out during the last eight months of the year—the cheaper labour tariffs in force at Galatz and Braila competing with Sulina prices, which showed an excess of 20 per cent. over the up-river figures. Continued attempts to reduce the rates for port and roads work have met with success, inasmuch as reductions of 25 per cent. for loading effected during the winter months (December to March) and 35 per cent. for the summer months (April to November) have been agreed to. These substantial reductions are a step in the right direction towards inducing grain shippers to use Sulina as a loading port, but a stable bar-depth is required to convince merchants that the advantages are real and that steamers with a tonnage of over 8,000 tons can load full cargoes in the port without questions of lighterage over the bar.

The depth of water on the bar has fluctuated between 22 feet and 24 feet, though it was maintained at the latter figure during the greater part of the year. With the opening of the new channel, which is curved south, it is expected that a stable depth of 24 feet will shortly be obtained.

The improved conditions in comparison with 1926 were felt and appreciated by navigation, for while in 1926 33 ships lightening 41,578 tons completed their cargoes in Sulina Roads, only 11 ships lightening 6,511 tons finished outside the bar in 1927.

The length of the pier prolongation work at the present time is 6,890 feet on the north side and about 9,350 feet on the south side, seawards of the old pier ends. It is intended to prolong the North Pier approximately a further 2,500 feet.

NEW KHEDIVIAL MAIL STEAMER.

The steamer Taif which has been built by Messrs. Alexander Stephen and Sons, Ltd., for the Khedivial Mail Steamship and Graving Dock Co., Ltd., for their cargo and passenger service in the Red Sea and the Eastern Mediterranean, has just completed her speed trials. Her dimensions are 250ft. length overall; 39ft. breadth; and speed of 11 knots. Accommodation has been provided for 50 first and second-class passengers, and 500 deck passengers. The propelling machinery consists of one set of triple expansion engines, with two single-ended boilers, and with the Clyde oil fuel system of oil burners.

A sister ship, the Tadoli, is being constructed by Messrs. Stephen and will be completed shortly.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, July 23); s.s. Elysia for Bombay (Birkenhead, August 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, July 24); s.s. Malancha (Birkenhead, August 2).

Bibby Line.—S.s. Derbyshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 26).

British India Line.—S.s. Mundra for Bombay and Karachi (London, July 21); s.s. Morvada for Colombo, Madras, and Calcutta (London, July 28); s.s. Hatimura for Bombay and Karachi (London, August 11); s.s. Masula for Colombo, Madras, and Calcutta (London, August 11).

Cunard Line.—S.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume Liverpool July 21, and in Swansea July 24; followed by s.s. Bothnia, Liverpool August 18 and Swansea 21; s.s. Bactria for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow July 20, and Liverpool and Swansea July 21; followed by s.s. Bosnia, Liverpool, Glasgow and Swansea, August 25).

Johnston Line.—S.s. Aviemore for Smyrna and Constantinople (Liverpool, July 28); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 4); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1).

P. and O. Line.—S.s. Malwa for Bombay (London, July 20); s.s. Mantua for Bombay (London, August 3); s.s. Ranpura for Bombay (London, August 17).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 21); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, August 1); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 4).

Ellerman and Papayanni Lines.—S.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 28); s.s. Polo for Algiers*, Patras, Smyrna, and Constantinople (Liverpool, August 4); s.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 4); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool August 4, Swansea August 9); s.s. Mardinian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 18). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

It is proposed to form a Roumano-Hungarian Chamber of Commerce at Bucharest.

The Egyptian market for cotton, silk, rayon, and linen handkerchiefs is large (says an American Consular report). The native demand is for highly coloured plaid patterns, most of which are imported. The local hand-loom weavers are supplying a portion of the rayon handkerchiefs for the domestic market. Fine linen and silk handkerchiefs with a woven pattern border, either two tone or plain colour, are sold to the better class of the population. The cheap-quality coloured patterns find a market among the native trade. Fringe handkerchiefs are used by men for wrapping around the head.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 17.

Although the general tone of the London Stock Markets has remained weak, partly as a result of the after effect of the Loewenstein tragedy, which incidentally found the markets none too cheerful, the settlement has passed off without any untoward incidents. There was certainly nothing to justify the placards of an enterprising journal to the effect that a heavy slump had taken place on the Stock Exchange. All the same the immediate outlook for various securities is not too bright. The holiday season is rapidly approaching and company promoters are busily flooding the market with prospectuses before the quiet months arrive. One of the prospectuses of the past week is of special interest to readers of the financial Press, since it amalgamated several well-known financial journals, though it is interesting to observe that the *Economist*, following the example of *The Times* and the *Spectator*, preserves its independence under a separate charter.

The raising of the New York Federal Reserve Rate to 5 per cent. at the end of the week does not improve the monetary outlook, although the Bank of England, after the recent accretions to its stock of gold, should be able to face the autumnal strain without resort to a 5 per cent. rate here.

The Plain Man and his Money.

During recent years there has been a notable spread of the investing habit. Many who before the War were content to place their money in the Post Office Savings Bank are now the holders of Stock Exchange securities. A large number of these investors are, of course, unfamiliar with the ways of the new world which they have entered, and experience shows that they have made numerous mistakes. This is unfortunate, but perhaps largely un-

avoidable. But since the spread of the investing habit is desirable, any honest attempt to smooth the past of the new investor is welcome. For this reason we draw attention to a helpful new book specially written for such investors. It is called "The Plain Man and his Money" (published by Nisbet, 2s. 6d.) the author being Mr. A. S. Wade, a well-known Financial Editor. It assumes little technical knowledge and in simple language describes the various classes of securities, points of procedure, and indicates the many pitfalls to be avoided. We notice, however, that the author devotes a chapter to the "Gold Standard and the Plain Man," while the jacket of the book tells us that the "plain man" and "his wife" want to know "what the gold standard means." We seriously doubt whether this estimable pair think about the gold standard very much; and in any case so technical and contentious a subject could easily have been avoided.

The Bank Dividends.

The leading British banks have now announced their interim dividends for the first half of the present year. In every case the dividends are maintained at the same rate as for last year. This is, of course, in accordance with expectations, but it does not follow that the past six months have been as profitable as the corresponding period of 1927. Indeed, the known facts point to the possibility of profits being at a slightly lower level. For instance, the level of Bank Rate, which governs other money rates, has been lower, the average rate for 1927 being £4 16s. per cent., as compared with £4 10s. per cent. for this year. Again, trade has been less active, as is shown by the decline of £4½ millions in the gross receipts of the four leading railways. It is true that a larger volume of funds has been available, but it is unlikely that this has been sufficient to off-set completely the other adverse factors. These minor fluctuations in earnings, however, are of little practical importance, for the financial position of the banks is extremely strong. The shares of the leading British banks can be confidently recommended as investments. The yields, admittedly, are not generous, often being on the same level as those given by British Government stocks. But from time to time the banks make a present to their shareholders by raising new capital on bonus terms.

Australian Finances.

Australia is once again making an appeal to the British investor, subscription lists for a £7,000,000 loan, redeemable 1945-75 and issued at £98 per cent., having been opened. Australia has recently been a heavy borrower in London, but the prospects of the loan are improved by the news, received this week, that Western Australia has given a second reading to the Bill which aims at regularising and co-ordinating the finances of the States and the Commonwealth. This brings it within measurable distance of the Statute Book. The Bill has, of course, still to pass through other stages, but apparently there are expectations that from now onwards it will have a fairly smooth course. Had Western Australia failed to give the second reading to the Bill the whole scheme would have been jeopardised. This would certainly have been deplorable and would have damaged Australia's credit in London. In recent years certain quarters in the City have viewed with some apprehension the rising tide of Australian indebtedness. Their view is that, if a halt is not necessary, at least the whole position should be placed upon a more satisfactory footing, especially with regard to provision for sinking funds. It is realised that the Bill now under discussion will go a long way towards achieving this purpose.

Near East Markets

INCREASED CYPRUS EXPORTS.

The value of Cyprus imports continues above the average, the total for May, £143,342, being about £9,000 more than for May, 1927, and over £27,000 more than the quinquennial average. The increase is general.

The export trade also continues above the average, the figures for May being £148,865, showing an increase of over £20,000 as compared with that of May of 1927, and of over £55,000 more than the quinquennial average, and it exceeded the import trade by £5,500.

The most noticeable increases in exports, as compared with the average for the last five years, are in asbestos, carobs, cotton, and copper pyrites.

The 1927 crop of carobs is practically exhausted. The abnormal local price of 27s. per kantar was reached during the month under review.

Shipments of potatoes have commenced. The quality is good and it is anticipated that the crop will be above the average.

Shipping during May maintained its recent high level, the port of Limassol having a record calling of 38 steamers.

TURKISH MARKET FOR LEATHER.

Production of leather in Turkey has been consistently increasing during late years, its 760 tanneries supplying about 70 per cent. of the sole leather requirements and a very small percentage of the other leathers used (says an article in the United States "Commerce Reports"). Considerable quantities of leather, consequently, must be imported annually, the greatest part coming from France and Germany and most of the remainder from the United States and Belgium. Only during the past 10 years have American tanners been successful in obtaining any substantial share of the trade.

Turkey is dependent on foreign sources for a large share of the uppers used annually, which are supplied mostly by French and German tanners. American producers, however, have recently been successful in obtaining a volume of trade which is much larger than the total American leather sales to that country during the immediate pre-War years.

Owing to the limited purchasing power of the general population, the cheaper and medium grades of upper leather find the most ready market, and only comparatively small quantities of the better qualities are imported. Of coloured upper leathers, larger amounts are being imported at present than ever before.

Of the present annual consumption of patent leather in Turkey, estimated at 1,250,000 square feet, the entire amount is imported, mainly from the United States, which supplies about 70 per cent., Germany, and France.

The production of sole leather in Turkey has increased consistently during recent years, and the annual output is now estimated at 10,000,000 lb. As the yearly consumption is placed at about 14,285,000 lb., domestic tanners supply approximately 70 per cent. of the total requirements. The imports of sole leather have decreased steadily during late years; the domestic tanners are increasing their efforts to improve and increase their production, and a further decline in imports is expected. France and Belgium supply the largest part, the former supplying the better and medium qualities and the latter the medium and cheaper grades. The American tanners have been able to sell the cheaper grades only of sole leather—mainly offal—in Turkey, and the reduced imports of sole leather by that country have not affected these sales. Turkish tanners are of the opinion that the higher world quotations for leather will be of material benefit to them in increasing their sales. They assert that foreign sole leather will soon be at too high prices for the Turkish market.

EUROPEAN COMMISSION OF THE DANUBE.

The Foreign Office have received from the British Commissioner on the European Commission of the Danube (Mr. J. G. Baldwin, C.B.) a detailed statement of the financial situation of the Commission on 31, December, 1927. The following is a summary of the figures taken from the official accounts (in French francs gold):—Receipts during 1927, 5,090,048; balance from 1926, 1,612,249; total, 6,702,297. Expenditure, 6,359,180; balance at end of 1927, 232,117; total, 6,702,297.

The receipts consist almost entirely of navigation dues (5,030,653 francs). The expenditure includes 2,062,191 gold frs. on the prolongation and strengthening of the embankments at Sulina, and 251,507 gold frs. in repayment of the British portion of the loan raised by the Commission in 1924.

EGYPTIAN MARKET FOR SPORTS WEAR.

A good market exists in Egypt for all articles of sport clothing (says an American Consular report). The various types of sweaters, knitted suits for women, and scarfs on sale are of wool and rayon mixtures. The knitted coats with collars and cuffs of napped wool goods are finding favour in this market. The well-dressed Egyptian or foreign resident wears a knitted fancy vest in the winter season. This additional garment is largely worn in lieu of a top coat and is either with or without sleeves. A few sweaters with a V-neck and a closed front are shipped by France. Native cab drivers during the winter wear a modern-type knit scarf, worsted or rayon, and usually fringed, wrapped around the neck, face, and head. A good prospective market exists for all articles of knitted outerwear.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Steel Fire-Float.—The Engineering Department of the Egyptian Ports and Lighthouses Administration is inviting tenders for one self-propelled petrol motor fire-float for use in Suez Harbour and Roads. August 31. (D.O.T.)

Oil.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 10,000 kilos shafting, engine, and machining oil and 5,000 kilos cylinder oil for Bell's and Morcom engines to specification. September 12.

Tent Cloth.—The Stores and Economat, Sharia El Falaki, No. 20, Cairo, invites tenders for the supply of 57,755 yards of tent cloth for the Plant Protection Section. August 20.

Chassis.—The Headquarters, Frontiers Administration, Ministry of War and Marine, Cairo, invites tenders for the supply of 10 six-wheeled chassis with engine as per specifications at Headquarters, Ministry of War. August 8.

Filter.—Tenders in respect of the contract for the installation of a third filter at the Damanhour waterworks are invited by the Municipalities and Local Commission Section, Ministry of the Interior, Cairo. August 4. (D.O.T.)

Filters.—The Tanzim Department, Egyptian Public Works Ministry invites tenders for the supply and erection of four mechanical water filters. These filters are required to have a total output capacity of two million gallons of water per 24 hours. August 2. (D.O.T.)

Buffers.—The Egyptian State Railways, Telegraphs, and Telephones, invites tenders for 60 buffers complete.

The date of the adjudication for the construction of an overhead bridge at Minia, originally fixed for August 4, has been postponed to September 4.

Telephone Trunk Cable.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply and laying of Cairo-Alexandria telephone trunk cable. October 3.

Ejectors and Accessories.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for supplying ejectors and accessories for stations Nos. 1, 2, 3, and 4 (Damanhour Drainage). October 15.

Paper, Binding Cloth, and Stitching Wire, Etc.—The Egyptian Ministry of Finance invites tenders for the supply of paper, boards, binding cloth, stitching wire, ink, etc., required during the year 1928-29. July 21. (D.O.T.)

Steel Plates.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 58 steel plates for renewals of four swing bridges. August 23.

Fire Float.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of a fire float for Suez Harbour as per conditions of tender and specification. August 31.

Flat Mild Steel.—The General Management, Egyptian State Railways, Telegraphs, and Telephones invites tenders for the supply of 472,800 kilos flat mild steel. August 29.

Spare Parts for Machihes, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of spare parts for machines, leather, belts, iron goods, paints powder, nails, files, etc., to Tura Mills. July 28.

Galvanised Steel, Etc.—The Egyptian State Railways, Telegraphs, and Telephones invite tenders for 22,000 feet galvanised mild steel and 3,200 feet piping steam mild steel, and for 700,000 twine type lead seals.

Side Bearing Springs, Etc.—The Egyptian State Railways, Telegraphs, and Telephones invite tenders for 2,000 side bearing springs for standard 10 ton wagons to drawing; 4,100 metres cable switch-board, value between £E950 and £E1,150; and 30 loco and tender tyres 4 ft. 2½ in. to drawing for standard gauge main line. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Automatic Telephone Exchange.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a full automatic telephone exchange equipment in Cairo and associated subscribers' apparatus. September 1.

Dredgers.—Tenders are invited by the Ministry of Public Works of the Egyptian Government for the construction of (a) two dipper dredgers each capable of an output of spoil in free-getting material of 80 metres cubic per hour measured in the solid, and (b) two suction pump dredgers each capable of an output of spoil in free-getting material of 200 metres cubic per hour measured in the solid; including re-erection in the Sudan and for the delivery thereof in working order safely afloat on the River Nile. Builders may tender either for the two dipper dredgers, or for the two suction pump dredger, or for both groups. The contract documents and the rules for, and full information as to, tendering may be inspected at the offices of Messrs. Goode, Fitzmaurice, Wilson and Mitchell, Consulting Engineers to the Egyptian Government, 9, Victoria Street, Westminster, London, S.W.1, or the Legation of the Egyptian Government, Bute House, 75, South Audley Street. October 1.

BUILDING IN PALESTINE IN 1927.

A further considerable decrease in building operations throughout Palestine, except in Jerusalem and Nablus, was recorded in 1927 (says the Commercial Bulletin of Palestine). About £P770,064 were invested in the erection of new buildings as compared with £P1,140,965 invested in 1926 and £P2,058,705 in 1925. This was particularly noticeable at Tel Aviv, where the amounts invested fell from £P1,472,820 in 1925 to £P276,923 in 1926 and £P50,000 in 1927.

The chief reason for this striking decrease is the decline in mass immigration which occurred in 1924-25, bound up with the acute financial and trade depression which set in towards the end of 1925. Building operations have also decreased at Haifa for the same reasons. An appreciable increase in building operations, however, was noticed at Jerusalem and Nablus.

In Jerusalem £P412,542 was invested in 1927 as compared with £P403,537 in 1926 and £P232,755 in 1925. This is due to the increase in the Jerusalem population and the demand for more up-to-date accommodation, and to the erection by philanthropic institutions of large buildings such as hospitals, orphanages, churches, social centres, etc.

In Nablus the earthquake of 1927 destroyed a very considerable number of houses and as a result new buildings had to be erected; the amounts invested in 1927 are, therefore, disproportionate to the sums invested in 1926 and in 1925; these were £P85,861, £P14,554, and £P13,128 respectively. Consequent on the earthquake building operations were also carried out in Jenin, Tulkarem, and Ludd.

Approximately £P234,900 was spent in 1927 by the Civil Government on public works, such as the construction of buildings, roads, water supplies and their maintenance as compared with £P164,718 in 1926 and £P101,538 in 1925, and £P20,904 by the military authorities on buildings and repairs.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

White to play. What result?

The solution to last week's end game is as follows:—
1, Kt—Q3 (ch), K—Q3; 2, K—Kt4, P—K5; 3, Kt—B4, B—Q2; 4, P—B4, B—B3 and draws.

Yugoslavia's exports in April totalled 429 million dinars as against 468 million in April, 1927, and 813 million in April, 1926. In the first four months of this year exports amounted to one milliard 821 million dinars as against 2 milliards 15 millions in the same period of last year.

YUGOSLAVIA'S NATIONAL RIVER.

M. N. Guiachintof contributes an interesting article to the current issue of the *Belgrade Economic Review* on the "The Sava, the Great National River of the S.H.S Kingdom." After pointing out that the Romans made considerable use of the river formed by the Sava and the Liubianica and that after the fall of the Roman Empire the utilisation of the waterway declined until the end of the 18th century he continues :—

Traffic on the river now amounts to over 300,000 tons a year. In 1924 and 1925 it reached as much as 375,000 tons. This amount might be greater by another hundred tons or so if one reckoned some of the arrivals and departures from the port of Belgrade, since the traffic at Belgrade includes goods sent thence to the ports of the Sava, while from the Sava on the other hand Belgrade received a large quantity of merchandise.

This traffic is by no means a negligible quantity. But if one takes into account the length of the river and compares the transport carried on with that on the Danube of its tributary the Tissa, it is quite easy to see that the traffic on the Sava is far from what it might be. In 1926 the Danube had a traffic of nearly 300,000 tons and yet its length within the Kingdom is less than that of the Sava. In the same year the Tissa transported 600,000 tons in spite of the fact that only 164 kilometres of its course lie within the limits of this Kingdom.

A study of the traffic on the Sava therefore gives an impression of inadequacy. No figures for a long period of observation are available which would make it possible to draw well-founded conclusions as to its development. The figures for the four years 1923 to 1926 show that during that period the Danube and the Tissa doubled their traffic, and that the Begey Canal and the Drava have shown an increase of 50 per cent, whereas the Sava increased by 25 per cent in 1924 and 1925 and then in 1926 fell to a level even below that of 1923.

At present the Sava cannot be considered as a river which plays an important part in international traffic. Commercial shipping has ceased not only on the Liubianica but also on the Sava itself beyond the outlet of the Kupa (km. 593). Even the last hundred kilometres between the outlets of the Una and the Kupa are only maintained by one port in the lower course of the Kupa namely Sisak. More or less busy traffic is now carried on only over the first 500 kilometres from the outlet of the Sava to that of the Una. Of the 90,000,000 kilometre tons of traffic on the Sava in 1926, over 82,000,000 or 91.44 per cent belonged to those 500 kilometres. The whole length of the Sava over which shipping is carried on is entirely within the limits of the Kingdom and thence the traffic connected with foreign trade is necessarily limited to what the basin of the Sava itself can supply from its surplus production and what it needs of foreign goods. For the present, according to the traffic figures for 1924—1925, this transport is estimated at 60,000 tons round per year.

It may be noted in connection with the present state of the Sava that there are very few ports over its navigable course, in all 15, without reckoning Belgrade, which by its traffic belongs rather to the Danube than the Sava. For the purpose of comparison it may be mentioned that in 1926 there were 53 ports at work on the Danube. In the district of the Sava, that is, taking the land which extends a distance of 40 to 50 kilometres inland from both its banks there is a railway network which comprises over 1,500 kms. of line and on which there are 280 stations.

All these facts together give a picture of a river not only falling into decay, but of one abandoned to its fate, and, one might almost say forgotten. Its present does not correspond to its past.

Agricultural products play an important part in the transport on the Sava. It is sufficient to call in mind the fact that it is the provinces of Srem and Machva

which are watered by the Sava to make evident the possibility of developing the traffic in cereals along this river.

Nevertheless in 1926, the year when the figures of agricultural products transported were largest, the transport on the Sava was only 118,814 tons. A calculation of this per kilometre gives less than 200 tons per kilometre. As to the other rivers flowing through agricultural districts, the following are the figures of agricultural transport in the same year : Danube 1,035,454 tons, Tissa 402,745 tons, Begey 186,244 tons.

All these three waterways carry on large transports in foreign trade. The Sava, however, is confined principally to internal communications. But taking only the latter the Danube gives a total transport of 488,260 tons, or 829 tons per kilometre; the Tissa a total of 215,079 tons or 1,311 tons per kilometre. There is no reason to doubt the capacity of the region of the Sava to nourish a transport of agricultural goods which might give an average per kilometre equal to that at least of the internal communications of the Danube i.e., 800 tons per kilometre in round figures. If this were achieved the quantity of agricultural products passing along the Sava would rise to over 550,000 tons. It is therefore possible to conclude that without any extraordinary occurrence the transport of this one kind of merchandise alone could exceed the present entire total of the traffic along the Sava.

Another important article of transport on the Sava is timber, both wood for fuel and wood for industry. The district around the Sava is extremely favourably placed as regards timber production. The Sava itself, as well as its tributaries, flows through the most wooded districts of the Kingdom, where the land is covered to fifty and even 75 per cent. in forests.

There is one other article which at present has only a minor part in the traffic on the Sava, but which illustrates the great possibility of developing the traffic along this river. This is coal. The quantities of coal transported on the Sava have been as follows: 1923 50,014 tons, 1924 25,167 tons; 1925 3,285 tons; 1926 2,194 tons. This transport is so small that it might be easily considered of no importance and as purely chance traffic. But in the Sava basin in Bosnia there are large coal mines, which in output come second in the mines of the Kingdom, after the mines of Slovenia.

Along the course of the Sava (700 krs. to Zagreb) only one part is exploited to any large extent because of the difficulties to navigation. It is true that this is quite a long stretch. Over 500 kilometres, but the part which is not used at all for shipping, or only very little, is a most important sector. The complete stoppage of shipping a hundred kilometres from Zagreb, which is the centre of an important industrial district, makes this river a very incomplete means of communication. It traverses a region whence can be drawn both food supplies and raw materials necessary for industries but which has an outlet in only one direction, namely the south-east. On the other hand, this large industrial region lying quite near the river is cut off and so to speak outside this means of communication. This position may hinder still more the development of traffic on the river, in that it gives a great advantage to the railway line Zagreb-Belgrade which runs parallel to the Sava, and which can carry goods without interruption over the whole distance.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

The basin of the river is very extensive. It comprises an area of over 95,000 square kilometres, of which nearly 22,000 belong to the Sava itself and over 73,000 to its tributaries, several of which, especially those on the right bank, penetrate for some hundreds of kilometres inland. Except for the Kupa, none of these tributaries are navigable, and only contribute little to the development of traffic on the main river. This deficiency in the tributaries, which ought to bring cargoes to the main stream, is especially felt in the wood traffic, which, as we have seen is growing weaker and weaker, but which, owing to the forest wealth of the district should become one of the most important transports on the Sava. The way to enliven and develop the wood transport lies in the development and perfection of the means of communications, which ought to penetrate into the great forest masses, and it is the tributaries of a river which are just the means of doing this if they are well managed.

The removal of these two main causes which hinder traffic would completely change the position on the river, and even more, it would give the region a whole system of well-managed waterways which would mean a powerful assistance to its economic evolution. This would ensure the Sava a much brighter future as a means of communication. But together with the measures necessary to the regulation of the rivers in the Sava basin, improvements could also be made in the districts themselves. This would contribute to the development of the whole region and at the same time ensure the growth of traffic on the river.

ECONOMIC DEVELOPMENTS IN BULGARIA.

Following the depression of the two preceding years there was a considerable improvement in general economic conditions in Bulgaria during 1927. For the first time since 1922 a favourable balance of foreign trade was attained, and in budget operations a surplus for the fiscal year 1927-28 is indicated in contrast to a large deficit for 1926-27 (says an article in the United States "Commerce Reports"). The credit situation was somewhat less stringent during the year, savings deposits showed an increase, and protested notes declined. Lev exchange was steady, and the monopoly of exchange transactions by the National Bank was continued. Tobacco and corn crops were smaller, but larger yields were reported for other crops.

Estimates of agricultural production during 1927 (1926 figures in parentheses) as follows: Tobacco, 15,794,500 kilos (27,189,100); wheat, 1,288,580 metric tons (994,590); corn, 523,610 metric tons (693,765); barley, 305,700 metric tons (241,340); rye, 209,370 metric tons (181,195); sugar beets, 242,050 metric tons (224,895); silk cocoons, 2,025,000 kilos (1,863,360); sunflower, 35,680 metric tons (11,582); attar of roses, 504,631 miskals (282,848) (1 miskal equals 0.16953 ounce avoirdupois).

The total sown area was slightly larger in 1927 than in 1926, the increase occurring chiefly in corn and sunflower acreage. Corn acreage increased from 601,000 hectares to 653,000 hectares in 1927, and sunflower from 15,250 to 44,900 hectares, whereas tobacco decreased from 31,540 hectares to 25,640 hectares. The area sown to wheat declined from 1,046,000 to 1,018,000 hectares, but the other crops showed only slight changes.

The output of manufactured tobacco during the year was 4,600 metric tons, as against 4,690 metric tons in 1926. Nevertheless, the value returned to the State monopoly was slightly larger, amounting to 695,610,000 leva as compared with 675,941,200 leva in the previous year. Production of sugar exceeded that for 1926, totalling 38,390 metric tons as against 32,060 metric tons. Coal, the principal mineral of the country, has registered a steady increase during recent years. The output in 1927 reached 1,237,650 tons, as compared with 1,205,760 tons in 1926, 1,219,570 tons in 1925, and 1,214,840 tons in 1924.

The State railroads during 1927 transported 317,000

carloads, as against 313,000 carloads in 1926. During the year special efforts were made by the Government towards development of the railway system and, in a general way, of roads and communications. On November 20, 1927, the 40 kilometre railway line from Lovetch to Levsky on the trunk line from Sofia to Varna was opened. Another line, about 23 kilometres in length, to connect the station of Rakovsky (on the trunk line from Sofia to Constantinople) with the town of Haskvo (on the slopes of the Rhodopes range) was under construction. This line is being constructed from funds obtained under the refugee loan.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at May 31, 1928, published in conformity with Article 8. of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E14,654,229; Egyptian Government, £E14,976,611; Sudan Government, £E221,184; Mixed Tribunals, £E1,986,172; bankers' accounts, £E389,923; cheques and bills payable, £E277,819; sundry other accounts, £E1,556,305—£E39,692,868. Assets: Government securities and securities guaranteed by the Egyptian Government, £E20,965,740; sundry securities, £E455,456; advances on merchandise, £E3,040,875; advances on securities, £E4,030,180; advances otherwise secured, £E1,293,348; sundry other advances, £E1,047,876; bills of exchange, £E3,591,016; local bills discounted, £E692,742; buildings and furniture, £E233,826; money at call and at short notice, £E614,250; bankers' accounts, £E252,157; sundry other accounts, £E1,012,582. Cash: Notes, £E1,736,813; gold, £E434,020; silver, nickel, etc., £E291,987—£E2,462,820—£E39,692,868. Issue Department.—Notes issued, £E27,100,000—£E27,100,000. Gold, £E2,339,570; *British Treasury Bills, securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills and National War Bonds, £E12,050,000—£E13,550,000—£E27,100,000.

BOMBAY, BARODA, AND CENTRAL INDIA.

The report of the Bombay, Baroda, and Central India Railway for the year ended March 31 last states that the gross earnings of the broad gauge system amounted to Rs.6,44,16,466 as compared with Rs.6,13,67,388 last year. The metre gauge system earnings were Rs. 5,05,92,952, as compared with Rs.5,16,13,355, making a total of Rs.11,50,10,358, as compared with Rs.11,29,80,743 in 1926. The expenditure of the combined systems totalled Rs.7,16,32,123, against Rs.7,13,58,857. The net earnings were thus Rs.4,33,97,235. The percentage of expenditure to gross earnings was 62.7, against 63.16. Of the surplus of Rs.6,61,207 due to the company in respect of the year 1927-28, after deducting Indian income and super taxes, Rs.1,97,203 was remitted to England in November, 1927, producing £14,764, and the balance, Rs.4,64,004 in May, 1928, producing £34,740. An interim dividend of 1½ per cent. was paid in January last, in addition to the guaranteed interest of 1½ per cent. then due, and the directors recommend the payment on July 20 of a final dividend of 1½ per cent., making, together with the guaranteed interest of 1½ per cent. for the half-year, a total payment in July of 3 per cent., and a return for the year 1927-28 of 6 per cent.

EGYPTIAN DELTA LIGHT RAILWAYS.

The report of the Egyptian Delta Light Railways for the year ended March 31, 1928, states that the gross receipts were £313,028, against £342,605 last year. No adequate regulations appear to exist in Egypt for the control of motor vehicles, and strong representations have been made to the Egyptian Government on this subject. It is understood that legislation dealing with the matter is under consideration; meanwhile every effort is being made by the company to meet the situation, and experimental motor-lorry services for collection and delivery of goods are now being inaugurated in selected districts. The receipts from cotton traffic have also been adversely affected by the reduction of the cotton-growing acreage in conformity with Government regulations. The total expenditure was £256,919, as compared with £274,081 for the previous year. The ratio of expenses to gross earnings was 82.71, as compared with 80.00. The balance carried to net revenue account is £54,108, which, with interest earned, amounting to £4,379, gives £58,487. After providing for interest on debentures and for all fixed charges, £19,284 remains; add £29,001 brought forward, making £48,285 to be dealt with. In view of the reduced earnings, of continued falling off in receipts since the close of accounts, and the necessity for providing for capital expenditure, the directors have, with regret, decided that they are unable to recommend a dividend for the year, and are transferring to reserve against capital expenditure £10,000, leaving £38,285 to be carried forward.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 11:—

Egyptian Futures.—Sakel Contract.—Rather quiet conditions have prevailed in this market since we last wrote and the moderate amount of trading that has taken place has not revealed any features of note, except perhaps the continued lukewarm response to any outside "bullish" influence. This comparative apathy or heaviness is still, in our opinion, due to the wide premium at which Sakels stand over other varieties, to the present state of trade in the fine spinning section, and to the highly satisfactory character of the crop reports coming to hand. The combination of the above factors curbs any weight of fresh enterprise on the "long" side and, in addition, brings out liquidation whenever values move up to the 21d. level for November. On the other hand, the strength of the statistical position, and the fact that the growing crop has still to pass through its most critical stage, limits "short" operations to a minimum, so that, on the whole, we think we are correct in stating that the open account is now of comparatively unimportant dimensions.

During the earlier days of the week values hardened gradually on small trade orders and isolated speculative purchases mainly for Continental account, the market at this period having the encouragement of strong American advices; prices subsequently relapsed sharply on the U.S. acreage figures, but, with the lower level attracting rather more trade support, some recovery has since taken place, to-night's close being 9 to 15 points lower for near and 12 points easier for distant months.

Cables from Egypt report a rather better commercial demand during the past few days and also state that good spinning qualities are increasingly difficult to find; it rather looks as if this season's carry-over is going to contain a large percentage of unwanted and undesirable cotton.

Upper Contract.—Fluctuations in this contract have again been mainly controlled by the action of the American markets; towards last week-end prices advanced over 15d. for new crop positions, but since have encountered liquidation and, whilst some recovery from the lowest has taken place, the decline on the week amounts to 23 to 30 points for near and 27 points for distant positions. Further heavy tenders have been made since we last wrote, but the dockets have been readily taken up by the same interests that took the earlier cotton. Trade reports still leave a good deal to be desired, but more business has been transacted in both spot and forward cotton, and the premiums of the intermediate qualities have hardened further during the past two days. Crop reports remain favourable; the June bulletin of the Alexandria Produce Association reads as follows:—

Lower Egypt and Fayoum.—Temperature has been generally favourable to plants, which are in a healthy and robust condition. Water irrigation has been adequate, some isolated appearances of worms have been reported, but no damage of any importance has been caused.

Egyptian Spot.—The slight improvement in the demand, noted at the time when our last report was written, proved to be of only short duration and, in view of the approaching issue of the American Government's Acreage Report (published on the 9th inst.), a waiting policy was adopted by trade interests generally. The publication of this report has, up to date, merely served to aggravate the feeling of apathy already prevailing, although, now that sufficient time has elapsed for the figures to be digested, opinion is rather inclined to regard them as not so "bearish" as was at first supposed. Reports regarding business up-country have been somewhat contradictory, but we are inclined to the opinion that there has, latterly, been some improvement in the demand for Egyptian yarns. No reflection of this has, as yet, been seen on our spot market, however, although reports from Egypt during the past few days are to the effect that there has been an improved demand for actual cotton on that side. Over here the same limited inquiry has been experienced and the sales reported have barely totalled 200 bales per diem.

The inquiry for Sakel has been of a fairly general character, but trade interest still leans towards the "off" rather than the "on" qualities. "Inferior" cotton at from 13d. to 16d. still continues to occupy attention, but difficulty is now being experienced in meeting requirements, and shippers have recently increased their limits for this style of cotton, with the result that a temporary deadlock between buyers and sellers has ensued. The demand for Uppers has been on the quiet side; a further 1,150 bales have been tendered this week. Pilon also has been quieter. Business in Sudan Sakel and Tokar Sakel has been almost at a standstill, but the basis for both qualities has remained very steady.

C.i.f. business has been done on a very limited scale only and forwardings to spinners for the week ending the 5th inst. were returned as 6,608 bales Egyptian and 1,420 bales Sudan. Estimated spot sales, 1,100 bales Egyptian and 200 bales Sudan. Quotations of Sakel show a net decline on the week of 10 points, whilst those of Upper and Pilon are 25 points lower. F.G.F. Sakel to-day, 30.65d. F.G.F. Upper to-day, 14.85d. F.G.F. Pilon to-day, 15.45d.

The production of the Anglo-Egyptian Oilfields for the week ended July 6 amounted to 5,710 tons.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 5, state:—

The futures market since our last report has been very active, but the tone has been barely steady. The week's summary of price movements is as follows:—Sakellaridis: July, 40.5 dollars, 0.75 dollars down; November, 41.75 dollars, 0.75 dollars down; January, 31.92 dollars, 0.50 dollars down. Ashmouni: August, 27.52 dollars, 0.36 dollars down; October, 28.14 dollars, 0.29 dollars down; December, 28.45 dollars, 0.20 dollars down.

Sakellaridis.—Dealings in this variety have been very numerous, and from time to time we have seen a spurt of buying, which, however, has not been lasting, and the rise caused by the buying has quickly been lost. Liverpool has been buying fairly heavily during the week, and we think that the local speculation has seized this opportunity to get rid of some of their long position. There has been no outstanding feature. The July/November straddle is to-day 160 points, the same as last week, although on Monday last it widened out to over 200 points on liquidation of the near month on the eve of the first tender day. The Sakel/Ashmouni new crop straddle is 1,360 points, against 1,407 points last week. The demand from abroad has been perhaps slightly better this week, but it cannot be said that there is any real improvement.

Uppers.—This market has more or less followed the fluctuations of American, but here again the tone has been on the heavy side. In the case of Uppers, however, the market has seen some commercial support whenever prices have sagged badly. Spinners' demand has run on about the same lines as for Sakel and has likewise been concentrated mainly on the medium grades, although there seems to be a tendency towards the Fully Good Fair/Good qualities.

The statistical position shows considerable improvement this week and the local stock is down below the two million mark. The market has, at present, no special points of its own and the immediate future course will depend to a large extent on American

Notes of the Week.

The New Regime in Egypt.

Although it is inevitable that the *coup d'état* in Egypt should at first be linked up in British minds with the differences of opinion between Egypt and Great Britain, and the apparent hopelessness of any settlement of those differences being reached while supreme power remained with the Wafd, it is obvious that the new Government under Mohamed Pasha Mahmoud has been actuated by concern for the domestic welfare of the country rather than by matters of foreign policy. No doubt, a Cabinet relieved of the pressure of the extremist section in Parliament will have greater freedom of action in negotiating a *modus vivendi* with Great Britain, but there can be no question of any permanent settlement of the points at issue between Egypt and Great Britain until an Egyptian Parliament is in existence to ratify that settlement. There is ample evidence to show that not only the members of the new Government, but also a steadily growing number of other politicians have been exercised by the deterioration that seemed to have overtaken Egyptian administration. Anglo-Egyptian relations had receded into the background; what was much more in evidence was the need, as urged by a section of the Egyptian Press, for internal reforms, in particular for an intelligent and sustained effort to improve economic conditions. The need must have been appreciated by many Wafdists, but during his brief tenure of office Nahas Pasha had seemingly convinced even some of his own followers, as shown by the resignations in his Cabinet, that his peculiar position in the Wafd would not enable him to deal with matters of internal reform as the situation required.

The Urgency for Internal Reform.

The new developments in Egypt, therefore, can be understood only in the light of the domestic situation. Mahmoud Pasha's earliest public statements after the *coup d'état* emphasize this point. "It had to be done," he stated to a correspondent. "The way in which the business of the country has been carried on of late has been intolerable. Every branch of the Administration and

of the national life has been thrown into disorder. We are going to try to clean up the mess; to purify the Administration and to introduce sanity into the conduct of affairs. We place the material prosperity of the nation before everything." Nothing in this indictment, it will be noticed, has any special concern with Great Britain. It is an Egyptian, with experience outside the narrow limits of purely local politics, passing judgment on Egyptian affairs in the light of ordinary world-standards. His opponents will try to represent him as a tool of one or more foreign Powers, in the hope of raising prejudice against him; but the verdict of the country, it is to be expected, will depend on the Prime Minister's ability to give Egypt good government. One aspect of the situation will not be lost on the world at large, nor, we may hope, on Egyptians as a whole. The issue between Egypt and Great Britain resolved itself mainly into this question of good government, the attitude of the latter country being that, in view of its responsibilities, it had to be satisfied in regard to Egypt's capacity for maintaining a certain standard of administration. The Wafd refused, in effect, to trouble about the government of Egypt until it should have forced Great Britain to recede from her position. Mahmoud Pasha's Cabinet takes up the standpoint that it can so order the administration of Egypt that neither Great Britain nor any other Power will be able to challenge Egypt's claim to stand on her own. From the Egyptian point of view—even that of the most rabid extremist—there can be no doubt as to which is the more practical policy.

M. Venizelos at Work.

M. Venizelos has lost no time in disproving the truth of the saying that two (or more) heads are better than one, when it is a matter of administering Greek affairs. For the first time since General Pangalos's dictatorship came to an end things are being done in Greece. In the absence of any outstanding personality among the other political leaders the two Administrations of M. Zaimis served merely to mark time. Within a few days

of taking office M. Venizelos has dissolved the Chamber, abolished Proportional Representation as the Greek electoral system, terminated a whole series of strikes and put an end to the tragic farce of the Pangalos trial by the liberation of the ex-Dictator. Like the latter, he has realized the necessity of curbing the pull-Devil, pull-Baker practices of the political leaders, but, shrewder than his predecessor, he has allowed the President to remain as titular head of a constitutional régime, knowing that he can afford to ignore the charges of unconstitutional procedure brought against him, at least until the results of the elections are known or the Chamber meets. Little more is likely to be heard of these charges, as far as the republican parties are concerned, as the respective leaders are anxious to save their political skins and are making common cause with the Liberal Party, accepting the quota of seats allotted to them by M. Venizelos.

One Man Rule.

In dealing with the strikes the Prime Minister has gone directly counter to the policy of the former Government, which refused to discuss matters with the trade unions until the strikes had been called off. M. Venizelos has undertaken to examine the strikers' grievances, in spite of the fact that the strikes were clearly losing ground when he took office. This policy may well be sound in the circumstances; but, in view of his past encouragement of the labour movement, at a time when he could not afford to alienate any potential body of political supporters, M. Venizelos's negotiations with the trade unions will be watched very closely by his political opponents. For the time being the novelty of having things done may well cause the Greek public a deep content. The chief danger ahead lies in the fact that by reason both of his predilection for foreign affairs and of the urgency of a settlement with several of Greece's neighbours, M. Venizelos may be tempted to neglect domestic matters for foreign relations, and to absent himself from the country. It is certain that his hold on the Greek public will not be proof against any prolonged delegation of his personal authority to subordinates. The new régime is every whit as much a one man's rule as was that of General Pangalos—with, we may hope, happier results.

Roumania's Loan.

The Government of M. Bratianu has achieved a notable success in concluding the negotiations for a loan, unless the result should prove to be that the Opposition, deprived of the reinforcements that it had looked for in the

failure of the loan negotiations, is driven to desperation and resorts to unconstitutional measures. In such circumstances the Liberal victory would be a Pyrrhic one, and a disaster for the country. Fortunately the National-Peasant leaders are insistent upon the fact that their struggle is to be conducted on constitutional lines. Their grievance is in the main the unconstitutional procedure of the Bratianu Government, notably in the manner of holding elections, and it would go far to stultify their cause, if they had to have recourse to revolutionary measures. Under ordinary conditions the successful conclusion of the loan negotiations should secure M. Bratianu in his position, at least for the duration of the present Parliament. He has lost no time in making the most of his success by asking the Chamber to confirm what has already been arranged. Although the Roumanian Government will have to wait until the autumn for the first instalment of the loan, it is to receive an immediate advance, which is to be used for advancing money on the harvest—a shrewd political move. It is to be hoped that the Liberal Government will not be too elated by its success to try to ride too roughshod over its opponents. If it wishes to avoid the danger, it will have to keep a close watch upon its Press, which loses no opportunity of trying to goad the National-Peasants to extremes.

The Situation in Yugoslavia.

The delay in the formation of the Government for which General Hajitch was given a mandate soon gave rise to doubts as to his ability to find a sufficient number of non-party men willing to form a Business Cabinet, and, after persevering in his attempt for nearly a fortnight, he was compelled to abandon the task. It is pointed out that the vigour, not to say viciousness, with which politics are conducted by the politicians in Yugoslavia make the average business man frightened lest, after he has tried to serve his country by taking service in the Government, political antagonisms may cling to him to the prejudice of his business. There is also an uneasiness in certain Yugoslav circles lest a Business, or non-political, Cabinet might prepare the way for an open dictatorship. This misgiving may have been urged by M. Juritch, Yugoslav Minister in London, who returned to Belgrade and was in consultation with General Hajitch. His advice, it is believed, was in favour of a coalition of political Moderates, if a sufficient number could be found. On these lines, it may be presumed, King Alexander will now try to bring into being his next Cabinet. In the meantime Dr. Markovitch has returned from London without a loan. He claims that the loan has been concluded, but that the issue of it is postponed until the autumn, as a result of the indeterminate political situation.

The Macedonian Revolutionary Organization.

The dissensions in the Macedonian Internal Revolutionary Organization have once more come to a head with the murder of General Protogueroff, who was killed in Sofia on July 7. Responsibility for the crime has been accepted by Ivan Mihailoff, another member of the Triumvirate controlling the affairs of the Organisation, but his authority to act without the express sanction of the Revolutionary Congress has been repudiated by the two other members, one of whom succeeded to the Triumvirate on the death of Protogueroff. Mihailoff announces that the motives for his action will be explained at the next Revolutionary Congress, but he justifies the murder on the ground that the Congress had already sanctioned the punishment of all concerned in the assassination of Todor Alexandroff, in 1924, and that Protogueroff had been shown to be implicated. Behind this quibbling there lies, presumably, a feud between Mihailoff and his colleagues which may be expected to lead to further bloodshed in the ranks of the Macedonian leaders. The former has come under the official ban of the Organization; but,

as he is credited with making a bid for the supreme control in it, he is not likely to remain inactive under the rebuff. The outside public will be mainly concerned to note that the other members of the Trumvirate do not repudiate assassination, whether as a means of trying to gain their political ends or for ridding themselves of inconvenient colleagues, but resent Mihailoff's unauthorized use of it. The latter, no doubt, stands for a programme of more unrestrained violence than the others are prepared to endorse, merely because it has been proved not to advance the cause of the Organization. It seems a pity that men who can appeal for "sympathy and support in the work of liberating Macedonia" cannot realize that their methods have effectually alienated most of the sympathy previously felt for the Macedonian cause and have rendered support of that cause practically impossible.

Stringency in Palestine.

That "axe" which since the War has cut short so many a promising plan, and which is the bane of idealists and of people who foresee milleniums every year, has, unfortunately, once more to be applied to Palestine. For the Holy Land during the past year has really suffered severely; earthquakes, locusts, and depression among the Zionist immigrants have all left their mark upon the Jerusalem Exchequer. It is quite obvious that reductions may have to be made in almost all the Departments, and one can sympathise with Lord Plumer in his reported opposition to the Colonial Office's decision in regard to Palestine's share in the upkeep of the Frontier Force. This financial stringency coincides with a notable stringency in Zionist circles, and it is perhaps an unhappy event that the Zionists' demand for further Governmental assistance in connexion with such things as public health and education (things which, when funds from abroad were plentiful, the Zionists were patently willing to manage themselves) should be made at a time when the Jerusalem Exchequer has to look at every penny. Pos-

sibly, however, this increased reliance of the Zionists upon the Government may be all for the good of Palestine as a whole; certainly it is not to be doubted that, given reasonable immunity from elemental havoc, Palestine will in the near future again be showing a surplus in her Budget.

The Berlin Conference.

Although it does not appear to have had much prominence in the general Press, the meeting on July 19 at Berlin of the General Council of the Zionist Organisation (the Actions Committee) was a most important one, primarily from the point of view of Palestine, and generally from the point of view of the future of Jewry. For the present leadership of the Zionist Organisation, that is, the policy of pacific co-operation in Palestine, was once more on trial. A certain gloom was manifest among all sections of this Actions Committee—General Zionists, Mizrachi, Hitachdut, Poale Zion, Radical-Zionists, and Zionist-Revisionists—owing largely, of course, to the present thinness of the contributions to the upbuilding of Palestine. During the last six weeks or so the United Palestine Appeal in America is reported to have produced not a cent. This is a most ominous commentary upon the internal dissension in Zionist organisation in America, a dissension which may or may not have been ended with the triumphant return of Mr. Louis Lipsky to power. The possibility of the defeat of the Zionist Executive has been seriously discussed at Berlin; and were any considerable change in Zionist policy now to be laid down, the consequences in Palestine itself would inevitably be considerable. In such a purely Jewish matter it is no part of the duty of the outside observer to interfere or to express an opinion; but the churning up of views within the Zionist movement and the general effect of uncertainty upon Palestine are things which must be noted by anyone who takes an intelligent interest in the future of the Holy Land.

The Iraq Railways

Before the end of the present year a decision has to be reached upon the future ownership of the Iraq Railways. As is well known, these Railways are owned by the British Government but administered by the Iraq Government. But according to the Financial Agreement (still under discussion) of the Anglo-Iraqi Treaty, these Railways are, in the event of no prior sale, to be transferred entirely to the Iraq Government. The question naturally arises: what will be the position of the British officials who, either during the War or shortly after it, accepted service in these Railways, and whose future has been the subject of considerable anxiety to the Colonial Office, to the High Commissioner, and to themselves?

The Iraq Railways have had an uphill fight. Constructed on no commercial basis, and living, so to speak, from hand to mouth, they have shown a profit, and this in spite of very considerable motor and river competition. In the nature of things, they could not be perfect, but under the direction of Colonel Tainsh they have shown remarkable staying power. Development has been almost impossible, owing to lack of capital, but what extensions and improvements could be made have been made. Perhaps the finest testimony to them is to be found in General F. D. Hammond's Report, published early this year: he examined carefully all the grievances alleged against the Railways, but for the most part they vanish under his penetrating criticism.

General Hammond, it will be recalled, was emphatically against the Railways' becoming the sole property of the Iraq Government, mainly because of his fear that their efficiency would suffer through the exercise of political influence among the Directors. His Report, like the

Hilton-Young Report, advocated the establishment of a Corporation consisting of Iraqis and British; and he suggested a loan for the Railways guaranteed by the British Government. But if the British Government were not to retain its proprietary interest, there would (unless, as many Arabs wish, the Railways were given to Iraq) have to be a lease or a sale to a private corporation: this contingency has become prominent during recent months. More than one financial group is interesting itself in the railways of Iraq, particularly in the future trans-desert line to the Mediterranean, so that this question is becoming a vital matter.

The immediate prospects of the Iraq Railways are by no means bad. The financial year ending March 31 ended with a surplus of Rs.7,55,527, after depreciation had been provided for to the value of Rs.10,40,024. An equally good return is anticipated for the present year. Prospects in goods traffic are said to be good; imports are satisfactory, and when new construction begins the effect of the amended Customs Tariff (which was passed on June 15) will be beneficially felt.

In these circumstances, it can hardly be supposed that the British Government will overlook the services of the Railway Officials—services in connexion with which the High Commissioner himself has supported Colonel Tainsh's claim to the attention of the Colonial Office. Whether these British officials—there are some forty-two of them—receive long-term contracts and are put on a level with Colonial Officers remains to be seen, but it would be satisfactory in the interests of all concerned if the British Government could come at an early date to a definite decision in this matter of the Iraq Railways and of the British officials serving them.

THE EGYPTIAN EXPERIMENT.

Diseases, desperate grown,
By desperate appliance are relieved,
Or not at all.

There can be no doubt that the appliance to which the Egyptian Government has had recourse in dealing with the political situation is desperate; on the subject whether the disease which it sets out to relieve has grown desperate opinions in Egypt may well be divided. In regard to certain points in the diagnosis there will be general agreement. It cannot be denied that a deadlock has been reached as between the Wafd and Great Britain. The nature of the conflict is not in dispute; it is unnecessary to specify it more particularly than by reference to the Reserved Points. The attitude of the Wafd—whether the Party is right or whether it is wrong is immaterial to the argument—is that it can have nothing to do with the Reserved Points, as it holds itself compelled to insist upon the independence of the country without reference to British interests or responsibilities. Great Britain, on the other hand, finds herself compelled to urge with equal insistence and tenacity that, until the four Reserved Points have been adjusted in friendly agreement, there can be no modification of the *status quo* in respect of the relationship between the two countries. The British Government is content that things should continue as they are, if Egypt so wishes it; but to this the Wafd demurs and presses for the immediate grant of all its demands without discussion. In these circumstances the deadlock in Anglo-Egyptian relations is complete, and, as a result of the Wafd's attitude, has proved such an incubus on Egyptian affairs that the actual administrative machinery becomes clogged. Little wonder, therefore, that in the view of some Egyptians the disease has already grown desperate. It was, in their opinion, out of the question that the deadlock should be allowed to continue indefinitely, to the prejudice, increasing as the months and years pass, of good administration in Egypt. The dispute has already lasted six years. There is nothing in the relative positions of Egypt and Great Britain as world-factors to suggest that the latter must, or is likely to, yield to the former, and so long as the situation in Egypt is dominated by the Wafd, there seemed no prospect of a trial's being given to the alternative, that Egypt should make an attempt to meet the British point of view. The new Government formed by Mohamed Pasha Mahmoud has, therefore, with the support of King Fuad, taken the drastic step of eliminating the authority and power of the Wafd by dissolving both Chambers of the Legislature and by suspending certain Articles of the Constitution. The administration of the country is to be carried on by the King and his Council of Ministers for a period of three years, at the end of which period "the situation will be reconsidered."

It would be idle to pretend that the situation thus created in Egypt is not a serious one. Both King Fuad and his Council of Ministers have, in common fairness, to be acquitted of taking the step lightly. It is equally certain that for Great Britain the new position might well

be fraught with embarrassment. British traditions and British interests are too closely identified with constitutionalism to allow a British Government to welcome unconstitutional measures except as a last resort, when they promise to be the only means of escape from a greater evil. Such an evil threatened in the administrative stagnation to which the Wafd's policy was condemning Egypt. With its overwhelming majority in the Legislatures it could, and did, of set purpose, paralyse the government of the country, whether a Coalition Cabinet or its own Party was in power, this method being deliberately selected to further, according to its lights, its own ends. It is fair to add that probably a majority of the Wafdist had not properly realised the seriousness of this administrative paralysis, for which the Party's policy was responsible. They have now been abruptly brought up against the consequences of their action, and we have sufficient confidence in the good sense of the thinking section of Egyptians to believe that they will be at heart well satisfied to have been saved from the extremism which had hitherto taken control of the situation.

The attitude of the country as a whole will be determined by the use that Mahmoud Pasha's Government makes of its authority and its exceptional opportunities. It has assumed office for three years, during which period it should be able to arrange that its power will be free from serious challenge. Here then is its first opportunity. There must be several able men in Egypt who may have been averse from stultifying themselves in what was likely to be a mere transitional Cabinet, but whose abilities are too great to be wholly lost to the country when there is a prospect of three years' steady service on Egypt's behalf. Again, a Government that suspends the Constitution in whole or in part must justify itself by giving the country much that the Wafd parliamentary majority of the last few years could never have given. Nothing could be more sterile than that, with Anglo-Egyptian relations permanently or provisionally settled, the Egyptian people should still find itself where it was before in regard to the old administrative shortcomings and the old abuses. It will have no inducement to repose its confidence in the new régime, if it can persuade itself that there has been little more than a change of name, that the former "outs" are now in, to carry on along much the same lines, with every prospect of the present "outs" being back again, having learnt nothing and having forgotten nothing. In the three years of office that the new order has bespoken for itself the administration of Egypt must become so much better than it was or could be under Wafd domination that the Egyptian people, taking note, will decide that it will henceforth always insist upon a certain standard of administrative efficiency and honesty. So long as every purely domestic question in Egypt had to be considered in its relation to the Anglo-Egyptian issues, the most urgent requirements of the country were wholly neglected or remained in a state of suspended animation. Mahmoud Pasha's Government should now be able not only to arrange a satisfactory understanding on the Reserved Points, placing them, if need be, in "cold storage," but also to reach a settlement in regard to a number of important problems which will have the effect of materially improving conditions in the country and promoting the well-being of the people. From his own statements it is evident that the new Prime Minister lays more stress on the urgency of a sane and efficient domestic programme than on matters of foreign policy. Good will alone is necessary for a *modus vivendi* between Egypt and Great Britain; the main task to which Mahmoud Pasha's Government is to set itself is, in his own words, "to purify the Administration and to introduce sanity into the conduct of affairs," after a period during which, as he is able to state from his experience as a member of Governments dominated by the Wafd, "the business of the country has been carried on in an intolerable way." The remedy, like the disease, is wholly an Egyptian matter.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, July 19.

The Governor of Constantinople.

For the second time within the last six months, Midhat Bey, Vali of Constantinople, has tendered his resignation. No reason is given for his action, not even the usual one of failing health. It was withdrawn on the first occasion, but has now been accepted, and the Government, in nominating Mouhieddine Bey, Prefect of the City, a civilian, to replace Midhat Bey provisionally, have departed from established hierarchic custom. It is true that, *qua* Prefect, Mouhieddine Bey is the nominee of the Authorities at Angora, but he is none the less a civilian, being a President of the Municipal Council, which is elected by the city ratepayers. Moreover he draws his emoluments from municipal revenues and not from the Treasury.

From statements in the semi-official Turkish papers, it would appear that the Vilayet or "County" of Stamboul is to lose some of its glory by being considerably reduced in area and confined to the shores of the Bosphorus and to circumscribed sectors of the Eastern and Western coastlines of the Marmora and Black Sea. It is also reported that the positions of Vali and Prefect are to be merged at an early date, and that Mouhieddine Bey will be the first person to hold the new post of Vali-Prefect. If these reports are founded on fact, it is probable that the main object of the Government is to effect economies in the administrative machinery of the old Turkish capital.

Tragic End of Two Turkish Officers.

A deplorable incident occurred near Smyrna some three days ago. Fouad Pasha, the military commander of that area, was returning to Smyrna towards sundown with certain members of his staff after a tour of inspection in the Vourla district. The officers were travelling in two motor cars, in the first of which were seated the Pasha and his A.D.C. and, in the second, Zeki Bey, Chief of Staff, and Nihad Bey, the Infantry commander. The General's car was held up by a gendarme at Kalizman, who permitted the car to proceed on recognising its occupants. The second car had fallen behind and the chauffeur was instructed by the senior of the two officers to press on and overtake the first car. Whether the gendarme's challenge to the second car at Kilizman was not distinguished or was disregarded is not quite clear, but, at all events, the sentry used his arm, hit both officers in the head and killed them outright.

An inquiry is to be held as soon as it has been determined whether the matter should come before the military or criminal courts. It is stated in extenuation of the gendarme's action that a band of outlaws or brigands was being pursued by a flying detachment of gendarm-

erie in the vicinity of Kilizman, and that his orders were to challenge and shoot at sight if he were not immediately obeyed. It is argued, on the other hand, that he might have attained his object by firing at the tyres of the car instead of at the heads of the occupants. The funeral given to the victims was one of the first in this country to be staged on purely military lines. Instead of being borne, as is customary, on the shoulders of the faithful who alternate with each other every minute or so in carrying the departed to their last resting place, the coffins, covered with the national colours, were placed on a gun-carriage drawn by a gun-team, followed by detachments of all arms and preceded by a military band playing a dead march.

Lawn-tennis in Constantinople.

The annual tennis tournament organised by the *Milliet* (the "Nation") one of the leading Turkish Constantinople dailies, has again met with very considerable success and has drawn together an interesting and international crowd of spectators and amateurs. The game was confined before the War chiefly to British and American circles, but it has not been taken up by all sections of the population, and there is little doubt the high standard of play at present prevailing in these annual matches was inherited from the Officers' Courts at the Jockey Club during the Occupation. In the semi-finals played off yesterday afternoon, in the men's doubles, an Armenian and a Jew found themselves matched against a Turk and an Englishman. In the ladies' singles, a Russian lady was to be seen playing against an English girl, and the favourite for the men's singles is an Egyptian. All scoring is done by Britons and, at the end of the finals, the cups are to be presented by the British Ambassador. It is pleasing to turn away from certain other aspects of daily life in this city in which the divergent interests of its heterogeneous population often come into sharp conflict, to the enthusiastic fair-mindedness which seems to imbue all and sundry when they come under the charm of *le sport*.

GREECE.

Athens, July 14.

Political Events.

Events have been moving with great rapidity since my last letter. The disappearance of one Government, the formation of a new, the fixing of elections for August 19, the reversal of the P.R., the re-distribution of seats, and the release of General Pangalos have followed in quick succession. M. Venizelos' activities have been accompanied by a running fire of interviews and letters, and his epistolary duel with M. Kafandaris on the subject of the ownership of the celebrated shares is in itself no small achievement. It must be confessed that as a financial expert he does not shine in comparison with the late Minister of Finance, and his admission in one of his letters, that he had not had time to study the question, would, in the case of a lesser man, have created a bad

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

impression. Between now and August 19 great liveliness may be anticipated; *pourparlers* among the party leaders are already in full swing, but it seems certain, although it is unwise to prophesy, that there is no one capable of putting up a serious opposition to the electoral strategy of the Prime Minister. Considering that he has long been regarded, and even described, as *magni nominis umbra*, one must admire this renewal of activity, but one may respectfully hope that the study of Thucydides, to which he is said to have devoted his seclusion, may not have been without results, and that, stimulated by that study, he may temper his energy with wisdom and restraint.

The Power and Traction Company.

Lesser excitement has been provided by one of the outbreaks of intermittent hostility against the Power and Traction Company. On the installation of the new and more powerful current, accidents have occurred and one, if not more, deaths. Only technical experts can decide who is to blame, but the word "murderers" has been rather freely applied in the newspapers to the Company and its directors. The new Minister of Communications does not seem to have any special qualifications for his post, being a Professor of Medicine at the University, and the experience gained by his predecessor in dealing with the foreign companies is now, of course, wasted. But this inevitably happens when Governments change so frequently.

General News.

Greece is justly proud of the achievement of her two airmen, Col. Adamides and Lieut. Papadakos, who after encircling the Mediterranean returned on July 1.

What only just escaped being a very serious accident happened to one of the Italian hydro-planes that make the service Constantinople-Athens-Brindisi. Near Sunium, owing to engine trouble, the hydro-plane fell into the sea. From the accounts of passengers—among whom

were Princess Bibesco and the Director of the Near East Relief—it seems that the machine fell within a few yards of the land. This is not the first accident that has occurred on this service but, for some reason, mention of them does not find its way into the newspapers; yet the public have a right to know about them.

The first act of the late Dictator, on being released, was to leave a card on M. Venizelos. While his release is an act of elementary justice, it is not an indication that his trial will be dropped. This would be unthinkable—in view of the serious charges against his associates which have been revealed in full by the report of the special Committee.

Cairo, July 15.

The Seif el Din Affair.

Certain London papers, in commenting on Egyptian politics, have greatly over-emphasised the influence that the Seif el Din "scandal" had in bringing about the dismissal by King Fuad of the Nahas Cabinet. The fact that the Opposition papers had sufficient grounds to lead them to bring grave charges against Nahas Pasha, the Prime Minister, and Wissa Wassef Bey, President of the Chamber of Deputies, helped to precipitate events, but

R. B. W. Holmes,
General Manager,
HAIFA.

there had for some time past been serious dissensions in the Cabinet between Liberals and Wafdists. The more important aspect of this affair (namely: Who has been benefiting all these years by this unhappy Prince's fortune?) seems to have escaped attention. If Nahas Pasha persists in his alleged threat to sue the London Press for their comments, the "scandal" may be cleared up, but it is more probable that its place in the public's attention will soon be taken by some other "affair," and the truth will never be known.

A Difficult Problem.

Interest in Egyptian politics is concentrated on what will happen when Parliament meets on July 28, after the month's adjournment. Mohamed Mahmoud Pasha and his newly-formed Cabinet will have a very difficult problem to solve; for they will have to face a Parliament in which the majority are Wafdists, supporting the retiring Cabinet of Nahas Pasha. From a British point of view this is, of course, a surprising situation, for in England no Prime Minister would think of trying to form a Government which did not enjoy the confidence of the House; nor in the first place would the late Cabinet have been dismissed. It had been hoped that, by coming to an arrangement with the Wafd Party, the Cabinet might have avoided submitting a programme; the Chamber could thus have proceeded with the discussion of the Budget and then have risen in the usual way for the summer vacation. But it has been repeatedly stated by Nahas Pasha, the President, and others, that the Wafd is going to wage unremitting war on the present Cabinet, and will allow them no escape, if they can help it. There is no doubt that Nahas Pasha feels very bitter about the fact that he has been forced to resign, and a section of the Press is trying to stir up the feeling that Mahmoud Pasha and his colleagues are traitors to their country. There is scarcely any doubt, therefore, that, unless the Prime Minister is a magician, Parliament will be dissolved at the end of this month. According to the Constitution elections should then take place within two months and ten days. There is a hint, however, that it may be contrived to postpone elections for some further months on the ground that the modifications of the constituencies to meet the large increase in the population shown by last year's census have not yet been completed; or the Government may pass a new electoral law, by means of decree, curtailing the suffrage, which is at present far too extended. If, however, the Government goes to the country, there can be only one result, namely, the return of a Wafd majority, so that the situation would then be precisely the same as it was before the dismissal of the Nahas Cabinet.

Mohamed Mahmoud Pasha.

The only alternative would be, if Mohamed Mahmoud Pasha were to prove himself to be another Mustapha Kemal. If in this way he could really get ahead with reforms and successfully grapple with the many very serious problems which face the country, he would be doing a world of good.

The Legislature has in the past done scarcely anything in the way of legislation, for politicians have continually been obsessed with the idea of foreign interference and have suffered from a complex about British bayonets. When asked why they do not put their house in order, they reply that it is impossible while a stranger persists in staying in their house unbidden; the first thing to be settled, they argue, is the Anglo-Egyptian question; when that is finished, they will begin to pass laws.

The Press.

The Arabic Press is full of either diatribes against the British or scurrilous party attacks, so that it is very refreshing to find a well-written and well-reasoned article in the *Mokattam* discussing at least one of the many problems which face the country's Administration. The article draws attention to the rapid increase in the population of Cairo and the problems to which this state of affairs gives rise. The number of inhabitants have increased during the past ten years by over 300,000, according to the last census returns, and it is expected that the increase will continue at the same rate. Planning for the new and greater Cairo should begin now, says the *Mokattam*; the problems of the future, such as transportation, public health and security, should be faced without any delay.

Party Activities.

Within the next few weeks the Wafd are holding a series of meetings throughout the country with the object, it is stated, "of maintaining the enthusiastic and patriotic spirit in the people's hearts and to combat any attempt to extinguish this sentiment." The first meeting will be held at Tanta, probably on July 20, another at Alexandria, and various other important centres.

The Liberals in the meantime are setting their house in order; local committees are being formed in the provinces with a head committee in Cairo; and they have decided to run their party on the same lines as parties are run abroad. There is no doubt that exciting political events are to be expected in Egypt shortly.

TRANS-JORDAN.

Amman, June 25.

Parliament.

The natural sequence to the Organic Law is an election of members of Parliament and the choosing of a building wherein to house the members. Owing to the necessity for very strict economy the probable choice will fall on what was originally intended to be a museum, the first building passed as Amman is entered from Jerusalem. Certain internal alterations will, of course, have to be made. What are generally termed the "throes of an election" have not yet descended on the country.

Locusts and Crops.

Fortunately the pessimistic reports of damage done by these pests have proved to be exaggerated. The situa-

tion was kept well in hand by the extremely energetic measures adopted, under the capable direction of Mr. A. S. Kirkbride, who had an anxious and trying time. Not only had he to be on the spot whenever locusts were reported, but he had also to train the villagers in the use of the flame throwers, a dangerous implement in the hands of the uninitiated. Locusts in the Jordan valley were dealt with by the Palestine authorities. Crops suffered very little, nor is the harvest such a failure as lack of rain led people to expect. This is evidenced by the repeal of the Decree forbidding the export of wheat and *samneh* (locally made butter), which was in force for some time when the possibility of a famine seemed likely.

Tribal Justice.

Early in the year a powerful Najd tribe, the Ruwailah, came into collision with the Bani Sakhr of Trans-Jordan; whose camels were grazing in Najd territory. A fight ensued in which the smaller tribe suffered severely. A few of the Ruwailah, in the elation of victory, committed the unpardonable sin of interfering and even killing some of the women of their opponents. Such an action stirred the anger of every Arab in Trans-Jordan; even the peaceable farmers joined in a combined raid of revenge. So secretly was this planned that it was not until the raiders were well on their way that Lt.-Colonel Peake, O.C. Arab Legion, happened during inspection to notice a few stragglers and recognised their intentions. It was only the great influence of the Amir Shaker—representing the Amir Abdullah, who, with Lt.-Colonel Peake, went off at once to persuade the leaders to give up the raid, that a serious situation was avoided. Public opinion was highly inflamed and entirely with the Bani Sakhr.

According to rumour the sequel came a short time ago. The Ruwailah, as is their custom, desired to go north to better grazing grounds for the summer, but to do so would have to pass through Trans-Jordan territory. In the meantime the crime had been traced to six men who were known to be still with the Ruwailah, and the Bani Sakhr, though far inferior in numbers, decided that a suitable occasion had arrived and determined to wipe out the dishonour with which their womenfolk taunted them. Once again the Amir Shaker managed to restrain them, and persuaded them to leave a strip of land ten miles wide for the Ruwailah to pass through. The latter, recognising that they were in the wrong, and knowing that the opinion of the whole Arab world was with the Bani Sakhr, brought the six men up before their court of justice, tried them, and condemned them to be left behind for the Bani

Sakhr to deal with. There is no doubt what their fate was, and there is general satisfaction that the crime has been expiated.

Whatever truth there may be in this sequel, it is at any rate strictly in accordance with justice as dealt out by Badawin Courts. The latest news from Najd states that the Amir Shaker was with the raiders from Trans-Jordan, though it does not explain why the raid did not take place.

General News.

The Amir Abdullah has moved for the summer months to Al-Hammah, near Suwailah, and his camp is pitched in a cool spot amongst the trees of the Government Nursery.

Lt.-Colonel Bewsher has rejoined his regiment, and Lt.-Colonel Shute has taken over command of the Frontier Force, whose headquarters are at Zerka. Most delightful bathing picnics take place in the Frontier Force bathing pool, resembling a backwater of the Thames, by the kind permission of the O.C., who has allowed non-members of the Force to use it at certain hours every day.

Lord Lloyd paid a flying visit to Amman at the end of May, and in the middle of June Lord and Lady Plumer came over on a visit of four days to the British Resident and Mrs. Cox, with whom they motored to many places of interest in the country.

THE POLICE IN CYPRUS.

The July issue of the new quarterly, the *Police Journal*, well maintains the standard set by the first two numbers for authority and variety. In the current number are particularly to be noticed articles on "The Burma Military Police," by Capt. J. W. Young; "The Police in Ancient Rome," by P. K. Baillie Reynolds (a very stimulating essay, this); "Burglary in an Indian Province," by J. A. Scott; and "The Development of the Police in Cyprus," by Lt.-Col. A. E. Gallagher.

In this last article, by the Chief Commandant of the Cyprus Military Police, it is pointed out that the Force was raised in 1878, being substituted for a force of Turkish *saptieh*. In the following year these were augmented by the "Cyprus Pioneers"; but a year later amalgamation took place. Now, in 1928, the Force consists of a Chief Commandant, six local Commandants (3 British and 3 Cypriot), seven Inspectors, and eight Sub-Inspectors; with 273 mounted and 474 foot of other ranks.

It is claimed that crime in Cyprus has been appreciably decreasing during the last six years.

General Savoff, the former Commander-in-Chief of the Bulgarian Army, died on July 22 in the South of France.

Judge Jovan Koutiancanin, of the Yugoslav Appeal Court, was drowned last week while boating on the river Drave near Novisad. His boat struck a barge and overturned.

As the result of a landslide on Mount Orthrie, near Nezero (Greece), eight trucks of a goods train were derailed and a gangster was killed. Three other persons were injured.

It is not expected that the Egyptian Residency will move from Cairo to Alexandria before the beginning of August, when Lord Lloyd, British High Commissioner, intends to start for England on leave.

Mr. W. M. Edwards, B.A., Fellow of Merton College, Oxford, has been appointed by the Council of Leeds University to the Chair of Greek. Professor Edwards was, until 1921, an officer in the Royal Artillery. He served during the War in Macedonia, Serbia, and Bulgaria, and was mentioned in dispatches, retiring with the rank of major in 1921.

The death is reported from Alexandria of Mohamed Pasha Said, who was twice Prime Minister of Egypt. Said Pasha first took office as Minister of the Interior under Boutros Pasha Ghali in November, 1908, and in 1910 he succeeded him as Prime Minister. Owing to a dispute with the Khedive Abbas Hilmi Pasha, he resigned in April, 1914, and was succeeded by Rushdi Pasha. In the troublous times of 1919 Said Pasha came to the rescue by forming in May a non-political Ministry. Later, in 1924, he joined Zaghloul Pasha's Ministry as Minister of Education, and shortly afterwards became Minister of Justice, and was Acting Prime Minister during Zaghloul's absence in Europe in the following summer. He left office in October, 1924, and in January, 1925, he resigned his membership of the Wafd, as he did not approve of Zaghloul's policy

FROM LONDON TO THE BLACK SEA BY CAR.

II.

BY FEODORA STANCIOFF.

Hungary.

The next day, our fifth on the road, we motored to Budapest (163 m.), leaving Vienna at noon and reaching the Hungarian capital soon after 7 p.m. From Vienna onwards the towns on our route were to be few and far between, and we found self-dependency in the matter of food was the wiser course; petrol is often easier to discover than a tempting restaurant in the Hungarian and Roumanian countryside.

The Austro-Hungarian frontier is now less than 40 miles distant from Vienna, in a village of the name of Kittsee, which we reached at what seemed the siesta hour; innumerable geese, marching in solemn squadrons from one brown pond to another, showed some reaction to the general drowsiness. Although within easy reach of Vienna, this first Hungarian village, with its low buildings and wide straggling streets, is already typical of hundreds of others scattered in the cultivated plains that stretch eastward. We felt the hot dry air blowing from the south, and the rich, sweet scent of the flowering acacias was more penetrating than it can ever be under western skies.

Meanwhile, the Hungarian Customs officials had to be visited in their inconspicuous dwelling in a secluded corner of the village. Though no passer-by is particularly intent on directing you thither, your duty is to discover their abode, that they may stamp all your papers (car and personal), your exit from Austria having been previously sanctioned by a smiling soldier leaning on his bayonet at the Austrian end of Kittsee.

And so onwards on the flat road that looks smoother than it is, because a thick layer of white dust covers the surface and veils a mere hole to perfection! Very soon the soothing monotony of pastures and endless expanse of cereals obliterate your sense of time and of injury; occasionally a group of acacia trees sheds its exotic snow-flakes on your way and some farms have good orchards. Parties of peasants, driving their fine, tall horses, are more often met than cars, and many a cart narrowly escaped disaster as the sensitive animals shied at our alien engine.

We passed through numerous villages with queer names and claim to beauty, until we reached Gyor (or Raab) on the Danube, after which we left the hot, spell-bound plain to follow the banks of the river just long enough to enjoy the copper-tinted hour of sunset. Those who have seen the warm, glowing pageant of colour on this wide, slow river can never forget its sad and silent appeal: row upon row of silvery willows rustle gently on the banks and long-necked birds fly heavily across the water.

We were soon on the most perfect road, indeed a proper racing track, winding its way amidst hills and planted on both sides for many a mile with cherry trees—a pleasing and novel idea. As we approached Budapest, conditions became ideal for the motorist, and I should imagine they are highly valued, judging from the number of powerful cars on the road. On entering Budapest an octroi tax is due, and this custom prevails in most towns of Hungary and Transylvania.

Our evening at Budapest was not marred by dog problems, but rendered most enjoyable by the inexhaustible repertoire of a gypsy orchestra.

The next morning we bought a sturdy local sausage, or *salami*, and a loaf of brown bread and set out towards Temesvar (179 miles) in a spirit of adventure, which though not entirely justified, had two reasons: we could not speak Hungarian and the route indications, procured in London, gave up the little hints of "turn right" or "left," from Budapest onwards. A list of localities at average distances of 30 miles or so from one to the other were nevertheless very accurately given.

From Budapest to Szegedin our course was a straight

line to the south-east, closely following the railway. The country is absolutely flat and agricultural. It lay bathed in sun and we raised clouds of dust on a passable road! Vineyards and maize fields relieve the monotony of other crops. Kecskemet and Felegyhaza were the only towns we passed, but we were more attracted by the villages where very wide avenues of trees are a notable feature, whilst the buildings all have an aspect of prosperous individuality. Gay processions of festive farmers (it was the Feast of the Ascension), flocked to the small parish churches, and one felt that these tillers of the land had earned their holiday. Their upright carriage and the dashing way in which they drove their strong, locally-bred horses, told the story of a fine healthy race. One of a party came up to us as we were lunching on the road side to ask how things were in America. (He had been to Cleveland and spoke a little English). At once he opened a political discussion on the wrongs of his country, and when we tried to cheer him with the prospect of good crops, he would not descend to this selfish and materialistic level and soared loftily in the clouds of national aspirations. We were reminded a little later of his talk. After leaving Szegedin and crossing the Theiss we took the wrong road at a deserted spot and instead of driving due east towards Mako we floundered southwards. Not a cart nor a peasant was in view. Only after several miles on this unused road, when our wheels were plodding through grass, did we stop . . . at the boundary of Yugoslavia! Our friend lived very near the new post-War frontier! We turned and went back to the cross roads, soon reaching Mako on the river Maros, which hails from the Carpathians. Five miles more and we were at Apatfalva, when new Roumania was in sight across the river.

Roumania.

After a parting visit to the Hungarian customs, we were accompanied to the frontier bridge by a white-gloved official, who waved us across the Maros to a tiny hut where Roumanians presided. We had just started dealing with them, when shouts and bayonets came from the Hungarian side; our dog had remained in Hungary. This might have led to complications, but it eventually ended with much laughter on both sides. We had actually introduced frivolity in the grim atmosphere of disputed frontiers! Finally we were free to deal with the Roumanians (in German), and they escorted us *manu militari*, to their village of Ceanad, where Customs and passports

deny any close relationship, with the result that you lose considerable time.

Rain began to pour steadily on our dust-coated car, and it needed the excellent wine, provided by the lonely passport officer, in between a chat, that cheered what he termed "exile," to restore our spirits on the muddy and very indifferent road to Temesvar, which we reached at dusk, repairing to the "Hotel Ferdinand," for a well-earned rest.

Now Temesvar, on the river "Temes," would be a very restful place indeed, if history and fate had left it to itself. It is an agricultural as well as an industrial centre, and its rose-trees are famous in the Balkans. But ever since the Emperor Trajan colonised the province of "Banat," in 107 B.C. it has been visited by settlers or conquerors of very mixed origin. Slavs, Hungarians, Germans, and Roumanians form the population and four languages are consequently spoken in the town. This in itself would breed confusion, but it is further emphasized by the fact that, where the Habsburgs of Vienna reigned since 1689, the Hohenzollerns of Bucharest reign since 1918, and Temesvar is bewildered because part of the Banat has become Yugoslav! . . .

In spite of all we found our "Babel tower" hotel sufficiently comfortable, though prices were relatively high; the food was Viennese, the staff Hungarian, and Roumania had provided as many officers as the Manager could put up, whilst the shops we visited the next morning were kept by Germans. . . . The latter, incidentally, are very early settlers, and in the case of Transylvania, Saxons have colonised the country to its great and lasting advantage.

There is a very up-to-date garage in Temesvar, and motor-races were being run in the neighbourhood, whether to encourage or sanction good roads, we set out to discover.

The obvious route to our goal on the Black Sea, would have been southwards to Turn-Severin, and then along the Danube, but we could not resist the call of the mountains, and drove towards Sibiu, 76 miles from Temesvar, in Transylvania.

The first part of the journey up to Lugos was necessarily slow, the state of the road decidedly clamouring for improvement if races were to be run! The mixed population noticeable in Temesvar is not less striking in Transylvanian villages; they generally have two or three names (the Roumanian one is now official); some of them have a Protestant as well as a Greek-Orthodox church, the latter often newly built under the Roumanian régime, but the Saxon farmer seems unruffled by changes of administration, and the country we drove through had every appearance of prosperity and intelligent development.

However, as we were not specialising in racial problems or economics, I was intensely gratified when we rejoined the Maros valley, and the first peaks of the Transylvanian Alps were in sight, for now the scenery became truly beautiful, and the land no less fertile but in a more varied sense. We passed as in a dream, through shady forests of oak, once the pride of Austrian foresters, and well they might have been, for very seldom have I seen such splendid specimens of trees on such a scale. I also remember one little glen, where we rested, and counted about thirty different wild flowers to a few square yards, and the sun was hot and brilliant, though all the growing things were so fresh and green.

From Deva, a town on the Maros, the mountain range we were approaching looked more imposing, and the peaks that enclose the "Red Tower" Pass, rose on our right, crowned with lingering snows. In the valley we often stopped to pick cherries on the roadside, and sometimes to ascertain our way; we noticed and admired the richly embroidered and artistically designed costumes of the Roumanian peasants, white loose garments being predominant. A little further we encountered Saxon women wearing the large, ungainly straw bonnet that they may find very practical, though we were not impressed by its shape! The road from Lugos to Sibiu is good, uphill driving, being particularly smooth, because a slope is generally safeguarded against the bad effects of rain.

(To be continued.)

NEWS IN BRIEF.

The Bulgarian Parliament has adjourned until September 4.

Hikmet Bey, the newly-appointed Turkish Ambassador to Afghanistan, left Constantinople for Kabul on July 22.

The Bulgarian Sobranie has approved the Budget for the current year, amounting 7,480,000,000 levas (£12,563,000).

Delegates from all parts of the world are attending the meetings of the Council of the Zionist movement, which are being held in Berlin.

The Bulgarian Government has approved the appointment of Mr. Schosenfeld to be United States Minister at Sofia, in succession to Mr. Charles Wilson, who has been transferred to Bucharest.

There was a requiem service in the Cathedral in Bucharest on the first anniversary of the death of King Ferdinand of Roumania. Among those present were the leaders of the Opposition.

Egyptian students in Alexandria have founded a new political club called "The Club of Awakening," of which Mohamed Abdul Kerim, a professor at the Orwa-el-Woska School, has been elected President.

At the opening of the International Chemical Congress at The Hague on July 18, Professor Ernst Cohen, of the University of Bucharest, President of the International Chemical Association, addressed the delegates in Latin, Esperanto, and English.

The Persian Parliament has approved the Opium Monopoly Bill, which will provide control of all local and foreign transactions in opium and all its products. Local consumption will be reduced by 10 per cent. per annum.

M. Clemenceau, a relative of the former Prime Minister of France, and three other French engineers arrived last week at Rawalpindi en route for Kabul, where they will act as advisers to the Afghan Government in regard to road development.

On July 21 Serbian gendarmes boarded a passenger train running between Szabadka and Szeged when it arrived at the frontier station of Horgos and handcuffed and carried off the Hungarian engine driver, Michael Bank, without giving any reason.

In accordance with the decision of King Fuad and his Ministers to rule without Parliament for at least three years, the doors of the two Egyptian Chambers were sealed up on July 20 and are guarded by police.

It is reported from Angora as probable that the draft law envisaging the abolition of the title of Pasha and all other titles of courtesy and honour will be submitted to the Grand National Assembly next session.

According to *The Times*, the Palestine Arab Educational Conference has resolved that boys in secondary schools should wear European dress—namely, shirts and shorts, instead of the customary traditional caftan, or modern reach-me-down suit, and that no fez or other form of head-dress should be worn indoors.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Book Reviews

THE PANGS OF ASIA.

"**ASIA REBORN.**" By Marguerite Harrison. (New York and London: Harpers. 15s. net.)

It is very easy to speak of the rebirth of peoples or of countries, more particularly when, as in Asia after the Great War, there have been in various lands manifestations of new forces at work. To the superficial mind there must necessarily be a connexion between such activities; and to the superficial mind the going back upon or turning away from certain things belonging to an immemorial past is synonymous with a new birth. But can one properly speak of Asia as a whole; can one really dignify the various apings of Europe (or of America) by the name of regeneration?

Mrs. Marguerite Harrison, an experienced American journalist, feels the qualms of such questionings, only, in the interests of her book, to dismiss them. Although she may find snags in the way of an odd detail or two, the winds of daring generalisation carry her ship easily enough into the well-known harbour of antithesis: the East against the West. From Turkey to China she finds evidence of a pro-Asiatic spirit, an anti-European spirit. It cannot be claimed, however, that she advances any material except the stock-in-trade of the sensational journalist in dealing with the affairs of Asia; sometimes, indeed, she repeats the veriest rubbish. In our view her thesis is a thin one. Asia, the oldest Continent in the world, cannot be treated *qua* Asia as now suffering the pangs of a new birth. Parts of Asia are undoubtedly capable of producing something new, something unique; but other parts will produce only imitatively—which is not rebirth at all.

Let us look at some of the evidence which Mrs. Harrison adduces in support of the theory of the unity of Asia and the fact of its regeneration. She professes ardent faith in the so-called "Muslim bloc" of Turkey, Persia, and Afghanistan. Speaking of the sympathy with the Turkish war of independence she says:—

The Muslims and Hindus united in India to demand the independence of the Khalifate, the revolt of the Moplahs in Malabar, of the Bedouins in Mesopotamia under the leadership of Sheikh el Senussi, who came all the way from Africa to place his sword at the disposition of Mustapha Kemal, were a protest against the humiliation imposed upon Islam through the Sèvres Treaty. Angora became the hope of every true believer.

It is, indeed, a difficult matter to disentangle the temporary and fortuitous from the permanent and foreseeable; and Mrs. Harrison has not exhausted herself in the effort. Had she looked into the matter further, she might have found that coincidences do not a thesis make; nor Angora a goal.

In her chapter on Persia, again, we read (what we have read before in the writings of American journalists) that "by the close of 1926, British interests were securely intrenched and British prestige, while not by any means what it was, had been in a large measure restored." Upon such a statement one can only say that Persian concession to such prestige and influence has been shown in most curious form. By the close of 1926 had anything at all been done by the Persians to benefit the British in Persia?

Again, concerning this "Muslim bloc," we discover Mrs. Harrison writing speciously:—

Until recently, religious differences have been the greatest bar to a complete understanding between the three countries, but with the growing tendency throughout Islam to place a more liberal interpretation on the teachings of the Prophet, these differences are becoming less important.

But it is more the interpretation of the orthodox schools of Islam, than the Quran itself, which is criticised by the "modernist" Mussulmans; and in any case, was not the Shiah doctrine in itself political or racial in origin? Such things as Perso-Turkish distrust are not destroyed in a year or two, as Mrs. Harrison appears to think.

In writing on Iraq this journalist falls into the familiar American error of supposing that British policy in Meso-

potamia was dictated by considerations of oil; but for abundance of inaccuracies the palm must surely be given to her chapter on "Arabia Deserta." Therein we learn that Ibn Saoud "while the Great War was in progress made several private wars of his own which resulted in his obtaining the subjection of the Djebel Shammar tribes and of the rich oases of Hail and Djuf, as well as the fealty of the Sheikh of El Hasa, which assured him access to the Gulf of Persia." Having recalled the real date of the submission of the Rashid family, we proceed to learn that the plan of making ex-King Husain Caliph was a "British proposal." With even more regret, we learn that this ex-King died in Cyprus in the early part of 1927. Our knowledge is yet further extended when we read that at Mecca, in addition to the famous Pan-Islamic Conference, a conference on the Caliphate was held in the same year.

But possibly it is unfair to find so many holes in the book. To the general and ignorant reader who likes to believe that strange happenings are always exciting and tremendously significant—and it is for him or her that the book is expressly designed—it may prove the source of much entertainment. It is to be doubted, however, whether the serious student of the East will endure to the end this shallow examination or collation or version of the facts.

TRAVEL.

"**A TOUR IN SOUTHERN ASIA.**" By Horace Bleackley. (London: Bodley Head. 12s. 6d.)

"**YOUTH GOES EAST.**" By the Earl of Cardigan. (London: Nash and Grayson. 10s. 6d.)

It is a curious psychological mystery that so many travellers should think it necessary to put their experiences in writing, quite independently of the value of any information which they can communicate to their readers. We are doubtless saved from much of what is written by the publisher's reader, to whom we owe far more than the general public is aware. But, in spite of his benevolent exertions, much appears in the form of "handsome volumes" that we could well do without.

Mr. Bleackley, for instance, made a tour in parts of Indo-China, Malaya, Java, Sumatra and Ceylon, all of it by steamer, railway or motor car. He visited nowhere that is not perfectly well known and waxes indignant when the hotel accommodation is not up to his standard. He gives us no information of any value, except, indeed, a good, though second-hand, account of the mutiny of an Indian regiment at Singapore during the War, of which we have seen such full details nowhere else. The photographs, apparently essential in a book of this kind, are not very satisfactory.

Lord Cardigan's book is much better. He really had an excuse for becoming an author. He and his party enjoyed themselves so thoroughly in their Morris motor car tour through Europe to Athens, with peeps at Poland, Roumania and Hungary, and a steamer trip to Constantinople, that he felt impelled to communicate his pleasure to others. In this he has succeeded. Their trip was not an easy one, as any one who has motored over the Balkan roads and spent nights in densely inhabited Balkan bedrooms well knows. But neither pot-holes nor insects worried them too much. Youth and a pleasant sense of humour carried them through, and they found much to enjoy. It is abundantly clear from this book that, till better roads exist, decent hotels are to be found, and official formalities (at the numerous borders and elsewhere) are greatly simplified, the Balkans are not a motoring territory for people unhappily not provided with these qualities. Provided with them, however, many motorists might do worse than improve their minds and store their memories by doing as Lord Cardigan, but giving more time to it. To those who take this advice, this book will be most useful. There are not many photographs in this book, but they are good and interesting.

C. S-W.

THE WEEK AT HOME

London, Tuesday Morning.

Ejecting the Communists.

The Communists are certainly not having a happy time just now, for not only are they repudiated politically, but their activities are being physically interrupted. Quite obviously the ordinary Socialist has made up his mind to have no more truck with these extremists: a fact which is as explicable by the frailty of human tolerance as by the more usual "one eye on the General Election."

But last week at a Trade Union meeting on unemployment the old Adam that is at the back of all decent men broke out. Mr. Herbert Smith, the Chairman, actually left his Chair to "chuck out" a Communist interloper. Now Mr. Smith was one of the chief representatives of the miners before the General Strike. Does it seem very probable that he and his fellows were really "out for" Revolution?

The Socialist Rebels.

But if the Labour Party can eject its Communists it does not find it so easy to deal with the extremer Socialist Parliamentarymen represented by Messrs. Wheatley and Maxton. As I have already recorded, these men are carrying out throughout the country a revolt against the slowness of the Labour Party in its plans for realising a Socialist State.

The Parliamentary Labour Party held a meeting last week to deal with this revolt, but they got no nearer solution of it than to pass a pious resolution declaring that all differences between Socialists should be brought forward in a constitutional way, that is, at the regular meetings of the Party.

This may be called mild censure, or a climb down. Actually it appears to have achieved nothing at all, for the Maxton-Wheatley-Cook revolt will surely go on. As a matter of fact, the first two of these men possess first-rate intelligence and sincerity that are not surpassed by any member of the "orthodox" Labour Party.

The "Moving" of Labour.

The Board which was set up by the Government for inquiring into the problem of removing workless men into areas where work is available has published its report, and its findings deserve the closest attention of all students of contemporary England. Briefly, its proposals are that, where no similar work is available, the older men out of work should be put on the land in this country (holdings in connexion with afforestation are suggested), and the younger men should emigrate to the Dominions. For this last essential purpose much greater facilities than exist at present should be provided.

The Commissioners found 200,000 men—mostly miners—who had no hope at all of finding work. They have not attempted to shirk the issue, and emphasise their conviction that the heavy industries must be reorganised from within. In short they have produced an admirable report, replete with knowledge and humanity. In particular one likes their tribute to the character of the miner—"regarded as a type, the British miner is an example to his fellows."

Irish in Scotland.

Having conquered England and the northern part of Ireland, the Scots, it seems, are now seriously concerned lest their own fair country, which, wheresoever be the actual field of their economic penetration, is always their unreturned-to "home," should become bepeopled by the Irish. A Church deputation went to Westminster last week armed with rather terrifying statistics upon the extent of Irish colonising in Scotland.

It was stated that between 1881 and 1901 the increase in Irish population in Scotland was 33½ per cent., compared with an increase of only 18½ per cent. of native Scotsmen, and between 1901 and 1921, 39 per cent.,

compared with 6 per cent. respectively. It was further stated that the Irish represented 25 per cent. of the population of Glasgow, and 70 per cent. of the relief funds was allotted to these Irish. And the deputation urged the establishment of a quota system.

But how can England interfere with the emigration laws of a Dominion? Even the newspapers have had to smile at the sight of Scotsmen petitioning Englishmen to help them against Irishmen. It all seems to fit so ill with historical boasts or fancies.

Unemployment.

The figures for unemployment have been creeping ominously up week by week, and certain minds are becoming seriously alarmed at the apparent ceaselessness of the stream of men being thrown out of work. To-day in the House of Commons the Labour Party are moving a vote of censure on the Government for its attitude towards this vital matter.

This vote will not, of course, be passed; but it will be interesting to see how convincingly the Government will shake off criticism. It is known that it intends to bring immediate assistance to the coal industry (which is the chief source of unemployment), and, instead of waiting for the rate relief which is due to be effected in October of next year, to reduce rail and dock charges at once.

This virtual re-subsidising of the mining industry will have to be very carefully carried out if it is to escape the criticism of our economists. What the Labour Party will say of it one can only guess.

Motors and Railways.

The end of the struggle between the road and the rail is by no means yet, and the latest proposal, to run sleeper motor-coaches through the highways of England, may come as a shock to the railways, already sorely pressed to know what to do against the competition.

It is stated that six-cylindrical twelve-berthed coaches to carry passengers can be provided at about the same as the third-class railway fare. A beginning is to be made between Newcastle and London, and if the idea "catches on," night services will be put on between London, Manchester, Liverpool, and Plymouth. How these things will compare with the railway-carriage for comfort in sleeping, it is impossible yet to say; but provided the gears are not changed too violently, nor the horn sounded too raucously, there seems to be no reason why they should not become quite popular. A speed of twenty-five miles an hour is foreshadowed.

If the railways wish to compete with this, they will have to construct third-class sleepers.

Ellen Terry.

Of the admiration and affection which Ellen Terry inspired among playgoers of all classes, it is unfitting that one who blushes to confess that he had never seen her should write. But quite obviously the tributes that have been paid on the occasion of her death are sincere. Something irreplaceable has gone out of the lives of those who saw her in her prime.

Always, except for the very fortunate individual, there must be regrets over things missed. Either he has not heard Busoni at the pianoforte, or seen Ranji at the wicket, or Ellen Terry on the stage.

To those who knew this great artist in the theatre memories are crowding of her gracious triumphs. She was by universal consent an English lady of whom the English nation was proud, and at whose tomb in the players' church, St. Paul's, Covent Garden, future generations may well be gazing with reverence and talk of a beauty which ravished both the instincts and the intellects of their forefathers.

ALTER EGO.

It is announced from Belgrade that Momtchilo Ivanoff, who tried to assassinate the Director of Public Security, M. Lazitch, two weeks ago and then shot himself in the head, has died of his wound.

PERSONAL AND GENERAL

TO-DAY

July 26, 1928 (New Style).

July 23, 1928 (Old Style).

Saphar 7, 1347 A.H., of the Muslim Calendar.

Ab 9, 5689, of the Jewish Calendar.

The Rani of Pudukota has arrived at Claridge's from Paris.

The Maharaja of Jind arrived last week at the Royal Palace Hotel.

The Maharaja of Kashmir left London on July 21 for Deauville.

The Prince of Wales received the Maharaja of Kapurthala at St. James's Palace on July 20.

The Hon. Henry and Mrs. Mond left London on July 21 for Athens, and will be abroad for six weeks.

Mr. A. F. Hodgson has been appointed Greek Vice-Consul for Bradford. There has not hitherto been a Greek Vice-Consulate in that city.

Mr. H. C. Luke, who was recently appointed Chief Secretary to the Government of Palestine arrived in Jerusalem on July 19.

Mme. Ferid Bey, wife of the Turkish Ambassador, left London on July 17 for Stamboul. She will be away two months and the Ambassador will join her later on.

Sir Amberson Marten left London on July 19 by the P. and O. Bombay Express to join the s.s. Naldera at Marseilles.

Sir Philip Grey-Egerton arrived on July 20 from India at Marseilles in the P. and O. liner Ranpura. Other passengers included Lady Hailey and Sir Philip Hartog.

Sir Ronald Lindsay last week assumed his post of Permanent Under-Secretary of State at the Foreign Office, to which he was recently appointed in succession to Sir William Tyrrell.

Queen Sophie of Greece, with Princess Irene and Prince Paul of Greece, and the Princess Victoria visited the King and Queen at Buckingham Palace on July 19 and remained to luncheon.

The Maharaja of Patiala has arrived in London from the Continent. On July 24 at the Caxton Hall he lectured to the East India Association on "The Indian States and the Crown." Lord Ronaldshay presided, and the lecture was broadcast.

The King has given permission to Mr. Wm. Robert Gerald Whiting, Superintending Engineer of Messrs. Armstrong's Naval Yard at Newcastle-on-Tyne to wear the Insignia of the Third Class of the Order of Saint Sava, conferred on him by the King of the Serbs, Croats, and Slovenes.

PROPOSED ENGLISH CHURCH AT TROODOS, CYPRUS.

WANTED!

A permanent church on Troodos for the needs not only of residents (military and civilian) but of the visitors who are coming in growing numbers each year to this popular hill-station of the Near East.

It is proposed that a stone building be erected on a site, to be allocated by the War Office, near the Parade Ground, at a cost if possible not exceeding £500.

The Special Committee includes H. Ll. Jones, Esq., Major L. F. Layton, O/C Troops, Norman Petrides, Esq., Dr. A. H. Unwin, Henry Williamson, Esq., and the Chaplains of Nicosia (Rev. H. Buxton) and of Limassol (Rev. L. Lindsay).

The Managing Director of the Cyprus Asbestos Co. has kindly promised a generous cash contribution and also building materials produced by the Company at exceedingly low price.

Contributions should be sent direct to the TROODOS CHURCH FUND, c/o H. Ll. Jones, Esq., Ottoman Bank, Nicosia.

Mme. Felix Guépin—née Stancioff—has left London for the Villa des Trois Sources Varna, Bulgaria; and will be away two months.

The Right Hon. William Ormsby-Gore, M.P. (Parliamentary Under Secretary of State for the Colonies), and Mr. Robert Greg (His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest) were received in audience by the King at Buckingham Palace on July 19.

General Sir John Du Cane (Governor and Commander-in-Chief of Malta and its Dependencies) had an audience of His Majesty on July 19, when the King invested him with the Insignia of a Knight Grand Cross of the Most Honourable Order of the Bath (Military Division).

Miss Helen Schilizzi, daughter of Mr. Stephen Schilizzi, of Guilsboro Court, Northamptonshire, and niece of M. Venizelos, Greek Prime Minister, is recommended for adoption as prospective Liberal candidate for Northampton. She is 24, and has been for some time a lecturer to the League of Nations Union.

Brigadier-General Sir Gilbert Clayton left London on July 20 for Jidda en route for Taif, the summer capital of the Hijaz, in order to resume negotiations with King Ibn Saoud. He was accompanied by Mr. Antonius, an Assistant Secretary to the Government of Palestine. It is hoped that the British mission will have concluded its labours and be able to return to London within six weeks.

THE INDIAN STATES AND THE CROWN.

Although during their recent tour of the country the members of the Indian States Committee visited most of the principal States and altogether covered over 8,000 miles by train alone, this week really marks the beginning of the inquiry proper. The purpose of the Indian visit was merely to acquaint the Committee with the atmosphere and to provide opportunities of informal discussion of matters pertaining to the inquiry before the receipt of the formal evidence. It is true that the number and importance of the individual States, the presentation of whose case by Sir Leslie Scott began on Wednesday, cannot obscure the fact that that eminent counsel is not empowered to speak for the whole of non-British India. At the same time, the views of a body that is the recognised agent of the Standing Committee of the Chamber of Princes, and represents Patiala, Kashmir, Bhopal and Gwalior and several of the most active and enlightened rulers of the minor States, can certainly be considered as authoritative. And whatever the differences that may still exist among the Princes on points of detail even those rulers which are not utilizing Sir Leslie Scott's services are united with the majority in the latter's opinion as to the main object for which all are striving. They realise that the importance of the economic relations between their States and British India has increased very greatly of recent years, and they naturally desire to be consulted when the Government of India imposes fiscal measures which necessarily affect the revenues of their States and the prosperity of their subjects. At present there is no constitutional channel for the expression of their views on such matters as the imposition of increased Customs duties, or the taxation of articles of general consumption. As we were reminded by a correspondent in last week's issue, when the present Reformed Constitution was in embryo the Princes pressed for some kind of machinery that would give them a voice in shaping those aspects of All-India policy which concerned them in common with British India, particularly in the economic sphere. Mr. Montagu and Lord Chelmsford admitted the reasonable character of the request, though its force was probably not so apparent in 1918 as the experience of the next decade has shown it to be. Unfortunately the Chamber of Princes, which was designed as the basis of the machinery for joint discussion of matters of common interest with British India, became, as our correspondent aptly remarks, "a mere Diet, whose stereotyped agenda and hidebound rules—neither shaped by the Princes—disgusted some of the most powerful and progressive Rulers in India."

Still more important is the constitutional aspect of the inquiry. The rulers of the Indian States believe that the time has now come for a final and authoritative review of their position in law, not only under the existing constitution but also in relation to the possible grant of a further measure of self-government in the area directly under British administration. The constitutional issue to which we understand Sir Leslie Scott, fortified with the opinion

of several of the most eminent of his fellow counsel, will address himself in the first instance, is at once the most difficult and the most important of the many complex problems which Sir Harcourt Butler and his colleagues have been called upon to resolve. Once the legal relationship has been settled suitable constitutional machinery for harmonious working between the States and British India ought not to present anything approaching the same difficulty, for the rulers of the States have made it clear that they are ready and willing to agree to any reasonable plan that may be devised. The existing relations which have developed, partly as a result of policy and partly as a result of historical accident, are confusing in the extreme. The legal principles they represent afford no parallel nor analogy to any known to history. They do not fall within the ambit of international law; for the States, although the principal ones are spoken of in official documents as allies, have entrusted the whole business of their foreign relations and defence to the Crown. "In some respects the Crown is the guardian; each State is its ward. To such a relationship international law has no application."

On the other hand, the Indian State is equally outside municipal law. As the authority we have cited proceeds: "although Sovereignty has been divided as a result of the Princes giving their consent—evidenced by treaty or other form of agreement—to transfer to the Crown some of their functions of their sovereignty, each Prince remains the true sovereign of his State in respect of all those functions of sovereignty which he has not consented to transfer to the Crown. And his subjects are not British subjects. He is amenable to no Court outside his State. No legislation of the British Parliament or the British-India Legislature binds him or his subjects; nor can British-Indian taxation be imposed upon his State." In a letter in the current issue of a legal contemporary Sir Leslie Scott, after passing in review the foregoing circumstances, draws therefrom four broad conclusions which we may presume are the main grounds of the Princes' case. The first point which emerges is that the fundamental tie is consent and that Great Britain is irrevocably committed by the public pronouncements of the King-Emperor and successive Viceroy to the scrupulous observance of all its contractual undertakings to the States. The second point is that the contracts are between sovereigns—the Princes and the Crown—not with the Company or Government of British India. The third is that the relationship is wholly legal—a nexus of mutual rights and obligations which "may not always be easy to define, but they are none the less real and ascertainable because they have not hitherto been scrutinised." Fourthly, Sir Leslie contends that the contracts, which, if concluded between private individuals, would be personal and incapable of performance by anybody else, cannot be assigned to any third party. On the more difficult question of the extent, if any, to which the Crown can delegate to the Government of British India, as its agent, the discharge of its treaty obligations, Counsel for the Princes wisely reserves his opinion. At the same time he stresses one aspect of the problem deserving of greater

consideration than it has hitherto received in public discussions on the same subject. The Crown can normally choose its agents, but an agent cannot act where his interest may conflict with his duty. In matters of common concern with the States, Customs, railways, posts, the salt monopoly, there is always the possibility that the interest of British India may not be identical with the interest of a particular State. The Crown's duty on the other hand is, or maybe, to safeguard the interest of the State, particularly in case of a minority administration. Should the interest of the agent be given the chance of conflicting with the duty of the principal?

CURRENT TOPICS.

The Royal Indian Marine.

By rejecting the Indian Navy (Discipline) Bill last session the Legislative Assembly made it necessary for the Government of India to reconsider their policy in regard to the proposed Royal Indian Navy. The result of the reconsideration was announced recently in an official *communiqué* issued at Simla. The Royal Indian Marine will not become the Royal Indian Navy. But the Government have not given up the idea of re-organising the Force in accordance with the recommendations of the departmental Committee of 1925, so far as this is possible under the existing law. The force will still be styled the Royal Indian Marine, but it will be a combatant force; and it will assume the functions and serve under the conditions regarding pay, pensions, etc., which were originally intended for the Royal Indian Navy. Indians will be recruited, on the basis which was contemplated for the Navy, to the commissioned and the warrant ranks. One commissioned vacancy in three will be reserved for them in the executive and in the engineer branches of the service. The vacancy will be thrown open to competitive examination in India on terms and conditions to be prescribed. The discipline of the force will be regulated, as it is now, under the Indian Marine Act of 1887. But the change to combatant status will make enrolment under the Act compulsory, instead of as hitherto optional, in the lower ranks. The extent of the Act is limited to Indian territorial waters and it follows that this limitation will apply to the activities of the Royal Indian Marine. The command will vest in the Director of the Marine who will be designated the Flag Officer Commanding and Director Royal Indian Marine. Rear Admiral I. N. Walwyn has been lent by His Majesty's force to be the first Commanding Officer and his appointment takes effect from November next.

The Adulteration of Indian Hemp.

Complaints are still being made concerning the adulteration of the hemp exported from India. The latest reports from Calcutta are to the effect that the weight of the bales is now being increased by concealing in them sticks to the extent sometimes of 20 per cent. and sometimes of 40 per cent. The exports of hemp show no great expansion, and the Report on the Maritime Trade of Bengal for the year 1927-28 says that there is not much likelihood of an improvement so long as the present defective methods of preparing and baling the fibre are persisted in. Tests have proved that Indian hemp, while not as good as Manila, compares favourably with the Russian and the Italian products. But unfortunately it is often shipped in an extremely dirty state. The hanks are flat and hard with dried mud at the ends; and the bales are sometimes packed so tightly that the fibre is crushed and spoilt. India bales hemp to 40 cubic feet per ton, while other countries bale their product to 80 cubic feet to the ton. It is true, of course, that by so doing Indian shippers pay less for freight; but such great compression damages the fibre.

It will be recalled that the Indian Agriculture Commission specially mentions hemp in connexion with adulteration. The report says that the complaints received in

regard to hemp are more serious than those concerning any other product. They were to the effect that it was very irregular in quality; that fibre from different districts was mixed in the same bale; that there was an excessive proportion of dust and dirt mainly due to retting in dirty water; and that the packing and baling were unsatisfactory. Practically identical statements are made in the Report on the Maritime trade of Bengal; and it is surely high time for those engaged in the trade to look into the matter seriously. It is suggested in Calcutta that there is no hope of an improvement unless the Government exercises strict supervision over the trade, and enforces a grading system similar to that in force in New Zealand and the Philippines. The Agriculture Commission considered the feasibility of introducing some such scheme in India. But the Commissioners came to the conclusion that in the present state of development of the export trade the administrative difficulties involved would be insuperable. They thought that organised trade associations in India could give great assistance; and that organisation among the ultimate buyers might be an effective weapon. They also recommended that the agricultural and co-operative departments should undertake propaganda advocating better cultivation and better methods of preparation; but they pointed out that such propaganda must be based on close touch with trade requirements, more particularly those of the export trade.

The quantity of hemp shipped from Bengal during the year 1927-28 was 341,801 cwts., against 319,043 cwts. in the preceding year. This increase was, however, effected at a sacrifice of price, the total value falling from Rs. 59.36 lakhs to Rs. 53.67 lakhs. The largest buyer was Belgium, but she reduced her purchases from 197,755 cwts. to 176,445 cwts. The United Kingdom and France also bought less in the previous year; but the United States, Italy, and Greece increased their purchases.

Bardoli—and After.

Expectations that the Bardoli Satyagraha agitation, if allowed to continue unchecked, would have important repercussions all over India have proved only too correct. As far back as the middle of June last a Bombay contemporary reproduced extracts from a private letter received from a Madras correspondent in which the writer observed: "The struggle in Bardoli is exciting wide public attention throughout the Madras Presidency. The Godavari and Kistina have just been resettled. Bardoli will have its repercussion in Madras. It would have been better if this Bombay Government had avoided this conflict if it was possible to do so." Meanwhile, it is satisfactory to note the firm stand taken by the Governor, Sir Leslie Wilson, in his speech at the opening of the Bombay Legislative Council at Poona this week. After giving a short history of the dispute, with which readers of THE NEAR EAST AND INDIA are already familiar, the Governor laid before the Council the Government's final and considered decision, which he made plain, has been approved by the Government of India. After emphasising that it had always been impressed upon the Bombay Government that the issue was very clear—namely, whether the reassessment of the landholders in Bardoli was fair or unfair, he intimated that the Government was prepared to submit the whole case, after the revenue now due to the Government had been paid and the present agitation had entirely ceased, to a full, open and independent inquiry. The Governor asked the Councillors concerned to communicate their decision as to whether, on behalf of their constituents, they accepted or refused the conditions which must be fulfilled before a fresh inquiry could be established. While we share Sir Leslie Wilson's belief that the proposals are not likely to be rejected, we are glad to note that he did not shrink from the unpleasant duty of making it perfectly clear that, if the conditions were not accepted, and consequently a settlement was not secured, the Government would take what action it considered desirable and would utilise all the powers at its command to maintain its statutory authority.

CALCUTTA LETTER.*(From Our Own Correspondent.)**Calcutta, July 5.***Politics.**

Sir John Simon's cablegram to the Punjab Council Committee, stating that equality between the Statutory Commission and the Council Committee will be maintained, not only in respect of the hearing of evidence, but also in its consideration, will have its effect on those who are not too deeply committed to the policy of the boycott. An understanding with one Council Committee is an understanding with them all. The Simla correspondent of the *Statesman* reports that "it is now being taken for granted that Madras, Bombay, Bengal and Bihar will elect their Committees without much trouble, and that even the U.P. and the C.P. may follow suit, as already there are indications of revolt in the boycott camp." Nevertheless, there are still well-informed people to be found who claim to be confident that, when on the 9th the Government resolution for the formation of a Council Committee is debated in the Bengal Legislative Council, the opposition will have the majority. Of the amendments that have been tabled—eighteen—the Swarajists being the authors of seven of them, I would call attention to only one, Mr. Fazlul Huq's. He has given notice of his intention to move that to the resolution be added: "with instructions to convey to the Commission the deliberate opinion of this Council that India under present conditions is not fit for any system of representative government." Than that could there well be anything more true? Yet one hears on all sides of "the growing demands and aspirations of all classes in India," which is talk pointing, of course, to still more representative government.

The Indian States.

The proposals of the Indian Princes regarding the future relationship of the States with the Indian Government have been published on your side; but they should be recorded here to complete the record. They are that there should be (1) an Indian States Council with the Viceroy as President, three representatives of Indian States, two English members with no previous connexion with India, and the head of the Political Department of the India Government; (2) a Union Council composed of members of the Indian States Council and the Viceroy's Executive Council; (3) a Union Supreme Council or Court of Arbitration, consisting of three judges appointed from Britain to be permanently retained. The general public is not sufficiently well informed of the questions that arise between the Indian States and the India Government to be able to envisage clearly the working of the proposed Councils. Only such interest is consequently taken in these last proposals as men take in the briefly reported concerns of their most distant cousins. The Princes may be trusted to secure that the utmost degree of orderliness may obtain in future in their relations with the British India Government.

Bengal Administration Report.

The Bengal Administration Report for the year 1926-1927 was published on Tuesday, and is now the chief topic of conversation. The Report is written in a very free style, as if the author had decided that, if ever there was a time to call a spade a spade, this was the time. There was sense in that: when all things are in the melting-pot is no time in which to put on kid gloves before handling anything.

A few quotations may be given. "The conflicting communal appeals for special protection that distinguish the year resulted in the police receiving from one or other

section of the Press and the public a measure of approval, to which it has hitherto been unaccustomed. The Criminal Investigation Department is represented as taking an almost fiendish delight in the fabrication of false evidence to support unfounded charges, though no explanation of such an amazing perversion of duty is ever offered or suggested by a Press which itself recognises no obligation whatever to justify or prove the most astounding and libellous allegations. This attitude towards the police has developed into a habit, which naturally persists even although the occasions for its manifestations were comparatively few during the year. On the other hand, many opportunities for approval of police activities were afforded by the success with which communal difficulties were met and overcome."

The true villain of the piece in the Report is not the Criminal Investigation Department but the Press. It occupies much of the foreground in this annual review. That is its right, and thus is it spoken of: "There was no need for any newspaper to justify its existence or the patronage of its readers by the excellence or completeness of its news. The qualities that go to build up a reputation were quite unnecessary to secure a circulation. Unbounded excitement and unrestrained vituperation took the place of all those saner elements that distinguish successful journalism, and provided adequate mental sustenance for a public, whose taste has been debased and degraded by many years of wild sensationalism. Government did not get even the proverbial 'dog's chance.' . . . Government in the eyes of the Indian Press could do nothing right, and throughout the year it had to face the ordeal of a 'morning hate' from the editorial forces of almost all the papers of the metropolis. The campaign of unscrupulous misrepresentation has now gone to such lengths that it is difficult to justify further tolerance. It is true that if the whole vocabulary of abuse is expended on trifling incidents, the influence of the Press in important matters will be correspondingly negligible."

The implication of those last words is that, in the writer's opinion, it is well that the influence of the Indian Press in important matters should be small. It clearly appears that it is. The most important of all matters is that the Government should be generally respected. How can the readers of the papers in question respect a Government, abuse of which they are given daily to read? That may well be one's question, but that they do respect it admits of no doubt. I have just been speaking to an official who has just returned from a short tour in one of the districts of Eastern Bengal. His launch was boarded late one day by a student of the Presidency College, the young man, then on vacation, having walked eight miles on purpose to ask the official and those with him to visit his village the next day. They did so, and their reception left no doubt in their minds of the respect in which the Government they represented is held. They had also the satisfaction of feeling that their advent had strengthened the hands of the young man and his companions in an effort, not encouraged by the elders of the village, to improve its health and sanitation.

The Administration Report covers the whole field, but it has already occupied us long enough for one day.

Sir David Yule.

The markets were closed yesterday immediately upon receipt of the news of the deeply-regretted death of Sir David Yule. The question on the lips of everyone is: Will there ever again be a Calcutta merchant prince with such a record? Sir David had become a figure in international finance, but there is no claim equal to Calcutta's to the possession of his fame in business. Yet, the *Statesman* says, "to most people in Calcutta Sir David Yule was a mystery. They had never seen him. He lived in Calcutta—off and on, it is true, during the last ten years—for the best part of half a century. He was for many years its richest and most powerful citizen; but to nine men out of ten he was a name, a mysterious power whose ways and motives were as inscrutable as Fate."

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 7.

The Loss of Contact.

The situation in India is far from reassuring. Every dispute that arises—whether it is between Government and the people, between Capital and Labour, or between Hindu and Muslim—develops with alarming rapidity into a deadlock between the two parties. This is obviously due to the fact that in Indian public life, the men of moderate views who at such times are of the greatest value to the country, have no place. The responsibility for this, however, does not lie wholly on the shoulders of the Indian extremists. The conservative elements, both in and outside India, have always shown a tendency to ignore the men who would have held the balance between two conflicting parties. That the Liberal has been thrust, until recently, into the background of Indian politics, is the fault not only of the intolerant extremists but the Government which has not troubled to pay serious attention to the views held by him. That the Liberal Hindu has not been able to stand against Hindu Sabhaites is due to the fact that his Muslim countryman has always ignored him. In Labour we find a man like Mr. N. M. Joshi still in the foreground, but this is due to the fact that both the millowners and the workers look to Mr. Joshi to mediate between them. Even here, however, very often Mr. Joshi's advice is disregarded or even resented. The result of all this, therefore, is the loss of contact between opposing views in every field.

Bardoli.

Mr. Vallabhbhai Patel, leader of the Bardoli campaign, came to Bombay this week to collect more funds. More important, however, than Mr. Vallabhbhai Patel's reception in Bombay is the report published by the Servants of India Society on the Bardoli situation. The Society had deputed Pandit Hirdayanath Kunzru and Mr. S. G. Vaze to inquire into the question. None of the three members have much sympathy for the Non-co-operation movement; in fact Mr. Kunzru and Mr. Vaze have been strongly opposed to the movement. Their conclusions were that "in view of these considerations (mentioned in the report) we are clearly of the opinion that the demand of the peasants of Bardoli for a fresh inquiry is fully justified. A new inquiry is necessary in the interests of justice. The recent announcement that the revision of the settlement of the Viramgam Taluka in the Ahmedabad district will be reconsidered makes the case for the reconsideration of the settlement of the Bardoli Taluka unanswerable." They have not, however, expressed their approval of the methods adopted by the people of Bardoli to make themselves heard.

The Bombay Strikes.

There is as yet no sign of the strikes coming to an end in Bombay. The millowners have invited the strike leaders to meet them again, but there is not much to be hoped for from that quarter. Doles of rice and *dal* are distributed among the strikers by the Relief Committee and the management of the Toyo Poddar Mills have been giving relief to their employees on strike and to their children. Meanwhile the strikers at their meetings are expressing their determination to hold out—not a very difficult task seeing that the funds of the Relief Committee are not exhausted. The situation at other places is not more promising. Personally the writer considers it is high time that the Government—the only body that can interfere with effect—took a hand. It has tried the policy of waiting for something to turn up and it ought to have found out by now that the situation has gone too far for any settlement to arise between the parties if they are left to themselves.

THE LATE SIR FRANK SLY.

An Appreciation.

BY SIR VALENTINE CHIROL.

The late Sir Frank Sly's activities in India covered a much more varied field than is usually given to Indian civilians. A self-made man in the best sense of the term, he passed from Balliol College, Oxford, into the I.C.S. when he was not yet twenty, the age of admission being in those days much earlier than it is now. He went straight to the Central Provinces, where, after only four years' service, he was entrusted with the responsible work of Settlement Officer in one of the chief districts, and it was then that he was brought into intimate relation with the land and with the primitive and rather backward peasantry whose fine qualities he learnt to admire and have a real affection for. Agriculture was then beginning to receive increased attention at headquarters as the greatest of all Indian industries. He went to the Government of India in 1895 as Under-Secretary and then as officiating Secretary in the Department of Revenue and Agriculture, and after a few years was Deputy Commissioner and then Commissioner of Settlements and Agriculture in his own Province. Appointed by Lord Curzon to the newly-created Inspector-Generalship of Agriculture, he was deeply interested in and helped to promote several of the new departures connected with agriculture, whether in research work, in the formation of district agricultural societies, in the opening of demonstration plots in the villages, which were to produce very promising results before he left India, whilst since then the appointment of a Royal Commission on Indian agriculture will, one may hope, help to carry India a long step further on the line of advancement which he regarded as the most hopeful and important of all.

It was on the Royal Commission on the India Public Services, 1912-1915, that I was for the first time brought into close contact with Sly. Our other English colleagues included men who were to rise to more conspicuous positions at home and in India—Mr. Ramsay MacDonald, Mr. Herbert Fisher, and Lord Ronaldshay amongst others—but perhaps the most striking figure on that Commission was the Indian leader, Mr. G. K. Gokhale, who combined in an almost unique degree an enlightened Indian patriotism with all the best that an Indian could learn from Western education. It was interesting to watch the growth of mutual respect and confidence between the Indian, who was determined to assert the rights of his fellow countrymen to a larger participation in the administration and government of their land, and the sturdy British civilian who, with all his liberal sympathy with the legitimate aspirations of India, was clearly there to uphold, together with another distinguished and considerably older civilian, Sir Murray Hammick, the interests of the great service to which they both belonged. Unfortunately, Mr. Gokhale died very prematurely before the Commission had drawn up its final Report in 1915, and the Report itself was, so to say, swallowed up in the far-reaching commotions of the Great War.

Whilst the large scheme of reforms which was to take shape in the Government of India Act of 1919 was being matured, Sly saw something of Gandhi, the strange figure who was afterwards to wage a tremendous campaign against the reforms, and nowhere more fiercely than in Sly's own Province. He presided over a Committee on which Gandhi himself served for the investigation of the cultivators' grievances in the Champaran district of Bihar. Again there grew up between the British civilian and the ascetic Indian, who had not yet launched out as the prophet of Swaraj, such a feeling of mutual respect that even after they had drifted into profound political antagonism and Gandhi presided over the stormy session of the Indian National Congress at Nagpur in the full frenzy of non-co-operation, whilst Sly was residing at Government House as Governor of the Central Provinces,

the former departed so far from his rigid boycott of a "Satanic" Government as to pay the latter a long visit as a mark of unaltered personal regard.

It was after serving, during the elaboration of the reforms, on Lord Southborough's Franchise Committee, that he was appointed to be Governor of the Central Provinces, an appointment which he held until, at its expiry in 1925, he retired after forty years' strenuous service—never more strenuous than whilst he was Governor, for, as I have already said, the non-co-operation movement nowhere raged more fiercely than there at a time when throughout British India the machinery of government was being subjected to a very severe strain. The Central Provinces had suffered, like the rest of India, from the economic set-back that followed the War, and in Sly's second year of office he had to fight against a bad famine, which intensified a general epidemic of discontent ruthlessly exploited by political agitation. In spite of all these grievous difficulties Sly laboured with untiring courage to apply the reforms in the liberal spirit which had inspired them, and to induce his Indian Ministers to work with him to make dyarchy a success in the face of opposition and obstruction more virulent and resourceful than perhaps even in Bengal. So successful were for some time his efforts that the Swarajist leaders, mistaking for weakness a policy of studied moderation, concentrated their worst attacks upon him. But he was not the man to surrender to the forces of disorder, and when in 1924 the Swarajists, abandoning the rigid boycott of the Legislatures ordered by Gandhi, entered the Nagpur Legislative Council with a majority which they were bent on using to destroy the reforms from within and his Indian Ministers resigned their offices, he did not hesitate to put the emergency provisions of the Government of India Act in force. He took over the administration of the "transferred" departments and carried on the government of the Central Provinces with his Executive Council on the old unitary system until his retirement. Those amongst his own fellow countrymen who had always misdoubted the reforms were prone to see the fulfilment of their worst forebodings in the temporary failure of dyarchy in a province entrusted to the charge of a Governor who had been concerned in the preparation of the reforms they hated. But though Sly was for the moment discouraged, he never lost faith in the fundamental principles underlying the reforms, for he was convinced that, if we are to carry the people of India with us on the road to responsible government as an integral part of the Empire, we must find some means of carrying with us the Western-educated Indians who, however woefully they may sometimes misread the lessons of Western education, are its direct and special offspring.

Sly's fine constitution and powerful physique showed no signs of having suffered from his long period of service in India or from a far heavier share of domestic afflictions than befall most men. He had always been a mighty hunter, and less than two years ago he returned to his beloved Central Provinces to shoot big game in the jungles he knew so well, and he came back much heartened in his enduring optimism by the warmth of the reception given to him by all classes, even by some of his former political opponents, and by many demonstrations of genuine affection from the humbler folk in the country districts, with whom I had more than once had an opportunity of witnessing his kindly relations whilst accompanying him on tour. After his fatal disease had declared itself, only a few months ago, he was able to spend two or three weeks, during a slight temporary rally, with his old and devoted Nagpur friends, Sir Maneckjee and Lady Dadabhoi, in their beautiful residence on Kingston Hill, and it was a special comfort to him, when the shadow of death was already on him, to receive the Sacrament from his old friend Dr. Chatterton, who had been for many years Bishop of Nagpur, for his heart remained always in the Central Provinces. Death came to him as a happy release from terrible suffering, supported with the same

courage and strength of will that he had displayed all through his life—a brave man, modest and kindly, and endowed with that deep sense of trusteeship which has always inspired the best amongst the British rulers and administrators of India.

THE REPORT OF THE ROYAL COMMISSION ON AGRICULTURE IN INDIA*.

By P. R. CADELL, C.S.I., C.I.E.

It is, however, in the chapter on village life that the Report contains the most interesting of its suggestions, though not the clearest of its recommendations. It recognises that the various Governments must do much more in the future than they have been able to do in the past, particularly in respect to medical relief and to education. But it points out also that the villager must adjust his outlook to meet changing conditions. "What is required," the Report says, "is to increase, in desirable directions, the villagers' wants, and to show him how to satisfy them by his own efforts." The hostile critic might observe that the villager is already painfully provided with wants which he is barely able to satisfy, without the creation of further needs. The Commission relies on improved guidance and the revival of the tradition of corporate action to raise the standard of village amenity; without such a revival, the hope of radical improvement must, the Commission thinks, be abandoned. Unfortunately every extension of administration, including local self-government, has hitherto led to a decrease in local effort. If the process can be stayed, and corporate action revived, through the adoption of the Commission's advice, the result will be the happiest conclusion of the Commission's labours.

The Report appears in another passage to point out the necessity for a reduction in the birth rate. It is doubtless as true as it was when the Famine Commission reported in 1880, that the numbers on the land are far greater than the requirements of cultivation demand, and the present Report holds out little hope of the possibility of the establishment of rural industries on a scale sufficient to occupy the over-abundant leisure of the agricultural classes. The increase of industries in the large cities, which will be the presumable result of the present protectionist policy, will doubtless continue to draw off much of the excess of rural population. The truest means of uplift will, however, be the diffusion of mass education in its widest sense. It is perhaps somewhat disappointing to find the Commission, while agreed on the necessity for compulsory primary education, so indefinite regarding the stages of its progressive adoption. It would, however, be difficult to prescribe compulsion without some idea of the manner in which the cost is to be met. The Commission is entirely convinced of the necessity for female education; but the method suggested for the demonstration of its advantages, namely the record of the educational history and subsequent development of the children of literate mothers, or of mothers educated *ad hoc* seems singularly circuitous and open to disappointment. The Commission's preference for the ordinary secondary school with a modicum of elementary agricultural teaching to the vocational secondary schools tried in Bombay will command general assent.

The proposals outlined in the Commission's Report will necessitate an enormous increase in the number of agricultural and veterinary officers. The proposals also contemplate a large number of special appointments for which special recruitment or training will be necessary. The condition of the superior agricultural service is already sufficiently serious. Recruitment for it ceased in 1924;

* The first part of Mr. Cadell's article appeared in the issue of THE NEAR EAST AND INDIA of July 19.

yet no Province has yet constituted the Provincial Service required to take its place. It is proposed that appointments to the agricultural services should be by nomination, and that many of the vacancies in the upper class, should, with the exception of research appointments, be filled by promotion from the second class; while the second class itself should be largely composed of men promoted from the subordinate ranks. It is obvious that much opportunity will be afforded for jobbery unless adequate Public Service Acts are passed. The Commission clearly indicates it to be desirable that many of the posts requiring special knowledge or administrative experience should at least at the onset be filled by officers recruited from abroad; but no definite pronouncement to this effect is made, except as regards certain of the Pusa appointments. Speaking generally, the adoption of the Report's proposals would appear to entail an increase in the host of minor officialdom. This may be inevitable: it is none the less regrettable.

In concluding this report the members of the Commission emphasise that, while the ultimate success of all measures of rural progress must depend on the outlook of the peasant, the responsibility for taking action to render the conditions suitable for progress rests with Government. They consider that neither the Government of India nor the local Governments have in the past appreciated this responsibility. The Governments might perhaps reply that their responsibility is limited by their capacity to raise money. The Commission professes itself unable to frame any estimate of the cost of its proposals, and limits itself to the hope that the various legislatures will appropriate the money for agricultural service as it becomes available. It is, however, clear that the amounts required are beyond the power of local legislatures to provide except by the imposition of rates and taxes which would be so unpopular as to defeat their object. It might perhaps be suggested that the most suitable source from which the required reinforcement of provincial revenues could be obtained would be the import custom duties. These are imposed almost entirely in the interest of the manufacturer and industrialist. The cultivator receives no direct benefit from them while he bears a large share of their burden. Unless some such assistance is given, it is obvious that the progress of the agricultural interests in the different Provinces will be not merely slow but markedly uneven.

The Report ends with a word of warning to Viceroy and Governors as regards the necessity for their personal interest in agricultural matters. No one will doubt the value of the driving force of a Viceroy like Lord Curzon in the removal of abuses connected with famine or irrigation administration; or of the knowledge and interest of an agriculturist like Lord Irwin. In the Provinces, however, the responsibility for efficient administration must rest on the Minister of the Department; and ultimate success is only possible with the co-operation of the legislatures and of the electors.

The Report will disappoint some. It may even conceivably displease others. But as a clear pronouncement of the problems to be met, and the objects to be aimed at, it deserves the highest commendation

NEAR AND MIDDLE EAST ASSOCIATION.

Sir Leslie Scott, K.C., M.P., who is assisting the Standing Committee of the Chamber of Princes in the preparation of its case for presentation to the Indian States Committee, delivered an interesting address to the members of the Near and Middle East Association on July 19 on "The Problem of the Two Indias." In the unavoidable absence of Captain E. N. Bennett, the Chairman of the Committee of the Association, the chair was taken by Dr. E. H. Griffin, D.S.O., M.C. Mr. L. F. Rushbrook Williams and Sir Thomas Strangman also spoke.

The meeting was followed by a reception for the

members held by Mrs. Beauchamp Tufnell, who kindly lent 14, Queensberry Place for the occasion. Among those present were:—

Lady Talbot de Malahide, Lady Florence Beresford-Ash, the Dowager Lady Boyle, Hon. Blanche Butler, Sir Thomas Strangman, Sir William Clark, Sir Willoughby and Lady Dickinson, Sir Frederick and Lady Graham, Sir Harry Eyres, Lady Hewitt, Lady Tighe, Herr Karl Zeileissen, Dr. and Madame Lessinoff, Dr. Feine, Rear Admiral Taylor, Mrs. E. N. Bennett, Mrs. H. C. Luke, Mr. Roland Michell, Mrs. St. John Philby, Colonel Etherton, Colonel W. B. Lane, Mrs. Halford Hewitt, Mr. Rushbrook Williams, Mrs. William Paget, Mr. Graham Scott, and Mrs. de Bunsen.

OBITUARY.

SIR FRANK SLY.

Sir Frank George Sly, the outstanding features of whose long and distinguished career in the Indian Civil Service are reviewed by Sir Valentine Chirol on another page, was sixty-two years of age and educated at Balliol College, Oxford. He entered the Indian Civil Service at the age of 19 and ten years later was appointed a Under-Secretary to the Government of India. After serving successively as Inspector-General of Agriculture and Commissioner of Berar, he was placed on special duty in 1912-14 as a member of the Royal Commission on the Indian Services and subsequently presided over the Public Works Department Reorganisation Committee.

Created K.C.S.I. in 1918, he played an active and important part in the preparatory work incidental to, and the introduction of, the Montagu-Chelmsford reformed constitution, serving on, among other committees; the Franchise Committee, presided over by Lord Southborough. Afterwards he was in turn Chief Commissioner and Governor of the Central Provinces, being appointed to the latter post in 1921.

SIR HENRY PROCTER.

Although he had been in failing health for several years past the death of Sir Henry Procter, at the age of 62, came as a shock to a wide circle of friends both in India and in this country. After a long and active career in India, where he occupied a prominent position in the business and social life of Bombay, Sir Henry, after his return to this country, continued to render notable service to many philanthropic organizations, particularly the Young Men's Christian Association. During the thirteen years he was at the head of the Bombay organization no less than three new buildings were erected—one for Young Indian business men; another a large students' hostel; and the third, known to-day as the Procter Building, was for Anglo-Indian apprentices in whose welfare he was particularly interested. On his transfer to the London office of his firm—Nixon Forrest and Company—in 1914 Sir Henry applied himself with the same energy to the War-time activities of the same organization and ultimately became honorary treasurer of the English National Council of Y.M.C.A.s, and of the War Emergency Fund. In 1922 he succeeded Lord Kinnaird in the presidency. In this work, as in all he did for the Y.M.C.A. in India Sir Henry enjoyed the active assistance of Lady Procter, who became Chairman of the War-work department of the Y.M.C.A. and was responsible for the Blue Triangle hostels, clubs, etc., for women workers in England and France.

Under his direction the activities of his firm in India—Killick Nixon and Company—were widely extended, notably in the direction of industrial development, especially feeder line railways. He was twice Chairman of the Bombay Chamber of Commerce, and served as its representative on the Bombay Legislative Council. He also did good work as a member of the Bombay Port Trust.

The Rev. C. J. G. Saunders, who has been appointed Bishop of Lucknow, was ordained in 1911, and went direct to the Cawnpore mission, where he remained till 1917. Subsequently he held chaplaincies at Rookie, Cawnpore, and Chakrata. From 1921-1925 he was staff chaplain at the Army headquarters at Simla, and since then he has been chaplain to the Metropolitan of India.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Loan.

In spite of the urgency which could be pleaded for a large foreign loan, the Roumanian Government has had perforce to be content with a postponement—which was indicated in these columns at the beginning of June as being inevitable—until the autumn. M. Bratianu, however, has known how to turn his disappointment to some political advantage. By securing the promise of an advance on the first instalment he is able to impress upon the Roumanian people that their country has been financially rehabilitated in the eyes of the Western Powers. No time is, therefore, to be lost in bringing this fact home to the electorate. A special session of Parliament is to be summoned for July 26, in order that it may have submitted to it the necessary measures authorising the Government to contract the loan and to make the arrangements required for obtaining a preliminary advance, which, it may be expected, will be devoted to the financing of the harvest. The total amount of the loan, it is announced, is to be £50,000,000, with a first instalment of £16,000,000, against which an advance will be made at once of £4,000,000. There has never been any question that the resources of Roumania justify such a loan; the difficulty has been the financial policy adopted by M. Vintila Bratianu, the present Prime Minister, in the past, which had the effect of alienating foreign capital and damaging Roumania's reputation in the world's financial markets. That policy has now, happily, been abandoned.

Drought in Anatolia.

It is very evident from the Turkish Press that the drought in Central Anatolia is, in spite of official assurances, causing the Turkish Government some anxiety and the people concerned considerable distress. Reports have been received of villages' being deserted, with the result that the authorities will have more refugees on their hands, in addition to those from Greece, for whom comparatively little has been done. Apart from the personal equation, the trouble raises the whole question of public works, for the problem of Central Anatolia turns on irrigation, and behind this lies the capacity of the Turkish Government to meet one of the most pressing needs of the country. Public works on the scale required entail heavy expenditure. The Government does not possess the necessary funds, and so far it has failed to obtain them. Consequently urgent irrigation works in which the welfare of the country is involved have been neglected, because the policy of the Government in other directions has prevented it from securing the capital which could have been forthcoming, if Angora had adopted a different attitude towards foreign capital and towards its own indebtedness to foreign countries. It is gradually waking up to the error of its ways, but before the new policy can have effect the country has been overtaken by this minor disaster.

"Water is Best."

A tour of inspection carried out by the Turkish Minister of the Interior, Shukri Kaya Bey, has established the fact that the vilayets most affected by drought from which Central Anatolia is suffering are those of Konia, Ak Serai, Yozgad, Kirshehir, Eskişehir and Afium Karahissar, where over a hundred villages are involved.

In the early efforts made to minimise the extent of the trouble the cause was attributed to the backwardness of the peasants, who were alleged to choose high ground for their crops instead of lower ground where water might be obtained from rivers, lakes or wells. Further, the peasants were urged to vary their crops, and instead of the universal wheat, barley, and maize to try—potatoes. Further reflexion, however, has shown that, if the repopulation of Turkey is to be achieved, irrigation is not a matter that can be left to the initiative of the individual peasant. With three successive leading articles in one newspaper devoted to the subject of irrigation in Anatolia it is evident that the authorities are seriously exercised by the existing state of affairs. Much wisdom and practical common sense were shown by those peasants who at the formal opening of the Angora-Caesarea Railway met the Prime Minister at a wayside station to thank the Government for giving them such a fine railway, but, producing samples of their crops, said that they wished it had been water instead.

Tariff Problems in Palestine.

In a country as small as Palestine interests which elsewhere might assume considerable proportions may be represented by a single firm. A case in point is provided by the challenge thrown down to the Government's tariff policy as it concerns the trade in chocolates and sweets. Hitherto there have been two firms involved in Palestine, but they are now contemplating amalgamation and are availing themselves of their united strength to bring pressure to bear on the Government to meet their demands. One of the firms has already resolved to transfer its plant to Syria, where the import duty on sugar and other raw materials of sweets amounts to half what it is in Palestine, and a threat of the removal of the joint business is evidently implied. Briefly the contention of the firms is that, with the duties imposed on raw materials, they cannot compete with imported sweets. The whole question is under the consideration of the Palestine Government, and there is no reason to suppose that a decision entirely just in all the complicated circumstances will not be taken. It is, perhaps, unfortunate that any change in the tariff stands to benefit a single firm only, as it can hardly be introduced without raising the price of sweets to the consuming public. On the other hand, the economic situation in Palestine is not calculated to encourage the Government to forgo the revenue derived from the duty on imported sugar.

Sudan Trade Improving.

My remarks last week about the tendency for conditions in the Sudan to improve find ample corroboration in the latest trade returns for that region—those for the first four months of this year. With one exception—Government imports, which show a decline of £E45,740 as compared with the corresponding period of 1927—all the items in the list show increases, in every case but one of a substantial character. Thus public imports at £E1,366,384 have risen by £E152,432, exports at £E2,987,136 are up by £E237,320, while transit trade at £E99,759 and re-exports at £E68,392 show respective increases of £E39,445 and £E2,736. Finally, the total volume of trade at £E5,184,271 shows an increase of £E386,193: a satisfactory result in any case for only four months, but particularly so when the poor returns for the first two months are borne in mind. The most notable feature of the returns is the increase in the public imports, an increase which is spread over a larger number of commodities and points to the improvement in the material condition of the inhabitants. As might be expected, cotton piece-goods show the largest rise, and other important increases took place in metals and metalware, motor cars, cycles and accessories, and machinery. It is necessary once again to repeat the warning that unduly rapid developments must not be looked for in the Sudan, but it must be emphasised that the progress which is now taking place in the country, of which the figures I have quoted are an obvious indication, makes it quite clear that the Sudan in the future, although with its inevitable restrictions, is going to offer an increasingly important market and one which will merit close attention on the part of British traders.

British Market and Palestine Products.

The interesting news is forthcoming that a company is shortly to be formed for the development of the sale of Palestine products in Great Britain. Among the commodities for which it is hoped to find an extensive opening are soap and olive oil. The company which is manufacturing these goods at Haifa is exporting large quantities to the neighbouring markets, notably Syria. Now it is desired to enter the European markets. It is also anticipated that a large market can be developed for what may be termed the artistic products of Palestine—such commodities as pottery, embroidery, and needlework. A varied range of exhibits of these things was shown at the British Empire Exhibition at Wembley, and occasioned much interest on account of the delicacy of the designs. The present development is, of course, the logical sequel to Palestine's participation in the Exhibition. It is a truism that nothing can be accomplished to-day without intensive publicity, and this applies particularly to the development of markets, for the memory of the public is short.

Palestine Harvest Prospects.

It is very satisfactory to learn that there is no foundation for the report that this year's crops in Palestine have been a failure. Taken as a whole, I understand that the crops are quite promising, except in certain parts of the Jordan Valley, where they are rather bad. The position with regard to Palestine's staple crop—the Jaffa orange—is most encouraging, and there is justification for

anticipating that the yield will show an appreciable advance on that of the past year. It has to be remembered, of course, that the extension of the area under orange trees is going on steadily, for there is a very natural concentration on the product which has been for so long the bulwark of the country's export trade. The importance to Palestine at the present juncture of a good harvest is so obvious that it is almost unnecessary to emphasise it. A failure of the crops would have meant an accentuation of the economic depression from which the country has been suffering, and would give a renewed impetus to the movement to leave the country. Happily the harvest outlook puts these unpleasant possibilities out of court.

Suez Canal Traffic.

The results recorded by the Suez Canal Company for the first six months of this year are distinctly encouraging. The number of vessels transiting the Canal was 3,230, as compared with 2,903 for the corresponding period of 1927 and 2,639 for the first half of 1926. The traffic receipts for the period amounted to 117,020,000 francs, as against 108,640,000 francs for the same period last year. These figures give encouragement to the view that world trade continues slowly but steadily to improve, though the results of the improvement may not yet be very evident in this country.

COMMENTATOR.

THE ECONOMIC BOARD FOR PALESTINE.

The sixth ordinary general meeting of the Economic Board for Palestine was held on July 17 at St. Helens Court, Great St. Helens, E.C. In the absence of Lord Melchett the Chair was taken by Sir Robert Waley Cohen. Sir Herbert B. Cohen, Colonel S. L. Mandleberg, Mr. O. E. d'Avigdor Goldsmid, Mr. Sigmund Samuel and Mr. W. S. Cohen were also present.

The Chairman said: "You see from the report, and it is confirmed by everyone who comes from Palestine, that although the position there has been very difficult in many respects during the past year, still there has been steady progress in many directions and there are some encouraging features.

I prefer to dwell on these rather than on the difficulties, because I think Palestine has perhaps suffered too much in the past from having its temperature taken too frequently, which is not good either for the patient or her friends. There has been a period of high fever and it was followed in the course of nature by a sub-normal period, but now I think we are slowly getting back to normality, which will be completed by the tonic effects of the new port at Haifa and the completion of Mr. Rutenberg's Hydro-Electric Works.

The Export Trade.

The port will reduce the cost of living and greatly facilitate exports, and I have always believed that in Syria and the adjoining countries Palestine can find a market for her surplus production. I think it is a most encouraging sign that in 1927 the exports increased by nearly £600,000 and included substantial quantities of refined olive oil, cement, and stockings, in all of which the figures for the preceding year were negligible. When you realise

LIVERPOOL MANCHESTER GLASGOW

that these exports are the products of factories which have only been in production for a very short time, and that what they export is only their surplus production after the Palestine market has been satisfied, I think it is very encouraging and a justification for the policy of industrial development which the Economic Board has been urging on the Palestine Government for so many years.

Customs Tariff.

I am very glad to say that this policy has now been officially accepted; the revised tariff which was promulgated in November is a great improvement on its predecessors, and a Tariff Board has been created which will make it easier for those engaged in industries to bring their requirements before the Government.

The reduction in the cost of power which will follow on the completion of the Jordan Works will be another great help to industry, which should lower the costs of the existing industries and encourage further development.

We are still unable to persuade the City that Palestine is a profitable field for investment, and until we do we shall be short of capital on the scale on which we require it. In the meantime we are pegging away in our own comparatively small way and seeking to build up successful enterprises and so creating that confidence in the country which is at present unfortunately lacking in the investing public.

Palestine Corporation.

The Palestine Corporation has had a better year, and is now entering with something on the credit side on the path which will lead, I hope, eventually to dividends.

The companies we are interested in, the Cement Company and the Salt Company, are making satisfactory progress. Apart from these, the Corporation has now a sum of £50,000 out on loan account, which includes a substantial sum lent to orange growers for the development of new groves.

Orange growing is the latest way of making a fortune in Palestine, and some people are afraid it is being overdone. Personally, I am not afraid of this. I am sure the English market can absorb double or treble the present production of the Jaffa orange, if only the growers would take care that it comes in good condition, properly packed and graded.

Central Bank of Co-operative Institutions.

You have been supplied with a very voluminous report on the work of the Central Bank of Co-operative Institutions in Palestine, Ltd., which is controlled by the Palestine Corporation of America, the Jewish Colonisation Association, and the Economic Board jointly. I am afraid I have not been able to read it all. Mr. Goldsmid, whom I am going to call upon to second the adoption of the report, is the Chairman and will be able to tell you all about it and explain why its hitherto excellent record as regards bad debts has been temporarily tarnished.

In one respect, anyhow, I think this institution sets us all a good example. We have here three Palestine organisations working together in the closest co-operation and I believe in perfect harmony. That is a rather unusual thing in Palestine and I think the principle of co-operation might with great advantage be more generally applied in Palestine undertakings, and that it would lead to greater efficiency and economy. Palestine is too small and too poor a country to support a number of different organisations all doing much the same work, but each with its own office and staff. There must be much duplication of effort and unnecessary expense. I cannot help feeling that in a great many directions it must be possible to unify the activities of the various organisations which are working in Palestine, and as far as the Economic Board is concerned I am sure that we should welcome action to secure this.

Palestine Products Company.

For this reason we were very glad that the company which is being created in London for the purpose of pro-

moting the sale of Palestine products, invited our co-operation. On behalf of the Economic Board I should like to assure the promoters that we cordially sympathise with their objects—it fits in admirably with the work of the Board—and that we can assure them a hearty welcome as members or associate members.

A resolution is being submitted to an extraordinary meeting, to be held at the termination of this meeting, for the necessary alteration of the Articles, so as to admit associate members paying a minimum annual subscription of £1 and entitled to one vote for every £1 paid. We hope for a large addition to our membership and a more extended interest in our activities."

The Chairman concluded by paying a tribute to the work of the Honorary Secretary, Mr. W. S. Cohen, and said that, if the Economic Board had done nothing else except secure his work for Palestine, it would have justified its existence.

Mr. O. E. d'Avigdor Goldsmid, speaking of the Central Bank of Co-operative Institutions in Palestine, Ltd., said that the report of the Bank showed the great amount of valuable work done. The amount outstanding from Co-operative Societies in Palestine was £140,000. It was £20,000 more than last year and nearly £60,000 larger than two years ago. At the same time their clients had increased in number, and sixty Co-operative Societies were taking advantage of the facilities offered by the Central Bank.

The report and accounts were unanimously adopted.

Sir Herbert Cohen, Bart., O.B.E., and Lt.-Col. H. J. Solomon, O.B.E., M.C., who retired under Article 40 of the Articles of Association, were re-elected members of the Executive Committee.

Mr. G. S. Engle was re-elected auditor.

REPORT OF THE EXECUTIVE COMMITTEE OF THE ECONOMIC BOARD FOR PALESTINE

For the Year ended December 31, 1927.

The Executive Committee submit their report and the audited accounts for the year ended December 31, 1927, and also a report of their representative in Palestine, Mr. A. Goldwater, the General Manager of the Palestine Corporation.

The year 1927 has been a period of adjustment in Palestine in reaction from the somewhat feverish activity of 1925. Credit and capital from abroad for development work have been restricted, emigration, principally of persons who have arrived in the country since 1920, exceeded immigration by over 3,000, and unemployment, chiefly in Tel-Aviv and to a lesser extent in Haifa, reached serious proportions at the beginning of the year, and there were some bankruptcies, for the most part of minor importance, among merchants.

The earthquake in July caused considerable damage, principally in Nablus, Ramleh, and Ludd, where over 500 houses were destroyed. With the aid of contributions from the Government and subscriptions in Palestine and from abroad, including £100 from the Board, the damage has been promptly repaired, and conditions in Nablus, where the damage was greatest, are now almost normal.

Notwithstanding these adverse factors there has been solid and steady progress. Agriculture has been flourishing and abundant crops, more particularly summer crops, were obtained throughout the country. The only exception was barley, which suffered from the drought.

Orange Growing.

Orange growing had another successful year, the fourth in succession since 1924, exports having amounted to over 2,600,000 boxes of a value of £814,000, an increase of 40 per cent. over each of the three preceding years. The average price realised was slightly lower than for 1926, but this was more than compensated by the high yield, and growers once again made large profits. There was a further considerable extension of orange groves. About 7,000 dunams were planted during the year, bringing the total area of groves producing and in development up to about 50,000 dunams, compared with 32,000 dunams in 1924. The Empire Marketing Board has taken an active interest this season in the orange trade of Palestine in view of its increasing importance and the demand in England for the Jaffa orange. A beginning has been made with a system of fruit control at the ports of export, and the fruit is also being inspected by specially appointed botanists at Liverpool, Manchester, and the other ports of arrival.

The Government has been giving increasing attention to afforestation, and over 38,400 dunams were afforested during the year with 787,000 trees, including 13,350 fruit trees; the Government Forest Reserves at the end of the year had an area of over 640,000 dunams. It is reported that nearly 2,000,000 fruit trees and 172,000 other trees were planted by the public during the year.

The industrial undertakings which have been started during the past few years are now overcoming their initial difficulties and

selling their output in Palestine and Syria. It is estimated that 513 undertakings with an invested capital of £1,500,000 and employing 4,700 workers have been established since 1920, and the export returns show substantial increases in the exports of a number of manufactured goods.

A revised import tariff was introduced on November 4, 1927. The new tariff was designed to change Customs dues, wherever possible, from an *ad valorem* to a specific basis and to give further protection to local industries. Although the protection given is not in all cases adequate, the new tariff has already had a most beneficial effect on several industries, and if maintained for a sufficient period should make it easier to obtain capital for industrial development in Palestine.

Increased Exports.

The increase in exports under the three main heads were as follows:—

	Increase over 1926.
Oranges	£232,658
Agricultural Products	£178,000
Manufactured Goods	£160,000

the most notable increase in the last category of exports being £58,000 refined olive oil, £58,000 laundry soap, £17,700 cement, and £10,000 stockings.

"The soap, flour, and (recently established) cement industries show steady development and are increasing their export trade. The value of edible oils exported rose from £9,470 in 1926 to £75,673 in 1927. The tobacco industry is flourishing and one factory alone, which started business a few years ago with several thousands of pounds, has now raised its capital to £150,000. Several of the smaller industries established at Tel-Aviv are increasing their output and local sales, and are also finding export markets."

The tourist trade, which has always been of great importance to Palestine, shows continued expansion. In 1926 the number of visitors was 52,000, as compared with 20,000 in 1922. In 1927 the figures were 59,500. There can be little doubt that, with the better hotel accommodation which is likely to become available in the near future, the tourist industry will develop still further.

The revenue for 1926-27 was £E2,390,081, almost £E350,000 less than for 1925-26, and the expenditure was slightly over £E2,000,000, approximately the same as for 1925-26. The Public Debt now amounts to approximately £7,750,000, consisting of:—(1) Ottoman Public Debt, £3,284,429; (2) Palestine Loan, £4,475,000. This loan was issued in November for the repayment of advances and for the construction of a port at Haifa, which it is expected will be begun in the autumn.

The construction of the Hydro-Electric Power Plant on the Jordan is now proceeding and it is hoped that the first units, having a capacity of 24,000 h.p., will be completed within the next eighteen months. Sixty million k.w.h. per annum of electrical energy will then be available, and it is expected that there will be a considerable reduction in the price now charged for current at Jaffa, Haifa, and Tiberias. A considerable amount of water will also be available from the River Ajaja for irrigation purposes.

The report and accounts of the Palestine Corporation for the year are forwarded herewith and show that the income from all sources was £6,887, £3,067 higher than for 1926, and the surplus of income over expenditure carried to the balance-sheet was £3,860. After deducting from this amount the whole of the debit balance of £2,553 carried forward from preceding years, there was a net profit of £1,306. The 96,490 unissued ordinary shares have now been allotted.

The total amount issued in loans during the year was £E132,636, as compared with £E130,112 during the preceding year. In order to increase the amount permanently available to the bank for its

* Report on Palestine and Trans-Jordan for the year 1927 (Colonial No. 31).

work, which shows a tendency to increase, an agreement was made with the holders of the loan capital, under which this capital is converted into shares carrying a fixed preferential non-cumulative dividend of 3 per cent.

Largely owing to unfortunate transactions with two societies the delinquencies during 1927 amounted to over 3 per cent. of the outstanding bills, as compared with less than $\frac{1}{2}$ per cent. in the preceding year, and a sum of £E3,527 has had to be written off in respect of bad debts, reducing the net profit to £E35, as compared with £E332 in 1926. Full details of the operations of the bank will be found in the general manager's report.

As requested at the last general meeting, the Executive Committee have considered the question of reducing the annual subscription with a view to increasing the membership of the Board. While we are satisfied that there are a number of persons who would be glad to be associated with our work if an annual subscription is fixed which is within their means, the financial position does not justify any recommendations which might result in a reduction of income. We accordingly suggest:—(1) That the existing annual subscription of £20 for ordinary members should be retained, but that the entrance fee of £30 should be abolished. (2) That a class of associate members should be created paying a minimum annual subscription of £1 on the terms of the resolution of which notice has been given.

Sale of Palestine Products in England.

A meeting was held at the offices of the Board on May 14 for the purpose of promoting a scheme for furthering the sale of Palestine products in England by the formation of a company with this object. A committee was appointed to prepare a scheme of co-operation with the Economic Board, and the proposal with regard to associate members has been approved by them.

Sir H. B. Cohen, Bt., O.B.E., and Lt.-Colonel H. J. Solomon, O.B.E., M.C., retire under Article 40, and, being eligible, offer themselves for re-election.

The thanks of the Board are again due to Mr. G. S. Engle, the Honorary Auditor, for kindly auditing the accounts.

MELCHETT, Chairman.

W. S. COHEN, Hon. Secretary.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, August 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, August 2); s.s. Mahrona for Calcutta (Birkenhead, August 16).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 8).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, July 28); s.s. Hatimura for Bombay and Karachi (London, August 11); s.s. Masula for Colombo, Madras, and Calcutta (London, August 11).

Cunard Line.—S.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool August 18, and Swansea August 21); s.s. Bosnia for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, August 25).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 4); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1).

P. and O. Line.—S.s. Mantua for Bombay (London, August 3); s.s. Ranpara for Bombay (London, August 17).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, August 1); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 4); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 18).

Ellerman and Papayanni Lines.—S.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 28); s.s. Polo for Algiers*, Patras, Smyrna, and Constantinople (Liverpool, August 4); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 4); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool August 4, Swansea August 6); s.s. Mardinian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool August 18, Swansea August 18). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The Constantinople Municipal Council has decided to rename Taxim Square in that city and to call it "Monument of the Republic Square". *Sic transit brevitas.*

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 24.

There has been no appreciable change in the Stock Market position during the past week beyond a small hardening in the tendency of gilt edged and other high class investment stocks, the former being favourably affected by Thursday's very strong Bank Return, which showed a stock of gold of £176 millions and a proportion of reserve to liabilities of 48.4 per cent. Since the beginning of this year an addition of no less than £25 millions has been made to the Reserve, and the Bank is now in so strong a position that the rise in the New York Federal Reserve Banks rate to 5 per cent. is not likely to be followed by a similar move here, and the approaching pressure on the exchanges in connexion with the financing of the wheat and cotton crops can be faced with equanimity.

In other directions in the Stock Markets there have been no outstanding features, and there are signs that the approaching holiday season will more nearly assume its customary quietude than was the case either in 1927 or 1926.

Industrial Company Profits.

An analysis made by the *Economist* of the profit and loss accounts of 1,700 joint-stock industrial companies, whose reports have been published during the past twelve months, shows aggregate net profits, after payment of debenture interest, etc., of over £173 millions, an increase of £9½ millions, or 5.8 per cent. over the total profits earned by the same companies in their preceding financial year. Of the twenty groups into which these 1,700 companies are classified only four show decreases in net profits, the most conspicuous decline being recorded by 361 rubber companies, whose profits fell by 42.4 per cent. Prominent increases were registered by the iron, coal and steel, textile, shipping, nitrate, electricity and gas sections. Of the total net profits 60.4 per cent. was distributed to ordinary shareholders, 18.9 per cent. to preference shareholders, and 20.7 per cent. was reserved either in the form of specific allocations or by additions to balances carried forward. The ratio of net profits to total ordinary and preference capital worked out at 10.8 per cent.—the same as at this time last year.

The average rate paid on preference capital was 5.5 per cent. and on ordinary capital 10.5 per cent., the latter comparing with 11 per cent. a year ago. The most prominent decline in average ordinary dividend rates was shown by the rubber group, namely from 23.8 to 11.2 per cent. The average for the oil companies fell from 19.5 to 15.8 per cent. and for the tea group from 31.8 to 28.4 per cent.

Averaging or Exchanging?

The customary feeling of summer lassitude is creeping over markets, and business in most sections of the Stock Exchange is falling off to a substantial extent. The downward trend of quotations will probably become more pronounced—especially in the speculative markets—during the next few weeks. Many investors will accordingly be considering the question of averaging. In certain cases such an operation would undoubtedly prove profitable, but it would involve considerable risk and could only be successfully undertaken by those in a position accurately to gauge the intrinsic value of the shares concerned. Few investors have the facilities—or the time—necessary to form a reliable opinion of the real worth of a security.

The man-in-the-street, therefore, should ponder awhile before buying more of the securities he already holds. But there is no reason why he should let slip the opportunity of acquiring sound shares at what coal merchants would describe as “lowest summer prices.” There is another course open to him. Instead of averaging he should, at the present time, think over the desirability of exchanging into other issues. If he is in the fortunate position of already owning shares showing a profit, he might do very well to dispose of them and put the proceeds into other securities which are to-day quoted at prices appreciably below those ruling a few months ago.

Tea and Tea Shares.

Towards the end of the last year much prominence was given to the possibility of a “boom” in tea shares. This was due to advices from India to the effect that unfavourable climatic conditions had so adversely affected the tea crop that the out-turn for the year would prove to be materially smaller than for the previous season. In September, sales in Mincing Lane were averaging as much as 1s. 11½d. per lb. compared with 1s. 8½d. a few months earlier. The last two months of 1927, however, were so favourable to tea cultivation that the shortage output was largely made up, and the final figure was only 3,030,000 lb. below the previous season. Experts had previously estimated a total deficiency of at least 10,000,000 lb. on the year.

The result was seen in lower tea prices, the final old crop sales in Mincing Lane last week being made at about 11d. per lb. for common tea, compared with 1s. 6d. per lb. for similar grades seven or eight months ago. It is, therefore, easy to understand why the predicted “boom” has not materialised. At the same time, the season, while not phenomenally prosperous, was quite a good one: it was, at any rate, better than its predecessor. Throughout the sales the trade has shown readiness to pay full prices for good quality teas—especially for Ceylon flavours. While, therefore, the Tea Share market is not likely to provide any fireworks in the early future, it should maintain its recent steady tone, and investors desirous of acquiring high-yielding shares for “mixing” purposes should not overlook the attractions of Jhanzie's, Pabbojan's, Singlo's and Empire of India's, all of which yield between 8 and 10 per cent. on the money invested.

A contract has been obtained by the Vulcan Foundry, Ltd., Newton-le-Willows, for twenty-one passenger locomotives for the Indian State Railways.

The “Sentinel” Wagon Works, Ltd., Shrewsbury, have obtained a contract for two 14-ton “Sentinel” locomotives for a 2 ft. 6 in. gauge railway in course of construction for the Baria State (India).

Motors and Motoring.

• By G. B. B.

Since the point was first raised in the columns of THE NEAR EAST AND INDIA as to the unnecessary sounding of the horn by motorists several other papers have taken up the matter, and there is now a chorus of condemnation for the senseless and irritating "honk," which so many car drivers seem to love. As a matter of fact, a horn is rarely necessary. Many drivers never use it except when absolutely unavoidable, and a considerate and careful driver could drive through traffic hour after hour without making any warning sound and yet would be driving in a perfectly careful manner. On the other hand, some drivers hardly ever have their fingers off the button, cannot sight, draw near, or pass another car without making an unearthly and altogether unnecessary noise. What is a motor horn for? Certainly not to use every moment one is driving. Said an experienced driver to me, the other day, when talking over this matter: "Honestly, I do not know why a motor horn has to be fitted to a car. It is no use to anyone in any way. When I am driving, I expect other cars to pass me at times, and, if they are going to do so, I do not want them to honk at me. I am not going to start suddenly to veer across the road. I do not blow my horn at the driver ahead of me, because I assume he is not an idiot either and so will not start zig-zagging as soon as I draw near. I do not sound my horn when nearing a cross road, because I know that, if there is an idiot there waiting to barge out, he will do it whether I hoot or not. So I slacken down, instead. If I am on the side road I do not start blowing my horn like a fog-bound liner the moment I approach a main road. I go dead slow instead and turn well on my own side, with foot on brake ready for an emergency. No, the use of the horn generally betokens the novice, and its excessive use shows a lack of confidence and a state of blue funk. In other words, I regard the man who is always sounding his hooter as a nervous and inexperienced person, who is, probably in view of the condition of his nerves, driving to the public danger." The driver who said that is himself no novice, but was one of the most dare-devil drivers in the old T.T. races. He is constantly on the road, has never had an accident of any kind and I do not suppose he sounds his hooter half a dozen times a year. Smith, the greengrocer, out with his family on Sunday, never takes his finger off the thing, but sounds a devil's tattoo all the way to Southend! And thinks it necessary because, forsooth, he believes there are a lot of bad drivers on the road. So there are: you can tell by their constant use of the Klaxon or whatever other tooting device they may have on their car. Curiously, it never seems to strike these people that the cars they drive are, in the way they drive them, noisy enough to be heard half a mile away.

Brake Mechanism and Car Design.

A correspondent has been taking British car designers somewhat severely to task, asking why they persist in keeping the brake mechanisms below the axles in such a position that they are liable to be very seriously damaged, if not put out of action, as soon as one leaves the main roads. This criticism sounds incomprehensible, until one realises that the critic is writing from a big overseas town and is referring to cars which our makers fondly imagine are just the thing for the Near and Middle East. The correspondent continues: "Surely some torque mechanism is indicated to enable the brake mechanism to be carried above the axle. From my experience the torque mechanism should embody an open tail shaft. One English car that comes to my mind—doubtless there are others—has a cross shaft for the brakes four inches or more below the running board right in the middle of the car. The writer asks: "What is the use of having nine inches of clearance under the centre of the front axle and then only

leaving the same amount of clearance under the crank case drain cup or filler three or four feet behind the front axle, as is the case on so many British cars. This, of course, is the most vital part of the engine and one which has been stripped clean off more than a dozen cars to my knowledge. If one has nine inches of clearance under the front axle one should have at least twelve inches in the middle of the chassis.

Other pertinent queries raised are as to why more general use is not made by English car designers of the exhaust gasses to heat the induction manifold, to assist starting in cold weather, and why radiator shutters are not standard fittings on English cars? The point about this seems to be that, if the radiator is adequately cooled for a country where temperatures of from 95 to 110 degrees Fahr. in the shade are not uncommon in summer, the same radiator will be over-cooled for winter temperatures of 12 to 15 degrees Fahr.

It is suggested also that some system of spring lubrication is necessary, but it must be efficient, preferably using oil, with good oil operated snubbers. It may be pointed out here, that overseas the leaf spring is not regarded with favour and the present form of suspension is not considered to be quite good enough for many road conditions. Another correspondent writes: "The first British manufacturer who will supply a sturdy car, with good clearance and independently sprung wheels, will go far towards securing a good overseas market."

Pneumatic Tyres.

It is exactly forty years ago this week since John Boyd Dunlop applied for the patent for the first pneumatic

For
Effortless Cycling
RIDE

ARIEL
The Good Cycle

You will experience a new sensation astride an "ARIEL" Cycle. Its lightness, combined with free and easy motion, makes the miles fly by without effort, and you will be envied your freshness at the end of a long journey.

The British company which produces this High-grade Cycle also produces, at very competitive prices, the wonder "ARIEL" Motor Cycle.

tyre. He had just retired from his veterinary practice in Belfast, the largest one in Ireland, where twelve horse-shoers worked for him. While a boy at school in the village of Dreghorn, Ayrshire, his native place, Dunlop had observed that a large wooden roller was easier to pull than a smaller one, because, as it had a larger area of surface bearing on the ground, the pressure on each unit of area was less. For years he thought on the idea of wheels with flexible rims that would flatten out and so increase the area of contact with the road. It was a complaint from his small son Johnny, then nine years of age, which actually materialised in the first rubber tyres to be filled with air. Johnny had grumbled about the difficulty of riding on thin solid tyres over the uneven setts of Belfast's streets. His father thereupon made two air tubes from sheet rubber one thirty-second of an inch thick; fixed them to a wooden disc with a thin strip of linen and blew them up with a football pump. The tyres were then fitted to a tricycle made by Dunlop from American elm to his own design with specially shaped rims. The whole was completed one night at ten o'clock, and so eager were both father and son to test the new device that the boy went out for a run in the moonlight and returned triumphant at midnight.

When a racing cyclist who was shown the novelty expressed his doubts about it the inventor challenged him to a race on his thin solid tyres against the nine-year-old boy on the home-made tricycle equipped with pneumatics. It was the first of the unending tale of races to be won on Dunlops. Although John Boyd Dunlop revolutionised cycling and made motor cars possible, he himself could not at that time ride a bicycle; indeed there is no record that he ever rode one all his life.

THE SUDAN AND ABYSSINIAN COFFEE.

The improvement of communications by means of motor roads both in Abyssinia across the Sudan border and in the Sudan itself and the consequent cheapening of transport costs gives promise of earlier and larger arrivals of coffee in the Sudan market (says the report of the Central Economic Board of the Sudan Government). In order to encourage this import from Abyssinia it is realised that a market must be found for the surplus when the requirements of the Sudan have been met.

To this end a sample sack of Abyssinian coffee, cleaned locally by hand, was recently forwarded from Khartoum to the Imperial Institute, London, for the purpose of obtaining (among other information) a trade opinion as to its quality and marketable value in comparison with Brazilian coffee.

The reply received from the Imperial Institute was to the effect that the sample, which weighed 56 lb., con-

sisted of ungraded coffee; the beans varying in size from small to fairly large. A few beans were still in the parchment or in berry and a few pea-berries were present. The beans were greyish-cream and opaque and had an average weight of 0.15 grain; a few were shrivelled and discoloured. The sample contained a small quantity of broken husk, but was practically free from earthy matter.

The coffee was submitted for valuation to brokers in London who, after examining and testing the sample, reported that it was slightly below the standard of Abyssinian coffee received in the United Kingdom, but should be worth about 95s. to 97s. per cwt., landed in London, at date of examination (May, 1928). As regards comparison with Brazilian grades, the experts stated that corresponding prices ruling for average quality Superior Santos were 105s. to 107s. per cwt. and for Superior Rio coffee 80s. to 82s. per cwt. The outlet in the United Kingdom for coffee of the type of sample is as a rule comparatively small, except on a very firm market. There is, however, a demand for it in France and other Continental countries and the firms consulted were of opinion that an export of 4,000 tons per annum could be absorbed without difficulty.

They mentioned that such coffee arriving in London usually comes on consignment and that they would be willing to find purchasers, for either the home or Continental market, for any shipments which may be forwarded.

It will thus be seen that coffee of the quality of the sample forwarded should be saleable in London and that the current price would probably be slightly below that ruling for the best Abyssinian, and between that of the Superior Santos and Superior Rio grades from Brazil.

The use of cleaning and sorting machinery would ensure a better product and should be adopted if this coffee is exported on a commercial scale.

A PROBLEM OF CYPRUS.

"GOAT GRAZING AND FORESTRY IN CYPRUS." By A. H. Unwin, D.Sc., M.E.F.A., M.C.S.F.E., Principal Forest Officer, Cyprus. (Crosby Lockwood & Son. 7s. 6d. net.)

The damage done by goats to the forests of Cyprus is one of the several important problems confronting the administration of the Island—a problem the more onerous because there is an inadequate appreciation of the damage done to the forests by the continual grazing of goats. In this volume the author has endeavoured to correct the misconception and ignorance of the public on the question. While the greater part of the work deals with conditions in Cyprus, five chapters are devoted to a description of the methods adopted in other countries to overcome conditions similar to those existing in Cyprus. The nature of the Island's problem may be gathered from the fact that at the present time there are some 60,000 animals grazing in the forests, of which more than 35,000 are goats. The author states that at the present time it is estimated that there are about 100,000,000 cubic feet of timber in the trees of the Island's forests, and that the yearly addition is about 4,000,000 cubic feet, at least one quarter of which is being eaten away or otherwise destroyed through grazing. As the author shows, there has been a gradual improvement in the agricultural position in the last forty-six years as a result of decreased goat-grazing, and he indicates plainly the probable effects on the economic position of the Island without grazing in the forests.

The Egyptian State Railways have given contracts to the Birmingham Railway Carriage and Wagon Co., Ltd., for ten bogie passenger underframes, and to Howell and Co., Ltd., Sheffield, for 8,000 steel boiler tubes.

Company Meeting.

EASTERN TELEGRAPH COMPANY.

The Coming Merger Developments.

The annual meeting (the 97th ordinary general meeting) of the Eastern Telegraph Company, Limited, was held at Electra House, Moorgate, London, on July 24. The Chairman, Sir John Denison Pender, G.B.E., K.C.M.G., was in the Chair.

The Chairman said:—The gross revenue for the year under review amounted to £3,306,909, against £3,436,690 in 1926, or a decrease of £129,781. I would, however, point out that the interest and dividends received on our investments are included gross, whereas in the past only the net amount received after deduction of income tax has been included in the revenue. But for this fact the disparity between the two years would, of course, have been greater. The total working expenses for the two years were as follows:—1926, £2,338,729; 1927, £2,358,983, showing an increase in 1927 of £20,254. The year's working resulted in a profit of £947,926, against £1,097,961 in 1926, showing a reduction of £150,035. There is, further, an increase of £31,734 in the charge for income tax payable in England, which is chiefly due to the altered method of dealing with the income from investments to which I have referred, so that the net profit is nearly £182,000 less than for the preceding year, in addition to which £49,000 less was brought forward from the previous year's accounts, so that the net amount available for distribution is about £231,000 less than at December 31, 1926. We have placed £150,000 to the credit of the General Reserve Fund, and, for the ninth year in succession, have paid a dividend on our ordinary stock of 10 per cent., free of income tax, while the amount now carried forward is increased by over £19,000 and amounts to the substantial sum of £525,765.

At the last meeting I mentioned that negotiations had been practically completed for joining up Palestine with our main line system. This has now been carried out *via* Cyprus, thus also strengthening our communications with that island. I am pleased to inform you that the Turkish Concession, to which I also referred, was duly ratified, and direct cable communication with that country was re-established in November last.

Reductions in Rates.

During the year, further reductions were made in rates with South Africa and India, the rates now being 1s. 8d. and 1s. 5d. per word respectively, these being in addition to the reduction in the rates to Australia and New Zealand reported at our last meeting. It should be remembered that approximately 85 per cent. of our traffic is sent in code, which enables the sender actually to obtain very low rates of charge per word, viz., reductions varying from 50 per cent. to 80 per cent. of the full rate tariff, and when it is taken into consideration that, roughly, the distance to Australia is 10,000 miles, and to South Africa and India 6,000 respectively, and that in the case of ordinary rate messages their delivery can be practically ensured all those miles away in a matter of minutes as compared with hours in years gone by, the facts, I think you will agree, speak for themselves. It is also now possible to send cheap rate week-end telegrams under certain conditions, to Australia at 7½d. per word, South Africa at 4d. per word, India at 3½d. per word.

The 97th Milestone.

To-day we reach the ninety-seventh milestone on the road of progress in connexion with this Company, it being our ninety-seventh ordinary general meeting. It was in 1872 that the Eastern Company was incorporated by the amalgamation of four small companies: The Anglo-Mediterranean, The Marseilles-Algiers and Malta, The Falmouth-Gibraltar and Malta, and the British Indian Submarine. This was the origin of our present Company, and the inception of British submarine cable enterprise throughout the Empire. The road has been marked by continued progress and consistent policy, to the advantage of the Empire and of all concerned; difficulties, of course, have been encountered and there have, indeed, also been many periods of anxiety, but the vast web of submarine cables which is now spread over the world, and particularly within the Empire, is due in no small measure to the enterprise and foresight of those connected with the inception of this undertaking, whose wise administration and prudent financial policy has been, and is still being, consistently carried out.

The Chairman concluded his remarks with a reference to the growth of Government competition with the telegraph companies from its beginning in 1902 with the laying of the Pacific cable. Now came the beam systems of wireless, working at lower rates. He repeated his assurance that their Companies would still continue to carry both a much larger volume and value of traffic than the Government Wireless services.

He had hoped to be able to say something definite about the negotiations with the Government, and the merger with the Marconi Company, but as this matter was still in the hands of the Government he could not give any further information beyond the statement appearing in the Press to the effect that at the final meeting of the Imperial and Wireless and Cable Conference, composed of representatives of Great Britain, Canada, the Commonwealth of Australia, New Zealand, the Union of South Africa, the Irish Free State, India, and the Colonies and Protectorates, it was stated that

it was a matter for satisfaction that, in view of the large issues and many interests involved, the Conference had been able to arrive at unanimity in putting forward their recommendations.

MOTOR v. WILD ELEPHANT.

The pioneer motor expedition which set out to investigate the possibilities of a great trunk highway from Cape Town through Central Africa to Cairo are now preparing for a record dash from London back to Cape Town after many curious experiences on the outward journey.

The rhinoceros was the most dangerous of the wild animals they met, and they saw elephants, thousands of monkeys, leopards, and buffaloes. When a wild elephant stood in their path they found that it was wise to reverse their car and pass it backwards, lest it should decide to give chase. Night animals were not enraged by the glare of the headlights; they just slunk off quietly to the side of the road, looking over their shoulders unafraid.

The worst patch of country encountered was eighteen miles of trackless hills beyond Khartoum covered with great, black chunks of ironstone rock. They took six hours to do the eighteen miles in 180 degrees of heat, yet their Dunlop tyres, which were too hot to touch, came through without a puncture. Indeed, they had only two punctures in the tyres, which took them all the way from Cape Town through Africa and on to London.

The effect of the expedition has been to stimulate road building throughout Africa and in two years' time it is expected that there will be a series of all-weather roads from Cape Town right up to Rejaf in the Southern Sudan.

IVORY IN BETTER DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on July 17, comprised 32½ tons (against 33½ tons at the same time last year and 30½ tons in April last), viz.: 10½ tons Zanzibar, Bombay, Mozambique, East African and Siam, 3½ tons Abyssinian, 6 tons Egyptian (Alexandrian description), 7½ tons Congo and West Coast African, ¼ ton Lisbon, and 5½ tons land carriage; also ½ ton mammoth tusks, ¾ cwt. rhinoceros horns, and 3 cwt. sea horse and boar's tusks; total, 33½ tons.

There was a good attendance of buyers and good competition throughout the sales, the demand being much better than anticipated. Prices on the whole were well maintained and the greater part of the new offerings was disposed of; a small proportion was bought in, holders being firm. America and the Continent bought freely, and the home trade about their usual proportion.

Abyssinian.—Rather more of this description was catalogued and partly sold at firm rates. Scrivelloes and ball scrivelloes were steady.

Egyptian.—Soft was firm, occasionally a little dearer. Hard, only a few lots were catalogued, which brought about previous rates. Soft scrivelloes were steady, hard firm, and ball scrivelloes steady.

ROUMANIA'S FRUIT CROP.

The Empire Marketing Board states that according to an official report a good surplus supply of plums will be available for export in Bessarabia. The quantity is estimated at 3,000 tons. Crops of apricots, apples, and pears are normal, but there will be no cherries for export. Roumania exports only a comparatively small proportion of the quantity of fruit produced in the country. In recent years Germany has taken the bulk of the exports.

The Bulgarian Sobranie has approved the Budget for the current year, which balances at 7,480,000,000 leva. Receipts for 1927-28 amounted to 6,643,560,000 leva and in 1926-27 to 6,200,669,000 leva.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 30 amounted to £E6,847, making the total from April 1 £E61,468, as against £E65,890 for the corresponding period of the previous year.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 18:—

Egyptian Futures.—Sakel Contract.—Some weak sessions have been experienced in this market during the past week and a substantial decline, in spite of some recovery to-day, has to be recorded. For some little time Sakel values have held their ground in face of very moderate trade support and good crop reports, the level being maintained as much as anything by the advancing tendency shown by the American markets. With the latter developing a decidedly easier undertone during the past few days, confidence in the position commenced to be undermined, and liquidation orders in increasing quantities had to be faced, the downward swing further uncovered "stop-loss" orders, little resistance was encountered until yesterday, when support in the shape of fresh speculative buying and short covering at 19d. for November halted the movement. At the time of writing the market is beginning to show a return of confidence and also gives some signs of recovery; a satisfactory feature to-day has been the improved turnover in actual. The Sakel premium over American has closed in to about 800 points, a not unreasonable difference, and one at which more trade support should certainly develop. The Alexandria market has, judging from reports, encountered the same drastic liquidation that we have faced at this side; a noticeable feature throughout the decline there has been the difficulty of getting offers of desirable cottons at prices anyway commensurate with the decline in the contract value. Crop accounts continue to be favourable. For the immediate future fluctuations in our market will probably be largely governed by the action of the American Exchanges; the recent shake out has certainly improved the technical position of the contract, and as we have now worked down to a level from which a speedy recovery is possible should any "bullish" news eventuate, we would advise working conservatively on the "long" side.

Upper Contract.—Values in this market have suffered a sharp relapse during the past week, heavy liquidation and "short" selling coming into the market, the former mainly for local account, the latter generally from Alexandria operators. No doubt a large proportion of the cotton that has come into the market has been under the influence of the recent easier tendency in the American departments; to-day, with the latter beginning to react, we have regained a minor part of the earlier losses. As a result of the week's fluctuations the November-October American straddle at one time closed in to 280 points, but has since widened somewhat. If the markets start to react, our premium over the other contract should commence to re-establish itself as a fairly important "short" interest appears to have been worked up, the covering of which, if attempted at the present juncture, will probably find contracts scarce. Trade support has been moderate throughout the week with more business developing on to-day's reaction. We still prefer to advise moderate commitments on easy markets.

Egyptian Spot.—For the most part business during the past week has been of a most depressing character. Only a very moderate demand from the trade has been experienced, which is hardly surprising in face of the heaviness of the various futures markets. Trade reports from practically all centres have been of a discouraging nature, and with improved weather reports from the U.S.A. becoming a daily feature, and with apparently nothing to worry about in connexion with the Egyptian crop, there is little wonder that spinners have lately come to regard lower prices as inevitable. In fact, throughout the week Lancashire appears to have expected something in the nature of a "landslide." It is interesting to note that the lower level recently attained has attracted a certain amount of inquiry from America and during the last two days a somewhat better tone has been noticeable here. To-day, for the first time, the local inquiry has shown a distinct improvement and spot sales were reported as 500 bales Egyptians and 350 bales Sudan, figures which we have not touched for some time.

Inquiries for Sakel have been concerned in a small way only, with cotton at from 13d. to 14d., 17d. to 18d., and 19d. to 21d. Some demand for Fine Sakel has also been experienced. The local sock contains a very poor selection of the medium grades. Uppers have met with the customary steady offtake at from pass to 30 on contracts, and some slight improvement has been noticed in the demand for the better cotton at about 100 to 150 on. Some further tenders have been made, and the total this month now amounts to 2,550 bales. With any improvement in trade, this cotton should attract attention, as, at its present difference with American, it looks reasonable. Pilon has been in fair request at from 15½d. to 16d., and supplies are scarce. The inquiry for Sudan Sakel has shown some slight improvement amongst the lower grades. Tokar Sakel has been neglected.

C.I.F. business has been very quiet. Forwardings to spinners for the week ending the 13th inst. were returned as 6,321 bales Egyptians and 2,733 bales Sudan. Estimated spot sales for the week, 1,400 bales Egyptian and 900 bales Sudan. Quotations of Sakel show a net decline of 110 points, those of Upper 75 points, and those of Pilon 60 points. F.G.F. Sakel to-day, 19.55d. F.G.F. Upper to-day, 14.10d. F.G.F. Pilon to-day, 14.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 12, state:—

The future market since our last report has been active, but the tone, on the whole, has been rather heavy. The week's summary of price movements is as follows:—Sakellaridis: July, 39.25 dollars, 0.90 dollars down; November, 41.11 dollars, 0.64 dollars down; January, 41.20 dollars, 0.72 dollars down; Ashmouni: July, 26.85 dollars, 0.67 dollars down; October, 27.45 dollars, 0.69 dollars down; December, 27.75 dollars, 0.70 dollars down.

Sakellaridis.—At the commencement of the week the market was quite steady, but the publication of the American acreage report and the subsequent decline of prices in New York induced some liquidation here and the selling has been continued ever since, in spite of the partial recovery of American prices. Demand from abroad has been very poor and this is the chief factor responsible for the veering round of opinion; it is realised that only an improvement in the demand can maintain prices, and the further falling off has discouraged those who have been holding for an improvement. The July/November straddle is quoted to-day at 186 points, but it has been over 200 during the week. The Sakel/Ashmouni new crop straddle is 1,366 points about the same as last week.

Rumour is again rife that the Government has decided to sell its cotton. There is apparently a certain amount of truth in this, for the Government brokers have been authorised to show samples and receive bids; whether, however, reasonable offers will be accepted or whether the Government will hold out for a fancy price is a point which has yet to be determined, and we are not very sanguine of the cotton changing hands.

At the second July tender 1,500 kantars dockets were issued, bringing the total for the month to date to 13,750 kantars.

Uppers.—This variety has shared in the general decline and, apart from a little buying by commercial houses, has had no support whatever.

The Ashmouni/American straddle has narrowed into 521 points against 614 points a week ago and 759 points a couple of months ago; this is the narrowest that the straddle has been for quite a long time and, with a very large short interest in October here, it may widen out against most unexpectedly.

The demand from spinners has been on the poor side; there has been a fair amount of inquiry, but this has been at cheap rates and for grades which are scarce, so that the business concluded has not been proportionate to the inquiry.

General.—The immediate future course of the market is difficult to forecast; New York fluctuations this week have been disregarded and the market has declined, whilst American has advanced. The decline here has been brought about, to a great extent, by local factors, and at the first signs of new crop inquiry on the part of spinners we think that we shall see a sharp reaction, especially in Uppers.

The week's receipts amount to 177 kantars, against 158,608 kantars; the stock in Alexandria stands at 1,838,830 kantars.

The official figures of arrivals and exports for the period September 1, 1927, to July 4, 1928, are as follows:—Arrivals: Sakellaridis, 2,413,901 kantars; Ashmouni and Zagora, 2,960,989 kantars; Pilon, 271,973 Kantars; Various, 218,510; Scarto, 137,421 kantars; total, 6,002,794 kantars. Exports: Sakellaridis, 2,516,847 kantars; Ashmouni and Zagora, 2,798,371 kantars; Pilon, 272,609 kantars; Various, 198,691 kantars; total, 5,786,518 kantars.

Spot: The market has been active throughout the week. Total sales amount to about 9,800 bales, of which we estimate 5,500 Sakellaridis, 4,000 bales Ashmouni and Zagora, 200 bales Pilon, and 100 bales other varieties.

Sakellaridis: Owing to the large premium for November over July holders are not at all disposed to sell, but prefer to wait till the July contract goes out. There has been a very good demand

for all grades of cotton and spot difference have considerably hardened.

Ashmouni and Zagora: Continue to be in good request and, with the exception of the good grades, there has been rather less cotton showing on the market. Spot differences are rather harder.

Pilon: Is still much sought after, but premiums have not altered. Other Varieties: White is practically non-existent. Some lots of Nahda have changed hands, but here, too, there is very little offering.

Crop, 1928.—Crop news is more or less as last week. The plant is making cotton normally under favourable climatic conditions. The temperature has been normal during the week and the slight Nadua attack in some districts of Upper Egypt has not increased. Humidity has been rather less. Water is plentiful.

Sir Arthur Slater, Director of the Financial Section of the League of Nations, is to visit Greece shortly.

The Persian Majliss has approved the Opium Monopoly Bill, which will provide control of all local and foreign transactions in opium and all its products.

The foreign trade of Bulgaria for the first quarter of the current year showed a marked increase on previous years. Imports amounted to 1,701,546,000 leva, as compared with 1,390,090,000 leva for the corresponding period in 1927 and 1,683,629,000 leva in 1925, the previous highest. Exports amounted to 1,425,127,000 leva, as compared with 1,173,761,000 leva for the same period in 1927 and 1,404,755,000 leva in 1926, the previous highest. The adverse balance stands to be corrected before the end of the year.

Notes of the Week.

The Yugoslav Crisis.

The failure of General Hajitch to form a Cabinet seems to have been due mainly to differences of opinion regarding the value of new elections. The leaders of the Croat Peasant Group were adamant on the subject that there must be new elections, as it was unthinkable that their parties should continue to be members of a Skupshtina in which some of their number had been murdered. It was pointed out on the other hand that new elections offered no solution of the parliamentary deadlock. Parties are for the most part territorial; when a general election takes place the party representatives usurp the authority of the officials or the officials become mere party representatives, with the result that there is little opportunity of any radical change in the representation of the country. The natural corollary of this state of affairs is gradually coming home to the Yugoslav people; that is, until a Government has been long enough in power and is strong enough to overhaul the bureaucracy, to make it independent of parties, and in a word to purge the administration of the more glaring of its defects, Yugoslavia stands to flounder in the present political morass. On the subject of preventing power from passing out of their hands into the hands of one strong man most of the party leaders are prepared to sink their differences and to present a united front.

The Status Quo.

The Government now formed by Dr. Koroshetz cannot be said to offer any solution of the problem confronting Yugoslavia. A certain amount of personal unpopularity handicapped the late Prime Minister, M. Voukitchevitch, in his attempts to administer the country—his own Radical Party comprised a section strongly antagonistic to him—but his main difficulty was his inability to come to any working agreement with the Croats. In spite of the Government's majority in the Skupshtina the Opposition—in particular the Croat-Democrat group under M. Raditch and M. Pribitchevitch—could by their numbers hold up the business of Parliament. The new Ministry under Dr. Poroshetz leaves the parliamentary situation

much as it was; the Radicals may present a more united body now that M. Voukitchevitch is no longer Prime Minister and that they have agreed to serve under the Slovene Clerical leader, but the Croats, far from being won over to sweet reasonableness by the change of Prime Minister, labour, if possible, under greater indignation, as they regard Dr. Koroshetz as a traitor to the non-Serb element in the Kingdom, to whose interest it is to leaven Serb domination in Yugoslav affairs. Of the sixteen Ministers eight are Radicals, three are Davidovitch Democrats, two Slovene Clericals; Dr. Spaho is the leader of the Bosnian Muslims, there is one Croat Democrat, who is, presumably repudiated by his fellow Croats, and General Hajitch belongs to no party. In view of the latter's failure to form a Business Cabinet, King Alexander may have had no alternative to turning to the majority parties in the Skupshtina for a Government. One point has been gained in securing the consent of the Radicals to serve under a member of another party; this action represents their concession to popular feeling as a result of the recent murders in the Skupshtina. The next step lies with Croats who find themselves flouted in their demand for the dissolution of Parliament and the holding of new elections. In the meantime the time-limit fixed for the renewal of the Italo-Yugoslav Treaty of Friendship has been allowed to pass without any action taken by the Yugoslav Government to renew it or to obtain an extension of the time-limit. Dr. Marinkovitch remains Minister of Foreign Affairs in the new Cabinet, and seems bent upon having the Nettuno Conventions ratified by the present Parliament. If this is done, there will be no difficulty in securing an extension of the Treaty with Italy in spite of the fact that it has not been renewed, as was stipulated, six months before the date of expiry.

M. Venizelos' Programme.

M. Venizelos has taken advantage of his visit to Salonika to elaborate the programme of the new Government. The refugee population as a whole is solidly Venizelist, as from the outset it has adopted the view that King Constantine was responsible for the Greek disaster in Asia

Minor, although it followed logically upon M. Venizelos's own policy of a greater Greece at Turkey's expense. It was, therefore, among his warmest supporters that the Greek Prime Minister sketched the outline of his new policy for Greece, and, as usual, he showed that he had the courage of his convictions. The refugees were warned that they must abandon any idea of returning to Turkey, but that equally they might rid themselves of any fear of being involved in war with the Turks. Questions arising out of the exchange of populations still remain to be settled; but as soon as these are out of the way, M. Venizelos points out, there is nothing to prevent the establishment of friendly relations between Turkey and Greece. In regard to domestic affairs the Prime Minister's programme sets out to bring the country into line with the most advanced States, instead of allowing it to flounder in a morass of backward administration. Taxation is to be equitably distributed, economies are to be effected to provide money for public health, child welfare, campaigns against tuberculosis and malaria, roadmaking, drainage, assistance for agriculture and improvements in education. In regard to foreign affairs M. Venizelos stands for friendly relations with all Greece's neighbours and with the Great Powers. He hopes to satisfy Yugoslavia in the matter of Salonika and to make Bulgaria content with a commercial outlet at Dedeagatch. With Italy he looks forward to relations as close as those which Greece enjoys with Great Britain and France. After two years of administrative paralysis Greece may well wax enthusiastic over the promise of an immediate millenium; it will be the duty of the Electorate at the coming elections to see to it that other political parties are not allowed to put a spoke into M. Venizelos's wheel.

The Macedonian Organization.

The split in the Macedonian Revolutionary Organisation has been carried a further stage by the holding of a congress summoned at the instance of Ivan Mihailoff. He had been previously excommunicated by the other members of the Triumvirate; but the verdict of the congress, which apparently sanctioned the murder of General Protogueroff (on the ground that he had been implicated in the assassination of Todor Alexandroff) and approved Mihailoff's conduct of the affairs of the Organisation, suggests that the ban of excommunication has now fallen on George Popchristoff and Peter Shandonoff. The congress proceeded to elect a new central committee, associating one Kurteff and Drangoff, a son of a former Chief of Staff of the Macedonian Division, with Mihailoff. In view of the latter's reputation it may be supposed that the new Triumvirate will endeavour to justify the confidence reposed in them by the congress by a renewal of the terrorist campaign. It may, however, still have to reckon with those who do not approve of the murder of Protogueroff. A skirmish between partisans of the rival leaders has already been reported, but it would be more in keeping with the later tactics of the Organisation for each side to rely upon individual assassination.

The Situation in Egypt.

Events in Egypt may be regarded as pursuing what is, in all the circumstances, a normal course. The Wafd politicians do not propose to acquiesce in Mahmoud Pasha's action, if they can help it, and are engaged in testing the Government's line of defences at various points. So far honours rest with the Cabinet. Madame Zaghloul's return to Egypt from abroad was to be the occasion of a great demonstration at Alexandria, but she was taken ashore from the ship before the latter berthed in the harbour and was sent to Cairo, while the would-be demonstrators were still awaiting her on the quay. Deputies and Senators belonging to the Wafd decided at a meeting, called for the purpose, not to recognise the dissolution of Parliament, and to meet in session on the appointed day. A formal request was sent to the Government for the keys of the two buildings, but they were not forthcoming, and the session as proposed was forbidden. The legal profession,

anxious to prove that its statesmanship was at least as high as that of Egyptian schoolboys, called a three days' strike, by way of protest against the interference with the Constitution. When, however, it was realized that some of its members were gifted with a higher order of intelligence and that the Courts would still sit, the strike came to nothing. In the meantime the work of the Government proceeds. In the interests of more efficient administration the powers of Provincial Governors have been extended, as part of a scheme of decentralization, designed to relieve the Ministry of the Interior. The Minister of Public Works has left for London for a conference with Lord Lloyd, the Governor-General of the Sudan, the the Governor of Uganda, and irrigation experts on the subject of projected training works on the Nile. The matters in question have been long under consideration, but events in recent years have militated against the taking of definite decisions.

Native Policy in the Sudan.

The publication in the Sudan Government Gazette of the Powers of Sheikhs Ordinance 1928 serves to direct attention to the Sudan Government's native policy. No new development would seem to be indicated in the Ordinance, which does little more than introduce minor alterations in the wording of the 1927 Ordinance that it supersedes. In general terms the policy may be stated to be the support of the authority of native chiefs in regard to matters of tribal or local jurisdiction. Powers are granted to Sheikhs of tribes or districts, assisted by their tribal elders, or to Courts presided over by such Sheikhs and composed of their tribal or district elders, to punish offences committed by, and to settle disputes among, persons subject to their jurisdiction. Rules are carefully laid down for the conduct of these Courts, and the maximum punishment, whether by imprisonment or by fine, that can be inflicted is specified in each case. A Sheikh exercising individual powers may impose only a fine; Courts may try any offence except those enumerated in a schedule attached to the Ordinance; the settlement of civil disputes may be carried out in accordance with native custom, subject to certain rules, and within a limit of five pounds by way of costs; no judgment to which the members of a Court shall not have agreed unanimously shall be valid, unless it is a majority judgment and is approved by the Governor or the District Commissioner of the District. The policy of building up the authority of Chiefs is clearly a sound one; not only does it relieve British officials of much unimportant work, which has to be done, but it also simplifies administration and affords useful training for all concerned in the rudiments of ordered government.

The Hijaz Railway.

After many delays, the various authorities concerned in the running of the Hijaz Railway met in conference, at Haifa, on July 26. Those authorities are, of course, representatives of the Governments of Syria, of Palestine and Trans-Jordan, and of the Wahhabi Kingdom of the Hijaz. It is to be presumed that the basis of negotiations between Dr. Abdullah Damluji and the French and British representatives will be the Anglo-French declaration made at Lausanne in 1923, when an expression was made of willingness to co-operate with the Government of the Hijaz and with the Muslim world in the establishment of a Muslim Advisory Board (with headquarters at Madina) to advise the four Governments of Syria, Palestine, Trans-Jordan, and the Hijaz upon the running of the railway. It is stated that an agreement was then reached to devote the resources of the Railway to maintenance and administration, and, if possible, to the assistance of needy pilgrims. But since the War the revenues derived from the Hijaz Railway have, of course, been placed into the general Exchequers of the Mandated countries concerned; nor has there been any attempt at equitable distribution of the locomotives and rolling-stock, which have remained very much where they were just after the War. Thus Syria is reported to have ninety out of the total hundred

and twenty locomotives, although she is responsible for but 250 kilometres of the line; Palestine and Trans-Jordan to have twenty-six locomotives for some 600 kilometres; and for the remaining section of the line, to Madina, the Hijaz Government to have but four locomotives. Some compromise should, therefore, be possible, even if the necessities of the situation are not exactly as represented in certain Muslim quarters. The view of King Ibn Saoud has been stated by our Jidda Correspondent to be that the line should be treated as a single entity endowed under religious law for the use of Islam *in perpetuum*, but it is possible that some diminution of this claim will enable practical and useful results to be achieved by the Conference at Haifa.

Persia and Great Britain.

The present visit to London of the Persian Minister of Court, Taymoor Tash, is a pleasing indication of the better feeling engendered as between the land of the Shah and Great Britain by the passing of the recent Anglo-Persian Treaty; and we are glad to see that it is being given the prominence which it deserves. It is some years now since a Persian of such high rank graced these shores with his presence. The opportunity is, therefore, not to be lost of still further cementing the new friendship which appears to have arisen as a consequence of both British and Persian concessions in the matter of Anglo-Persian relations. As is well known, there still remain for settlement one or two questions, such as the repayment of debts or the recognition of Iraq, that make it impossible to claim absolutely that relations between Persia and Great Britain are exemplary; but there seems little doubt that the psychological plane of argument has been shifted to a higher level, and there is no reason at all why the problems still outstanding should not be soon and amicably settled. It is to be hoped that towards this consummation the visit of the Taymoor Tash will contribute in no small measure, and that, in particular he will take back to the Shah a lively sense of British sympathy with the present desires of the Persian nation.

The Arabs and Palestine.

Whatever recollections Lord Plumer, High Commissioner of Palestine, takes away with him of the forces at work in the Holy Land, that of the political ambitions of the Arabs will surely be one of the most vivid. For a few days ago he was presented with a long memorandum in which were laid down the views of the Arab Congress upon the inapplicability to Palestine of Crown Colony government and the desirability of establishing representative government. Such "absolute" government was stated to have caused the present wretched economic condition of the country, and the demand for a Parliament was based on the promise made to the Arabs under the Mandate and the allegation that Palestinians now lack political rights which they enjoyed before the War under the Turks. This statement Lord Plumer is said to have promised to convey to the Colonial Office, whence, however, it would appear doubtful that immediate satisfaction should be forthcoming. It has been asserted that official quarters in London are against the early establishment of a Parliament in Palestine; and, indeed, one cannot see how such a Parliament could well be established against the wishes of the Zionists whom Great Britain is committed to support. The whole political dilemma with which Britain is faced is thus, at the end of Lord Plumer's High Commissionership, once again brought into prominence. Iraq has a Parliament, Syria has a Parliament, Trans-Jordan, even, soon will have a Parliament; why not Palestine? Later or sooner Palestine must enjoy representative government, but that will be, presumably, when her Arabs are far more united than they now are. In considerable measure the future will depend upon economics, for unquestionably political demands will be more loudly and insistently urged when

and if the country is in an unsatisfactory condition than when and if substantial Budget surpluses are shown.

The Problem of the Yaman.

The problem of the Yaman, that is, the problem between the Aden Protectorate and the Zaidi Imam, shows, according to reports from Aden, distinct signs of clarifying. According, also, to recent replies in the House of Commons, it is presumed that a new situation has arisen as between the British and the Imam. The Zaidi forces are stated, as a result of bombing from aeroplanes and ground action by certain tribes in Treaty obligations with the British—notably those of the Jabal Radfan, led by the Amiri Amir Nasr of Dhala—to have evacuated the Protectorate. If this is so, it remains to be seen whether the Imam Yahya will acquiesce in this display of force, and agree to the present facts of the situation, or will attempt to reassert his will upon that part of the Protectorate which he claims as his rightful own. At this distance it is impossible to say what steps the Imam may take. There is a report that the Zaidi forces in the Lower Yaman have shown signs of disaffection towards him, and it is certainly true that in the other parts of this State, towards Hudaida, the Zaraniq have been giving considerable trouble. But the Imam does not strike one as a man who would tolerate signs of disaffection among his troops—if, indeed, there is any truth in such a rumour. It will be fortunate if, now that the British authorities have fulfilled their obligations towards shaikhs living within the Protectorate—the borders of which were drawn, of course, in agreement with the Turks, not with an independent Yaman—the opportunity is now swiftly taken for a consolidation of the Anglo-Yamani position without loss of prestige on the part of the Imam. The Aden Protectorate would stand to lose rather than gain by a multiplication of rulers living on its borders. The suggestion has been made that Sir Gilbert Clayton, after he has finished his present mission at Taif with King Ibn Saoud, should proceed to the Yaman to attempt to conclude what he failed to conclude in 1926. The feasibility of such a step, however, may depend upon three things: first, the present mood of the Imam Yahya, secondly, the degree of success in treating with the Wahhabis, and, thirdly, the swiftness with which the defeat of Zaidi forces and the evacuation of Dhala are followed up by generous negotiations. In the circumstances, we are still inclined to think that the wisest course might now be to invite to London a mission from the Yaman.

THE MINORITIES PROBLEM.

If the League of Nations should ever wish to be rid of the problem of Minorities in the Balkans, it will have to adopt a different policy from that on which its treatment of the question has hitherto been based. Appeals to the better nature of the disputants may seem to accord with the League's province and will often meet with success in the case of Western States; but there has been nothing in the experience of the last eight or nine years to suggest that such appeals will solve a single dispute in Central or South-Eastern Europe. With a touching belief in the efficacy of the policy the Council has clung to it for several years in the case of the Hungarian Optants in Roumania. At the end of the last Session the problem was, in consequence, left precisely where it had been at any previous moment since the Roumanian Government in February 1927 withdrew its representative from the Mixed Arbitral Tribunal. A further resolution urged the Government of Hungary and Roumania to bring "this long dispute to a close by reciprocal concessions"; but the Council steadfastly refused to take the decisive action of settling the matter, once for all, over the heads of the disputants. Its difficulties are admitted, although in the question of the Optants it has persistently gone out of its way to avoid the step which it is authorized to take under the Peace Treaties—the appointment of a new member to the Mixed Arbitral Tribunal in the place of the Roumanian representative withdrawn by the Bucharest Government to prevent the Tribunal from exercising the functions for which it was appointed. The Council's basic fault would seem to lie in its ignorance of national psychology. Misled, perhaps, by the high standards which the various delegates to Geneva personally represent, it fails to realize how far administrative routine in the respective countries lags behind the achievements which the exceptional merit of the individual delegate appears to promise. Concessions in South-Eastern Europe, it is to be feared, are never made; they have inevitably to be wrung from unwilling donors. On the other hand, wherever mixed populations are to be found, injustices must be looked for, unless some means can be devised for exercising the supervision which, in the absence of higher moral standards, affords for the present the only effective deterrent.

A communication sent on June 18 to the Secretary-General of the League of Nations from the Bulgarian League of Nations Union suggests that the Council will have once again to deal with a Minority problem which it might reasonably have supposed to be settled by its first intervention. The petition calls attention to what is described as a "new outbreak of injustices and mass cruelties in the Dobruja towards the Bulgarian Minority,

which are taking place after a short period of quietness following the intervention of the League of Nations in November 1927." It is not to be expected that any Balkan petition will avoid the pitfalls of exaggeration and unsubstantiated assertion; but in the present instance the signatories have the advantage of having had their previous statements confirmed at least in their main particulars as a result of the League's action. Invited by the League to supply information on the subject, the Roumanian Government carried out an inquiry; and, although the severe sanctions promised by it were not imposed, the mere inquiry had the effect of stopping for the time being the excesses under complaint. Once more, however, according to the evidence of the petitioners, the old abuses are being renewed. The threat of the League's intervention or the explicit orders of the Bucharest Government caused the local officials to put an end to palpable injustices; but there was no change of heart nor adoption of a higher moral standard, and, as soon as the fear of too much publicity or of the incurring of a rebuke from the League of Nations had passed, all concerned revert to that primitive code which knows nothing of fair play for aliens.

The trouble in the Dobruja turns on the Balkan axiom that no alien population can be expected to provide loyal subjects of their own free will, and that the only way to ensure loyalty is by persecution and oppression. That part of the Dobruja which was annexed by Roumania after the Second Balkan War as the price of her victory contains a Bulgarian population, which under fair treatment and a little toleration would, have eventually provided good Roumanian subjects. The internal troubles of Bulgaria provoked some reaction among these people, but not enough to cause the Bucharest Administration any real anxiety, if it could have ensured them tolerable government. Frontier difficulties supervened, and the Dobruja inhabitants were held responsible. A policy of securing their ejection by one means or another found favour with the Roumanian authorities, and to throw a judicial cloak over the procedure a Verification of Land Title-Deeds Law was introduced. The sting of this measure lay in the fact that the majority of the Bulgarian peasants possessed no title-deeds, but held their property by rights which could not have been challenged, if the land had remained Bulgarian. Simultaneously Macedo-Roumanian settlers and ex-Service men have been introduced into the Dobruja, and have been on the spot to accelerate the process of the expropriation of Bulgarian property. This Law, it will be noted, is no part of Roumania's Agrarian Reform, which would hardly be applicable to southern Dobruja, where no large estates exist. The land expropriated has not been given to local peasants, but to others brought into the region, for the purpose, it would seem, of dispossessing the Bulgarian population. To add to the grievance of the latter, the land has been seized at a time when it has been sown and before the crops have been harvested. It is not a matter for surprise that the wretched people have resented this treatment and that troubles have ensued, with the result that any disturbance of the peace is used by the authorities as evidence of original sin on the part of the inhabitants and an excuse for further molestation. Such, indeed, is the case as it has been presented to the League of Nations, and the latter, which took action in the matter last November, can hardly fail to call upon the Roumanian Government for fresh explanations. There are several aspects of the Minorities problem which defy remedy, because they are inherent in the new order; but the League of Nations should at least be able to safeguard some of the Minorities against the cruder forms of persecution.

*The Near and Middle East

From Our Own Correspondents.

Baghdad, July 10.

Parliament.

At the ninth sitting of the Chamber, the Parliament of Iraq decided to cable to the President of the Syrian Constituent Assembly a message of congratulation on its first meeting at Damascus on June 9. The Syrian President replied in a courteous telegram of thanks, which was read aloud in the Chamber amid much applause.

The appointment of Daud Beg Haidari as Minister of Justice having left vacant the post of Vice-President of the Chamber of Deputies, Marouf Effendi Ali Asghar, a Kurdish deputy, was elected in his place by a large majority.

The Latifiyah Agreement, which is a substitute for the Asfar Concession, has been referred to the Financial Committee for their report.

Parliament agreed to a bill exempting from Customs import duties the plant and pipes of a water supply scheme for Najaf. The whole of the plant is being supplied as an act of grace to Najafis by two wealthy Persian subjects, Haj Muin and Haji Rayyis al Tujjar. The project is receiving all possible support from the Government.

The attention of the Minister of Interior was called to the alarming reports in the local Press indicating that in the Basrah liwa a large number of Iraqis were adopting Persian nationality. At a later session the Minister, who had asked for written notice of the question, replied that the Government was alive to this danger, and had asked the Persian Government to abstain from "converting" Iraqis into Persians. The Cabinet was making exhaustive inquiries into the matter, and would later make a detailed statement to Parliament.

Replying to questions, the Minister of Finance stated that the Indian Customs and Excise Law, which is still in force in Iraq, was no longer considered suitable for this country and would shortly be abolished. A new draft Customs and Excise law had been prepared in the Ministry of Finance, and would shortly be submitted to Parliament; in the meantime the Iraq Chambers of Commerce had been asked for their views on the proposed draft.

The Iraq National Flag Bill has passed its third reading.

Subsidising the Anaiza.

A bill for providing for the payment of Rs.12,000 a month to Shaikh Mahrouth al Hadhal, Shaikh of the Anaiza tribe, caused a good deal of discussion in the Chamber of Deputies. This shaikh had been requested by the Government to mobilise an emergency Desert Camel Corps capable of dealing with *Akhwan* raiders. It was pointed out that the father of Shaikh Mahrouth, Shaikh Fahad, had in his lifetime drawn no more than Rs3,000 a month as Government subsidy. The ex-Minister of Education (Saiyid Abdul Mahdi Chalabi) described subsidies to tribal shaikhs as "instruments confessing the weakness of Government in maintaining order and security in the desert," and urged that the Government should take the matter into its own hands; he maintained further that the

shaikh in question was not very influential, and would be helpless without the backing of Government.

The Prime Minister, in reply, said that Shaikh Mahrouth was a tribal leader of first-class importance, his father before him having been paramount shaikh of the Anazia. The mobilisation of an emergency Desert Camel Corps was a purely temporary measure, intended to avoid the expensive maintenance of a permanent force.

Nouri Pasha as Said (Minister of Defence) then reviewed the course of events since the first raid at the Busaiyah Post. It had been decided at a private conference to build three police posts, and to garrison them by troops under the orders of the Ministry of Defence. Later, however, two further raids made it necessary to call in the assistance of the British Royal Air Force, whose participation in the defence of the tribes was found indispensable. But another raid at Gurshan made it necessary to take still further defensive measures; the Royal Air Force protected a certain section of the southern frontier, and in order to double the Iraq defence at other sections it was decided to mobilise a section of armed cars as well as an emergency Desert Camel Corp, both for a period of three months. At this time Shaikh Mahrouth came to Baghdad and informed the Government of his fear that many of his tribesmen would go over to King Ibn Saoud unless immediate steps were taken for their protection; and as it was impossible to do this in a few days, the Government had no alternative but to charge Shaikh Mahrouth with the task of mobilising an emergency Camel Corps. The Government was at present awaiting the result of the negotiations then in progress with King Ibn Saoud, but would probably have to ask Parliament to vote further expenditure before the end of the summer.

Irrigation.

In spite of the high flood conditions prevailing in April, the river fell very rapidly this year, and by the end of May the levels were well below the average. Fortunately no difficulty has been experienced in providing canal water for cultivators, as small demands have been made. Work has begun on the new concrete weir across the river Diyala, which is expected to cost Rs.225,000 and to be completed by the end of October. The drainage work on the swamps near Karbala is going on, and the Dagharrah and Diwan-iyah regulators are finished except for the roadways across them. Proposals are in hand for strengthening and repairing the bunds damaged during this year flood, and all breaches have been closed.

General News.

The Minister of Finance (Yusuf Beg al Ghanima) gave a farewell dinner to Mr. R. V. Vernon, who left Iraq this month after three years' service as Adviser to the Ministry of Finance. The Prime Minister emphasized the value of Mr. Vernon's work in connexion with the settlement of the Ottoman Debt question, which he characterized as "a great task worthily achieved."

During a short stay in Syria Nouri Pasha (Minister of Defence) had two interviews with the French High Commissioner and his deputy, at which they discussed topics of interest to the East in general and to Arabs in particular. To the representative of a Baghdad vernacular paper Nouri Pasha stated it as his impression that the leading Syrian politicians and the Constituent Assembly were in favour of having a king as their ruler, provided that they were allowed to make their own free choice. He thought that the Syrians and the French authorities were making a real effort to co-operate for the development of Syria in a spirit of reconciliation.

Abdul Karim Beg al Saadun, brother of the Prime Minister, has been appointed a Senator by royal *iradah*.

A serious fire occurred in one of the khans of the Suq al Safafir on July 6, resulting in the destruction of merchandise valued at Rs. 300,000. There was no loss of life.

The Baghdad shoe industry, which employs 8,000 workers, is protesting against the new Customs duty on imported leather. The ever-increasing importation of foreign-made shoes by retailers is a real danger to the local industry, which seems likely before long to be altogether submerged.

A special effort is being made by the Police to check the all-too-common cruelty to animals in Baghdad, no less than 200 cases having been brought before the Courts during the month of June; but unfortunately the local magistrates are still reluctant to impose adequate penalties for such offences.

The Turkish Petroleum Company has again struck oil, this time in a well at their Tarjil station, on June 15. The well is under control, and is now being tested for production.

A flying accident at Mosul on July 4 resulted in the death of Flying Officer Kay, whose machine struck the telegraph wires and fell into the Tigris. His mechanic escaped with slight injuries.

Cairo, July 23.

The Country's Attitude.

The dissolution of Parliament by Royal Decree on Thursday July 19, for three years, fell on Egypt like a bomb-shell. It had been expected that Parliament would be dissolved some time before the end of the month, but only in order to hold elections which, according to the Constitution, should have been held by the end of September. It had been expected that the Government would contrive to postpone elections, re-arranging constituencies or modifying the law; but it had never been expected that they would stand up in this manner against the whole Wafd and Nationalist parties, the former of whom have so far held a very large majority in the country. In fact, the country is still a little bewildered, and it is difficult as yet to find out what is the real feeling. How far the country is behind the Wafd in their opposition it is difficult to say, for there has been an indication lately that the middle-class Egyptian especially is tired of all the political intrigue and foolishness of the Wafd and will be only too pleased if the present Government is able to carry on an efficient and strong administration, settling some of those many internal problems which face the country. It has begun to be realized by many former friends of the Wafd that they have dismally failed in their administration of the country; the *fellaheen* care little what form of government there is provided that their cotton crop is good and they obtain sufficient necessities of life. They can, however, be worked upon to create disturbances, as has been shown in the past, and this is what the Wafd may endeavour to do. Already they have tried to start a campaign in a certain section of the Press to persuade people not to pay taxes, and it was to prevent such attempts to stir up trouble that the present Cabinet suspended the freedom of the Press; that is, they can suspend or suppress a newspaper by administrative means.

A Benevolent Dictator.

There is no doubt that Mohamed Pasha Mahmoud sincerely desires the good of his country, and that no good would ever have been achieved by continuing the parliamentary régime. He realizes the grave responsibility which he and his colleagues have assumed, and he is not afraid of the rôle that he has assumed as "benevolent dictator." He realizes that the only thing that will justify his drastic action will be success. He and his colleagues are brave men to face the country unaided, as they have done, and to tell it home-truths about its past behaviour. Nahas Pasha and the Opposition have repeatedly accused them of being supported by the British, saying that they are dependent on "the bayonets of the foreigner." The step of dissolving Parliament for three years, was, however, taken purely on their own initiative. The only way that they can be said to be backed by the British is that, if there should be serious disturbances in the country, Britain would naturally help the existing Government, whatever its complexion, to preserve order.

Strong Measures.

But the Government's own measures for the preservation of order have been more than adequate. The Wafd decided to hold a big meeting at Tanta on July 20, which the Government proscribed; the Wafd insisted, however,

on attempting to hold their meeting, and proceeded to Tanta from Cairo on the day arranged. The Government, however, had prepared against all eventualities, and on Wednesday Cairo station was busy with the departure of detachments of the Egyptian Army for all the various important provincial centres, taking with them tents and provisions for a week. At Tanta from early morning of Friday, the day of the meeting, the police were preventing the crowds coming into the town from the country, and when in the evening the members of the Wafd arrived there were five hundred police ready in the town and a large military force with steel helmets and bayonets fixed. The result was that no serious disorder occurred except the throwing of stones and chairs at the police. In spite of their ill-success at Tanta the Wafd decided to come to Alexandria for the meeting which they had arranged for July 22. This was also proscribed, but the Wafd were allowed to hold a tea-party at a private residence.

Opposition Movements.

On Saturday evening the members of the Egyptian Bar Association announced that they had decided to carry out a three days' strike as a protest against the present régime. The Cabinet held a meeting on Sunday morning, and decided to issue a circular to all the Judges saying that the strike would not be taken as an excuse for the adjournment of any of the Court cases.

The Wafd Manifesto.

The Wafd Manifesto was issued at the House of the Nation yesterday and was signed by Nahas Pasha. It is a curious oratorical document, accusing the Cabinet largely of things for which the Wafd themselves are responsible and of which they are themselves accused. It states that a great calamity has fallen on the nation. Egypt is suffering from a retrograde movement at a time when Syria, Iraq and India are progressing and enjoying a constitutional régime. It proceeds to say that the Cabinet has paralysed its own conscience by breaking its oath to respect the Constitution. The foreigner is going to make use of the present Cabinet to further his own ends. He is going to make the natives fight one another so that citizens will forget about their claims to independence, being intent upon their local disputes. The Cabinet is trying to break up the nation into different sections, so that there will be internal strife, and the evil results of such social crisis are known only to God.

There is a rumour gradually spreading that the Wafd is going to try to do all it can to institute a republic; how much truth there is in this story it is as yet hard to say.

Failure of Parliamentary Regime.

It is as much a disappointment to the British as to anyone else that the Egyptians should so far have failed in carrying out their parliamentary régime, for it was after all the British who took a principal part in drafting the Constitution. The past Cabinets have failed because either they were unable to effect any reforms, or, like the Sarwat Cabinet, they were intent on trying to settle their relations with England to the detriment of all other pressing questions at home. And this obsession about the foreigner's staying unbidden in the Egyptian house con-

tinued when the Nahas Cabinet came into power. The Nahas régime did nothing to improve the economic condition of the country, but endlessly discussed the tyranny of England. By intrigue and threats the supporters of Nahas Pasha gradually enlarged their party, which was one of their principal aims; anyone who expressed himself opposed to the decisions of the party was treated in very summary fashion; and Governmental posts were dealt out to those of the party who had behaved themselves the best. The result was that conditions in the country were going from bad to worse. It is only necessary to motor through any part of the Egyptian countryside for the space of an hour to see under what terrible conditions the majority of the inhabitants live. The only drinking supply serves almost everywhere as both wash-tub and sewer, and if it were not for the health-giving properties of the sun, Egypt would certainly be swept with recurring plagues.

Belgrade, July 19. (Delayed).

A Political Experiment.

For the first time since the creation of the Triune Kingdom a General on the Active List has been entrusted with the task of forming a Government, and the political situation centres round the War Office. On M. Raditch's refusal to attempt to form a Government to work with the present Parliament, in which his friends had been killed and he himself wounded, the political situation in Yugoslavia presented immense difficulties. Considerable alarm was aroused in Belgrade political circles by the speeches of M. Predavatz, one of the leaders of the Croatian Peasant Party in Zagreb, in which he exaggerated the differences between the Serbs and Croats, insisted on the fact that they had never united, and claimed that they could never become one nation. This was interpreted as an attack on the unity of the State, and the leaders of the four coalition parties were called to the Palace for consultation. A little later M. Pribitchevitch called to inform the King that there was no truth in these suggestions, and that, while the Peasant Democrat bloc was working against the present régime, they were certainly not out to destroy the State, for the unification of which both he and M. Raditch had made so many sacrifices. This declaration had the effect of restoring confidence, and renewed efforts were made to find a way out of the difficult situation. These have taken the form of negotiations for the formation of a "neutral" or non-party Government, composed of higher Civil Servants, University professors, lawyers and judges representative of all provinces and sections of the Yugoslav people—all eminent men and public

workers, yet not involved in the embittered strife of party warfare which is ruining this country. This difficult task has been entrusted to General Hajitch, who for many years has been Minister of War.

A "Non-Party" Government.

General Hajitch has the confidence of the greater part of the Yugoslav people, and the choice of candidates with whom he has so far conferred has been extremely wise. He has also made a thorough study of the question of foreign relations, and for this purpose M. Rakitch, Minister in Rome, and M. Yefitchitch, Minister in Vienna, have been called to Belgrade. M. Juritch, Minister in London, has also arrived, and it is believed that he will become Minister of Finance, if General Hajitch forms a Government. It is not yet clear whether this Government is intended to work with the Skupshtina or not. The members of the old Coalition, who control a great majority in the present Parliament, in the name of parliamentarism naturally insist on the new Government's working under its control, but the Opposition declare that any attempt to work with the Skupshtina in which Croatian blood was shed will be considered as an insult and a challenge and will cause the trans-Sava representatives to leave Belgrade for good. General Hajitch has refrained from saying anything definite on this point. It is understood that the non-party Croats who have been interviewed are willing to enter a neutral Government which would carry on the administration until the autumn, when the time is ripe for elections, and then carry through fair and free elections. They would not enter a "Working Government." The situation has been complicated by the fact that M. Raditch has recovered sufficiently to begin to speak and to write copiously again, and has made many violent attacks on Belgrade and demanded complete "Home Rule" for Croatia.

Good Harvests.

The brightest feature in the whole situation is the fact that reports from all over the country state that the wheat, barley and rye harvests has been wonderfully good, and that, given rain, the maize and fruit will be equally good. After the lean years just experienced, political troubles were inevitable, and it is very probable that, if this year is a good one and prices are well maintained, many of the present difficulties will fade away.

A Loan for Yugoslavia.

Dr. Bogdan Markovitch, Minister of Finance, returned to-day after a long absence in France and Britain. He is reported to have declared that a loan has been concluded on the London market, but that owing to the low rate of Yugoslav exchange on the New York market, which would have too bad an effect on the rate of issue, this will not be issued until the autumn. M. Pribitchevitch yesterday issued a statement attacking the loan on the ground that the terms were for too hard, but it is officially stated that the data on which he bases his criticism are not correct.

Macedonian Troubles.

On July 13, Ivan Momtchilov, a Bulgarian refugee, who has lived for about two years in Yugoslavia, shot Zyiko Lazitch, Head of the Department of Public Security, and then shot himself. Momtchilov died from his self-inflicted wounds without ever fully recovering consciousness, but fortunately M. Lazitch was not seriously wounded and is rapidly recovering. M. Lazitch's very goodness made

the attempt on his life easy. It is well known that anyone, whatever his status, coming from Southern Serbia and asking to see M. Lazitch, whether he wants work in Belgrade, a scholarship to study at one of the State Universities, or a small loan, is always admitted at once. For this reason M. Lazitch is highly popular in Macedonia, whither he has been sent repeatedly to clear up messes made by less tactful and less kindly officials. Momtchilov gave a false name, claimed to come from Shtip, and was immediately admitted to see M. Lazitch, who is one of the chief officials in the Ministry of the Interior. While M. Lazitch looked at the slip of paper handed him, Momtchilov drew a small revolver and shot at him twice, wounding him over the ear, and then shot himself through the temple.

An Object of the "Komitajis."

A foreign journalist who has lived long in Sofia drew my attention to the fact that the officials who are murdered in Yugoslavia by the Bulgarian *komitajis* are almost always honest, kindly men popular in Southern Serbia. He suggested that this proves that the *komitajis* are working purely for the political aims of keeping Yugoslavia and Bulgarian apart and causing trouble in Macedonia, and not, as they maintain, for the humanitarian aims of protecting and avenging the wrongs of their Macedonian brothers. Were this the case, they would assassinate the corrupt officials who oppress the people, of whom numbers undoubtedly exist, and not the Kovatchevitchs and Lazitchs who are honestly striving, often against great opposition, to make the people happy and contented in their new country.

Sofia, July 17.

Assassination of Protogueroff.

The great Macedonian leader, Alexander Protogueroff, the oldest member of the Central Committee of the Macedonian Revolutionary Organization, was assassinated in the streets of Sofia, on July 7, by emissaries of his young and impetuous rival Ivan Mihailoff.

General Protogueroff was one of the great figures of Macedonian history. Born in 1867, at Ochrida, he was one of the first pupils at the Military School at Sofia, and as such took part in the first Serbo-Bulgarian war of 1885. He carved out a career in the Bulgarian Army, and interrupted it in 1902 to pass into the ranks of the young Macedonian Revolutionary Organization, to which he remained faithful until his death. He particularly distinguished himself at the head of detachments of revolutionaries during the great rising of Macedonia against the Turks in 1903, in the course of which he covered himself with glory and wounds. Later, during the Balkan Wars, Protogueroff, who was still only a Colonel, commanded the Macedonian legion, of which in 1915 an independent division was formed under his command. After the Armistice, which found him a Lieutenant-General, Protogueroff, like Todor Alexandroff, was arrested and imprisoned by Stambolisky, but these two Macedonian leaders soon escaped, with the help of numerous partisans, and set to work on the reconstruction and consolidation of the Revolutionary Organization, the strictness of which was considerably relaxed during the War—in the hope of a just peace which would make this conspiratorial institution superfluous.

Owing to the work of organization done by these two

men, the Macedonian Organization, curiously aided by the deplorable Serbian administration in Macedonia, soon attained a degree of power unknown hitherto, even in its period of greatest prosperity. But the germ of Bolshevism was introduced into it, and a struggle ensued between Autonomists and Federalists. This came to a head in the crisis of 1924, when Todor Alexandroff was murdered, by means of a Bolshevik plot. The crisis was overcome by the Revolutionary Congress, meeting in February, 1925, which placed on the Central Committee, in addition to Protogueroff a voivod, George Popchristoff, and an energetic young man, Ivan Mihailoff, who had previously been Secretary to Todor Alexandroff and who, in this capacity, had directed the terrorist activity of the Organization. But in this Committee, the fierce energy of Mihailoff—at the time of his election but a youth of 28 years of age—could with difficulty accommodate himself to the *bonhomie* of the debonair Protogueroff (who at the age of 60 was inclined towards Theosophy and began to dabble in mysticism) and antagonism soon showed itself, all the more so since the ex-Secretary of Todor Alexandroff could not rely on the help of the third member, George Popchristoff, who was a very conscientious and scrupulous man.

Position of Ivan Mihailoff.

In fact, Ivan Mihailoff gradually assumed control of the Revolutionary Organization, and he was arranging a new congress, which should have met last spring, to rid himself of his two irksome colleagues (or at least of the "old veteran"), so as to rejuvenate the institution. In this he would have succeeded, had he not come into conflict with the political representatives of the Organization—Bajaroff, Parlitcheff, and Tomalevsky—who, taking into account the international situation and especially the situation of Bulgaria after the War, often intervened against Mihailoff, to restrain his terrorist activity. The effective head of the Committee having finally turned against the representatives, who hold their mandate, not from the Committee, but from the Congress, they (the representatives) set to work openly against Mihailoff, preparing a vast coalition at the head of which was, naturally, Protogueroff, who, with the help of Popchristoff and of a certain number of other revolutionary leaders, seriously threatened the all-powerful will of Mihailoff in the Congress of the Organization. And so the rupture came, and the shots were fired; on the pretext of avenging the death of Todor Alexandroff, with which the others had dared to accuse Protogueroff.

Crisis in the Organization.

On this, the latent crisis in the Macedonian Organization broke out, involving Macedonians in the risk of a civil war. This contingency was avoided, at least for the moment, thanks to numerous exhortations to both sides. It remained to save the legality of the Macedonian Organization, in which the act of Ivan Mihailoff was equivalent to a *coup d'état*. It was to this end that the following *communiqué*, published by the Central Committee and countersigned by the political representatives of the Organization, was directed:—

"In the night of July 7, Alexander Protogueroff, member of the Central Committee, who at the time was outside the limits of action of the Macedonian Internal Revolutionary Organization, was assassinated. The assassination was carried out by order of Ivan Mihailoff, also a member of the Central Committee.

"According to the Statutes of the Macedonian

Internal Revolutionary Organization, the members of the Central Committee have equal rights and it as a whole is responsible for all its acts to the Congress. It is impossible, therefore, for one member of the Central Committee to decree the death of one of his colleagues. That cannot be allowed in any organization. By this violation of the statutes of the Organisation, Ivan Mihailoff has placed himself outside the laws of the Organization.

"In conformity with the statutes of the Organization, after the death of a member of the Central Committee, the place of the dead is taken by the first of the reserve members elected by the Congress. This is Peter Shandanooff.

"Thus reconstituted, the Central Committee announces that, in collaboration and in strict accord with the representatives abroad (the Political Bureau), it will continue to work for the liberation of Macedonia until the gathering of the next Congress. The Central Committee begs public opinion not to judge the Macedonian Internal Revolutionary Organization by the acts of Ivan Mihailoff. In the course of its long existence of thirty years the M.I.R.O. has given ample proof that it is not an anarchist group and that it is subject to laws which are equally binding on all its branches, large and small, and on all its members.

"The Central Committee hopes that in the future, as in the past, the civilized world will give its sympathy to the work of liberating our country—Macedonia."

CYPRUS.

Nicosia, July 18.

The Weather.

Great heat prevails in the plains, but there have been heavy rain storms at Nicosia. There has been a great rush to the hills, especially to Platres, where the usual gay season proceeds. Hotels are well patronized.

Marriage of the Acting Governor.

Mr. Nicholson, Colonial Secretary, who is at present administering the Government, was quietly married at Limassol, on July 12, by Canon Newham, to Miss Richards, on her arrival by the mail steamer. After lunch they proceeded to Mt. Troodos, to "Government Cottage."

The Locust Bean.

A new vision has been unfolded for the carob (locust bean) industry, which has long been an important branch of agricultural industry. A prosperous development, as Sir Ronald Storrs has recently stated in London, should await the carob, in connexion with photographic film manufacture, as soon as the extracted membrane, now opaque, can be, by chemical process, rendered transparent. The bean, or pod, has hitherto been chiefly used in England as an ingredient of cattle foods. Cultivation of the carob tree could be enormously extended in the island.

Release of Prisoners.

July 12 was a happy day for a number of both long and short-sentence prisoners, whose conduct had been exemplary, for they were released on that day of jubilee. One of the former, a Greek, who had proved an expert in carpet making, was appointed, on his release, to be teacher of the art in the Central Prison of Nicosia.

General News.

The thanks of H.M. the King have been conveyed to the Governor, for his telegram of congratulation on the occasion of His Majesty's Birthday.

M. Venizelos has replied to a telegram of congratulation sent by the Greek Archbishop to that statesman.

THE ARABS OF THE SUDAN.

Mr. H. A. MacMichael delivered the Burton Memorial Lecture before the Royal Asiatic Society on July 20, at 74, Grosvenor Street. Lord Ronaldshay, who mentioned that the first medal in memory of Burton had been awarded three years ago to Mr. St. John Philby, presided; and after Mr. MacMichael's lecture was over he presented him with the medal.

The subject of the lecture was "The Coming of the Arabs to the Sudan." Mr. MacMichael first explained that, but for a few bodies, mostly refugees, the Arabs did not reach the Sudan by the Red Sea, but *via* Egypt. The motives which brought Arab tribesmen to Egypt in 639 A.D. were partly religious and partly economic. When the Byzantine province of Syria had fallen, the Arabs streamed into Egypt with Amru ibn al Asi. A few settled in the towns; many pushed westwards in alliance with Berber tribes to Tripoli, Tunis, Algeria, Morocco, and even Spain; but many others, who had brought their flocks and sheep and camels with them, remained in Egypt. These last remained, of course, as nomads.

Now the Nile had been a trade route for ages past, so that the Arabs, in moving southwards to the Sudan, were not penetrating an unknown land, checked though they were by the negroid Christian Kingdom of Dongola.

The Arabs who sojourned in Egypt were a medley of tribes; some Qahtanites (from the Yaman), others Adnanites, that is Ishmailitic (from Central and Northern Arabia). But the genealogical claims of the Arabs were of doubtful authenticity. Arabs were very quick to take advantage of coincidence of name. Yet it was as tribal units that the Arabs entered Egypt in the seventh and following centuries. Many Gudham, for instance, were settled from the conquest until about the year 1400 in the Eastern Delta; some of them appeared later in the Sudan among the Kababiah of northern Kordofan. The Guhayna (and it was from an Abdullah al Guhani that half the Arabs of the Sudan claimed descent) came from the Hijaz; numbers of them invaded the Beja country (Red Sea hinterland). The Kenana and the cognate Quraysh came from the Hijaz and the Tihama; the Fezara came from the neighbourhood of Mecca.

But few of these tribes (or of the many others represented in the Sudan) came to the Sudan via the Red Sea; the movement took place through Egypt and up the valley of the Nile. The reason for migrating from Egypt to the Sudan were: better pasturage for animals, less fear of

the tax-collector, and more hope of loot and slaves. Egypt was not an ideal country for the nomad, owing to the negligible rainfall and the superfluity of cultivation. The Sudan, on the other hand, closely resembled Arabia itself in its desert grazing grounds, the bleak, sun-blackened hills of wasted standstone, and the more kindly valleys fed by springs or rainfall. The Red Sea was in fact no more than an accidental rift between two parts of the same country. All the broad central belt of the Sudan, the fringes of the heavily-watered marshy area to the south of it, and the habitable parts of the desert to the north of it, were now predominantly Arab.

By the middle of the ninth century the Arabs were numerically preponderant in Egypt. With the rise of Ibn Tulun in 861, however, the Turks, Berbers, and Mamluks began their long reign—which ceased only with the conquest of the country by Selim I of Turkey in 1517. To this state of affairs, the Sudan offered an obvious means of escape to the Arabs; an immediate opportunity was provided in the expeditions despatched against the Nubians.

The Christian Kingdom of Nubia, with its capital at Dongola, had been founded in the sixth century, and its negroid people converted to Christianity shortly afterwards. It lasted for 600 years after the Arab conquest of Egypt; but in the thirteenth and fourteenth centuries it entirely crumbled.

After the collapse of Dongola, the Rufaa, in the sixteenth century, with headquarters at Qerri (north of Khar-toum) allied with the Muhamadan Sultan of the negroid Fung, with capital at Sennar on the Blue Nile. These Fung founded a dynasty which lasted until the Turko-Egyptian conquest of 1821. With this alliance the doors of the Sudan were wide open, but there was no further evidence of tribal movement into the Sudan on a grand scale.

The Arabs now in the Sudan might be divided into three groups, determined by the geographical conditions of the country, which were—desert in the extreme north, then open steppes with shallow *wadis*, then richer, sandy country, then (on either side of Latitude 12 degrees) a broad belt of thickly wooded country, and then the vast, sub-tropical country.

The claim of the mixture of Arab and black to be true Arabs varied: it was strong among the sallow camel- and sheep-owning nomads of the north and even among the dark, hawk-eyed, cattle- and horse-breeding Baqqara and certain of the northern riverain groups, but slight among most of the sedentary villagers.

It was the policy of the Sudan Administration to avoid every form of unnecessary interference with the tribal life, and to support, within reasonable limits, the authority of the shaikhs. The result was that, with security and prosperity, the Sudanese shaikh was now ruling over nomads possessed of a far higher sense of responsibility than were their cousins in Arabia.

After the lecture, Sir John Maffey, Governor-General of the Sudan, referred to Mr. MacMichael's relationship with Lord Curzon and mentioned hereditary ability. It was with the help of such learned and sympathetic men as the lecturer that his Administration was ruling the Sudan. Its policy was to support the rule of tribal leaders rather than to foist modern Western notions of democracy upon them. For the carrying out of such a policy he thought the Anglo-Saxon race peculiarly well suited.

CORRESPONDENCE.

Calcutta, Delhi, Simla, Lahore, Rawal
Pindi and Murree

At the same time I wish to correct certain phrases in that report which, though not altogether incorrectly quoted, yet do not give the meaning I intended to convey.

(1) I am not prepared to say that the Turks "had failed in the way of small shops." In Caesarea Turks have effectively replaced the expelled Christian traders. Elsewhere they are trying to do the same thing. They do not, however, take kindly to the routine side, the humdrum side, of making money on a small scale. As lenders of money they will probably never succeed.

(2) Few Armenians have returned to Turkey. In the future, I think, some may be able to go back. In the villages there are no Armenians, but in all the large towns a few have remained. These are mainly Catholics and appear to thrive.

(3) I gave the Railways and the Bosphorus Ferry Service as examples of the efficiency that Turks can show. I noted at the same time their amazing inefficiency in some other matters; and the queer unaccountable contrasts that are always cropping up in the Turkish character and which need to be studied.

(4) As to Caesarea, I endeavoured to paint it as typical of modern Turkey—an old world town to which the railway has just come, but has not as yet affected its life; the attempt of the Turks to replace the expelled Christian traders; the capable, vigorous Governor beating against the massed inertia of the people and the procrastination of the lower officials; everywhere the promise of great changes—but as yet only the promise.

(5) I tried to describe the position in Turkey to-day—its rulers efficient and with high resolve fighting against immense difficulties to revive and to reorganise a tired, battered people and an impoverished country; a land potentially rich, but hardly touched through lack of men and capital. As in Caesarea, so throughout Turkey there is everywhere the promise of great things ahead—but as yet only the promise.

(6) I did not intend to say "nothing promised to come out of what Turkey was doing," as you have quoted me. I will put my meaning as follows: "There is in Russia, for good or bad, a new spirit, a faith, a hope, a vital drive, and in the next generation this will produce something—it may be something fine, it may be a monster, I cannot say. Of a similar spirit in Turkey I could detect no stirring, but as yet the time has been so short that it is not fair to judge. In fact the rulers of Turkey are fighting against great odds and they are still forced to destroy more than they can create."

(7) Finally, I said that I believed that a little sympathy, a little holding out of the hand of friendship on our part, would help the rulers of Turkey and that a stable, well-governed Turkey would be a great asset to the British Empire.—I am, etc.,

F. H. C. ARMSTRONG.

Paris, July 21.

THE VISIT OF TAYMOOR TASH.

Taymoor Tash, Minister of the Court of the Shah of Persia, arrived in London on July 26. He was met at Waterloo Station by Mr. J. B. Monck, representing the Secretary of State for Foreign Affairs, and by Sir Robert Clive, the British Minister to Persia. In the afternoon Taymoor Tash was received by the King at Buckingham Palace and afterwards attended the Royal Garden Party. The following day His Highness placed a wreath at the Cenotaph, and in the evening was entertained at dinner by Sir John Cadman and the directors of the Anglo-Persian Oil Company at the Savoy Hotel. The Lord Mayor, the Persian Minister, Mirza Eissa Khan Fayz, and other distinguished guests were present. On July 30 he was entertained by Sir Austen Chamberlain, Secretary of State for Foreign Affairs.

Count de Chambrun, the new French Ambassador to Turkey, arrived in Constantinople last week.

NEWS IN BRIEF.

Two Junkers aeroplanes purchased in Germany and the big machine that was presented to King Amanullah during his visit to Germany arrived last week in Kabul. The acting Foreign Minister, who had stayed behind in Herat owing to illness when on his way back with Royal travellers, was a passenger in one of the machines.

In order to prevent all possibility of further collisions between members of the rival groups in the Macedonian Revolutionary Organisation and to enforce respect for public authority, the Bulgarian Government is stated to have ordered the disarmament of the partisans of both sides, throughout Bulgarian Macedonia.

Owing to the continuance of the drought in certain parts of Anatolia, the Turkish Government last week appointed a commission to visit Konia to investigate what further relief measures were required. The Turkish Red Crescent has voted £T500,000 (£50,000) for relief in the Konia area.

It is officially announced that the following have been selected as Probationers in the Sudan Political Service: H. P. Arber, C. W. Beer, L. M. Buchanan, C. de Bunsen, C. A. Flux Dundas, A. M. Hankin, H. R. P. Harrison, A. W. Hill, T. H. Hunter-Blair, T. C. Livingstone-Learmonth, J. K. K. Morrison, P. J. Sandison. For Education: D. H. Hibbert.

THE YUGOSLAV CABINET.

The following is a list of Ministers comprising the new Yugoslav Cabinet which was completed on July 27.

Father Auton Koroshetz (Slovene Clerical)	Prime Minister and Interior.
*Dr. Marinkovitch (Democrat)...	Foreign Affairs.
*General Hajitch (no party)	War.
*Dr. Mehmed Spaho (Bosniak)...	Commerce.
*Dr. Milan Groll (Democrat)	Education.
M. Vlada Andritch (Radical)	Agriculture.
*M. Milorad Vuitchitch (Radical)...	Justice.
M. Petar Markovitch (Democrat)	Mines and Forests.
*M. Bogoliub Kuyunitch (Radical)	Posts.
M. Daka Popovitch (Radical)	Agrarian Reform.
M. Niko Subotitch (Radical)	Finance.
M. Angelinovitch (Croat Democrat)	Public Works.
M. Baritch (Slovene Clerical)	Social Welfare.
M. Zwetkovitch (Radical)	Public Worship.
M. Stanitch (Radical)	Communications.
M. Mihailovitch (Radical)	Public Health.

*Held the same office in the late Cabinet.

FROM LONDON TO THE BLACK SEA BY CAR.

We hope to publish next week the concluding instalment of Mlle. Stancioff's article with the above heading.

THE WEEK AT HOME

London, Tuesday Morning.

Rifts in the Conservative Lute?

Although the enemies of the Conservatives are perhaps naturally inclined to exaggerate the seriousness of the rifts within the Tory lute, it cannot reasonably be doubted that over the question of Protection some sort of crisis is arising in that Party. More than two hundred Conservative Members of Parliament recently asked for an extension of the system of Safeguarding, and there have been fierce mutterings of protest at a recent "Free Trade" speech by Mr. Churchill.

Curiosity reached a high point on Saturday, when the Home Secretary, whose modesty is possibly not his most conspicuous virtue, declared that between the present time and the General Election next May or June the Conservatives must seriously consider the extension of Safeguarding. Now the Prime Minister and the Chancellor of the Exchequer, as Sir William Joynson-Hicks knows well, have considered it. They have rejected it. What, then, is to be the result of this conflict of advice?

Patently the organizers of the Conservative Party realise that the country as a whole will not stand Protection, however sincerely Conservative Members of Parliament may believe it to be in the best interests of the nation. Patently, also, there is the necessity for more discipline in the Party, if it is to be triumphant at the Polls next year. No Party can stand a Home Secretary who is apt to arrogate to himself the prerogatives of the Chancellor of the Exchequer, not to mention those of the Foreign Secretary. The trouble is, however, from the Tory point of view, that in the Cabinet itself the egregious Sir William Joynson-Hicks has considerable backing. Only Mr. Baldwin and Mr. Churchill, in fact, seem to be quite convinced that to hoist Protection is to lower the Conservative flag.

Party Politics and Independence.

How impossible it is for a Party man really to be independent in these days is shown by the fate of Sir Basil Peto, the Conservative M.P. for Barnsable, from whom the Government "whip" has just been withdrawn. The faith that is in Sir Basil has caused him more than once to oppose the Government; with the result that this very excellent Tory is left high and dry.

Sir Basil's particular politics are of no great importance. It is true that his views on such matters as Safeguarding, the Irish Loyalists, and the Naval Prize Bill would probably not commend themselves to the country at large. But the point is that he is punished for his independence. A good Tory, he is, in other words, a poor Party man.

Popular sympathy will surely be with him, for no one likes to see the spirit of man crushed under the huge Party machine. Of course, the disadvantages of independence are obvious, but it is a question between principle and expediency.

They order these things better, I fancy, in the Labour Party, in which very wide ranges of conviction and of activity are tolerated. Yet the truth remains that for the man who thinks and takes his politics independently (the man, for instance, who would vote for Mr. Stanley Baldwin on the obviously correct ground that he is the best Liberal in England) the choice is very small.

The New Archbishop.

Although there had recently been set on foot a movement for appointing a young, enterprising Archbishop of Canterbury, whose pulsating, revivifying influence should have made the road of ecclesiasticism a more glorious adventure, no one was really surprised at the Archbishop of York's having been chosen to succeed Dr. Davidson. Like the present Archbishop, whom he is to succeed next November, Dr. Lang is the son of a Scottish Presbyterian

it ought
The impo.

—his father was Moderator of the Church of Scotland and Principal of Aberdeen University.

The general impression appears to be that the path of wisdom has been carefully trodden in this appointment. Fears have been expressed in some quarters over Dr. Lang's Anglo-Catholicism, but although this is distinctly marked, it is not, I am told, of the extreme order. It will be very interesting to see how the new Primate sets about his urgent duty of restoring discipline in the Church, and whether his policy will differ from that of Dr. Davidson, whose partner he has been for some twenty years.

Science and Religion.

Governmental publications are not the common repository of both wit and wisdom, but it is astonishing what treasures may be found in Reports that look forbidding enough. For example, the Annual Report by the Chief Registrar for Friendly Societies contains passages that will provoke anger, mirth, and opposition.

Sir George Robertson, the Registrar, speaks of the application for exemption from local rates made by a Christian Science Church, by the Swedenborg Society, and by the Thesophists, on the ground that these bodies were instituted solely for the purpose of science or literature. He rejects all their claims, on the ground that these bodies are primarily religious. He says that to call such a system as that taught by Mrs. Eddy a "science" is ridiculous; that the value of the works published by the Swedenborg Society is not literary, but theological and doctrinal; and that Theosophy is a dogmatic religion, not a science.

This Report is well worth studying for its frank analysis of certain modish systems of living.

Standardising English Pronunciation.

Among those who never have any doubts upon the correct pronunciation of English, there can be heard considerable lament at the standardising process which is manifest in England, and which the B.B.C. Committee on the Pronunciation of English will—because of its learned persuasiveness—undoubtedly hasten. For those who do know better rather glory in the varieties, dialectical and accentual, of English speech; that such things as the broad vowels of the North or the burr of the West should ever give way to the thinner patter of the South, would, they think, be a calamity.

But such a disaster cannot happen for many years. Admittedly there must be an approach to uniformity, and that approach must be to the educated speech of the capital, London. Everything in what we call Progress, facility of communications, wireless, and so on, must tend towards this. In our lifetime, however, there will continue to be more than one right way of pronouncing the language.

The Railway Agreement.

Bouquets are being showered upon the railwaymen, and particularly upon Mr. J. H. Thomas, for the agreement by which a reduction by two and a half per cent. is being made in the wages and salaries of all concerned in the railways. It is claimed that the road to real statesmanship has been pursued, and evidently the railwaymen are inclined to think that no better terms could have been reached.

They are probably right. Yet one should remember that a reduction of sixpence in the pound to a man whose salary is £3,000 a year is not quite the same as a similar reduction to a man whose wages are £3 a week. This agreement was, however, freely arrived at, and is now being regarded as the model for similar agreements in other large industries. The best part of it is probably the clause by which this reduction is stated to be only temporary; the old standard agreement remains the basis for future negotiations. But when will the opportunity for returning to it occur?

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

August 2, 1928 (New Style).

July 21, 1928 (Old Style).

Saphar 14, 1347 A.H., of the Muslim Calendar.

Ab, 5689, of the Jewish Calendar.

The King and Queen received the Dowager Maharani of Cooch Behar on July 25.

The Maharaja of Patiala left London on July 30, for Germany.

The Bulgarian Minister left London on July 28 for abroad, on two months' leave.

Dr. and Miss Muriel Brock have left London to visit America, India, and Egypt.

Mr. S. R. Das embarked in the Malwa at Marseilles on July 27, for Bombay on return from leave.

The Maharani of Kapurthala left Claridge's Hotel at the end of last week for Paris.

Ibrahim Bey Fahmi, Egyptian Minister of Public Works, is due to arrive in London this week.

The Maharani of Baroda left Immingham on July 28 in the Orient liner Otranto for a cruise to Norway.

Lord Lloyd, High Commissioner for Egypt, left Alexandria for Europe in s.s. Heluan on July 28.

Sir Oswald Bosanquet left London on July 26 to join the Malwa at Marseilles for Bombay.

The Prince of Wales received at St. James's Palace on July 27, the Maharaja of Patiala, Sir William Tyrrell, and Sir Abe Bailey.

Sir Ronald Storrs, Governor of Cyprus, was present at the reception given by the Cyprus Brotherhood on July 28 at 12, Archer Street, W.1.

Sir Philip Grey-Egerton returned last week, after a shooting trip in India, to 50, Berkeley Square, where Lady Grey-Egerton is also in residence.

His Highness Taymoor Tash (Minister of the Court of the Shah of Persia) had the honour of being received by the King and Queen at Buckingham Palace on July 26.

The Sultan of Muscat and Oman, accompanied by Mr. B. S. Thomas, was received at Buckingham Palace on July 25, by the King.

His Majesty received Major A. K. Macpherson (Officer-in-Charge) and the King's Indian Orderly officers, at Buckingham Palace on July 26, and took leave of them upon their return to India.

PROPOSED ENGLISH CHURCH AT TROODOS, CYPRUS.

WANTED !

A permanent church on Troodos for the needs not only of residents (military and civilian) but of the visitors who are coming in growing numbers each year to this popular hill station of the Near East.

It is proposed that a stone building be erected on a site, to be allocated by the War Office, near the Parade Ground, at a cost if possible not exceeding £500.

The Special Committee includes H. L. Jones, Esq., Major L. F. Layton, O/C Troops, Norman Petrides, Esq., Dr. A. H. Unwin, Henry Williamson, Esq., and the Chaplains of Nicosia (Rev. H. Buxton) and of Limassol (Rev. L. Lindsay).

The Managing Director of the Cyprus Asbestos Co. has kindly promised a generous cash contribution and also building materials produced by the Company at exceedingly low price.

Contributions should be sent direct to the TROODOS CHURCH FUND, c/o H. L. Jones, Esq., Ottoman Bank, Nicosia.

Mme. Lessinoff, wife of the Counsellor of the Bulgarian Legation in London, sailed on July 28 in the Berengaria for America. She will return to London in October.

Colonel Sir Ronald Storrs (Governor and Commander-in-Chief of Cyprus) had an audience of his Majesty, and Lieut.-Colonel Sir Arthur Bannerman (upon relinquishing his appointment as Political Aide-de-Camp to the Secretary of State for India) had the honour of being received by the King at Buckingham Palace on July 28.

A farewell luncheon was given by Sesostri Sidarouss Bey, Egyptian Chargé d'Affaires, to Sir William and Lady Tyrrell, at Claridge's Hotel on July 27. There were present: Sir William and Lady Tyrrell, the French Ambassador, the Brazilian Ambassador, Madame Regis de Oliveira and Mademoiselle Regis de Oliveira, the Turkish Ambassador, the Governor-General of the Sudan and Lady Maffey, Sir A. M. Hassanein Bey, Mr. John Murray, Mr. Stephen Gaselee, Mr. and Mrs. G. Neville Bland, Hussein Sirry Bey, Mr. D. P. Hall and Miss Hall, Mr. J. M. Furness, Mr. Georges Cattai, Mr. and Mrs. R. A. Radi, Mr. F. Nawardi, Mr. Y. Noor El Din, Mr. M. Gamal El Din, Mr. M. Makhoul, Mr. F. Abdullah, and Mr. H. Khatib.

Professor Gilbert Murray was on July 25 elected President of the League of Nations International Committee on Intellectual Co-operation in succession to the late Professor Lorenz.

Mr. C. H. Griffith, deputy general manager of the Egyptian State Railways, has resigned, and it is reported that he has accepted an important post with the Pullman Car Company.

At the monthly meeting of the general committee of the Church Missionary Society held in London on July 24 the Bishop in Persia gave an account of the present situation in that country. It is more than 50 years since the Society began a mission in South Persia, and there are now four centres of medical, educational, and general Christian effort. The Church in Persia is small, but it is claimed to be growing year by year, and the Bishop is appealing for recruits from England to help him in every branch of the work.

Following a discussion on July 26 between Professor Capps, the Director of the American School of Archaeology in Athens, and officials of the Greek Ministry of Education, an agreement in principle was reached in regard to excavations on the site of ancient Athens. Under the agreement, according to the Athens correspondent of *The Times*, the American School will be granted a permit to excavate for the present the site between the Theseion and the Stoa of Attalos—namely, about half the extent originally proposed. It is proposed to begin work this year as soon as arrangements have been made for the settlement elsewhere of the occupants of the first 20 houses to be taken over.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE IMPORTANCE OF BARDOLI.

The trouble in Bardoli may at first sight seem a local concern of the Bombay Government. In reality, however, it is a matter of first importance, and, if the Provincial Government fails to deal with it with reasonable firmness, the consequences may well be disastrous throughout India. The facts are simple enough. As we have already indicated, the Bardoli taluka is one of the richest portions of a district which is itself one of the most fortunate as regards climatic conditions in the whole of India. As in other portions of India, the cultivators hold their land from Government, the ultimate owner, on an assessment which holds good for thirty years, after which time it may be revised at the pleasure of Government. The theoretical right of Government to increase it as may seem fit is indisputable. As the last settlement took place in 1896, the revision is already overdue: in fact the cultivators have had two years beyond the fixed period, at the old rates settled when agricultural prices were much lower. It is equally indisputable that owing to the War, the opening of world markets for Indian produce, particularly cotton, and the general rise in prices, the agriculturist gets far more for the crops on his land than he did 32 years ago. Government, whose expenses have increased at least proportionately, can naturally claim a higher rent for the land than they did more than a generation ago, especially when it is remembered that the rent, or assessment, now fixed is to hold good for the next thirty years, and cannot be increased in the meanwhile, whatever the further rise in prices. In accordance with the usual practice, the Settlement Officer submitted his proposals for the revision of the assessment. He was an Indian officer of good standing and reputation. It is not disputed, at least by the fair-minded critics of Government, that his work was done carefully. He came to the conclusion that, in view of the increase in the value of the produce, an enhancement of 30 per cent. could reasonably be made. It is admitted that he based this opinion mainly on the gross value of the crops: nor is there intrinsically any unfairness in his doing so. The right of Government to a share in the gross produce is not merely traditional in India: it is the recognised principle in Indian States everywhere. When the proposals came to the Settlement Commissioner, that officer pointed out that it was possible to allege that the costs of cultivation had also risen: and he preferred to base his calculation of the fair increase of the assessment that could be made on the rental of such lands in the taluka as had been let by their occupants to tenants. The principle of calculating on the rental basis of leased lands has been recommended, as the fairest possible, by a majority of Committee which lately inquired into this very question of revision of assessment.

Provided that a sufficient number of cases of rented land can be found, and that the cases are examined to see that they are not greatly affected by extraneous considerations, calculation based on free rentals is doubtless the fairest, though it ought not to exclude a consideration of agricultural values. The important point in this case, however, is that,

though the Settlement Commissioner preferred his own method to that of his subordinate, his own conclusion was that the assessment should be increased by 29 per cent.: that is only one per cent. less than the original proposals. The closeness of the results arrived at by two different methods would appear to be a proof of their correctness. The Bombay Government, however, which has not been marked of recent years by any great administrative backbone, and is particularly open to pressure from Gujerat, reduced the increase to 22 per cent., and again on yet further consideration to 20 per cent. That Government also appointed the most senior of its officers, Mr. Hatch, to consider the complaints, but he was unable to find any substance in them. The Servants of India Society, an unofficial body formed for social service, then instituted an inquiry of its own. The *bona fides* of their members who conducted the inquiry need not be called in question: but none of them had any experience of settlement work, and one has, for several years, conducted his social work with an anti-Government bias. Their criticism, however, merely amounts to a suggestion that the rentals which served as a basis for the Settlement Commissioner's calculations, had not been examined with sufficient care. No evidence of real value is brought forward to support this suggestion: the rentals were often ascertained from registered documents; and in any case the possibility of an occasional error was surely covered by the reduction by Government of the increase in assessment from 29 to 20 per cent. On the merits of the case, therefore, there is no little ground for the refusal to pay the increased assessment. A similar or larger increase has been made, and is being paid without difficulty, in the neighbouring taluka of the same district.

The merits of the matter, as we explained last month, have little to do with the real agitation. It will be remembered that Bardoli was chosen by Mr. Gandhi as the trial ground for his movement of Civil Disobedience in 1921. If it be asked why this taluka had the doubtful honour, and undoubted misfortune, of being thus selected it may be remembered that it lies in the heart of Mr. Gandhi's native stronghold of Gujerat. It contains a large number of prosperous Hindu cultivators, orthodox and even bigoted in their views. It has also a large population of the depressed or Kaliparaj classes, who are entirely under the subjection of the superior Hindu classes. Finally it has a close connexion with the Hindu traders of South Africa, who in spite of complaints of oppression and unfair treatment, manage to make money in the Union, and who can be trusted to lend financial help in any political or racial struggle. It is true that Mr. Gandhi, genuinely shocked at the Chauri Chaura violence of 1921, called off the Civil Disobedience Movement. The agitation, however, did not cease. Ashrams were multiplied throughout the taluka: and there can be little doubt that Mr. Gandhi is once more playing with fire, and stirring up passions which he cannot control, though he will doubtless lament the violence to which they must inevitably lead. Mr. Gandhi is admittedly the brains of the movement, and his son is taking a prominent share in its activities. The

actual leader, however, is Mr. Vallabhai Patel, who is hailed as the Lenin of the movement. He is described as "General" by his followers, who are administered on a military basis. We may smile at the idea of the Gujarati Hindu as a soldier: but we must recognise the harm which a vain and ambitious man can bring on his deluded followers. Doubtless the intervention of his brother, the President of the Legislative Assembly, with his offer to pay a thousand rupees monthly to the agitation, has its serio-comic aspect. But it is surely impossible for the Government of India to countenance the President of one of its legislative bodies, whose salary is paid for the performance of his duties with decent impartiality, contributing out of that salary to an agitation admittedly subversive of the system of Government.

The local aspects are serious enough, but, as we have said, the consequences, if the Government of Bombay admits defeat, or even shows further weakness, will be far more serious. We are told that the malcontents in Madras Presidency are watching the results in Bombay. Similar questions will arise all over India, where the Government is the great landowner. Inasmuch as the Government of Bombay had already twice revised its Settlement Commissioner's proposals, and had appointed an officer to inquire into them, it seems an undue yielding to agitation to offer further inquiry. Such an inquiry might be justified if the agitation agreed to abide by its results. The idea of any such agreement is, however, repudiated by the agitators. The Government of Bombay must therefore decide between governing and abdicating its functions in favour of Mr. Vallabhai Patel.

CURRENT TOPICS.

The Opening of the Case.

As we anticipated, the proceedings at the first meeting in London of the Indian States Committee last week, were merely formal, the Committee, over which Sir Harcourt Butler presided, deciding merely to receive the opinion of counsel on the constitutional position of the States. The formal submission of the opinion, which was signed by Sir Leslie Scott and four other leading counsel, and, it is understood, extends to some twenty printed pages, was made by the Chancellor of the Chamber of Princes, the Maharajah of Patiala. The Chancellor was accompanied by several other members of his Order belonging to the group which has engaged Sir Leslie Scott's services for the presentation of their case. The latter, we understand, now comprises some sixty-eight Princes who are members of the Chamber in their own right (including all the members of the Standing Committee), thirty-five rulers represented in the Chamber and one hundred and twenty rulers not so represented. At the conclusion of the proceedings the Butler Committee adjourned their meetings until the middle of October, by which time it is expected Sir Leslie Scott will be in a position to present and argue the considered opinion of the group as to, first, their grievances in respect of the existing constitutional position and practice, and second, the nature of the revision required to adjust the present administrative machinery to modern conditions. That there are still differences of opinion among the Princes as to the precise form which the alterations should take—Hyderabad, Baroda and Mysore are the outstanding examples of those States which have so far declined to join the Standing Committee of the Chamber in the new organization—is a matter of common knowledge. "I think it is fair to say, though," his Highness the Maharajah of Patiala stated on the eve of the opening of the case, "that we are all agreed that there must be something like a federation for India; and by federation I mean nothing more than a machinery which will enable British India and Indian India to meet together at the top, and to discuss jointly, in a manner consonant with the interests and importance of each, all policies and proposals which affect India as a whole. Concerning details,

as will be obvious, there is plenty of room for difference of opinion; but on these broad lines, that is to say, the strength of the Princes' case, the importance of finding a remedy and the necessity of some federal scheme—I think I may say that there is entire unanimity among us."

And anybody who studies the admirably concise but comprehensive exposition of the Princes' case which the Maharajah gave at the last meeting of the East India Association, of which a full account appears on another page, must admit the force and equity of their demand for a stable and satisfactory adjustment of the relations—constitutional and economic—between the Crown, British India and themselves. With the first aspect of what, as the terms of reference to the Butler Committee indicate, is a two-fold problem, we dealt last week in some detail. The other aspect is the steadily growing importance of affairs of common interest to the States and to their neighbour. British India tariff legislation, particularly that on protective lines, is an outstanding case in point. The co-ordination and control of railway policy throughout India is another, and further illustrations readily occur to mind. The opinion that developments in such directions have reached a stage when regular constitutional methods of consultation between the States and British India ought to be established has long been crystallising in authoritative quarters. Some of the leading ruling Princes, His Highness reminds us, pressed upon the Paramount Power definite schemes for dealing with the situation over ten years ago. The institution of the Chamber of Princes was itself an expression of general agreement upon the need to take special measures to that end. Unfortunately those who have been most closely concerned in its working complain that as a basis for co-operation between British India and the States the Chamber has wholly failed of its purpose. And meanwhile the urgency of the problem has increased, as the outcome of the practical administration of the reformed Constitution of British India, tenfold. A glance at any map will reveal the economic interdependence of the latter and of the States which occupy nearly a third of the Indian Empire, and will emphasize the Maharajah's contention that the prosperity of India as a whole is largely dependent upon effective co-operation between the governing authorities in British India and those in the Indian States.

Labour Unrest in India.

After a short period during which the country was relatively free from labour troubles of serious dimensions, India has lately been in the throes of a strike epidemic of unprecedented extent and virulence. The 128 separate disputes reported in 1926, we pointed out recently in these columns, represented, in point both of days lost and work-people involved, a smaller number than in any of the six years during which regular statistics have been compiled. This comparatively peaceful state continued into 1927, only about 25 strikes, some of them very paltry, being recorded during the first quarter of last year. And a notable and very satisfactory feature of all these disputes was the almost entire freedom from acts of sabotage and violence. Unfortunately, the improvement has not been maintained. The current year has not only seen a recrudescence of the trouble but upon more extended lines and in a far graver form. The situation has developed with bewildering rapidity since the end of March, but the figures for the first quarter of 1928—the latest available—are sufficiently impressive. Between January 1 and March 31, 58 disputes occurred, the number of men involved being 83,570 and the days lost 1,005,000—the latter figure being practically the equivalent of that returned for the whole twelve months of the two previous years.

(At the same time, to describe the latest developments as symptomatic of labour unrest in the sense in which the term is understood in this country is greatly to underrate their significance. The avowedly Communistic aims of the self-constituted leaders, both Indian and European, the clearly proved complicity of outside agencies known to be

hostile to our rule in India, and the violence and "direct-action" tactics employed from the very beginning of the trouble mark a new and more sinister phase in the history of industrial progress in that country. That the Government of India has itself largely to blame for a situation which threatens to become a real menace to law, order and good government, is unquestionable. But its dilatoriness in re-introducing the legislation for the prevention and settlement of industrial disputes, with the somewhat chequered history of which we dealt in a recent issue, is not the only complaint which can be lodged at its door. For at best compulsory arbitration, even supposing an equitable and workable system can be found, must only be a palliative in existing conditions, and leaves the real problem untackled. Accordingly we welcome the action taken last week in Madras and we hope that not only will the trial of the ringleaders be arranged as expeditiously as possible, in order that the maximum moral effect may be obtained from any deterrent sentences which may be imposed, but that steps will further be taken to prohibit the entry into British India in future of persons of any nationality holding professed Communist views. 7

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 12.

The Statutory Commission and Bengal.

A few days before the debate began in the Bengal Council on the resolution that that Council should follow the lead of the Punjab and the Burma Councils, and appoint a Committee to act with the Statutory Commission, I had some talk with an Indian, a journalist prominent among the Swarajists of the Province. In answer to my question, whether the Bengal Council would decide for or against co-operation, his ready answer was that it would decide against, and by a majority of nine votes. "If the voting should go the other way," he went on, "and the Council decide to appoint a Committee, the majority in favour of that course will be the same, nine." The actual voting last Tuesday must, then, have occasioned a good deal of surprise; for, first, the Swarajist amendment to the resolution, the supporters of which sought to postpone the decision indefinitely, was defeated by 82 votes to 45, while the resolution itself was carried by 72 votes against 50. The Muhammadan vote was the decisive factor. All the Muhammadan members present voted for the resolution except two, one of those voting against it, and the other, Sir Abdur Rahim, did not vote. Needless to say, all the European and Anglo-Indian members voted for the resolution.

The decision of the Council meets with general approval, with much more indeed than is expressed openly; and the example of Bengal should have its weight with those Councils which have not yet come to a decision, and it may have some influence with those Councils that have already decided, and have decided for the boycott, but might reverse that decision. Less and less, it may be predicted, will be heard of the boycott. It may sound a little ungracious, and not in a Locarno spirit, to remark that, should the boycott collapse, which seems most improbable, an extremely pertinent question will be, "What amount of real statesmanship can there be in those leaders who began it with such an air of assured victory?" It would have to be asked, for the whole Simon inquiry turns on it. If these politicians have little real statesmanship in them, which is the belief regarding them of most impartial observers, then the new constitution must be one that does not assume for its successful working the possession by the parties of a great deal of statesmanship, for as the leading politicians of to-day are, so will Indian politicians for long enough continue to be.

The "Incident" of the Debate.

What is variously spoken of as the "incident" of, or the "breeze" in, the debate occurred when, to give it in the words of the *Statesman's* summary, "Mr. J. M. Sen Gupta, the Swarajist leader, alleged improper conduct by official members and His Excellency the Governor in sponsoring the Government resolution, despite Sir John Simon's statement that the formation of provincial committees must be confined to non-official members." On the President's stating that Mr. Sen Gupta must come to his private chamber after the debate, and exhibit his proofs, and on the Swarajist leader's saying that he would not do so, the President ruled that the portion of the speech in question must be expunged from the official report.

There is a valid distinction to be drawn between confining the formation of the provincial committees to non-official members and deciding whether there are to be such committees, or not to be any. There is even a distinction to be drawn between the official members taking part in the selection of those seven non-official members who should form a committee and their appointing one or more of their own number to the committee. Such distinctions Sir John Simon clearly meant should be drawn. Why the apparently small matter is worth dwelling on is because it is another instance, as the boycott was one, in which a leader of a party has shown a lack of understanding of what is worth putting forward in policy or debate, and what is not worth it. If there are to be representative institutions with increased powers and responsibilities, there must be a surer guarantee than is now apparent that there is at command that minimum of competence without which the business of such institutions cannot be intelligently conducted.

It may be said all the same that the implications of the President's ruling on Tuesday are extremely unsatisfactory. Is every speaker who alleges improper conduct on the part of the Governor or the executive to be summoned to the President's private chamber, there to exhibit his proofs? And will it depend on the President's being satisfied, whether the man's speech is reported in full, or with a part expunged? What a field would thereby be opened to any subtle minded member who wished to make the President's existence a burden to him! What a field for a party practising obstruction! Surely, too, it could not be good for the executive or the country, that the executive should be considered so holy and sacrosanct, that it must not be accused of improper conduct. How far the Governor's acts may be properly made the subject of debate is a more difficult question. There is sound sense in the feeling in England that the King's name must never be dragged into debate. The Governor is the King here.

East Indian Railway Strike.

It would appear that the East Indian Railway strike at Lilloah, Asansol, and Ondal is at last on its speedy way to the much-wished for end; for the strike was "officially" called off on Monday. Mr. K. C. Mitra, Secretary of the E.I.R. Union, addressing a mass meeting at Howrah, attended by about 2,000 men, confessed that the Union's resources were exhausted, and that he could not ask the men to hold out any longer. He offered to lead them back to work the next day. Each man, before being admitted, had to sign a promise that he would work, and not just perform *saiyagrah*. There has been a steady streaming back to work since Tuesday, for it has been more than a drift. This is true of all three places. There has been a welcome absence of late of the name of Mr. Philip Spratt, in the reports of the strike. The strike had lasted for 134 days. There is to be no pay given for the time the workshops were closed; so one may now consider the bad Karghpur precedent as buried. The authorities, one imagines, were determined that whatever it might cost it should be.

Co-operative Movement in India.

The co-operative movement in India has made remark-

able progress during the last twenty years, statistics just issued showing that there are now 89,071 societies, with a membership of 3,422,000 and capital amounting to nearly seventy crores. The rapidity of the growth of the movement in Bengal is commented on in the Report of the Department of Agriculture, which has this among other matter: "Another class of societies . . . is the co-operative irrigation society which has for its object the construction of new sources of irrigation and the improvement of those already in existence. Co-operative societies of this character have done good work in the Bankura and Birbhum districts . . . where they now control an irrigable area of over 23,000 acres. The organization of these societies is reported to have changed the whole outlook of the people and to have strengthened their economic position. Their development would have been more marked had it not been for the lack of expert guidance and advice." There are even now Co-operative Anti-Malaria Societies. The possibilities of this movement have been recognized by the Government, which has assisted by giving annual grants, amounting to date to about Rs.70,000.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 14.

The Bombay Legislative Council.

The Poona session of the Bombay Legislative Council which commences shortly promises to be an interesting one. A discussion will most probably arise on the Bardoli question on which the Gujerat members of the Council feel very keenly; there is the Fragmentation of Holdings Bill to which the Deccan members are strongly opposed; and, lastly, there is the appointment of the Council Committee to work with the Simon Commission opposed by the Swarajists and the other boycotters. Though none of these three parties would be able to offer an effective opposition to the Government, it is feared that acting together they may defeat the Government at every point. Each party has stipulated that, as the price of its support, the other must be willing to reciprocate. The result is likely to be that, if Government suffers a defeat on any resolution, it will be successfully opposed on all the others. If the Government could settle the Bardoli question before the Council meets it can look to the support of the Gujerat members. But the Council assembles on July 23 and there is hardly any possibility of the Gujerat members being conciliated in the intervening period.

Bardoli.

Sir Leslie Wilson has gone to Simla to consult the Viceroy about the Bardoli matters. The Revenue Member of his Government has come, I understand, to the conclusion that Government are facing a crisis at Bardoli the intensity of which they had not hitherto realised. It is expected that Government will yield to the demand for an inquiry though it will by no means be an independent and impartial one. The Gujeratis, it is to be feared, will not accept this compromise, and, while at a certain stage they could easily have been appeased by this offer, the matter has been allowed to drift for such a long time that the demands of the leaders of the disobedience movement have, like that of the Sibyl, increased with lapse of time and nothing will now content them but an "independent and impartial" inquiry, by which they mean an inquiry which finds that the assessment has been too heavy.

Relief for Strikers.

The proposal that the Municipal Corporation of this city should grant for the relief of the women and children of the strikers Rs.1,000 a day was thrown out. The chief danger in such a scheme is that there will be a rush from the villages and it will not be possible to distinguish the mill workers from the others. The resolution was brought forward as an election "stunt" and even those who sup-

ported it had not much enthusiasm for the scheme. Election time is near at hand and many who have shut their eyes to the mistakes of Government when they were safe from their electors, have suddenly discovered the iniquity of those in authority and consider the time taken up in writing letters to the Press well spent.

Mayor's Fund.

Dr. Deshmukh, President of the Corporation, has started a fund for the relief of the strikers to which many of the millowners who opposed the idea of a municipal grant have generously contributed. Some of the millowners had also consented to put at the President's disposal their mill crèches for the use of the children of the strikers. Dr. Deshmukh, at the informal meeting of the members of the Corporation, at which he made this announcement, suggested that they should not rest content with helping the strikers but should endeavour to bring the strike to an end and that they should urge on Government the necessity of appointing a conciliation board to settle the dispute as only by mediation could the strike be ended. Dr. Deshmukh was only fair to the millowners when he advised the audience to get the strike ended as he could not otherwise take their money to support the strikers. The extremist labour leaders, however, look at it in a different light. At one of their recent meetings at Thackersey Hall a speaker advanced the ancient argument of *timeo Danaos et dona ferentes*, which has caught the imagination of the strikers.

Government and Ministers.

Sir Chimanlal Setalvad, in his inaugural address at the Institute of Political and Social Science held yesterday at the Servants of India Society, attacked the method of appointing Ministers under the system of dyarchy as ill-suited to the requirements of the time. Sir Chimanlal has for long been associated with the Bombay Government and he has had inside experience of the working of the reformed constitution. His words, therefore, cannot be disregarded as wild fulminations against the Government. "The way in which Ministers are appointed in India," says Sir Chimanlal, "is the very negation of the principle of Constitutional Government. A person is chosen as Minister not because he has a party committed to a definite policy, but because he suits the purpose of Government. All that Government desire is that their measures, particularly the measures required by the Reserved Departments, should be smoothly carried through. They select Ministers who can give a greater number of votes to the Government. There is a regular bid for the post of a Minister and the person that gives the highest bid gets his chance. By giving the Ministership and the salary of Rs.4,000 attached to it, Government not only buys over a person but along with him they buy 14 or 15 votes, according to the bid that that person might have given."

Part III. of Volume I. of the Report of the Royal Commission on Agriculture in India, consisting of the evidence of officers serving under the Government of India and of witnesses from minor provinces, has been published by H.M. Stationary Office (price 1s. 9d.).

The Marquis of Reading, presiding at a luncheon of the British Indian Union at the Hotel Cecil, on July 28, said that the Union was doing much to foster a better understanding between the British and the Indians, which was a matter of vital importance. Mr. S. R. Das, the Law Member of the Government of India, who was the guest of honour, said that the Union was helping in the right direction. Sir M. Shafi and Sir M. Dadabhai spoke in praise of Lord Reading's efforts to extend the activities of the Union.

The Right Hon. Satyendra Prasanna, Baron Sinha of Raipur, P.C., K.C.S.I., of Delhi, India, and of Queen Anne's Mansions, London, S.W. who died on March 5, aged 64, domiciled in India, left property in England valued for probate at £538, and in India valued at Rs.2,974,753, making the total value of the estate at current rates about £223,600. He left Rs. 10,000 each to the Hospital attached to the Belgatchia Medical College, the Trustees of the Sadharan Brahma Samaj of Cornwallis Street, Calcutta, the Trustees of the Bhowanipour Sanmilani Brahma Samaj, the Sambhunath Hospital, Bhowanipour, and the Calcutta Orphanage of Bulloram, Deys Street, Calcutta.

"THE INDIAN STATES AND THE CROWN."

At a largely attended meeting of the East India Association on July 24, Major-General the Maharajadhiraj of Patiala, Chancellor of the Chamber of Princes, lectured on "The Indian States and the Crown." In the absence, owing to family bereavement, of Lord Ronaldshay, Sir Walter Lawrence presided on what is believed to be the first occasion on which a Ruling Prince has addressed a gathering of that nature.

The Maharaja of Patiala said that it was difficult to understand the relations between the States and the Crown unless one realised the great importance of the position which the former occupied in the actual geography of India. The territory of the States lay across, and from one point of view dominated, the whole of India—in fact the Indian States were so situated that the main arteries of communications, which were vital both for the safety and the well-being of the Indian Continent, ran principally through State territory. He asked whether this did not seem to argue that the prosperity of India, as a whole, is very largely dependent upon effective co-operation between the governing authorities in British India and in the Indian States.

After a brief historical retrospect of the various phases through which the relations between Indian States and British India have passed since the early days of the Company, the Maharaja showed how economic progress and enlightenment had brought in their train a growing consciousness that the position of the Princes was unsatisfactory; and that those rights and privileges which they believed themselves entitled, according to their treaties and engagements, to enjoy were in practice infringed very often in deference to the imperious political and economic requirements of British India. Early in the present century the new generation of Princes became alive to the necessity of some organization for the promotion of their common interests in place of their previous isolation, while the new generation of British administrators realised that the time had come when such a combination was essential.

Accordingly when the late Mr. Edwin Montagu came to India in 1917, a number of Princes, with whom the Maharaja of Bikanir and he had the honour to be associated, were ready to present to him a scheme intended to afford a basis of co-operation between the Indian States and the Government of British India, as well as to provide the means of rectifying the particular difficulties which the Princes had begun to experience in the working of the existing system. The scheme contemplated the creation of three separate pieces of machinery; a Council of Princes, a permanent Advisory Board, and a system of arbitration. The Chamber of Princes was intended to enable the States to speak with a common voice, and thus to provide the foundations upon which negotiations between the States as a whole and British India as a whole could be based. The permanent Advisory Board was to be associated with the Political Department in the management of everyday relations between the States and the Crown, in order to ensure that the Princes' point of view was adequately represented when policies were framed. The system of arbitration was devised to secure the impartial decision of justiciable matters in dispute between States inter se, and the States and Government.

"I am speaking," he continued, "with the fullest sense of responsibility when I say that we were able to convince Mr. Montagu and Lord Chelmsford of the strength of our case. . . . But the fact remains that while the Joint Report endorsed what I may call the externals of our recommendations, it deprived our proposals of the scope and functions which we had postulated." The Chamber of Princes was set up, but under conditions which made it almost useless for their purpose. The Advisory Council of the original proposals was represented to-day by the Standing Committee of the Chamber of Princes, with none of the functions which the Princes themselves had prescribed for it. The system of arbitration was represented by a Government resolution which enabled Government,

when it so desired, to employ the forms of an impartial arbitration to settle differences between itself and a State; but allowed Government to accept or to refuse the result of the arbitration as seemed to it more desirable.

Since the Chamber of Princes was set up in 1921 its members had pursued the policy of doing the best with what had been given them. Until a couple of months ago they had no control over their own agenda or their rules of business; but now through the liberality of Lord Irwin, they had achieved the first of these two points. The Chamber had performed the useful purpose of building up a very strong body of public opinion among the Princes in support of a definite line of policy.

"This line of policy," he continued, "may be briefly defined, first, as a fixed endeavour to bring home to every ruler a sense of common responsibility to the Order of Princes as a whole; secondly, a deliberate encouragement, by every means, of efficiency and good government in the States; thirdly, a fixed determination to press for what we regarded as our undoubted rights under the treaties."

As time went on the Princes, finding their position becoming increasingly difficult, approached the Viceroy in person to ask for an impartial and authoritative inquiry. They had become increasingly conscious of the fact that while there was never any intention on the part of the framers of the Reformed Constitution in British India to trespass upon the rights of the States, yet in actual practice these had been affected very deeply. In a great variety of directions—for example, the fixing of the rupee ratio, the introduction of protective duties, experiments with prohibition and the like—they found themselves most deeply and vitally affected by policies in the framing of which they had no hand.

The terms of reference to the Indian States Committee, now sitting under the able Chairmanship of Sir Harcourt Butler, were not as comprehensive as the Princes originally desired; but they believed that the investigations of the Committee could do them nothing but good, since they would enable them to put forward at least some portion of their case in all its strength. Regarding the precise form of constitutional machinery they hoped to see established, there were still some differences between the Princes. But it was fair to say that they were all agreed that there must be some machinery to enable British India and "Indian India" to meet together at the top, and to discuss jointly, in a manner consonant with the interests and importance of each, all policies and proposals affecting India as a whole. The Princes were unanimous in believing in the strength of their case, the importance of finding a remedy, and the necessity of some federal scheme.

He emphatically declared there was not, and could not be, any ill will on the part of the Princes towards the Nationalist movement in India. They, like all the greatest of the Nationalist leaders in British India, were firm believers in the value of the British connexion. They had not the slightest desire to thwart the progress of British India; indeed, they hoped to run a friendly race with them along the lines of national development. Not only had the States the will to improve, but very real improvements had in the course of a few years been carried out. It was the characteristic tendency of the States in these days to lay down the lines of a stabilized administrative system, which should be independent of changes in the personality of the Ruler, and which should operate with something like the same consistency and steadiness as characterized the work of Government in advanced countries.

The Maharaja concluded: "And here again let me speak very plainly. It has sometimes been said that Rulers of Indian States are autocrats. I do not quite know the full implications of that term to Western ears; but this I do know; that no Indian Ruler can resist, or would dream of resisting, the public opinion of his people. That is not our conception of kingship at all; nor is it the idea which our people hold. To us, kingship is an office which has rights and which has obligations. The two are indissolubly linked. The same is true of the subject. He has his rights just as he has his obligations; and the King can no more

transgress the former than he can permit the subject to transgress the latter.

"One last word, and I have done. It may seem to my hearers that I have said very little upon the the subject of the relations between the Indian States and the Crown. In reality, as I hope reflection will show you, I have really said a great deal; for I have done my best to explain to you as effectively as I can in the time at my disposal the manner in which Indian States themselves conceive of this relation; and the manner in which they believe it can best be implemented, for the benefit of Great Britain and the Empire, of India herself, of British India, and of the States."

Lord Lamington, president of the Association, who was detained at Harrogate by medical orders, wrote that, whatever reactions the changes in administration in British India might have on the Indian States, he thought that if those changes were to be successful they must be modelled on the forms and in the spirit of administration in the Indian States, rather than on the lines of our Western bureaucratic and representative institutions.

Sir Lennox Russel, late Resident in Hyderabad, said that by taking the bold step of ventilating in public the subject of the relations of the States with the Crown and the organization of the Princes for joint action the Maharaja had added to the notable services of his illustrious house.

Sir Michael O'Dwyer said there was no Prince in India who achieved more for the British cause in the Great War than the Maharaja of Patiala. The States differed markedly in treaty rights and status and relative importance, and it was very difficult to find any common denominator. But there were certain points on which the Chamber of Princes could "function" for their common good. In one instance mentioned by the Maharaja, that of the imposition of high protective duties on steel and other manufactures, he felt that the interests both of the masses of the people and of the Indian States had been disregarded. If, as the Maharaja had suggested, the Princes were disappointed with the outcome of the examination of their position in the Montagu-Chelmsford Report, it was because that document, in Chapter X., as in the chapters on British India, did not take sufficiently into account local conditions. The Princes had a very strong claim upon us when they asked for re-adjustment of relations, and their wishes should be met, subject to the proviso that British paramountcy remained unimpaired, and that in the last resort the British Government should have the right to interfere on behalf of the people of a State suffering from maladministration.

Sir Louis Dane said that the Indian States were the greatest sheet-anchor we had in India, and it was certain that if we stuck to them they would stick to us. He announced that the Maharaja had accepted a vice-presidency of the association.

THE STATUTORY COMMISSION.

THE NEAR EAST AND INDIA understands that Sir Philip Hartog, Chairman of the Auxiliary Committee on the Growth of Education, the appointment of which was announced in its issue of June 7, has arrived in England and is in conference, with the two members of the Committee resident in this country, with the Simon Commission respecting the lines of the inquiry.

In a questionnaire drafted by the Chairman and his colleagues in India before his departure, information is sought as to whether the growth of education during the past decade may be considered satisfactory. Recipients are required to submit their replies under specific headings, and, in the event of their answer being in the negative, to indicate the reasons which, in their opinion, may be held responsible. In particular, opinions are invited on the application of compulsion in primary education and on the

value of moral and religious instruction of special classes of the population. Questions of agricultural education are excluded as having been recently investigated by the Linlithgow Commission. Witnesses are invited to submit separate memoranda on any departures or experiments with which they are personally acquainted. The replies are to be submitted not later than August 22.

Sir Philip Hartog leaves for India again on August 23, and, on his return, the committee will begin a tour of the country to receive the reports which the Provincial Governments have prepared for its information. After visiting Madras and Burma, the Chairman and other members of the Committee will be joined at Bombay by Sir Amhurst Selby-Bigge and Sir George Anderson. The inquiry, as our Calcutta Correspondent recently pointed out, is necessarily general in character and it is intended that it should be completed by the end of the year.

APPOINTMENTS.

The King has been pleased to approve the following appointments:—

Sir William Malcolm Hailey, G.C.I.E., K.C.S.I., I.C.S. to be Governor of the United Provinces in succession to the late Sir Alexander Phillips Muddiman, K.C.S.I., C.I.E., I.C.S.

Sir Geoffrey Fitzhervey de Montmorency, K.C.I.E., K.C.V.O., C.B.E., I.C.S., to be Governor of the Punjab in succession to Sir Malcolm Hailey.

Mr. Alexander Montague Stow, O.B.E., I.C.S., to be a member of the Executive Council of the Governor of the Punjab in the vacancy created by the appointment of Sir Geoffrey de Montmorency as Governor.

Sir Provash Chandra Mitter, C.I.E., to be a Member of the Executive Council of the Governor of Bengal in the vacancy caused by the death of the late Maharaja Kshausish Chaudra Ray Bahadur of Nadia.

Saiyid Fazl Ali to be a Puisne Judge of the High Court of Judicature at Patna in succession to Sir Basanta Kumar Mullick, Indian Civil Service, whose retirement will take place shortly.

A DITCHER'S VIEW OF INDIA.

"THE ORDINARY MAN'S INDIA." By A. C. Brown. (London: Cecil Palmer. 10s. 6d.)

Mr. Brown tells us that he served in the Army during the War, in Mesopotamia. We imagine that he must have been an intrepid soldier. He certainly displays a quite unusual supply of "nerve" in printing this book, and reckless bravery in tackling Hindustani, of which he proudly claims a "working knowledge." He appears to have been in charge of the one English Calcutta "pictorial" weekly for some years. Judging from his excursions into politics and other deeper matters, we presume that the editorial pen was employed in the *Empress* in discussing matters of less importance. He seems to have spent all his time in the European quarters of Calcutta, with a trip to Darjeeling and one to Rangoon. His qualifications for writing a book on "India" are, therefore, far from evident. From a mass of miscellaneous information, much of it wholly inaccurate, we gather that for the "ordinary man" India would not be too bad a place if it were not for the Indians, of whom the author has, incidentally, no knowledge at all. A book of this kind might do infinite harm if it were to be taken seriously, but of this we hardly think there is much danger.

C. S-W.

Major-General Sir Christopher Rice Havard Nicholl, K.C.B. (late Rifle Brigade), of Headworth Square, Chelsea, S.W., Crimean and Indian Mutiny veteran, who also saw service in the Ashanti War, and who died on March 31, aged 91, left unsettled property of the gross value of £2,401, with net personality £2,312.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The New Yugoslav Ministry.

From an economic point of view the main interest attaching to the composition of the new Yugoslav Government lies in the fact that both the Minister of Finance, Dr. Bogdan Markovitch, and the Minister of Communications, General Milosavlyevitch, of the late Cabinet have been omitted. The former, it may be supposed, is paying the penalty of his failure to conclude a loan in London, although according to his own statement the loan has to be regarded as already concluded, but its issue is postponed on account of the unfavourable political conditions in Yugoslavia. General Milosavlyevitch was identified with a large programme of railway construction, and it remains to be seen whether the new Minister of Communications is prepared to inherit a ready-made policy or has views of his own on the subject. While the late Minister was engaged upon "future music" dissatisfaction with the existing state of affairs was growing. As an example may be taken the state of the railway which gave Zagreb through connexion with Split. The great hopes founded on this line have failed to materialize as it is found that the line, in particular the new section that linked up the two formerly unconnected portions, had been so indifferently constructed that it can bear only light trains and these only at slow speeds.

The Bulgarian Meat Concession.

Two years ago a British concern, the Bulgarian Development Company, with a capital of £500,000, obtained a concession for the export from Bulgaria of pork and other products. This company was to construct in Bulgaria model abattoirs and refrigerators, and to organise a regular shipping service between Bourgas and Varna and Great Britain. Unfortunately there were difficulties in connexion with the provision of the requisite capital, and another company has been formed with the title of the Anglo-Bulgarian Corporation to take up the concession, the transfer of which has been agreed to by the Bulgarian Government. The agreement provides *inter alia* that the new company shall construct the necessary abattoirs, refrigerators, etc., not later than July 28, 1930. Further, the company is to organise in 1929 a direct shipping service between Bulgaria and Great Britain with a minimum number of six voyages out and home. The delay which has ensued in carrying out the concession, which is of such importance to Bulgaria, is greatly to be regretted. The new company has before it a considerable field for the development of Bulgarian trade with Great Britain, and the success of its activities will unquestionably have a marked influence on the market in Bulgaria for British products.

Motor Competition in Egypt.

At the meeting of the Egyptian Delta Light Railways the Chairman, Sir Montagu Sharpe dealt in detail with the difficulties with which the railway has been confronted. Motor competition has been a most serious handicap,

and it is being met in the only possible way by the establishment of competitive motor services and by lower fares. In one district the measures taken have been so successful that it is stated that it is believed that the competition has been overcome. Granted, however, that in Egypt and other countries the railways succeed in holding their own by entering the terrain of their rivals, the fact remains that the competition has revealed the existence of a means of locomotion more useful in certain conditions than a railway. That is the all important fact, and, as I have already had occasion to point out in these columns, it is going to colour railway extensions in the future. The construction of a railway by itself is not likely to be contemplated in the future, but any scheme will probably provide for motor services covering the region which the line is designed to serve, thus providing in advance for the development of competition.

An Olive Pest in Cyprus.

The production of olives and olive oil constitutes an important feature of the industries of Cyprus, and while the Island has over 3,000,000 olive trees in production no active steps have been taken since the War to deal with the olive-fly which is the cause of a very heavy loss in the olive crop each year. A memorandum which has just been issued by the Government of Cyprus emphasises the importance of the olive crop and states that it has been decided that measures shall be taken forthwith to combat the olive fly. The figures given with regard to the olive crop are very interesting. The yield of olives in 1927 was 18,520,000 okes of the value of £462,500, while the production of olive oil was 1,865,065 okes of the value of £149,205. Cyprus, however, is an importer of both olives and olive oil. In 1927 the imports of olives totalled 3,195 cwt. and of olive oil 244 cwt, against which the Island exported 194 cwt. of olive oil. It is pointed out in the memorandum that during the last two years there has been a big increase in the import of olives, particularly in 1927, in spite of the fact that the production was the largest since 1920 and more than three times that of the previous year. Given that the island has 3,000,000 olive trees in production it is maintained that the production for the best years is far below what it should be. On an average minimum production per tree of 8 to 10 okes of olives the production of olives, it is stated, should be from 24,000,000 to 30,000,000 okes. It is anticipated that the measures

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

now being taken will contribute to a substantial improvement in the yield.

Bengal and North Western Railway.

A feature of the Indian railway returns generally in the last year has been the great improvement in the results, and the report of the Bengal and North Western Railway for the half year ended March 31 last adds one more to the list of satisfactory returns. The gross earnings of the company for the period amounted to Rs.1,95,15,042, an increase on the figures for the corresponding period of 1927 of Rs.3,52,651. On the other hand, the working expenses at Rs.69,08,795 show a decrease of Rs.1,02,281, and the net earnings have increased by Rs.4,54,932. With this improvement for the half year it is not surprising that the Board are recommending an interim dividend and bonus of 9 per cent. as against 8 per cent. for the same period of 1927. It may be noted that the return in the ordinary stock has risen in five years from 11 per cent. to 18 per cent., and it will be interesting to see whether the present decision foreshadows a further slight increase in the yearly return. Given the satisfactory maintenance of the traffic returns such a development would appear to be at least probable.

The Rubber Position.

It is a good many weeks now since I referred to the rubber position, and there has been no real need to mention it until now, for the outstanding features of the situation have been unchanged. At long last, however, the steady and continuous decline in the London stocks has begun to have its effect, with the result that price of spot rubber has been up to 9 9-16d. and promises within the next two months or so to go higher. The trifling increase of a hundred odd pounds this week cannot, incidentally, be regarded as of any real significance. The market has all along been governed by fears of what may happen after November, but the view is now gaining ground that the position then will not be nearly so serious as has been anticipated. Hence the more cheerful atmosphere which now prevails.

SUDAN GUM ARABIC.

With reference to the position in regard to Gum Arabic in the Sudan for the period May to June 30 Messrs. Boxall and Co., of Khartoum, report as follows:—

Arrivals in Kordofan Stations from May 20 to 30 amounted to 460 tons against 555 tons for the corresponding ten days during 1927, whilst in June arrivals amounted to 851 tons as against 934 last year. The decrease for the whole period is 12½ per cent., but it must be remembered that last year's arrivals were exceptionally small, whilst there were stocks in the Sudan then which are apparently non-existent now, if we rule out gum held against forward contracts. Moreover owing to the early rains a large part of gum arriving is rain damaged.

The only stations now bringing in gum are El Obeid, Nahud and El-Odaiya.

From May 20 to June 11 prices at El Obeid continued steady; afterwards the market stood at 3d. more until the 26th, when a further 3d. was paid and a steady rise set to the end of the month. The total rise during the above period was 2s. 9d. per cwt.

Higher prices, however, were paid outside the market to obtain such small stocks as were available, and with all exporters wishing to keep prices as low as possible in view of small demand from overseas, the actual increases in prices do not show to the full extent the nervous state of the market here owing to the small arrivals and insignificant stocks.

The demand during June was certainly small, but it was certainly as large as, and probably exceeded, the arrivals and available stocks. In view of the low and falling prices of past years buyers overseas were possibly sceptical of the increased prices asked, but the position has not improved as the days passed, and we doubt if the requirements of the past week can be booked irrespective of repeatedly increasing prices.

Stocks, as before mentioned, we believe are insignificant, if we rule out gum held against forward contracts. Between Jan./June this year there were 2559 tons of Kordofan Gum in excess of the arrivals for January/June, 1927, but against this there was the lack of old-crop stocks at the end of 1927, as against the estimated 2,900 tons at the end of 1926. Besides this it is estimated that the inferior Hashab is about 100 tons less in 1928 than in 1927, but we have no absolutely correct figures as yet on which to base this assumption. Lastly the exports of January/May, 1928 exceed those of January/May, 1927 by 2062 tons Hashab, and so we have the explanation of small or insignificant stocks in the Sudan this year as against last.

Yet the stocks last year were by no means excessive and barely lasted out the requirements of the closing months of 1927.

The future of prices will, of course, be decided by demand from overseas; but, unless it is much less than last year, then prices must rise.

The actual gum available during 1928 and, therefore, the probable total export we estimate to be much the same this year as last, the different factor being the exports this year as against last year reducing the stocks on this side.

Exports for the five months ending May, 1928 amounted to 13,429 tons, as compared with 11,132 tons for the corresponding period in 1927. Of the total, 2,652 tons were exported to Great Britain; 2,983 tons to the United States; 2,254 tons to France, and 1847 tons to Germany.

The output of the Anglo-Egyptian Oilfields for the week ended July 27 was 5,424 tons.

The Automobile Association is officially informed that the International Travelling Pass will in future be recognised in all parts of Yugoslavia (Kingdom of the Serbs, Croats, and Slovenes). The letters to be shown on the oval nationality plate are "S.H.S." (Serb-Hroat-Slovene). Before the War Serbia and Montenegro had adhered to the International Convention of Paris, 1909, on which the Pass is based. The new nation, constituted after the War, has not adhered to the Convention, but has now agreed to recognise the pass.

The Greek Minister of Foreign Affairs, M. Carapanos entertained Admiral Sir Frederick Field, British Commander-in-Chief Mediterranean, at the Hotel, Petit Palais, at an official supper on July 26. The following morning the Admiral visited M. Venizelos, who returned the visit. The Admiral gave an official supper in his flagship, followed by a dance. Horse races in honour of the British Fleet took place at the Hippodrome at Phalerum on July 29, and the Admiral and the officers and band of the flagship were present. British officers were the racecourse officials.

The Jerusalem Correspondent of *The Times* reports that Field-Marshal Lord Plumer, the outgoing High Commissioner of Palestine, performed what was almost his last function by laying the cornerstone of the new Y.M.C.A. building in Jerusalem which has cost \$750,000 (£150,000). The building stands to the north of the railway station and will dominate the rapidly developing south-western district. The Orthodox and Armenian Patriarchs, the Syrian Metropolitan, and other religious heads took part in the ceremony, while representatives of most of the religious and civil communities and organisations, including leading Jews and Moslems, were present.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

TANKER CHARTERING.

Messrs. John I. Jacobs and Co., in their tanker chartering review for the half-year ended June 30, state:—

The necessity of finding markets for an ever-increasing production has resulted in the expansion of the petroleum trade and the absorption of all new tanker tonnage as it has come into the market. To date, no new tonnage has had to lie up for lack of employment. Generally speaking, owners of tank vessels have experienced a better half year. Competition in the petroleum trade has shifted from that of production to that of marketing.

The large ship-building programme mentioned in our last two reports is visibly coming to its end, and ship-builders are receiving new orders on a very limited scale. It is computed that about 48 motor tankers are now building or on order and that about 10 are fitting out preparatory to delivery. These figures only take into account vessels intended for deep sea trading, and over 6,000 tons d.w. Very few steam tankers are now being built except for special trades, such as that of the Maracaibo Lake in Venezuela, where a special type of vessel is required in order to cross the bar.

There are now in commission about 10,500,000 d.w. of tankers. At the quarter ending March, 1928, Lloyds' returns showed 93 tankers building with a gross tonnage of 637,232 as against the peak figure last year of 775,600 tons gross. Lloyds' returns for the half-year ending June 30 last show 80 tank vessels of all sizes building and a gross tonnage of 539,722.

With the increasing reliability and efficiency of the internal combustion engine, the percentage of motor vessels building continues to increase, and this is now the recognised method of propulsion for tankers. The world figure of motor ships building for all trades now exceeds by 362,000 tons the total for steamships.

World production of crude petroleum increased in 1927 by some 15 per cent., the greater part of which arose in the United States, but all the major producing countries participated, with the exception of Mexico. Oil continues to be diligently searched for in all four quarters of the globe, and important finds are reported in New Zealand and Australia, whilst even Southern Patagonia shows signs of becoming an oil-producing country. Improved methods or refining are altering the proportions of the various grades of oil obtained from the crude.

It is likely that freight rates during the coming half of the year will on the average be rather below those for the period just reviewed, but with a continued expansion of the world's oil consumption owners may look to the future with a measure of optimism.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Flanged Beams.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invite tenders for the supply of 48 broad flanged beams and 12 steel joists, approximate total weight of 136 tons, for Sharabia subway. October 2, and for 9296 kilos solid drawn copper pipes. October 3.

Pulverising Plant, etc.—The Director General, Tanzim Department, Cairo, invites tenders for the supply of (1) One plant for pulverising limestone; (2) Two stone crushers. September 29.

Cards for Tickets.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 15,500,000 blank cards for railway tickets. August 30.

Brass and Copper Wire and Rods.—The Superintendent of Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 17,215 kilos brass and copper wire and rods of various dimensions.

Steam Roller.—The Tanzim Department invites tenders for the supply of a 5 ton tandem steam asphalt road roller. August 20. (D.O.T.)

Chloride of Lime.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of stabilised chloride of lime, 35 per cent. chloride, required for the year 1928-1929. October 2.

THE SUDAN.

Steam Launches. The Inspector General of Irrigation, Sudan, Khartoum, invites tenders for the supply of three steam launches for use on the Upper Nile. September 1.

YUGOSLAVIA.

Lathes.—The Acting British Consul at Sarajevo reports that a leading local firm of ironmongers, engineers, and contractors is desirous of receiving tenders from British manufacturers for the supply of two lathes, height of centres, 150 mm., distance between centres 1,500 mm. August 2. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, August 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahrona for Calcutta (Birkenhead, August 16); s.s. Mahanada for Calcutta (Birkenhead, August 30).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 8).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, August 11); s.s. Masula for Colombo, Madras, and Calcutta (London, August 11).

Cunard Line.—S.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool August 18, and Swansea August 21); s.s. Bosnia for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, August 25).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 4); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, August 17); s.s. Kaiser-i-Hind for Bombay (London, August 31).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 18); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 1); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 1).

Ellerman and Papayanni Lines.—S.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa,* and Haifa* (Liverpool August 4); s.s. Pola for Algiers*, Patras, Smyrna, Constantinople (Liverpool, August 4); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz,* Ancona,* Venice, Trieste (Liverpool, August 4, Swansea, August 9); s.s. Assyrian for Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, August 18); s.s. Mardinian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 18, Swansea, August 18). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian Ports via Algiers; Morocco ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.
LARGE STEAMSHIPS UPPER DECK CABINS.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 2.

The fortnightly settlement on the Stock Exchange was concluded without the disclosure of any difficulties, and while the general tendency of markets remains uncertain there was a slightly better tone in evidence after the conclusion of the settlement. The gilt-edged market has eased off a little as a result of the approaching holiday season. Two of the principal railways have announced their interim dividends for the past half year. The London Midland and Scottish distribution of $1\frac{1}{2}$ per cent. was a little better than the market had anticipated, and the saving of a million in expenses which the directors divulged in the dividend statement was regarded as a bull point. The Southern pays the full $2\frac{1}{2}$ per cent. on its preferred ordinary stocks, the question of the dividend on the deferred being left as usual until the end of the year. While the results so far disclosed may be regarded as reassuring, the outlook will not really brighten until gross revenues begin to show an increase.

The Post Office Savings Bank.

Many readers of this column have a Post Office Savings Bank account and are therefore interested in all proposals relating to these accounts. The Post Office Savings Bank has been subjected to a good deal of criticism, and particularly on the ground that it has not adopted the postal cheque system in operation on the Continent. This latter point of criticism has been investigated by a committee, whose report has been published this week. The committee cannot recommend the adoption of the postal cheque system, but it suggests "as a tentative step," in the hope of "encouraging a wider expansion of banking habits and economy of currency," that cheque facilities should be offered to depositors. The majority of the committee propose that limited cheques should be made available—

that is, a book containing cheques for a given sum—£1, £2, etc.—up to the amount of the depositor's balance, the view being that there are dangers in offering the unlimited cheque facilities of the joint stock banks. It remains to be seen whether the Post Office adopts this recommendation and it also remains to be seen whether, if adopted, it meets a popular demand. It is conceivable that in certain circumstances the facilities would be very useful. In any case, indications of a desire on the part of the Post Office to experiment with a view to improving its services would be welcome, and the more so when the experiment is in the direction of stimulating thrift.

Argentine Railways.

The leading Argentine railways, which have been built by British Capital, have completed their financial year—ended on June 30—amidst many uncertainties. As regards gross revenue, however, the year, was by no means unsatisfactory. One company—the Central Argentine—shows an increase of no less than £1,067,000; the Buenos Aires and Pacific also records an increase. The Buenos Aires Western and the Buenos Aires Great Southern, however, show modest declines. These returns, it should be remembered, compare with a year in which revenue was exceptionally good. But there have been developments which have tended to offset the favourable revenue position. On the one hand, the Government has ordered a revision of tariffs in the users' favour; and on the other hand, certain employees have demanded an increase in wages. The situation as regards the Government's demand is somewhat easier, the company concerned—the Buenos Aires Great Southern—having this week acceded to the Government's request. Presumably the Government's demand was not unreasonable. In any event, the companies have pursued a very conservative financial policy, with the result that it seems unlikely that dividend distributions will be affected. In recent weeks the junior stocks have declined slightly, the return in each case now being around $\frac{7}{8}$ per cent. There appears to be no substantial ground for uneasiness, especially as the outlook from the revenue point of view continues favourable.

The Popularity of Foreign Stocks.

During recent weeks the investing public has displayed a keen appetite for overseas loans issued on attractive terms. This week, for instance, the State of San Paulo 6 per cent. sterling loan, issued at $\frac{94}{100}$, was heavily oversubscribed. Moreover, during recent months many overseas loans have shown a considerable measure of capital appreciation. While this is satisfactory to holders, it increases the difficulty of finding new stocks which are attractive to investors with money to invest in this direction. Brazilian Stocks have lately been buoyant and in some cases have reached prices at which they appear fully valued. In many respects the European reconstruction bonds are still among the most attractive overseas investments. The German 7 per cent. sterling bonds, finally redeemable 1949, give a return of £6 7s. od. per cent. Turning further afield, Japan is held in high esteem by many investors. The 6 per cent. bonds of 1924, finally redeemable 1959, give a return of £6 3s. od. per cent.

SALONIKA FAIR.

The Department of Overseas Trade is informed that the Third International Fair at Salonika will be held from September 16 to 30 next. The last two fairs have, it is claimed, shown an increasing measure of success and the British Commercial Secretary at Athens is of opinion that British firms should consider the advisability of participating or instructing their local agents to participate in this enterprise, which, he reports, attracts buyers from Greece and from the surrounding countries.

Pamphlets containing the regulations for the Fair and application forms may be obtained from the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1. Firms interested should address their enquiries to La Foire, Internationale de Salonique, 11, Rue Papakiriatzu, Salonika, Greece.

Motors and Motoring.

By G. B. B.

The use of sheeting piles has been general for some time and every engineer knows that these are usually much lighter than they would have to be to hold up against the earth pressure behind them were the latter calculated out in the usual way. As Mr. R. N. Stroyer pointed out recently in a paper read before the Institute of Civil Engineers, it is not so generally recognised that the earth pressure and the resulting bending moment on the sheeting vary with the thickness of the latter and that, within certain limits, the thinner the sheeting the smaller is the bending moment therein. It seems opportune to point out that the problem of thin sheet walls has attracted the attention of engineers for some considerable time, and the first attempt to throw light on the apparent discrepancy between the light scantlings of sheeting and the earth pressure it was supposed to withstand was made eighteen years ago by Dr. H. Ehlers, who was at the time engineer to the Hamburg Port Authority. He carried out a good many investigations on existing wharves of the type used in the neighbourhood, and he found beyond doubt that in all cases the sheeting was stressed extremely highly when basing his calculations on the usually accepted formulas for earth-pressure the average working stress being about 4,000 lb. per square inch, which for timber immersed in water, seems astonishing. His explanation of the discrepancy was to the effect that two planes of rupture were formed instead of one, the head of the sheeting piling being immovable as well as the toe and that therefore a double frictional or arching action took place between the two planes of rupture as soon as the sheeting began to deflect. To take this into account he proposed calculating the earth pressure in the usual way, but employing higher working stresses of 3,000 to 4,000 lb. per square inch when timber was employed.

New Type of Omnibus.

A new type of omnibus has recently been placed on the road by the London General Omnibus Co., Ltd., the vehicles being four-wheeled, with pneumatic instead of solid tyres. Otherwise, they are on the general lines of the familiar N.S. type. The tyres are single on the front and double on the rear wheels, and the new buses seat 24 passengers on the lower and 26 on the upper decks. The old arrangement of seats, which has proved so convenient, has been retained and the side windows, which can be raised or lowered, instead of being movable horizontally, as in the older vehicles, are provided with winding handles; the upper three windows at the front, behind the driver, are, however, pivotted. To prevent the accumulation of used tickets a receptacle is fitted at the door,

and altogether the vehicle is a distinct improvement on previous types.

Miscellaneous.

I have been going through the figures recently issued by the Indian Railway Board and was struck by the efforts being made to increase efficiency and to reduce working costs. The Board, for instance, have considered the desirability of adopting various standard types of coaching stock bodies for use on all State railways, with the object of reducing the cost of manufacture and maintenance. A workshop of the State railways and these samples were afterwards inspected by a Committee who decided to amend the specifications, incorporating all suggested improvements, and to have five more sample bodies built. This has been done and the new bodies are now under construction. It may be that when they are completed, some minor alterations will be necessary or advisable but apart from that, a definite decision as to standardisation should be reached.

I am informed by the Institute of Metals that the Council of that body has accepted a cordial invitation from the Association of German Engineers and the German Metallurgical Society to hold the autumnal meeting of 1929 in Germany, probably at Dusseldorf. There seems no real reason why this invitation should have been accepted, as no particular benefit will be derived from it by members of the Institute. The cost of the visit will be far higher than most members will imagine, and these meetings generally mean no more than receiving a printed copy of a Paper or so—which may or may not be looked at—and a round of visits to parks and museums.

I hear that the Low Temperature Carbonisation Co., have opened up another retort at Barugh, Yorks, to meet the increasing demand. I had the pleasure of going over the Barugh works a short time ago and am pleased to learn that Coalite is now making rapid strides in popular esteem.

A Readership in Islamic Law, the first of its kind in Europe, has been established at the University of Vienna.

The Egyptian Residency moved from Cairo to Alexandria on July 30.

The Kaiti Sultan Omar bin Awad of Mokalla in the Hadramaut passed through Aden last week on his return from the pilgrimage to Mecca.

A contract has been obtained by Hick, Hargreaves and Co., Bolton, for a 1,500 i.h.p. drop valve engine, together with boilers, super-heaters, connecting piping, and crane, for India.

A Sofia message states that following the receipt of news that the Disconto-Gesellschaft has reconsidered its attitude, the negotiations for an international loan for Bulgaria has taken a favourable turn.

Sir Kenneth D. Stuart, of the firm of Stewart Thomson and Co., shippers, Manchester, has been elected a director of the Manchester Ship Canal Company, to fill the vacancy caused by the death of Mr. Allan Hughes.

The traffic receipts of the South Indian Railway Company for the week ended May 12 amounted to Rs.12,78,737, making the total from April 1 Rs.75,10,678. For the corresponding periods of the previous year the totals were Rs.12,54,408 and Rs.72,30,512.

EDUCATION AND INDUSTRY.

A special committee of the Federation of British Industries has recently drawn up a report on education in relation to industrial administration. The committee is of opinion that during the last fifty years an industrial revolution, comparable with that covering the break-up of the Guild system, has been taking place, and it holds that it may be necessary to scrap old methods of management and control in the same way as old processes. With this prospect in view, it examines the question of the development of education facilities to cover the subject matter of administration for industry and commerce.

The subject is one of special interest to countries less advanced in industrial development than Great Britain, which may reasonably expect to benefit by British experience and will be on the look out to follow along any new ground that may be broken over here. Quite recently a severe shock has been administered to thoughtful people in Turkey on learning that a textile factory at Angora, started with a great flourish of trumpets only a year ago, is now heading for bankruptcy unless the Government comes to its rescue. It is difficult to suppose that lack of business experience is not at the bottom of the failure, whatever other contributory causes may be discovered. The Turks have had to turn their hand to business in a hurry; it is inevitable that they should be lacking in the experience which comes from careful schooling in every department. They are further handicapped by anxiety to proclaim success before it has been achieved.

Even in countries where industry is more highly developed than in Turkey technical education presents an urgent problem. Slovenia is a case in point. The textile industry there has experienced a notable expansion since the War; factories have been enlarged and modernized, and foreign firms have established branches in the country. In spite however, of the penalisation of foreign competition by a tariff wall and the fact that the home requirements are far from being adequately met, the industry is troubled by cost of production owing to the shortcomings of the personnel. Steps are now being taken to found a textile school in Kranye or Maribor for the training of workers in all grades of the industry.

Similar conditions may be found throughout the Near East; and it may, therefore, be of interest to summarize the findings of the special committee of the Federation of British Industries. They concern, it is true, the higher ranks for the most part; but the mere enumeration of the items in a large undertaking that call for knowledge and supervision at the head serves in itself as a first step in the process of education.

Science of Administration.

On the subject of the science of administration the report says:—

It would be extremely difficult for any two persons to agree what was meant by administration, but for the purpose of this report it is considered to cover (a) Discovering the best method of carrying out any function concerned with industry. (b) Ensuring that the method is put into practice.

This simple division suggests two main sides of management problems, the craft side and the art side. The craft side is the side of the expert, whether scientific or commercial; the art side can be regarded as the general administration side in which leadership and the power of blending the various experts into one team, is, perhaps, the most essential characteristic.

America is often regarded as the home of scientific administration of industry. And although much more may have been done in America on a public scale and also in commercialised development and the training of administration experts, there are factories in other parts of the world in which administration is of as high an order as in the States. It may be that the birth of the movement in the States was due to the difficulties concerned with

the labour market, as without doubt the development in France by Fayol was due to the poorness of certain mineral deposits. It thus seems that in these two cases we have two of the chief costs in manufacturing, i.e., labour and material, as being the sources from which sprang serious consideration of management as a science.

Principles of Administration.

The report continues:—

The above definition of management, namely, (a) Discovering the best method of carrying out any function concerned with industry; (b) Ensuring that the method is put into practice, leads us to a consideration of the main functions of industry, namely, the purchase of something, the doing of work on what is purchased and finally the sale of the manufactured product. To obtain an organisation which will allow these functions to be satisfactorily carried out necessitates finance and the employment of consultants, or one might call it an intelligence service, covering many subjects. In regard to finance many questions arise including not only the provision of capital but also legal aspects. The organization once established, administration resolves itself into the direction of effort necessary to ensure that the various functions in the buying, manufacturing and distribution sides of the undertaking are being carried out efficiently and that in carrying them out the best practice is being adopted with due consideration of commercial aspects. When one considers the hundreds of varying functions carried out by the personnel of industry it is quite apparent that, although there may be some general principles of administration, the actual practice of administration needs the most expert consideration of some one branch of industry or even perhaps an individual works.

It is, however, on the common principles that attention will be focussed and not to the details of study or even of practice as these must be dealt with by particular trade organisations.

Suggested Development.

The following paragraphs contain suggestions for consideration of education authorities providing courses with special bearing on administration practice.

A word of warning must be issued to possible students and to educational authorities providing the courses. Leadership is a personal factor; if it is not present external influences, such as educational facilities, will not provide it. It is realised, however, that modern leadership requires knowledge besides personality; it is to this knowledge that attention must be given. Wherever it is possible it is strongly advisable that some form of selection of students for courses should be applied, as, quite apart from the necessary personal equation or the personal characteristics, it must be realised that in the higher ranks

FOREIGN EXCHANGES.

of administration, posts are very limited in number. There is, however, a much wider field lower down, and perhaps it is for the under-manager type that courses could be best framed.

Problems concerned with purchasing, manufacturing and selling have constantly to be faced, and it is for the purpose of widening the knowledge and thus limiting the possibility of error in judging as to how these problems are to be solved that administration courses should be directed.

The detailed references under the main headings are general in character. They have been made so deliberately, as the requirements of the districts will determine which of the main sections would have to be elaborated, and it has to be remembered that the various branches of industry have also their particular requirements. It is considered, however, that the main headings used would cover comprehensively any particular necessity of a district or a trade.

For the higher executive training the courses must be necessarily of a general survey character, but sections could be elaborated for the purpose of meeting the requirements of the specialists and under-managers.

It is felt desirable to emphasise the importance of a general economic knowledge in all students undertaking courses in administration. In those cases where students have not done such a course it is essential that some time be given to the fundamental principles of economics, quite apart from their particular application in individual sections of the administrative course. For ease of reference the following suggestions have been divided under three main headings: (a) Finance; (b) Production; (c) Distribution. Each of these subjects have over-riding legal limitations which should be dealt with specifically in the sections.

Finance.

These lectures should cover the provision of capital for setting up a manufacturing or distributing enterprise, and also for the financing of the working of such enterprises. As such the various forms of business, i.e., a private company, a private limited company, a limited company, amalgamations and associations including corporations and holding companies, public utility undertakings and voluntary associations, need consideration. This would also cover various types of capital. Working Capital would necessitate consideration of Banking methods, loans, discounts and credits. Exchanges, speculation and investments including commodities as well as stock script are also subject matter which are necessary for an appreciation of movements of currencies as reflected by foreign exchange. Normal Accountancy, that is, trading accounts including balance sheets would also be dealt with in this section: Taxation and Rating; Insurances, contributory schemes, etc.; Bankruptcy.

Production.

Lay-out of works with special reference to routine. Stores and application especially as a cost factor. Machine Standards. Costing and rate fixing. Labour (a) selection and training, (b) methods of payment, individual agreements, collective bargaining, Trades Unions and Employers Federations, (c) welfare and social aspects. Government regulations—The Factory Acts. Public Health Acts and Industrial Manufacture. Nuisances including smoke and liquid effluents. Patents and other forms of monopoly. Standardisation and simplification. Research.

Distribution.

Advertisement and publicity, Press advertising, Exhibitions, Catalogues, Posters, Trade Marks, Business Correspondence, Cinema and Wireless.

Marketing, Trade Channels, wholesale and retail. Commission Merchants, brokers and exporting houses. Brands. Trade Marks. Transport, Road Railway, Shipping and Air. Transport documents. Insurances and Risks.

Selling. The personal factor. Knowledge of commodities, languages and general commercial practices in particular countries. Trade Agreements. Sales Service as an Intelligent service.

Statistics.

Trade statistics including production, consumption and marketing movements. Interpretation of statistics. The use of statistics in determining manufacturing policy.

IMPORT AND EXPORT PROHIBITIONS AND RESTRICTIONS.

The International Convention for the Abolition of Import and Export Prohibitions and Restrictions and a Supplementary Agreement were signed at Geneva on November 8, 1927, and July 11, 1928, respectively. The principal provisions of these instruments and their annexed Protocols are as follows:—

Subject to the exceptions mentioned below, the Parties undertake to abolish within a period of six months from the date of the coming into force of the Convention, all import and export prohibitions or restrictions and not thereafter to impose any such prohibitions or restrictions. During this period, each of the Parties will adopt all appropriate measures in order to reduce existing prohibitions and restrictions to a minimum and will refrain from imposing any new prohibitions or restrictions.

Prohibitions or restrictions relating to the following matters are not prohibited by the Convention on condition, however, that they are not applied in such a manner as to constitute a means of arbitrary discrimination between foreign countries where the same conditions prevail, or a disguised restriction on international trade:—

- (1) Public security.
- (2) Moral and humanitarian measures.
- (3) Traffic in arms, ammunition and implements of war, or, in exceptional circumstances, all other military supplies.
- (4) Protection of the public health or protection of animals and plants against disease, degeneration or extinction, insects and harmful parasites. This includes measures taken against harmful seeds, plants and animals.
- (5) Protection of national treasures of artistic, historic or archaeological value (export only).
- (6) Gold, silver, coins, currency notes, bank-notes or securities.
- (7) the extension to foreign products of the régime established within a country in respect of production of, trade, and transport and consumption of native products of the same kinds.

This paragraph must be interpreted as in no way interfering with the practice followed by certain countries of subjecting the importation of their products to certain conditions as to quality with the object of preserving the reputation of those products and at the same time of offering a guarantee to the foreign purchaser. It is, however, intended to prohibit recourse to any system of classifying or defining products which is employed as an indirect means of restricting the importation of foreign products or of subjecting importation to a régime of unfair discrimination.

Prohibitions or restrictions the sole object of which is either to prevent imported goods from escaping the payment of the Customs duties applicable thereto, or in exceptional cases to prevent the importation of certain goods which would reduce the revenue from the duties imposed on certain other goods, may only be established or maintained if no other effective means exist of securing the said revenue.

8) Measures applied to products which as regards production or trade are, or may in future be, subject within a country to State monopoly or to a monopoly exercised under State control. This provision has solely in view monopolies each of which applies only to one or more specific articles.

Prohibitions or restrictions applying to prison-made goods are not within the scope of the Convention.

In view of the existence in certain countries of situations of fact or of law which prevent these countries from immediately undertaking, as regards certain specified products, some of the engagements entered into under the Convention, reservations may be made in respect of certain temporary exceptions which the countries concerned undertake to withdraw as soon as the circumstances from which they arise cease to exist. These are known as Paragraph 1 exceptions.

As the abolition of certain import or export prohibitions or restrictions would involve certain countries in grave difficulties, and as moreover these prohibitions or restrictions do not prejudicially effect the trade of other countries, reservations in regard to these exceptions have been permitted. (These are known as Paragraph 2 exceptions). By allowing exceptions of this category, it is not intended to give recognition to their existence, but merely to indicate that the necessity of abolishing them is not so imperative in view of their slight importance in international trade.

Among the exceptions agreed to by the conference held in October and November, 1927 were the following :—

Paragraph 1 Exceptions.

Czechoslovakia : Coal, coke, lignite briquettes (import and export).
Hungary : Scrap iron and scrap of other metals and alloys (export).
Scrap iron and scrap of other metals and alloys (export).
Roumania : Scrap iron and scrap of other metals and alloys (export).
Used machinery for industrial installations (import).

Paragraph 2 Exceptions.

Egypt : Live-stock (exportation subject to licence) (export). Eggs, during certain months of the year (export). Organic fertilisers, including pigeon-manure, slaughter-house offal and dried blood (export).
Roumania : Ores or iron, copper and manganese. Crude oil (export).

The Convention contains a declaration that, by accepting in the case of Roumania, in consideration of her exceptional situation of fact and of law, the reservation concerning crude oil as a paragraph 2 exception, the Parties have not in any way agreed to measures of prohibition or restriction for this product, which they regard as being of very great importance for the world market. They feel confident that as soon as circumstances allow her to do so, Roumania herself, acting in the spirit of the intention of the Parties in agreeing to paragraph 2 exceptions, will abolish this prohibition, and in the meantime, that she will take into account the interests of the neighbouring contracting countries. The Roumanian Delegation fully associated itself with this declaration.

The conference held in July, 1928 agreed to further exceptions including under Paragraph 1 exceptions the export of "Rose trees and roots and shoots" from Bulgaria.

The exceptions set out above will be valid only if the prohibitions or restrictions to which they refer were in force on November 8, 1927.

Nothing in the Convention affects the right of any country to adopt measures prohibiting or restricting importation or exportation for the purpose of protecting, in extraordinary and abnormal circumstances, its vital interests. Should measures of this character be adopted, they must be applied in such a manner as not to lead to any arbitrary discrimination against any other Party. Their duration must be restricted to that of the causes of circumstances from which they arise.

If the importation or exportation of goods is subjected in pursuance of legislation to certain regulations in respect of the manner, form or place of importation or exportation, or the imposition of marks, or to other formalities or conditions, such regulations must not be made a means of disguised prohibition or arbitrary restriction.

The Convention, although signed by a number of countries, is not yet in operation, and in order to be brought into force, it must have been ratified or acceded to by at least 18 countries. Ratifications must be deposited before September 30, 1929. Any country may, at the time of ratification or accession, make the entry into force of the Convention in so far as it is concerned conditional upon the ratification or accession of any or all of the following countries but no others :—

Austria, Czechoslovakia, France, Germany, Great Britain, Hungary, Italy, Japan, Poland, Roumania, Switzerland, Turkey, United States of America, Yugoslavia.

If the conditions required under those provisions are fulfilled, the Convention will come into force on January 1, 1930. In the contrary event, the countries which have ratified will decide after October 31, 1929, whether they desire nevertheless to bring the Convention into force.

Owing to the position in the United States in consequence of a short Session of Congress in the year 1928-29, it has been agreed that if the ratification of the United States has been asked for by any country and has not been deposited by September 30, 1929, the Convention shall come into force on January 1, 1930, provided that all the other countries on which the entry into force of the Convention depends, and the total number of which would in this case be reduced to 17, shall have ratified or acceded

to it before September 30, 1929, and provided no objection is raised before November 15, 1929, by any of the countries which have made its entry into force, so far as they were concerned, conditional upon the ratification or accession of the United States. If any objection is raised, the countries which have ratified will decide whether or not the Convention shall come into force.

After November 7, 1930, any country may denounce the Convention, on giving six months' notice, if any one of the paragraph 1 exceptions still exists.

After November 7, 1932, any country may denounce the Convention, on giving six months' notice, if it then considers that any one of the exceptions allowed at the Conference held in July, 1928, has impaired the effects of the Convention.

Apart from the above provisions, the Convention may be denounced on twelve month's notice at any time after the expiration of five years from the date of its coming into force.

The Convention of 1927 has been signed by the following countries :—

Austria, Belgium, Bulgaria, Chile, Czechoslovakia, Denmark, Egypt, Estonia, Finland, France, Germany, Great Britain, Hungary, India, Italy, Japan, Latvia, Luxemburg, Norway, Netherlands, Poland, Portugal, Roumania, Siam, Sweden, Switzerland, Turkey, United States, Yugoslavia.

The supplementary Agreement has been signed by the same countries, with the exception of Bulgaria, Norway, and the United States. Norway has promised to sign, and Bulgaria and the United States will enjoy the benefit of the exceptions granted in their favour if they sign before August 31 next.

CYPRUS CROP REPORT.

The following report has been issued on Cyprus crops in June
Wheat : Threshing continues.

Barley : Threshing continues ; production estimated at approximately the same as last year. Quality poor in certain localities.

Oats : Production estimated at less than 50 per cent. of last year's crop.

Vetch, Chichling Vetch, Ochrus Vetch, Lentils and Chick Peas : crops very poor.

Onions : Production expected to be good ; price 1s. 2d. to 1s. 8d. per stone.

Potatoes : Production good. The crop in the Famagusta district has been attacked by *Lita Solanella* which has impaired the keeping qualities ; as a result there has been a rush for sale and a consequent drop in prices.

Oranges : This crop has been greatly affected by abnormal weather conditions and fruit continues to drop ; production is expected to be poor.

Vines : Production very good, but there is a fear of damage by excessively hot weather.

Carobs : The crop is estimated at 40 per cent. less than that of last year.

Olives : Production estimated at 20 to 30 per cent of last year's.

Cotton : This crop is at present growing normally.

Figs : Early figs have started to ripen. The main crop is expected to be very good.

Melons and Water Melons : The first crop of this fruit is now on the market. The area under the crop is considerably less than that of last year owing to lack of rain at the right season.

Tobacco : The area under tobacco has been extended this year. Picking of leaves has started for both cigarettes and Latakia tobacco. It is hoped that the quality, owing to the advice of a special Government expert from Greece, will be greatly improved.

MARKING OF THREAD FOR BULGARIA.

The British Vice-Consul at Varna reports that an Order has been issued by the Ministry of Trade, Industry and Labour to enforce the provisions of the Weights and Measures Law in so far as regards the marking of thread, manufactured in or imported into Bulgaria. After a period of six months from the date of the Order (i.e., after December 5, 1928) all thread imported into or manufactured in Bulgaria must, when offered for sale bear a mark which gives the length of the thread in metres.

Company Meeting.

FURNESS, WITHEY AND COMPANY.

"Carriers for the Whole World."

A Strong Balance-sheet.

The thirty-seventh annual general meeting of Furness, Withy and Co., Ltd., was held on July 25 at Furness House, Leadenhall Street, London.

Sir Frederick W. Lewis, Bt., who presided, in moving the adoption of the report and accounts, said:—Our capital account remains unaltered at £5,500,000 divided into 1,500,000 5 per cent. Preference shares and 4,000,000 Ordinary shares. Sundry creditors, credit balances, and bills payable at £2,717,313 are down by approximately £450,000, and as shown on the face of the balance-sheet, this amount includes provision for taxes and also for the final dividend which I will shortly have the pleasure of proposing to you.

This item of sundry creditors includes current account balances due to our associated companies for whom we act as bankers, and consequently the actual amount due to independent creditors is very much less than the figure appearing in the balance-sheet. Naturally, the amounts due to our affiliated companies are just as much liabilities as amounts due to outside creditors, but there is this difference—that as we control the destinies of our subsidiary companies, we also control their finances. Therefore, the effective liability which appears under the heading of sundry creditors in our balance-sheet is considerably less than would appear to be the case, in addition to which, of course, the outside creditors embrace the ordinary working balances of our offices all over the world. In view of the extent of our business, I think it will be obvious that the amount of the creditors' item is not excessive.

Assets.

Turning now to our assets, there has not been a great deal of variation in the figures, but in fact there has been some alteration inasmuch as the two principal items, shipping property and investments in associated companies, etc., and British Government and industrial securities, which together stand at £8,277,422, show an increase of close upon £100,000, notwithstanding that the annual depreciation allowance of £200,000 has been written off. Freehold properties, dock warehouses, wharves, etc., less depreciation, stand at £289,005. Debtors, including steamers' current accounts, show a reduction of £250,000 at £1,057,306, and finally cash, deposits, Treasury Bills, etc., stand at £835,143, as compared with £1,052,482 a year ago. Altogether, from a balance-sheet point of view, I think you will agree that the position disclosed is exceedingly satisfactory, and the same can also be said of the profit and loss account, to which I will now refer.

Profit and Dividend.

I am in the somewhat difficult position having to reconcile the results of a satisfactory year's operations with the fact that the shipping industry is still in the throes of acute depression. So far as the figures are concerned, including the amount brought forward from last year, there is a balance of £821,564 to the credit of the profit and loss account as compared with £753,814. This is partly due to last year's increased carry-forward, but all the same there is an actual increase in the trading profit of some £24,000. There have already been paid the two half-yearly dividends on the Preference shares—£60,000—and we propose to set aside £200,000 for depreciation, leaving £561,564 at our disposal. I referred last year to our intention to alter our method of dividend payments, on the general grounds of economy and convenience to shareholders. Hitherto it has been our practice for many years to pay two half-yearly dividends of 2½ per cent. on the Ordinary share capital, and to declare a bonus according to the results apparent when the annual accounts are before us. It will be within my recollection that in accordance with the procedure which I foreshadowed at our last meeting, an interim dividend was declared in October last, and paid at the end of December, of 5 per cent., less tax, and I now have pleasure in submitting that a final dividend be paid of 5 per cent., less tax, making 10 per cent. for the year.

This compares with a distribution of 7½ per cent., free of tax, a year ago, and at the present rate of income-tax is equal to a dividend of 8 per cent., free of tax, and therefore represents a slight increase. This recommendation will leave a balance of £241,564 to be carried forward to the current year's accounts, which incidentally is an increase of nearly £50,000 compared with the amount brought in.

Financial Policy.

It is quite a customary thing to build up an increased carry-forward in anticipation of a possible reduction in profits in the succeeding year, and whilst this is not in our minds in the present instance, I am frank to state that if it were it would not be unjustified by the continued depression with which we have to labour. I am well aware that this may appear to be inconsistent with the increase in our profits last year, but this increase is entirely due to the policy upon which our company has been built up, and in fact the direct earnings of our shipping property show a material

reduction compared with the previous year. However, it is fortunate that, speaking generally, the various undertakings in which we have interests have prospered, and that is the explanation of our increased profit, notwithstanding the general depression.

The development of our business continues along normal lines in the belief that we must prepare ourselves for the improvement which will eventually come unless all preconceived ideas of trade cycles and precedents are to be confounded.

EGYPTIAN DELTA LIGHT RAILWAYS.

A Difficult Year.

Effects of Motor Competition.

The annual general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 27, at Winchester House, Old Broad Street, E.C., Sir Montagu Sharpe, K.C. (the Chairman), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: When we last met, in July, 1927 there was a general consensus of opinion among the financial element in Egypt that a gradual improvement might be anticipated in the prosperity of that country, and I then had reason at least to hope that the year with which we are now dealing would be a more prosperous one for our railway. I have, however, with much regret, to inform you that my hopes have not fructified, and that, as you may have already seen from the published accounts, the past year has again been a most difficult and lean one.

There are several reasons for this depressed condition of affairs,

(a) The increase in competition from motor passenger and goods vehicles.

(b) The reduction in the cotton-growing acreage, which is enforced by law in conformity with Government regulations.

(c) The existing system of municipal taxation.

(d) Lack of money among the fellaheen, attributable to high rents, low prices of cotton during the year 1926-1927, and the general fall in the market value of cereals.

The effect of those adverse factors upon our coaching traffic will be obvious to you. During the year we carried, as a result of necessary reductions in fares in order to cope with competition by road, 8,694,911 passengers, or 220,919 more than during the year 1926-1927, while our total receipts were only £194,038, as compared with £209,017, a decrease of £14,978. We have pressed forward the only possible policy—namely, of improving train services and reducing fares in districts where motor competition exists, and this we have only been able to accomplish through the service of the "Sentinel" tractors which have been adopted by us. We now have 49 of these running, 12 of which were sent out during April of this year, and our agent and general manager refers to the results obtained from them as being "the one satisfactory feature about the last two-year's working." I think we may safely assume that, but for these tractors, our coaching receipts would have been far lower.

Our difficulties are accentuated from the fact that the traffic is short-distance traffic, the kind most affected by road competition, that nearly all our lines run alongside agricultural roads, while our competitors are subject to no control or taxation.

Another serious problem with which we faced is that of the method of administration of the municipal tax system. The present system is generally recognised as being inimical to all transport interests, being open to every kind of abuse.

In the majority of the municipalities taxes are only collected on inwards and outwards goods transported by railways and no collection is made on goods carried by road and water.

Under existing conditions, even if taxes are imposed on road or water-borne goods, these can in most cases be evaded, adequate night and day supervision on roads and canals being impossible.

In any case the receipts in smaller municipalities would not cover the cost of collection.

Continuous representations have been and are being made to Government, with a view to an amelioration of these conditions, but, notwithstanding that the Egyptian State Railways suffer equally with ourselves from the present system, these efforts have so far been unsuccessful.

In order to compete with motor competition, we have in some districts already arranged for the organisation of experimental goods lorry services, which will enable the collection of unginned cotton from the villages for delivery direct to the ginning factories and the carriage of other produce by road.

Should this prove successful, it is proposed to institute regular services by the purchase of lorries, which will become part of our scheduled system.

Our aggregate gross earnings for the year from all sources have, as a result of the circumstances I have outlined, been reduced to £315,028, as compared with £342,605 during the previous year, a decrease of £29,577.

The resolution was carried unanimously.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 25:—

Egyptian Futures.—Sakel Contract.—For the major portion of the week this market has met further pressure, pessimistic trade advices, lower American values and weak Alexandria reports inducing liquidation of old long accounts and encouraging the working up of a short interest. The tone throughout has been unsettled and nervous and values have at times moved rapidly; resistance to further declines from the present level appears to be working up, however, and an instance of what may happen, should any unfavourable crop news or improvement in the trade offtake be experienced, has been furnished to-day. At the opening, Novembers were dealt in at 18.60d., without any particular feature in the trading; towards noon some Alexandria buying started to move prices upward, and, with the spot inquiry giving a little encouragement, the whole list quickly hardened 50 to 60 points, with contracts difficult to get hold of. This certainly gives colour to the opinion that the technical position has greatly improved as a result of the very substantial drop experienced during the course of the past three weeks. The sharp advance in Alexandria this morning is attributed to rumours that the Government are about to publish an acreage estimate showing a reduction of about 9 per cent. Conservative quarters cable us that they consider this premature and improbable. Crop accounts continue satisfactory, except that complaints of too much humidity are being expressed. In view of the fact that the Sakel area planted is certainly smaller than last year and also owing to the probability of a moderate carry-over, values will be very susceptible, should adverse conditions be encountered during the next few weeks. Reports from the fine spinning sections both in this country and on the Continent have latterly been far from reassuring, and, whilst spinners are showing more interest at the present reduced level, business is very slow in developing. We still consider that sentiment in the market will be governed to a large extent by the action of the American Exchanges; certainly, until we get nearer the marketing of the Sakel new crop and a clear idea of its possibilities, we would advise avoiding the "short side"; on the other hand, we think "bullish" operations should be kept within very reasonable proportions until distinct signs of increasing trade support begin to be shown.

Upper Contract.—In conformity with the action of other markets this contract has shown an easy undertone for the greater part of the present week. The declining tendency has brought out liquidation and sentiment has veered round to the "bearish" side. Rather more trade support has been in evidence at the lower level now obtaining, and orders from America have had to be filled out of the local stock owing to the exhaustion of certain grades in Alexandria.

The current position was depressed to 38 points under November at one period, but has since closed up again, holders becoming more optimistic owing to the improved demand and anticipations of further orders from overseas buyers. The November/October American straddle difference narrowed-in at one time to about 280 points, but owing to the recently improved support has hardened again to the neighbourhood of 300 points. The situation appears very open and we consider that commitments either way should be limited to moderate proportions.

Egyptian Spot.—During the early part of the week prices continued to fall, and interest in actual cotton was very difficult to arouse. During the past few days, however, a better undertone has been in evidence and a considerable improvement in the local inquiry has lately been seen. Such a severe drop has been experienced that it is small wonder that inquiries from spinners, with a view to testing the market, are now becoming quite a frequent occurrence. At the moment, trade reports are so bad that the impetus to buy is lacking, and, without a distinct change of sentiment taking place either in Egypt or America, it is difficult to see where the required impetus is coming from. A feature of the week has again been a persistent inquiry, both for Sakel and Upper direct with Alexandria, and it is an interesting pointer towards the state of the market that it should now be diverted to this country. The Liverpool stock of Uppers, as we have pointed out before, looks very reasonable. At the moment, there is a fair supply available, but any marked improvement in the offtake, particularly if assisted by America, would tend to cause a very tight situation for this cotton. The bulk of the inquiry here has been for Upper this week and the qualities mostly in request were from 13½d. to 13¾d., and 13¾d. to 14½d.

In Sakel, a fair general inquiry has been witnessed, but only a limited business has resulted. The American inquiry has called attention to the poor selection of staple cotton available here, and we would advise any spinner, who is likely to find himself short of supplies before the end of the season, to be early in the market when buying recommences.

A small inquiry for White Egyptian has been seen, but other growth, such as Pilon, Nalda, etc., together with Sudan and Tokar Sakel, have all suffered from neglect. C.i.f. business has been very quiet, and forwardings to spinners for the week ending the 20th inst. were returned as 4,012 bales Egyptian and 2,219 bales

Sudan. Estimated spot sales, 1,900 bales Egyptian and 300 bales Sudan. Quotations of Sakel show a net decline on the week of 10 points and those of Sakel and Upper are 25 points lower. F.G.F. Sakel to-day, 19.45d. F.G.F. Pilon to-day, 14.60d. F.G.F. Upper to-day, 13.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 19, state:—

Since our last report the futures market has been quite active, but the activity has consisted principally of liquidation sales, and the result has been a severe drop; the tone at the close of the market to-day was heavy. The week's summary of price movement is as follows:—Sakellarides, July, 36.95 dollars, 20.30 dollars down; November, 38.75 dollars, 2.36 dollars down; January, 38.98 dollars, 2.22 dollars down. Ashmouni: August, 25.90 dollars, 0.95 dollars down; October, 26.65 dollars, 0.80 dollars down; December, 26.85 dollars, 0.90 dollars down.

Sakellarides.—The drop, on the week, in this variety is over 2½ dollars. The week has been a succession of poor markets; speculators have been getting rid of purchases which they have been carrying for months, and the professional element have added their quota to the pressure by selling short. Demand from abroad has been very poor, and the revival which the consuming centres promised a couple of weeks back has shrunk to nothing; even inquiry has been rather less this week. The Sakel/Ashmouni straddle has narrowed into 1,210 points against 1,366 last week, but at this difference new straddle buying of November Sakellarides has come out. The market is healthier for the shake-out; but there is still a fair speculative position open, and a further decline is not unlikely.

Uppers.—Uppers have fluctuated in sympathy with American and show a loss of about 80 points on the week. Spinners' purchases have been on the poor side. There has been quite an appreciable inquiry, but the prices offered have been on low and not all the inquiry has resulted in business. The Ashmouni/American straddle is unchanged on the week at 521 points. The Uppers market has

shown considerable resistance to the decline, and it looks as if we are near the bottom.

General.—The local political position has been considerably altered by the dissolution of Parliament; the Royal Order issued this afternoon notifying the dissolution also suspends the Parliamentary régime for three years, at the end of which period the question of new elections will be reconsidered. The Wafd (Extremists) party are considerably perturbed, but no untoward incidents are reported; the Government have taken precautions to prevent disturbances.

The week's receipts amount to 667 kantars, against exports 103,442 kantars; the stock in Alexandria stands at 1,736,055 kantars.

The official figures of arrivals and exports for the period September 1, 1927, to July 11, 1928, are as follows:—Arrivals: Sakellaridis, 2,414,026 kantars; Ashmouni and Zagora, 2,960,989 kantars; Pilon, 271,973 kantars; Various, 218,510 kantars; Scarto, 137,473 kantars; total, 6,002,971 kantars. Exports: Sakellaridis, 2,582,446 kantars; Ashmouni and Zagora, 2,881,241 kantars; Pilon, 279,494 kantars; Various, 201,950 kantars; total, 5,945,131 kantars.

Spot: The turnover on the spot market during the past week has been considerably restricted by the limited quality of cotton offering. Total sales amount to about 5,900 bales, of which we estimate 2,600 bales Sakellaridis, 3,200 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis: Fully Good Fair and below of good style is only found in very limited quantities, and spot differences are stiffening daily, as the bulk of the demand is centred on these grades. There has been some demand for better grade cotton, but premiums do not show very much change.

Ashmouni and Zagora: There has been a good demand for all grades, especially for Fully Good Fair/Good and below, but very little of this cotton is showing; Good Fair and below is practically

non-existent and any lots for sale command very good prices. Spot differences have stiffened up all round.

Other Varieties: Practically no business has been done owing to the very limited stocks remaining for sale. One or two lots of Pilon, White, and Fouadi have changed hands, without much change in spot differences.

Crop, 1928: Crop reports are still uniformly good. The plants are maturing nicely and we have before us a sample of cotton received from the Ghirgha district of Upper Egypt. This is, of course, made up of cotton picked from bolls open here and there and it does not mean that cotton is ready for picking; in a couple of weeks, however, picking will commence. The flood is now passing through the Assuan section of the river and the whole country is amply supplied with irrigation water. Temperature has been normal to slightly above, but the week has been marked by excessive dampness; no damage, however, is reported. Boll worm has not yet made its appearance.

THE YUGOSLAV HARVEST.

The Yugoslav Ministry of Agriculture announces that this year's harvest is better than that of any year since 1912. The wheat, rye and barley crops are reported to be particularly good. The situation in regard to maize, on the other hand, is not satisfactory; the best that can be said of it is that it will probably prove not to be as bad as was anticipated. Rain, if it comes in time, will materially improve the position.

The Yugoslav shipping company Oceania has placed another vessel on the Sushak-Canary Islands service. Yugoslavia exports wood and cement to these islands, and to the African coast, receiving various imports in return.

Notes of the Week.

The Position in Yugoslavia.

Although all the indications point to a widening of the breach between Croatia and Serbia, the very seriousness of the situation may yet prevent the two parties from proceeding to extreme measures. It is a fact, however, that the Government of Dr. Koroshetz is acting as if no murders had taken place in the Skupshtina, and as if conditions in the country were normal. The new Minister for Agrarian Reform has announced his intention of completely overhauling the agrarian policy of preceding Governments, and the Prime Minister has outlined a programme that is to occupy the Skupshtina right through the autumn. There was sound sense in Dr. Koroshetz's contention that Parliament could not be held responsible for the crime of one man, and he was careful to state that the Government parties wished to see a resumption of legislative collaboration by the deputies who had left the Skupshtina; but the Croats look for some tangible overture to meet their point of view and they remain in a sullen, if not ugly, mood. Serbo-Croat relations do not, for the moment, stand to gain from the latest reports of M. Raditch's state of health. His apparent recovery from the wound received in the Skupshtina has not been maintained. His general condition has taken a distinct turn for the worse, and it has been found necessary to appoint a substitute leader for the Croat Peasant Party. M. Pribitchevitch, accordingly, becomes for all practical purposes sole head of the Peasant-Democrat group. The adhesion to this group of Dr. Trumbitch and Dr. Pavelitch, the two Croatian Federalists, is held to indicate that the Coalition has now adopted the federalist point of view, which M. Pribitchevitch has hitherto opposed. If the demand for a separate Croatian Parliament should now be pressed with virtual unanimity among the Croats, Serbian obstinacy will be largely to blame. So far Dr. Koroshetz has not shown any disposition to modify that obstinacy, and his actions

as Prime Minister lend colour to the Croat contention that he is wholly in the pockets of the Serbian Radical Party.

Retaliation.

The murder in Zagreb of the Editor of the notorious *Yedinstvo* is an indication how high feeling is running in Yugoslavia. This newspaper, which is published in Belgrade, had distinguished itself before the murders in the Skupshtina by suggesting that only shooting would bring the Croats to their senses. It is characteristic of Serb mentality that not a single step has been taken to appease Croat feeling after the murders. The Government clung to office when the most elementary sense of the fitness of things ought to have prompted its immediate resignation; no steps were taken to deal with the *Yedinstvo*, although it had clearly helped to embitter feeling in the country. The murder of a Serb is likely to create the impression that the Croats are the aggressors and Serb nationalism will assert itself, it is to be feared, in an aggressive form. Dr. Koroshetz might have been expected, as a Slovene, to act as a mediator between the two parties; but he has missed his opportunity, and now it will call for King Alexander's personal intervention to pour oil on the troubled waters.

A Roumanian Landmark.

The passage through the Roumanian Parliament of the financial Bills authorizing the Government to take the necessary steps to stabilize the currency and to obtain a loan of fifty million sterling is as much a triumph for M. Vintila Bratianu, the Prime Minister, as the loan itself will be for the country as a whole. For both there is the possibility of the triumph's being shorn of some of its glamour; for Roumania by disappointment at having to pay seven per cent. for her money, and for M. Bratianu by the knowledge that his future task has not been lightened by the immediate withdrawal from the Govern-

ment of M. Titulescu, who returns, after a holiday for recuperation, to the post of Roumanian Minister in London. There can be no question that M. Titulescu's presence in the Government for more than a year has been of the utmost value to his country, and it will not have escaped the attention of the political opponents of the Liberals that this long period of association failed to secure his absorption by the Government Party. The special session that has now closed was responsible for an undertaking on the Prime Minister's part to deal with the question of Minorities in the autumn. The promise was not given in any specific terms, and M. Bratianu had probably in mind legislation that would tend to remove the grievances of the new provinces that they were being discriminated against in favour of the Old Kingdom. At the same time he gave the assurance that the aim of the Government was to create for the citizens of all races and religions the possibility of a normal life in the midst of the general progress of the country. Whether the law that discriminates in effect against Bulgarian and Turkish landowners in the Dobruja can be held to accord with this principle remains to be shown.

Abyssinia, Italy and Britain.

The treaty of friendship and arbitration recently signed between Italy and Abyssinia may well give rise to conflicting reflexions in Great Britain. In the first place there will be the satisfaction that the Abyssinian Government, so notoriously suspicious of European Powers, has at last brought itself to sign a treaty with one of them. On the other hand, it is impossible to forget that it was the exchange of Notes in December 1925 between Great Britain and Italy regarding Lake Tana and economic spheres of interest in Abyssinia that led to an official protest on the part of the Addis Ababa Government to the League of Nations and increased Abyssinian suspicion of the two Powers. In the two and a half years that have elapsed since that date Italy would seem to have succeeded in re-establishing herself completely in the good books of the Abyssinians; the Lake Tana project, however, remains, so far as is known, in the air. One of Abyssinia's cherished ambitions is to secure a second line of communication to the coast, in order to relieve her of sole dependence on the Jibouti Railway. An obvious alternative would have been to link Harar, the second town in Abyssinia, with Zeila in British Somaliland, and it is at least reasonable to suppose that such a proposal would have brought the Tana problem nearer solution. The treaty with Italy provides for an Abyssinian zone at Assab

on the Red Sea and the construction of a road fit for lorry traffic between that port and Abyssinia. It will readily be conceded that Italy has less cause than Great Britain to be squeamish about the possibility of hurting French susceptibilities; but it is, to say the least, unfortunate that Anglo-French relations allow for the prejudice of British interests in so many parts of the world as a result of French susceptibilities, which, it might be supposed, are capable of being overcome.

The Anglo-Trans-Jordan Treaty.

Obviously there is to be more opposition than was expected to the recent Anglo-Trans-Jordan Treaty, the justification of the apparently severe terms of which was to be found in the primitive and artificial nature of Trans-Jordan itself. It was never pretended that a country possessed of corporate consciousness and power of expression would submit to such a Treaty without protest. The point was, however, that no better form for obtaining the security and prosperity of Trans-Jordan could be devised. If that ground is correct—and there is considerable evidence that it is so—the recent showings of resentment towards the Anglo-Trans-Jordan Agreement must be treated as the voice of the minority, which wishes to put the cart before the horse. In Oriental countries, however, as elsewhere, minorities have a way of developing into majorities, and it will be well, therefore, to summarise the resolutions recently passed at a meeting of shaiyks in Amman. It was then claimed that the Trans-Jordan Government should be wholly responsible to a freely elected Parliament. The British Mandate was recognised only in a limited form. The Balfour Declaration was condemned as contrary to British promises to the Arabs and to international rights. Military service, unless imposed by an elected Parliament, was repudiated. The financing of foreign troops was rejected. It was claimed that the revenue and expenditure of Trans-Jordan were adequate for the governing of the country (if its national resources were duly exploited). And finally, the right was denied to Great Britain of supervising the finances of Trans-Jordan, it being alleged that the country was utilised by Great Britain for "the selfish purposes of air communications."

A Straw and the Wind?

Now these resolutions, although they appear to bear some marks of extra-Trans-Jordan inspiration, are without doubt possessed of considerable significance. While it cannot be held that they represent in any large measure the real opinions of the *badawin*, they would appear to be a straw showing in which way the wind is blowing. It seems unreasonable to doubt, for instance, that the passing of the Treaty has decreased the prestige and popularity of the Amir Abdullah, and very careful conduct will be necessary to prevent any further damage in this way. Trans-Jordan is not the only Arab country in which a rough division of the people into "pro-Treaty" and "anti-Treaty-ites" has hindered the progress of the country as a whole. Nor is this lesson, this symptom of Arab feeling in Trans-Jordan, to be missed in Palestine, where already there exist plans for utilising some of the resources of the Amirate for the benefit of the immigrants who are singled out in these resolutions as being the obstacle to Arab independence in Trans-Jordan. In a word, while these declarations of Trans-Jordanian "Nationalists" may spell no immediate danger, it would be folly, on the part alike of the authorities in Amman, Jerusalem, and Baghdad, to ignore them as trumped-up and meaningless.

The Draft Syrian Constitution.

If the report of the Commission appointed by the Constituent Assembly in Damascus is to be acted upon, Syria is not to have a Kingdom, but, as we have always im-

YUGOSLAVIA'S PROBLEM.

The problem that the Yugoslavs are called upon to solve will not be settled by shouting at or shooting one another. Unfortunately, in no quarter is there at present the least indication of the necessary spirit of compromise, and the two opposite camps continue to fulminate against each other, thereby encouraging onlookers to infer that the dissolution of the Triune Kingdom is a possibility, if not actually inevitable. Public utterances in Yugoslavia, however, have to be discounted very considerably, if the real situation is to be gauged accurately. Two hopeful signs emerge from the position as it is to-day. In the first place, the Croats have not been driven by the murder of their two deputies to commit political suicide by proclaiming their secession from the rest of the Southern Slavs. Immediately after his removal to hospital M. Stepan Raditch counselled a policy of "Wait and See," and after due reflexion his fellow-leader, M. Pribitchevitch, at a formal meeting of the Peasant-Democrat group has repudiated the suggestion that they wish to see Croatia break away from Serbia. To what extent this more considered attitude is to be over-ruled by M. Raditch's remarks to a German correspondent, in which he spoke of federation as essential, remains to be seen. The second hopeful sign is that the Serbs have recognized that some concession on their part is called for in the cause of national appeasement. They consider, indeed, that the concession that they have made is both far-reaching and as much as can be expected of them. It consists in their acquiescence in a non-Serb Prime Minister at a time when the Serb Radicals are the strongest party in the Skupshtina. They point out that not only is the Prime Minister a Slovene, but that also one half of the portfolios are in the hands of Ministers from the incorporated provinces, among them the important portfolios of the Interior, Finance, Public Works, and Agrarian Reform. The fact that four political parties are represented in the Ministry is hailed as the apotheosis of the democratic principle, and as disposing conclusively of the allegation that Serbia harbours any designs on the hegemony of Yugoslavia. That the Croats still refuse to see the position in the same light is taken ill, and the country is urged to regard them as irreconcilable separatists. In time, it is to be hoped, the Serbs will realize that there is room for further unbending on their part.

For the moment the breach between the two camps is complete. While the Skupshtina meets in session in Belgrade, the Peasant-Democrat group holds a congress in Zagreb. Some colour was lent to the contention that this congress was a coalition of the various constituent parts of the Kingdom against bad government by the fact

that deputies from Dalmatia, Slovenia, Herzegovina, the Voivodina and Montenegro, as well as Croats, were present. It was feared that the gathering would insist upon the breaking away of the trans-Sava provinces from Serbia; but this policy was not endorsed. The congress resolved itself into a protest against any further session of the "blood-stained Skupshtina," and decided that measures by the rump Parliament now sitting in Belgrade, in particular all fiscal measures, would not be binding on the trans-Sava provinces. It demanded a new Constitution which would allow provinces possessing a distinct national individuality to retain this individuality; but while it did not specify more clearly the changes indicated, no mention was made of a purely federal system. In the circumstances, it has to be admitted that the Zagreb congress was much abuses, are held, it might be difficult for the Peasant-milder in the wording of its resolutions than might have been expected from the bitterness of feeling which the murders in the Skupshtina provoked. The gulf that separates the two camps is by no means too wide to be bridged; but the problem is to bring the two parties together to decide where and how the bridge is to be built. For the present it will not be amiss, if things are allowed to continue as they are, provided that exacerbation of feeling on either side is avoided. A case can be made out for the summoning of Parliament to pass necessary measures. In the face of M. Raditch's refusal to accept office as Prime Minister the least provocative step that could be taken was to entrust the leader of the Slovene Clericals with the task of forming a Government. If, when the more urgent legislation has been passed, the Skupshtina is dissolved and new elections, free from all abuses, are held, it might be difficult for the Peasant-Democrat group to persist in its attitude of boycotting Belgrade. It does not appear, however, that this is to be Dr. Koroshetz's policy.

The Croats have made trial once before of the device of absenting themselves from the Skupshtina and have found it unsuccessful. On the present occasion they have adopted it under greater provocation, and as a gesture it may serve its purpose during a short emergency session. As a policy it has nothing to commend it, for sooner or later it defeats its own ends. In the present instance there would seem to be limits to the extent to which the national indignation over the Skupshtina murders can be exploited. If it can be argued that loose talk among Serbian Radicals had suggested that only shooting would overcome Croat opposition, it can also be urged that the tactics pursued by the Peasant-Democrat group made Parliament a farce as well as a bear garden. The avowed object of the Croats is to secure good government; they may have been justified in contending that it was impossible under the old order, but they cannot permanently rule out the possibility of it under other systems merely because these do not conform entirely with Croat demands for administrative reform. They will do well not to lose sight of their goal, and the Serbs should bear in mind that the Croat aims are sound and desirable in themselves. For the time being Dr. Koroshetz, the new Prime Minister, has a compact majority and is not handicapped, as his predecessor was, by serious differences in his own party. The legislative needs of the country are obvious, and the main reason why they have not been adopted by Parliament is to be found in the stultification of that body by party quarrels. If the needed legislation is now passed without the attendance of the Peasant-Democrat group, they will not be able to contend that they are indispensable to the good government of the country. The future policy of the Croats would seem to call for the exercise of caution and statesmanship.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, August 1,

Greco-Turkish Relations.

With a view to paving the way to a better understanding between Greece and Turkey, and thus bringing the projected but so far nebulous Pact of Amity and Neutrality between the two countries into the realm of practical politics, a meeting between Tewfik Rushdi Bey, Turkish Foreign Minister, and M. Venizelos may take place, it is reported, in the near future at some convenient spot on the Greco-Turkish border. Much will no doubt depend upon the outcome of the forthcoming Greek elections, which will take place before the meeting of the two statesmen. Speculation is rife in Stamboul whether the weakened Venizelist elements will be in a position to hold their own at the hustings.

It may not be out of place, in this connexion, to describe in a few words what exactly is alleged by the Turks to constitute the main stumbling-block to that better understanding between the two Governments which must necessarily be the precursor to the signature of any political instrument framed on the lines of the lately concluded Italo-Turkish Pact.

By a declaration signed at Lausanne on July 24, 1923, by MM. Venizelos and Caclamanos, the Hellenic Delegates to the Peace Conference at Lausanne, which instrument forms part and parcel of the Treaty of Lausanne, the Greek Government undertook that there should be no infringement of rights to property held by Muslim persons not affected by the Convention for the Exchange of Populations, and who had either left Greece before October 18, 1912, or who had always resided outside Greece, although owning property in the country. In other words, such Muslims were to continue to enjoy complete freedom in regard to the disposal of their property.

This declaration further provided that all claims arising out of alleged infringement of such Muslim rights by an unfair application of measures of a general nature and claims respecting the alienation of revenues derived from such properties should be dealt with by the Commission which was set up by a Special Convention, dated January 30, 1923, also embodied in the Treaty of Lausanne, for the exchange of Greek and Turkish Populations.

The Turkish Government have alleged and continue to maintain that during the five years which have elapsed since the Declaration was signed, that instrument has remained virtually a dead letter, and that the Greek

Government have failed to keep their pledges. As a result of further negotiations between Greek and Turkish delegates in Athens which dragged on laboriously for several months, a further Convention was signed between the parties, whereby it was agreed that Muslim properties in Greek territory already assigned to exchanged immigrant Greeks from Turkey should be compensated for by the assignation to exchanged immigrant Muslims from Greece of properties situated in Turkish territory, other than Constantinople, which had been owned by Greeks resident in Turkey prior to the Exchange but who were now established in Greece. The valuation for the purposes of compensation of all such assignable properties was to be entrusted, and was in fact, entrusted, to the care of the Commission set up in January, 1923.

The whole problem, a thorny one in itself, simply bristles with super-imposed complexities, and the Exchange Commission with its numerous Sub-Commissions and "Equipes d'Evaluation" has not come unscathed out of the fire of acrid criticism, which has been upspringingly levelled at it in both the Athenian and the Turkish papers.

The Turks maintain that the situation is no better than it was before the signature of the Athens Convention, that exchanged Greeks have been placed in possession of specifically reserved Muslim property in Greece, and that exchanged Muslims in Turkey cannot be compensated with Greek property unless the Turkish Government deliberately disregard their Treaty obligations and resort to reprisals by seizing Greek property in Constantinople—which area was specifically excluded from the operation of the Convention.

There the matter now stands, and it is this incubus, this distressing aftermath of the late War which must be got out of the way if Turk and Greek are to shake hands, let bygones be bygones, and come into line with Italy by signing a bilateral agreement aiming primarily at the preservation of peace in this Near Eastern cockpit.

The Title of Pasha.

There will be shortly passing away another link with the past in this country of ultra-rapid evolution—another of those landmarks, which for good or evil, had at least, the merit of conjuring up for the distant Western observer alluring visions of Eastern pomp and circumstance. The title, rank and dignity of Pasha is to be abolished within the near future.

Whether we turn to the roving, roistering Bashaws of the Barbary Coast whose filibustering expeditions against English Merchant Adventurers who went down to the sea on their lawful occasions are so vividly described by the good Hakluyt in his "Voyages, Traffiques and Discoveries of the English Nation," or to the early eighteenth century Pashas of one, two or three tails whose military exploits and conquests led the Sublime Port to institute the administrative divisions known as "Pashaliks"—the very term "Pasha" has up to the present connoted something so essentially and typically Turkish that one can view its forthcoming disappearance from the Western vocabulary only as a regrettable severance with century-old tradition.

How this condemned title, with that of "Bey," its immediate hierarchic successor, is to be replaced has not yet been made public. It would be more than regrettable were that euphonious appellation "Effendi," which the foreign resident in Turkey, notwithstanding all that transpired at Lausanne, still enjoys by courtesy, to be also cast into the melting pot. There would then remain nothing but "Agha" or plain "Mr." which, when all is said and done, would prove to be the most genuine and acid test of a strictly democratic régime as applied to the regeneration of an Eastern country.

Cairo, July 30.

The Wafd's Attitude.

It was expected that yesterday there would have been a certain amount of trouble in Cairo, for the Wafd had announced their intention of forming themselves into a Parliament,—yesterday being the day on which Parliament had been due to reassemble after its month's adjournment. The ex-President of the Chamber and the ex-Vice-President of the Senate had sent a letter to the Government demanding the keys of the House in order to enable them to meet. But the reply was that, if there should be any such meeting, Nahas Pasha would be held personally responsible.

The amazing lack of interest in what was going to happen in Cairo on Saturday on the part of Egyptians was most extraordinary, and proves the truth of the Prime Minister's statement that the saner elements throughout the country are behind him, and not much interested in any particular brand of Government, as long as it is strong. For a greater part of the day all the area round the Parliament buildings and the Zaghloul Club was carefully guarded by the police and the military, preventing anyone's entrance into this area. But scarcely anyone made any attempt to make an entrance, and the many Egyptians who were passing up and down the neighbouring streets, which are some of the most populous in Cairo, did not seem to take the slightest interest in what was happening.

While, however, the police were interested in what was going on in the west of Cairo, a number of Wafdist deputies and senators managed to meet in the eastern, native, quarter, at the house of Mourad Sherei Bey. There about 150 of them formed themselves into a Chamber of Deputies and a Senate, and passed various resolutions. It was first pointed out that the dissolution of neither the Chamber nor the Senate was in accordance with the Constitution, and that, therefore, their existence as a Parliament was valid. They then passed the resolution that they had no confidence in the present Cabinet and that it should resign; also that any laws which it passed or conventions arranged with foreign Powers were invalid. The Parliament then passed a resolution to the effect that of its own free-will it adjourned until the third Saturday in September, unless any untoward incident necessitated its meeting before.

These resolutions were signed by about 150 deputies

and senators. The meeting was very poorly attended considering how important it was from a Wafd point of view; there seems little doubt that, although they may formerly have had the country behind them, they have not now.

Rail and Road.

Egypt now has a Minister of Communications who has been General Manager of the Egyptian State Railways, and it is hoped that some of the country's pressing transportation problems will be solved. The first and most important problem is the growing competition from motors. It is essential for the nation that the railways should be kept in a high state of efficiency, and, therefore, it becomes important for the Government to regulate this traffic. The British Railway Companies, for instance, have sought powers to run their own road services, and a Royal Commission is going to investigate the whole transport problem. In Egypt the problem is particularly acute, for the road traffic is not only a serious competitor to the railways, but is carried on under conditions which make it exceedingly dangerous for the travelling public. Motor-cars and motor-buses travel along the country roads literally covered with natives, hanging on to any part of the car which projects. Apparently it is possible for anyone to purchase a car, put it in charge of a driver whose skill is very uncertain, and use it as a public conveyance. It is possible to charge very low fares because the car is generally filled to three times its capacity, and it is driven all day and a greater part of the night. The result is that there are many very serious accidents and the railway is hard hit because of the unfairness of the competition. Laws exist to stop overcrowding of vehicles and other abuses, but they have not so far been enforced.

The Egyptian State Railways have, within the last few days, submitted a Note to the Ministry of Communications on this subject. It is suggested that the Main Roads Department should be asked not to build new roads near the railways, nor improve the conditions of those that already exist. Further, that until new regulations governing motor traffic on these country roads have been issued no new licences to run motor bus services on the roads which compete with the State Railways should be issued without the sanction of the State Railways themselves. This is a move in the right direction, but on the other hand it is ludicrous to try to stop the improvement of roads, which are in a terribly bad condition throughout the provinces. It is almost as important for the commerce of the country to have good roads as it is to have good railways. Far the best thing for the Government to do would be to take over the running of the motor bus services, so that it will be an advantage both to them and to the country to have improved roads. The suggestion to keep a strict watch over the issue of licences is sensible.

Lieut.-Colonel Henry Curteis, who died recently at King's Lynn, at the age of 68, trained and commanded during the Great War four new regiments and commanded the 22nd Rifles in Salonika in 1916-17. He was commandant of the Citadel, Cairo, in 1916, and was later Senior Military Officer at Cyprus.

NOTES OF THE WEEK

(Continued from page 162.)

agined, a Parliamentary Republic under a President. But the main content of this report is that section which reinforces what we have constantly urged: the necessity for recognising the unity of Syria. Syria, in the words of this Report, is an independent Sovereign State, its territory co-extensive with that detached from the Ottoman Empire. As we have insisted, the divisions that have been made since the War are not recognised, it being proclaimed that Syria is a political entity, one and indivisible. This declaration of the Commission is of the highest importance, and the French Mandatory Power will neglect it at its peril. Never too often can it be emphasised that the various States of Syria are artificial, and that their borders should be destroyed. Doubtless Syria would need to be hammered into a unity, but without such a hammering how can the ends of the Mandate be achieved? For the rest, this Draft Report states that the capital of the State of Syria shall be Damascus, that its religion shall be that of Islam, that the national flag shall be red, white, and black, and that the Provisional Constituent Assembly shall elect the first President for a term of two years, and that thereafter the term will be three years.

Problems in the Lebanon.

These resolutions will be giving the French authorities considerable food for thought, in particular, of course, because the greatly enlarged Lebanon is intimately bound up with the question. It has been recently reported that M. Henri Ponsot, High Commissioner, has declared that there existed no possibility of diminishing the borders of the Lebanon. That may or may not be correct; but if so, it will be a source of endless trouble. Apart from that aspect of the position, however, the Lebanon is having problems of its own. The curious development is to be witnessed there—and, incidentally, it is an instructive commentary upon recent events in Egypt—of a popular agitation in favour of the dissolution of Parliament. It is claimed by the local Press that the representatives in Parliament neglect the country's interests, pursuing only their personal ambitions. And it is suggested that what the land needs, to pull it through its economic troubles, is a benevolent dictatorship, which would save the country the £30,000 which it expends upon its representative government. It looks, in short, as though the system of "representative government," however much those clamour for it who enjoy it not, were in for a period of unpopularity in the Middle East.

The Syrian President.

At the beginning of June we recorded the fact that the four most likely candidates for the Presidency of Syria were Shaikh Taj al Din al Hassani, the present Prime Minister, Hashim Bey, and Ibrahim Bey Hannano, the famous Nationalist who sits in the Constituent Assembly for Aleppo. Now it is reported that the choice has been narrowed down to the first and last of these men, the first, it is alleged, being favoured of the French authorities, the last being the nominee of the extreme Nationalist bloc. The rivalry between the two men appears to derive from the conduct of the elections for the Constituent Assembly, which the Nationalists allege were interfered with by Shaikh Taj al Din's Minister of the Interior, Said Beg Mohassam. This Minister has now, however, been dispensed with, and if by this move the Prime Minister has removed the traces of resentment, and the slur of anti-Nationalism, it may be that the French will after all have as the first President of Syria a man who owes much to their support. But it is quite obvious now that the French are steadfastly resolved upon a policy of co-operation with the Syrians, and that they intend loyally to inaugurate a free and no longer an oppressive régime.

Jewish Agency and Palestine.

The General Council of the Zionist Organisation concluded its meeting at Berlin last week, and the general result reached, after considerable pothole, may be said to be "As you Were." The chief points of dispute arose over the Report of the Palestine Survey Commission and over the composition of the Zionist Executive in Palestine. The Labour and Socialist members of the Council roundly condemned the recommendations of the Report that co-operative agricultural settlements should not be established in future in Palestine, and that in addition to the land purchased by the Jewish National Fund as the inalienable property of the Zionists there should also be a land reserve for those who wish to buy land as private property. Moreover, the Palestinian members of the Council expressed profound dissatisfaction with the work of the Zionist Executive during the past year, and attempted, indeed, to insist upon the resignation of one of its members, Mr. Harry Sacher. Upon this attempt Dr. Weizmann declared that the whole Executive would resign; but further consideration of the matter resulted in the conservation of the Executive *en bloc*. With this end of the question the Council as a body were greatly relieved, but there will be grave heart-burnings in Palestine itself at the retention of unpopular members. Of the Report of the Non-Partisan Commission, it is sufficient to state that in broad outline it was accepted, but that the comment was passed on it that a recognition of five principles—Jewish labour, Hebrew language, national land, the settlers' right of self-determination in regard to the form of settlement, and a continuous increase of immigration, form "an immutable foundation for the establishment of the Agency and the drafting of its plan of work." All these decisions of the General Council, however, have to be freshly examined at a conference next month in New York—for it is upon the support of the non-Zionists among American Jewry, of course, that the whole success of the new plans for the Zionist colonisers depends. And American Jewry, to judge from the reports of the last meeting of the American Zionist Organisation, is terribly divided in its ranks.

NEWS IN BRIEF.

A postal order service between Persia and Germany will come into effect on October 1.

Viscount Chetwynd has accepted an invitation to join the board of Imperial Airways, Ltd.

A Sofia message dated August 1 states that heat and drought continue to prevail throughout Bulgaria, and the Indian corn and other crops are seriously compromised. In Southern Bulgaria the shade temperature has attained 106 Fahr.

The British Consul at Jidda reports that there were 54 motor cars and 447 trucks and omnibuses in use in private ownership in the Hijaz on March 8. The statistics do not include the considerable numbers of cars in royal and governmental use, of which no figures are available, but which will probably exceed 100.

The second International Motor Show in Egypt, organised under the auspices of the Royal Automobile Club of Egypt, will take place at Alexandria from January 23 to February 6 next. The closing date for applications is October 31. Copies of the Exhibition regulations, containing application form, are available at the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1.

A number of amendments have lately been introduced in the Customs Tariff of Iraq. Several classes of building material and machinery have been placed on the free list, whilst on other classes of these goods an increased duty has been imposed. The duty has been reduced on perfumed spirits, motor spirit, non-spirituous perfumery and toilet preparations (excluding soap). Increased duties have been imposed on salt, cigarettes, cigars, snuff and manufactured tobacco.

As from July 26, the Bulgarian Government, by Ministerial Decree have increased the exchange difference on which Customs duties, etc., are paid in gold currency from 1,500 to 2,000 per cent., i.e., for every gold leva payable under the Tariff, 20 paper levas are now collected instead of 15 paper levas as formerly. Articles of prime necessity imported from abroad will continue to pay at the former rate of 15 paper leva per gold leva.

FROM LONDON TO THE BLACK SEA BY CAR.

III.

BY FEODORA STANCIOFF.

Christian, a village, some six miles from Sibiu, had a peculiarity; the church, an ancient stone building, was surrounded by a fortress wall, because it had once been the custom to assemble villagers in this religious stronghold, in times of danger.

As for Sibiu itself, when we drove up its steep streets, that evening, it seemed to us that stone by stone, the town buildings had been brought from Germany, 200 years ago, to stand in this site of natural aloofness, in a great circle of mountains and woods. The German name of Sibiu is "Hermannstadt," and the Hungarians called it "Nagyszeben." We crossed a large paved square with a central fountain and a semi-Gothic church on our way to the Hotel "Römischer Kaiser," where a marble tablet commemorates the visit to this same hotel of the Emperor Joseph II of Austria in 1785, and where the Swedish King Gustave, who fought Peter the Great, is said to have spent some time when fortune deserted his arms. These historical associations are the pride of the hotel; beauty and comfort are somewhat neglected, but our rooms were clean. The corridors resembled army headquarters. The Roumanians keep a strong garrison in Sibiu and there is a cavalry school in the vicinity, so that every room was occupied by officers, and the passages by their orderlies. (A pacifist would have fled in horror from the "Römischer Kaiser.")

We spent the evening in an open-air restaurant, counting uniforms, listening to the melancholy strains of Hungarian music, and observing sturdy Transylvanian farmers, unconscious of their picturesque costume, enjoy the square meal and long drinks that a farmer allows himself on market day.

We liked Sibiu, the starlit night and the fragrant mountain air, and the next morning we resented the veil of mist that hung over the plateau and made a mysterious vastness of the "rugged and forested wall" of the surrounding Carpathians.

The journey from Sibiu to Bucharest (190 miles) occupied our eighth day on the road, and combined an uneventful run to Brassov, via Fagaras on the river Oltu, 50 glorious miles of mountain scenery from Brassov to Campina, and a trying and dusty "finale," through the oil-fields to Bucharest. Brassov, (*alias* Kronstadt) lies at the foot of the hills in an ideal situation, the surrounding green meadows and forests being bathed by tributaries of the Danube, still in their youthful guise of mountain streams or torrents. South-east the Czukas and Sireu peaks rise above 6,000 feet and south-west Mt. Omul (8,200 ft.), was clearly outlined against a sky of deep blue. In between stretches the "Tomos" pass through which we made our ascent to Predeal, once the Roumanian frontier post. Forests of fir trees enclosed the road, and the winding climb of about 3,000 ft. is unrivalled in its serene and fragrant beauty. Wild cyclamens nestle in the woods, but alas! traffic increases daily on this road, though I cannot blame anyone who takes it.

We made the descent via Busteni to Sinaia, the famous Roumanian summer resort, where palaces, villas and hotels were still empty of their gay crowds. Gardens were being laid out in the trim little town, and birds twittered in the lilac bushes in happy anticipation of the smart season.

Abruptly the mountain dream ends in the arid plain of petroleum wealth, which stretches from Campina beyond Ploesti. At the time of our journey, the road was of the nerve-wearing kind that sends your car bumping right and left, on the dust filled holes, when you would like to drive like the wind through ungainly flat country, which many British and American oil-seekers have made their temporary home. We left them to the delights of the primitive and untidy cafés, in the hot and noisy streets of Ploesti, reflecting on the fact that oil had justified worse places.

Through flat and eventually wooded country, one covers the last 30 miles to Bucharest, which one enters by the fashionable *Chaussée*, in a maze of the smartest cars and the smartest women a dusty traveller could wish to set eyes on!

Bulgaria.

Roughly 170 miles now separated us from our destination; the Bulgarian port of Varna on the Black Sea. We drove from Bucharest to Giurgevo the next morning and saluted Bulgaria across the Danube. Let me note that *Tryptiques* are now accepted in Bulgaria, a fact which was often disputed a year ago. I would like to add that a bridge across the Danube, linking Roumanian and Bulgarian territory, is being considered, but for the time being a ferry is in use (the cost being about 2,000 lei), and one crosses from Giurgevo (Roumania) to Rustchuk (Bulgaria), with no difficulty. As time must be allowed for Customs formalities at each port in turn, and for the ferry arrangements, the Bucharest to Varna trip is just feasible in a day, provided that everything runs smoothly and the weather is good. In our case, we reluctantly broke the journey at Rustchuk, having been warned that some roads were up, on the Bulgarian side.

Information is easy to obtain in any Bulgarian town or village, where the advent of a touring car is always a matter of interest and rejoicing. A homely crowd of peasants or citizens soon gather round you, and the local *strajar*, or policeman, can be as smiling as he is talkative. You feel at once that here is a nation with keen brains, a thirst for knowledge and unbounded hospitality. Mechanics are generally efficient, with more genius for repairs than constancy in upkeep. Petrol is cheap and the Sofia Touring Club is a reliable guide to the foreign motorist. Some roads are very good, some bad; on the whole they are improving.

Rustchuk, or "Rousse," once a Roman stronghold on the Danube, was known as "Cexanta Prisa," from the Latin *pristis* (river transport), and the present name of the town was first mentioned in 1503, during peace negotiations between Turkey and Hungary. In the bewildering chaos of Balkan history, it stood on the road to Constantinople, for travellers from Poland, Transylvania and Roumania, and for armies from Russia, but Balkan history claims a destructive mood throughout the ages, and to-day Roman remains are buried and the little trading port has no artistic treasures!

We left by the road to Torlak, driving between stretches of well kept vineyards, on a wide smooth surface where

A week on the road had brought us from the distant Channel coast to the wooded shores of the Euxine, and, whether taken in parts or as a whole, there are few more varied, and more enlightening enterprises to suggest to the amateur of Continental versatility, to the lover of Nature and space, or, last but not least, to the owner-driver of a reliable car.

Digitized by Google

THE DISSOLUTION OF THE EGYPTIAN PARLIAMENT.

On July 19, a Royal Decree dissolving Parliament and suspending the Parliamentary régime for three years, was published, together with a Note submitted to King Fuad and signed by all the Ministers then in Egypt, in an extraordinary issue of the *Journal Officiel*. Of this Note we append the following translation:—

Sire,—Your Majesty deigned in 1926 to approve the Coalition and to consider it a means of answering to the needs of the country and likely to avoid the disadvantages of party spirit and dissensions and to satisfy the hope it held of a firm and stable government.

It was necessary for the success of this régime that its constituent elements should co-operate cordially and direct their efforts to the realisation of various reforms, and that throughout the administration of the State, affairs should be conducted according to the principles of justice and equality.

When the Coalition had been formed, no one doubted but that its members were satisfied and that intentions in regard to it were sincere. As Egyptians are, in fact, in agreement about the end and the means, as no conflict born of a difference of opinion and no divergence of views separate them, it was thought that schism, personal in its origin and genesis, was destined to disappear and that Egyptians would re-establish their early unity.

But a small group, who by mere chance recently assumed the leadership of the majority party, did not cease, in its jealousy to acquire power, to stultify co-operation and to give itself up to a party spirit most dangerous for the general interest; it claimed that the schism came from the fact that it alone could defend the rights of the country, it devoted its efforts to spread this prejudice, and occupied itself in enlarging the field of schism by maintaining its causes.

It is exceedingly unfortunate that the governmental spheres were affected by this dissension, which profoundly influenced the work of officials and their conditions of service. It is impossible to ignore the resulting disorganisation in the service, the danger to public interests, exposed as they are to abuse and autocracy, and the uneasiness and unrest which have manifested themselves among officials.

These effects did not spare individuals, whose relations to one another were disturbed; while they were divided into hostile camps, one against the other, and even family ties were loosened.

The parliamentary régime even ended by becoming an instrument of oppression in the hands of this group, which relied on a majority that was forced to flatter it or treat it with deference, one as its dupe, another fearing its attacks, yet another coveting favours. It was for this reason that the parliamentary régime was powerless to realise the hopes which had been the more particularly founded on it, that is to say, the execution of various reforms required in the public interest.

Confronted by this situation, the wisdom of Your Majesty decided to remedy the position by decisive measures to turn aside from the country the menace of a permanent antagonism and an administrative régime which was powerless and disturbed. Consequently Your Majesty dismissed the last Ministry, and confided power in the present Ministry.

The Cabinet has devoted long study to the present situation seeking to find means to deal with it. It could find no other way than to devote itself to rescuing the country from these factitious influences so that affairs might re-

sume their normal course. Affairs will not resume their normal course unless the public is instructed in the real facts, understands the way in which it has been misled, and realises how the schism was artificially created to the profit of a small group, and what misfortunes it has cost the country. In the same way the situation cannot be stabilised unless individuals, shielded from various annoyances and slanders, are able to express their opinions with complete confidence and security, and unless the unanimous conviction exists that the public services and the administrations of the State are carried on in accordance with right and justice.

But these factitious influences, which have reduced the country to the condition under which it is now groaning, cannot end immediately. The Ministry hopes, however, that a period of three years will suffice.

These influences could not cease whilst the factors continued to exist which have facilitated their action and have given them strength and the power to expand.

As Parliament, in its present form, does not favour the establishment of this normal situation which the country insistently demands, it is necessary that it should not be allowed to constitute an obstacle to the attainment of that end.

The Ministry, therefore, considers it to be indispensable to dissolve the two Chambers and to postpone elections until a time when, it is hoped, the nation's will will find expression in its true form.

The Ministry also intends to revise the electoral law as well as the provisions of the Constitution relative thereto, modifying them in such a way as will remedy the situation described above. At the same time, the parliamentary régime and ministerial responsibility will be in no way affected by these modifications.

The Ministry would have been reluctant to undertake the dissolution of the two Chambers and the postponement of elections had it not been absolutely forced to do so by the necessity of delivering the country from the present situation and by the need of a stable and satisfactory régime, restoring to the country its unity and giving it the means to deal with the cause of its independence in such a manner as to realise all its aspirations.

The Ministry is firmly convinced that it expresses the real needs of the nation and reflects the unanimous opinion of its enlightened elements.

In regard to the conduct of public affairs during the suspension of the parliamentary régime the Ministry undertakes to establish the reign of justice and to ensure equality without partiality or partisan spirit, to maintain liberty within the limits of the law and to execute reforms in the general interest so long waited for by the country. It hopes to succeed, under the benevolent ægis of Your Majesty, and with the support of the nation to attain the end that it has in view.

If Your Majesty approves the preceding considerations, You will deign to give Your august order to dissolve the Chamber of Deputies and the Senate and to suspend the application of the Articles 89, 155, 157 and the last part of Article 15 of the Constitution.

In placing its loyalty at the foot of the Throne, the Ministry expresses its warmest wishes for the preservation to the country of Your Majesty's august person, sustained by the aid of the Most High.

PERSONAL AND GENERAL

TO-DAY

August 9, 1928 (New Style).

July 28, 1928 (Old Style).

Saphar 21, 1347 A.H., of the Muslim Calendar.

Ab 23, 5689, of the Jewish Calendar.

The Maharaja of Kapurthala left London on August 1.

Sir John Cadman left London on August 5 for Paris, for a few days' stay.

Sir Seymour King is cruising in his yacht, Heartsease, and will be away for some weeks.

The Maharajadhiraja Bahadur of Burdwan left London last week to stay at Runnymede House, Old Windsor.

Viscount and Viscountess Allenby left 24, Wetherby Gardens at the end of last week to spend a few days at Amesbury, Wiltshire.

Lord and Lady Sinha left London on August 2 for Villars, Switzerland. Lord Sinha expects to be back at Queen Anne's Mansions by September 15.

Lord Lloyd, High Commissioner for Egypt, arrived in England on August 6. Crossing overland from Marseilles to Boulogne, he travelled to London via the Boulogne-Folkestone route.

On August 1, at St. Giles Church, Camberwell, London, the Rev. Angus Campbell MacInnes, M.A., elder son of the Right Rev. R. MacInnes, D.D., Anglican Bishop in Jerusalem, was married to Miss Florence Isabella Joy Masterman, M.B., B.S., London, fourth daughter of Dr. E. W. G. Masterman, Medical Superintendent of St. Giles Hospital and Hon. Secretary of the Palestine Exploration Fund. The officiating clergy were the Right 'Rev. Bishop MacInnes, D.D., father of the bridegroom, and the Right Rev. the Bishop of Plymouth, D.D., uncle of the bride. The church—the largest in South London—was crowded, and a large number of the nurses of St. Giles Hospital in uniform, filled the choir stalls and led the singing. Professor R. A. S. Macalister acted as organist. After the wedding there was a reception at St. Giles Hospital, attended by about two hundred guests, among whom were many Palestine friends.

The bride is a great-granddaughter of the late Bishop Gobart, the second Anglican Bishop in Jerusalem and the granddaughter of the Rev. John Zeller, who worked for the C.M.S. in Palestine all his active life.

The Rev. and Mrs. Campbell MacInnes will be going to Palestine in connexion with the C.M.S. in the early autumn.

THE VISIT OF TAYMOOR TASH.

Taymoor Tash and Mme. Taymoor Tash were guests of the Persian Minister at luncheon on July 30 at the Legation. Other guests present to meet him included Lord Greenway, Sir Samuel Hoare, Sir Robert and the Hon. Lady Clive, Sir Denison and Lady Ross, Sir John and Lady Cadman, Colonel H. E. Medlicott, Mr. J. B. Monck, Mr. and Mrs. Fairly, Mirza Eissa Khan Fayz, M. and Mme. Nabavi, M. and Mme. Ardeshir, M. H. K. Godse, and M. Nubar Gulbenkian.

The Persian Minister of the Court left London for Paris on August 1. Sir Robert Clive, British Minister to Teheran, and Mr. J. B. Monck, representing Sir Austen Chamberlain saw his Highness off at the station. The Persian Minister, and Mirza Mohammed Khan Nabavi, Mirza Ahmed Ardeshir, Mirza Eissa Khan, Sir Robert Clive (British Minister at Teheran), Sir John Cadman and members of the Anglo-Persian Oil Company were also present at Victoria.

Accompanied by her daughter Princess Ileana, Queen Marie of Roumania arrived at Bled (Slovenia) to stay with her son-in-law and daughter, the King and Queen of Yugoslavia.

Nazim Hikmet Bey, the Turkish Communist who was condemned *in absentia* to 15 years' imprisonment in 1924 by the Tribunal of Independence for Communist propaganda, was recently arrested at Khopa, just inside the Turkish frontier, near Batum.

At Jerusalem, on August 1, Chief Rabbi Kuk laid the corner-stone of the new buildings of the Israel Girl Orphans' Home in the Montefiore quarter, which will accommodate 500 persons. The buildings will cost £100,000 to erect. The expense is being defrayed from American donations.

Field-Marshal Lord Plumer left Palestine by special train for Egypt en route for England on relinquishing the High Commissioner-ship. Pending the arrival of Sir John Chancellor, the duties of High Commissioner are being discharged by the Chief Secretary, Mr. H. C. Luke.

As the result of an accident near Aden to a Fairey 3 F machine of No. 8 Bombing Squadron, Aden, on July 31 248,736 Sergeant Cecil Norman Morris, the pilot of the aircraft, was killed, and the passenger, 3,906,145 Lance-Corporal (Acting Sergeant) Gwilym Williams, 2nd South Wales Borderers, was slightly injured.

It is stated from Bucharest that on August 1 the Roumanian *Official Gazette* published a decree granting one month's leave to M. Titulesco, the Foreign Minister, as from July 31. M. Argetoianu, is acting as Minister of Foreign Affairs. M. Titulesco has tendered his resignation, and will take over the Roumanian Legation in London on the expiry of his leave.

THE WEEK AT HOME

London, Tuesday Morning.

Parliament.

The Parliamentary session ended last week as all such sessions should end—with a little excitement, a little uncertainty, and a little good humour. The excitement was caused by the charges of corruption which a Labour Member brought in connexion with the cable and wireless merger, charges into which the social historian of the future may inquire with considerable curiosity. The uncertainty was caused by the amount of Protection which the Conservative Party is prepared as a whole to support. And the good humour arose out of the Prime Minister's very shrewd explanation of the recent manifestation of differences within the Conservative Party on the subject of Safeguarding. In the end he safely gathered under his fatherly wing all the chuckling brood.

It is never easy to estimate the progress of one particular Party during one particular session; it is much easier to note the personal popularity of individual members. On the Tory side, I should say that Mr. Baldwin and Mr. Churchill have enhanced their general reputations in the country—people are getting a little tired of the ubiquitous and loquacious "Jix"; on the Liberal side, Mr. Hopkin Morris seems to be destined for fame; and on the Labour side the order of precedence remains much the same.

In any case, no one is going to worry much about politics during the next few weeks, during which alone we are, according to Rousseau, really free men.

Conservative Unity.

Yet although the official explanation of the differences within the Conservative Party was good enough for end-of-the-session purposes, it is quite obvious that the Conservatives are aware of the alarm that has been caused in the country by the additional talk of Protection. You may amuse a House of Parliamentarians with airy descriptions of the "many-sidedness of truth," but if the country at large gets the idea that Protection is really a possibility, it may unfortunately deprive you of the chance of making such an explanation a second time.

And so the Prime Minister has published a letter, written to his Chief Whip, in which he definitely reiterates his pledge not to introduce Protection, and not to impose any taxes on food. Quite naturally and justifiably great play is made in this letter of the de-rating proposals of the

Government—proposals which may be applied to any productive industry in this country.

This compromise, to all but the rabid Free Traders and the ardent Protectionists, should be eminently satisfactory, with the result that our Socialist Government will not be the next one, after all, but probably the one after that.

The Archbishop of York.

I have spoken of the increase of the Prime Minister's popularity for his work in the House, but it is due also, I think, to the generosity which he has displayed extra-murally. The appointment of the Socialist Dr. Temple, to the see of York, appears to have caused some surprise, but it is quite in keeping with the Prime Minister's outlook on life—and on the things that are bigger than life.

This appointment, like the choice of Liberals to be Chairmen of Royal Commissions, has fluttered the doves of the Die-hards, who firmly believe that while a Conservative Premier holds office, the places of distinction should be filled by Conservatives. The fact that Mr. Baldwin holds other views will undoubtedly stand him in good stead when the testing time of his popularity comes.

Mathematical Cricket.

The introduction of mathematics into the Game of Cricket, in the form of reckoning the points for the County Championship, has, as is well known and widely deplored, meant also the introduction of several non-sporting features. But the defects of the system have rarely been so clearly shown as they were last week, when, in a match between Leicestershire Second Eleven and Staffordshire, runs had to be given away by Leicestershire in order to make Staffordshire win on the first innings and so weaken their position in the table of the Championship!

Leicestershire had made 124 in their first innings, but, since there was no chance of finishing the match, Staffordshire deliberately set out not to win, but to leave their innings unfinished. They contrived to score 75 in two and a quarter hours. Thereupon the Leicestershire skipper bowled wides, together with other extras, so that the 124 mark was passed.

This, of course, is farcical. There have, as every cricketer knows, been examples of the deliberate giving away of extras, just as there have been examples of the deliberate sacrifice of wickets. In the University match of 1893, for instance, Oxford wanted to follow on in order to get an unworn pitch for their second innings, and the last two batsmen had just made up their minds to ensure this when a wide and no balls, each of which went to the boundary, were bowled by the frustrating Cambridge people. A similar thing happened in the same match three years later. But in these instances it was a win, not a draw, that the "offenders" were after. And that makes all the difference between a game and the mouldiest (to use the fashionable word among politicians) of sciences.

England's Dream.

The countryside is now a sight for eyes too long used to the pavement of towns and the scurry and worry of men. It seems to be a good corn year; certainly the fields which I have seen are fruitful. In many places the oats have already been cut, and the barley also will soon be falling before the patient harvester.

Fields which have been mown for hay are now green once more, for the rains of last week, together with the bountiful sunshine, have freshened the meadows. To see them, with the gold and russet of other fields, is to become very content with this "fair England in her pastoral dream." At other times than the harvest, England has other lovelinesses, but there is about this ripening an unalloyedly satisfying quality. Perhaps it is the clarity, the cleanness of the atmosphere. "As the clear light is upon the holy candlestick, so is the beauty of the face of ripe age."

THE WORKING OF THE REFORMED COUNCILS.

One of the greatest advantages of the periodical reports by the Provincial Governments on the working of the reformed Constitution, the third volume of which has just reached this country, is the opportunity they afford of viewing the march of events in India in true perspective and of discovering their general tendencies in a way which is often impossible in the midst of day by day controversies. We make no apology, therefore, for reverting to documents which were released for publication in that country more than a month ago, and accordingly have already formed the subject of considerable comment in the Indian Press. In a covering communiqué, the Government of India indicates that the reports cover the triennial period from the beginning of 1925 to the end of the lifetime of the second Councils under the existing régime. They are, of course, in continuation of those submitted in 1923 and 1924, which were embodied in the report of the Muddiman Committee, and emphasis is laid upon the fact that they were prepared in the course of official correspondence prior to the appointment of the Statutory Commission and do not necessarily form the basis of the memoranda submitted by the various provincial administrations to that body. At the same time, we dissent entirely from the view of our Allahabad contemporary that it was either bad tactics or deliberate contempt of court—we confess our inability to make out the precise charge formulated against the Government of India in that connexion—to publish the volume at the present juncture. nor can we admit that the importance of the reports as evidence before the present inquiry is in any way diminished by the fact that they were not specifically prepared for submission to Sir John Simon and his colleagues. On the contrary, the very fact that their contents were prepared in the ordinary course of administration, and not with some special object in view, renders them the more valuable as a reflexion of actual conditions than they otherwise might have been.

The first point which we think will strike the ordinary individual in this country whose knowledge of the problems presented is derived entirely from intelligent reading of newspaper reports is the surprisingly favourable view taken on the whole of the working of the new Councils and the progress recorded in that respect since the earlier statements. With the possible exceptions of Bengal, Bihar and Orissa and the Punjab the verdict of the provinces is by no means unfavourable. The Assam Government, for example, reports that though the majority of the elected members of the Legislative Council consider the criticism of the executive their most important function, there has been no tendency to obstruct. On the other hand, members of all parties, including the Swarajists, have been willing to offer their services and advice on important questions of policy, and the Council has, on the whole, maintained a high standard of dignity and procedure. Next to the Assam Government the Burma Government is most appreciative in its estimate of the

working of the reformed Constitution of which, of course, it has not had the same length of experience as the Indian provinces. It notes in particular the great improvement in the attitude of the opposition towards measures dealing with law and order, which was at first one of bitter hostility and unreasoning prejudice. Uneasiness in the public services, probably on that account, has sensibly diminished and there has been no lack of co-operation between the members, Ministers and heads of departments. The Bihar Government, on the other hand, while reporting that "the pessimistic outlook of the public services has been considerably removed," is itself obviously uneasy. The Ministers, it says, claim a considerable advance as the result of the Reforms, but the heads of the Transferred Departments take a somewhat different view. "The ingrained determination of the Council, not merely to control the policy but to meddle in the details of the executive administration, is directly responsible for the feeling that 'governing officers' are now required to serve two masters. The position of the district officers has definitely changed for the worst."

The Bengal Government is not unnaturally also inclined to be severely critical of the Council, but echoes the opinion of the Bombay administrations that by far the greatest hindrance to the success, or at least a fair trial, of the Reforms was the financial situation. The outstanding feature of the report is the frank acknowledgement of the fact that in spite of everything the relations in the Council between Indians and Europeans were cordial. "Non-official Europeans were respected and, whatever be said in the Council in debates, the members outside treated each other with unvarying courtesy." This may be said of other Provincial Legislatures as well as of the Central Legislature, and is a gratifying testimony to the absence of racial ill-feeling among those who are elected to those bodies. The Government of the United Provinces, though disposed to be critical, is also appreciative of the solid benefits which have accrued from the reforms. "Ministers have acquired an insight into public problems, and obtained experience of the difficulties of administration, and both in the Legislature and to some extent outside it, there has been a general quickening of interest in all public matters. It is probably true to say that, on the part of officials and non-officials alike, there is a more general acceptance of dyarchy as a form of Government than there was when its illogicalities and cumbersomeness were more irksome by reason of their strangeness." In what is unquestionably the most carefully reasoned of all the reports attention is called to three main elements of weakness in the relations between Government and the Legislature. The first is the bitterness of communal feelings "which may kill political development by forcing the Muslim minority into an important alliance with the official element." The second is the lack of foresight and cohesion on the part of the landlord party in the Legislature, a defect which those responsible for the formation of the new Country League have already gone some way to remove. The third is the apparent lack of good will on

the part of the Nationalists towards the British element in the administration. The Punjab Government emphasises the increasing difficulty of maintaining the efficiency of the administration on account of the number of resignations from the Indian Civil and Indian Police Services. Incidentally, it lays stress upon the fact that continued communal tension is also bound to have some injurious effect on the services undergoing a rapid process of Indianisation. "Force of circumstances" it points out with commendable frankness, "has in some cases tended to compel Ministers to safeguard the claims of their community or party in respect of recruitment to the services, and communal considerations have occasionally impeded the choice of the most suitable men. Occasionally the heads of departments resented this, but on the whole there has been a general recognition that Ministers must to some extent use patronage to consolidate their position in their parties." The Punjab Government is, nevertheless, of opinion that the area of political consciousness is rapidly growing, and the access of fresh elements largely representing classes with a considerable stake in agriculture and commerce must tend to have a healthy and steady influence on politics. The Madras Government, on the other hand, considers that the main change to be observed in the efficiency of the administration as a result of the introduction of the reforms is from rigid adherence to a fixed policy to constant formulation of new and progressive policies. The change is inevitable when power is being shifted, however slowly, from a bureaucracy whose one supreme ideal has been efficiency of administration to a popular electorate, with however limited a franchise. In the absence of the testimony of the elected non-official members, which the organisers of the boycott have caused temporarily to be withheld, the Commission must naturally devote proportionately greater attention to the evidence of the Central and provincial administrations on the working of the legislative machinery in their respective domains.

CURRENT TOPICS.

The New Governors.

Speculation has been rife for many weeks past as to the probable successor of the late Sir Alexander Muddiman in the difficult post of Governor of the United Provinces. As not infrequently happens on such occasions the majority of prophecies, although stated at the time to be on good authority, have proved singularly wide of the mark. The distinction has fallen not to Sir Montagu Butler, the present Governor of the Central Provinces, nor to Sir Atul Chatterjee, the able and popular High Commissioner in London—to cite only two of the several names freely mentioned in connexion with the vacancy—but to Sir Malcolm Hailey, whose term of office as Governor of the Punjab expires in May next. It is announced at the same time that Sir Geoffrey de Montmorency is to receive the unusual honour of promotion to the head of the administration of his own Province. This shuffling of gubernatorial appointments at such a time, in view of the old adage about changing horses in the middle of the stream, has not unnaturally given rise to some criticism on the part of those unacquainted with the opportunities provided by the Government of India Act for the translation of civilian Governors from lesser to, in point of pay, more important posts, according to the exigencies of the political situation. It is not generally realised, for example, that provincial governorships in India are now more or less a series of graded appointments, in the matter both of salary and status. The three Presidencies of Bengal, Bombay and Madras are placed on a par, and their respective Governors are appointed direct by the Home Government without reference to the Viceroy. The almost invariable practice of recent years has been to select men prominent in British public life, who have had some parliamentary experience. In the case of the other "Governor Provinces" the appointments are made on the recommendation of the Viceroy and in practice usually reserved for

civilians of outstanding ability and long and distinguished service to whom otherwise membership of the Governor-General's Executive Council would represent the limit of their attainments.

On the other hand, in point both of area and population, the United Provinces are on the same level as the three Presidencies, although the latter are assumed to be educationally and politically more advanced, and alone of the new "Governor Provinces" the head of the U.P. administration draws the same salary as that attaching to the Presidential appointments, namely, Rs.1,28,000 per annum. Recognition of this fact, together with the somewhat delicate political situation in the Provinces, no doubt underlay the widely expressed belief that the delay in making the present appointment was due to a suggestion by the Secretary of State that the new incumbent should also be chosen from public life at home instead of from the Indian Civil Service. It will be recalled that such an enlargement of the field of selection was strongly advocated by Indian political leaders and is sanctioned by the Government of India Act. Although the arguments in favour of the new departure were strong, there can be little doubt that, in all the circumstances of the case, the decision to adhere to the old tradition in the present instance was a wise one. Except for his tenure of office as Finance Member, in which he was obviously a "misfit," Sir Malcolm Hailey's career has been one of remarkable administrative achievement, and the value of his work in the Punjab has been warmly acknowledged, by even the most inveterate critics of the British administration. The appointment of Sir Geoffrey de Montmorency as his successor will occasion also general satisfaction, and provide the best possible assurance that the Punjab will not suffer unduly by Sir Malcolm's departure. In other words, if only Sir Malcolm Hailey's health will stand the ordeal of another five years, which may well prove to be the most exacting of all his service, the appointments are unexceptionable.

Bombay Follows Suit.

After a debate extending over two days, the Bombay Legislative Council last week adopted, by the large majority of sixty-four votes to forty, the requisite resolution for the appointment of a Committee to co-operate with the Statutory Commission. This latest demonstration of confidence in Sir John Simon and his colleagues confirms the belief to which we have testified more than once in these columns, that the political situation in India to-day is distinctly more favourable to the Commission than it was a few months ago. Last year the non-cooperators loudly proclaimed, for an altogether inadequate reason, a complete boycott of the Commission; and they succeeded in persuading the Legislative Assembly to endorse this foolish policy. Three of the provincial legislatures, namely, the United Provinces, the Central Provinces and Madras, took, it will be recalled, the same line, although, as regards Madras, it must be remembered that Sir John Simon and his colleagues were warmly welcomed when, at a later date, they visited the presidency. Of the six other provinces three—Assam, Burma, and the Punjab—decided to co-operate with the Commission, while the remaining three—Bengal, Bombay, and Bihar and Orissa—kept the decision pending. Last month the Bengal Legislative Council, by a majority which came as a surprise to both parties, resolved to follow the wiser course and the position of the Swaraj Party in the Eastern presidency is now distinctly precarious. It only remains for Bihar and Orissa to come to a decision on the question of appointing a Committee; and there is little doubt that it will follow Bengal and Bombay's wise lead. Should it do so, then it will not be easy for Madras, the Central Provinces and the United Provinces to refuse to reconsider their previous adverse votes. And anything approaching to unanimity in the Provinces ought to lead the Assembly to rescind its own resolution—which was carried only by a small majority—and to co-operate with the Commission. There is no doubt that the concession which was wisely made by Sir John Simon the other day,

at the instance of the Punjab Committee, has influenced moderate opinion in both Bengal and Bombay; and, if so, then it may be expected to yield similarly fruitful results in the other provinces mentioned.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 19.

Belur Railway Disaster.

On Sunday, July 8, shortly before midnight the Howrah-Burdwan express crashed into a culvert between Belur and Dankuni; twenty or more people were killed, and upwards of thirty injured. The disaster has led to matters that, being now *sub judice*, cannot be discussed, but only reported. "An application," so the *Statesman* reported yesterday, "was submitted on Tuesday before the Chief Presidency Magistrate by Mr. E. A. Hartley, Assistant Commissioner of the Detective Department, against Satya Ranjan Bakshi, editor of the newspaper *Forward* (Calcutta), and Pulin Behary Dhar, the printer of the paper. They were charged under section 153 I.P.C. (promoting class hatred) in connection with an article entitled 'Railway Smash at Belur,' which appeared on July 13." And yesterday two separate libel suits, for damages of Rs. 5,00,000 each, were filed before the Master of the Calcutta High Court on behalf of the Secretary of State for India in Council, Mr. G. L. Colvin, Agent, East India Railway, and others, against *Forward* Publishing, Ltd., Mr. Satya Ranjan Bakshi, editor, and Pulin Behary Dhar, printer, of the newspaper *Forward*, in connection with publications relating to the Belur train smash. The legal proceedings will be followed with great interest.

Distress in Bengal.

Distress, if not famine, prevails in districts of the Burdwan, Presidency, and Rajshahi Divisions, and the Government is persistently declared to have failed to deal adequately with it. The debate on the subject in the Bengal Legislative Council was cut short by a Swarajist's moving the closure in the middle of the explanation of the Member in Charge. While the heaviest speeches against the Government were those made by Swarajists, speakers from other parts of the House were not less insistent that Government had not done all that might have been done, while some regular supporters of the Government abstained from voting in the division. The voting was heavily against the Government.

It is difficult to get at the facts. The Governor came down from Darjeeling in May to see conditions for himself, and an official *communiqué*, summarising what had been done, was published about that time. Up to July 4 about Rs. 14½ lakhs had been allotted by Government for land improvement and agricultural loans, relief works and gratuitous relief, and officers had been relieved of ordinary duties that they might devote themselves to relief work. But it would be well if the public was given more information. The cause of the distress or famine, whichever it is, was the failure of the winter crops after last year's weak monsoon. It would probably have been better for the people, had the failure been on a somewhat greater scale. Then famine would have been declared, and Clive Street would have heard of it at once. The relief fund would then have been placed in more influential hands.

Bauria Riot.

Bauria Jute Mills were the scene on Monday of a riot in which some forty-six persons, including thirteen constables, received buckshot wounds or other injuries. It is reported that, incensed by the dismissal of half a dozen coolie leaders, an angry mob of 4,000 workers marched to

the mill office, and demanded the surrender of the head clerk, the man responsible, they alleged, for the dismissals. The mill authorities, of course, refused, whereupon the mob attempted to rush the doors under cover of a fusillade of stones and heavy pieces of metal. The police opened fire thereupon to disperse the mob, thirteen rounds of buckshot being fired. The next day it was reported that, following Monday's outbreak, the Fort Gloster Jute Mills and the Bowreah Cotton Mill had been closed, bringing the total of idle millhands to twenty thousand. So we have now another heavy labour trouble on our hands.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 21.

The Surat Conference.

As stated in my last week's letter, Sir Leslie Wilson left for Simla on the 13th instant to have a personal interview with the Viceroy. He was accompanied by the Finance Member of the Bombay Government, the Hon. Mr. J. L. Rieu. He halted on his return journey at Surat and met a deputation headed by Mr. Vallabhbhai Patel. The conference, however, was a failure, and an official statement issued this week states that the Governor intends to make an announcement at the opening of the Council session at Poona on Monday the 23rd. The position is that, whilst the Government are prepared to have a fresh inquiry, they insist on the difference between the old and the new settlement being deposited with them as a preliminary condition. The Bardoli leaders maintain that, as the new inquiry means that the previous one was not satisfactory, it is not fair of the Government to reassess on the basis of the latter. The *Times of India* suggests that some philanthropic person should deposit the amount, which after all is only Rs. 25,000, as under the Igatpuri rules the full increase is not taken at once, but is gradually worked up to in the course of a few years after the new settlement. Government could easily afford to wait till after the new inquiry to collect the difference, and it need not look to any philanthropic person to step into the breach.

Indian High Courts Bill.

A public meeting convened by the Sheriff of Bombay was held on Monday evening at the Cowasji Jehangir Hall to protest against the provision in the Bill now before Parliament making civilian judges eligible for the office of Chief Justice of the High Courts. Sir Joseph Kay took the chair. In his opening speech the Chairman recalled that when the High Court was constituted in 1861, the Letters Patent provided for the appointment of a Chief Justice and not more than fifteen Judges. Barristers, Civil Servants and certain Judicial Officers were eligible for office of a judge of those Courts, and the following proviso applied: "Provided that not less than one-third of the Judges of such Courts, including the Chief Justice, shall be barristers and not less than one-third shall be members of the Covenanted Service." This has led to the office of the Chief Justice being reserved for a barrister, and recently much pressure was put on Government to amend this section so that pleaders also should be eligible for the post. But it came as a surprise to everyone when the Bill contained a proviso extending this privilege to the Civil Servants. "Let me say quite clearly that this is not a racial question," continued Sir Joseph. "What is involved is the principle of keeping quite separate and apart the Executive and the Judiciary, and it is submitted that the Judiciary should be perfectly independent of the Government, whereas this might not be so, if Civil Judges became Chief Justices, because the Chief Justice represents the High Court in its relations with Government, and it may be difficult at times for him to take that independent attitude which is so essential."

STANDARDISATION OF WAGES IN THE BOMBAY MILL INDUSTRY.

[Additional interest is lent to the following statement by the Bombay Millowners' Association on the question of standardisation of wages by the Association's attempt to re-open the mills this week. The operatives' acceptance of the scheme outlined below, it will be noted, is one of the main conditions on which work will be resumed.]

The Committee of the Millowners' Association have for a long time past been engaged in giving effect to the various suggestions made by the Tariff Board for the improvement of the Mill Industry in Bombay. These attempts have already resulted in some saving in cost and minor improvements in other directions. But the most important suggestion, in the opinion of the Committee, and on which the members of the Tariff Board themselves laid great stress, viz., standardisation of wages, could not be effected earlier owing to the laborious and intricate nature of the work. The Tariff Board stated:—

"We realise that adoption of such a system (of standardised wages) presents very great difficulties in Indian conditions owing to the illiteracy and imperfect organisation of labour and that its introduction might probably cause discontent among those operatives whose wages might be prejudicially affected."

Although the present strike situation added considerably to these difficulties, the Committee of the Association are now able to announce that the scheme as finally prepared by their Sub-Committee, assisted by technical experts, has met with the unanimous approval of the members of the Association. The Committee, in view of the present strike situation, believe it necessary to give a general outline of the scheme. The main object of the scheme is to do away with the present system under which the wages in the Bombay Mill Industry vary from mill to mill and to pay to labour standardised wages for the same class of work as between mill and mill. Turning again to the report of the Tariff Board, the following remarks will be found on pages 136-137:—

"A noteworthy feature of the Indian Cotton Mill Industry, which is of great importance in this connection, is the disparity between the wages of spinners and weavers. In the inquiry conducted by the Labour Office in 1923, the average daily wages in the Ring Spinning department in Bombay were returned at R. 1-0-4ps. whereas those of the weaver in charge of two looms, i.e., of the great majority of the weavers, were returned at 1-11-3. This is entirely contrary to the practice in other countries where the wages of spinners and weavers are practically the same."

The scheme therefore had to be so devised as to remove as far as practicable the anomaly pointed out by the Tariff Board. The rates of wages therefore in the spinning have been increased directly in some cases and other efficiency measures have also been recommended whereby operatives in this department can earn still more if so inclined. On the other hand in the weaving section, wages have been reduced where they were too high compared to the work to be done, but so that even with this reduction an ordinarily efficient weaver working plain grey sort on two looms 40 inches wide can easily earn Rs. 42 per month. Those working on better or finer sorts or on wider looms will, of course, earn proportionately more. Working out the standardised rates on the different kinds of cloth, it is found that a weaver working on two looms will be able to earn from Rs. 38 to Rs. 65, and in exceptional cases even more.

The entire scheme has been devised on the principle of "a fair day's wage for a fair day's work." The wages have now been fixed as far as possible in relation to the actual work to be done and the scheme as published gives not only the rates of wages, but also the duties which the operatives are expected to perform in return for such wages. In cases where wages were obviously high in relation to the work done, these have had to be adjusted. It will also be clear that in such a comprehensive scheme

intended to raise where necessary the efficiency of the workers, there can be no room for the employment of superfluous or supernumerary men who may have been employed in the past on payment of lower wages. As the Tariff Board have pointed out in emphatic language, the only alternative to a direct cut in wages—the present wages in Bombay being deemed high—is the method of increased efficiency.

In all such cases, however, no standard has been fixed which has not actually been put into practice in some mills and found to be working satisfactorily to the mutual advantage of the workers and the employers. In short, the scheme has been prepared after the closest investigations and in a spirit of absolute fairness to the workers. Any scheme of standardisation must necessarily mean adjustments of the prevailing rates, and consequently a reduction in certain cases is bound to occur. On the other hand, some mills in particular instances will have to pay higher rates than at present. The scheme has therefore got to be considered in its entirety, and the Committee of the Millowners' Association have every confidence that when it is studied and understood, it will gain the approval of the public, as it has of the members of the Association.

It might also be mentioned here that a Sub-Committee of the Association is at present engaged in discussing the standardisation of wages scheme with the representatives of labour organisations, and although at the beginning they have shown opposition to the very principles underlying the scheme, the Committee hope that they will appreciate the scheme when it is better understood. The Committee appreciate the difficulties in obtaining a thorough grasp of the various details on the part of those who are not engaged in the industry at all and who have not a clear perception of the nature of the work in different departments of a mill. A sub-committee is making final efforts to explain the entire scheme with a view to seek their co-operation. Whatever be the result of these negotiations, the Committee are in entire agreement with the suggestions made by the Tariff Board and are so convinced of the utility and urgent need of enforcing such a scheme at an early date that they have decided to broadcast the scheme amongst themselves, giving them every facility to understand the details and making the acceptance of the scheme one of the main conditions on which the strikers will be allowed to resume work.

OBITUARY.

MR. AMEER ALI.

An outstanding figure of his time is removed by the death, which took place on August 3, of the Right Hon. Syed Ameer Ali, the great Muslim leader and writer, who afterwards became the first Indian member of the Privy Council and of its Judicial Committee. In addition to occupying perhaps the foremost place in the ranks of expositors of Muhammadan thought, custom and history, Mr. Ameer Ali, who was the first member of his community to be appointed a judge of the Indian High Court, was also the author of several books on jurisprudence which have long been recognised as standard works. But it was probably as an Islamic leader, and particularly as the leading spirit in the formation of the All-India Muslim League, and other movements designed to promote the material and moral advancement of the Muhammadan community in India along practical and constitutional lines, that the Syed was best known to a wide circle of friends and acquaintances, to whom the loss of his guidance and influence will be irreparable.

Lord Irwin, the Viceroy, on July 30, received in Indore formal visits from the Princes and Chiefs of Central India. On the following day he visited the Daly College, which was founded in 1876 for the education of the sons of Chiefs and Sardars of Central India. Later he left for Mhow, where he took luncheon with the officers of the 2nd Battalion, the West Yorkshire Regiment, and then went to Dhar, where her Highness the Maharani entertained the Viceregal party at tea.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

British Coal and the Near East.

It will be recalled that Turkey was successful in obtaining the recent contract for the supply of coal to the Athens Gas Company. This company is again on the market for coal, the amount required being 10,000 tons as before. It may be assumed that Turkey will be a competitor again, and it remains to be seen whether the price and quality of British coal will be sufficiently important factors to bring the contract to this country. The figures for Greek imports of coal for the first four months of this year are flattering to the United Kingdom. Of the total imports of 174,050 tons the United Kingdom supplied 141,822, while of the balance 18,499 tons came from Germany, 9,078 from Russia, 1,654 from Turkey, and 1,167 from Bulgaria. Since that period, however, Turkey has become a serious competitor in the Near East markets.

Turkey's Slow Progress.

It cannot be said that the report of Colonel Woods on conditions in Turkey in 1927-28 (extensive extracts from which will be found elsewhere in these columns) makes encouraging reading. Unfortunately the story to be told of Turkey in that period is the same as can be recorded of other regions in the Near East, a tale of prospects of progress which have not fructified. In the case of Turkey the causes which have operated to prevent economic developments are peculiar to that country and cannot be attributed to the existing world commercial conditions. The nationalistic tendency which has coloured developments in Turkey in the past few years, and the effect of which, as Colonel Woods points out, is to discourage foreign enterprise in that country, showed itself in the period covered by the report in Turkish commercial and economic legislation. The chief difficulty with which Turkey is confronted is the lack of commercial experience on the part of that section of the population which would naturally take the lead in industrial developments. The policy of Turkey to do without foreign assistance in the economic progress of the country has entailed as a natural corollary the necessity to absorb the requisite business knowledge at express speed, but business experience of a quality adequate for the successful running of large enterprises is not a natural gift but comes of long training, and the Turks are slowly finding out that it is one thing to change the established order of things and quite another "to remould it nearer to the heart's desire." Progress is being made by Turkey, but in the circumstances the economic advance is bound to be very much slower than it would have been if Angora had welcomed foreign assistance instead of impeding it, admittedly sometimes unintentionally, at every turn. Immediate developments will not be made easier by the effects of the drought in Anatolia to which I have referred in these columns, though the result of that disaster will doubtless be to bring home forcibly to Turkey the fact that foreign enterprise and foreign capital are essential to carry out those works without which the utilisation of the country's economic resources cannot be achieved.

Harvest Prospects in the Near East.

Last year the harvests in the Balkans were, generally speaking, poor, and this had naturally a retarding effect

on progress in that region, and its consequence has been felt to the present time in the reduced purchasing power and the consequent decreased demand for imports. The fine weather which Great Britain has enjoyed this year has fortunately been more or less general throughout the world, and this time it is anticipated that in the greater part of the Balkans the harvests will show a very marked improvement on those of 1927. The Yugoslav harvest is reported to be particularly good. The yield is expected to be better than that of any year since the War, and the amount of wheat available for export is put at 400,000 tons. As regards Roumania the outlook is also good except for the maize crop, which it is feared will be a failure for the second year in succession. The position with regard to Greece is also promising, and while harvest prospects in Bulgaria are not satisfactory at present owing to drought it looks as if 1928 will mark a very definite improvement in the economic situation in the Balkans. It has to be borne in mind, however, that the record crops in the Near East will not be quite the economic asset they would normally be owing to the record harvests in other countries. Still, they will go far to replenish the purchasing powers of the region and thus give a much needed impetus to the recovery of trade.

Bulgaria's Mineral Springs.

As is well known, Bulgaria is richly endowed with mineral springs, there being no less than 135 in the country, according to a recent estimate, the greater part of them being in the south. It is not surprising to learn that the late earthquakes have had a considerable effect on these springs. One well-known one, that of Méritchkléry, the waters of which were said to be similar to those of Karlsbad, is reported to have disappeared altogether, but on the other hand a number of new springs have appeared. A commission has now been appointed to examine and analyse all occurrences of mineral springs in the country, and also to investigate the reasons for the disappearance of the above-mentioned spring. The curative properties of the mineral springs in Bulgaria were known to the Romans, but up to the present it cannot be said that the country has exploited them to adequate advantage. While there are a number of watering places the facilities for visitors are far below those of the average Continental spa. It may be assumed that the present investigation of these springs foreshadows an attempt to make them a greater economic asset to the country.

British Consular Reports

III.—TURKEY.

The following extracts are taken from the Report on Economic Conditions in Turkey, for the year 1927-28, of Colonel H. Woods, O.B.E., Commercial Secretary, H.M. Embassy, Constantinople:—

The promise of progress in administration, commerce and agriculture, to which reference was made in the report dated May, 1927, on economic and commercial conditions in Turkey has not, unfortunately, been altogether fulfilled. The tendency to nationalisation, the general effect of which is to discourage foreign enterprise, has again been apparent in Turkish commercial and economic legislation. The replacement of the old-established trading element by a body of Turkish traders which has not yet gained experience is a process which needs time to ensure successful fulfilment.

Finance.

Some attempt has been made by the Government of recent years to establish more precise budgets and to reduce expenditure by the exercise of a stricter economy.

As finally approved, the revenue side of the 1927-28 budget attained £T194,580,554, as against £T190,158,864 approved estimates for the financial year 1926-27. Expenditure was estimated at £T194,454,619, as against £T190,105,544 for the preceding year.

Estimates of revenue and expenditure for the 1928-29 budget have already been submitted to the Parliamentary Commission, but these estimates are liable to modification. Revenues as estimated by the Minister of Finance amount to £T206,298,045, which, compared to the approved estimates of £T194,580,554 for the preceding year, shows an increase of £T11,717,491, or an increase of 6.02 per cent., to be obtained from the following sources of State revenues:—The profits, cattle and transaction taxes, State monopolies such as tobacco, tumbeki, cigarettes, salt, petroleum, and sugar, and from a re-adaptation of the stamp duties, but considerable doubt exists as to whether the surplus revenue as specified above will, in reality, be forthcoming.

Expenditure, as submitted to the Parliamentary Budget Commission, amounts to £T206,291,668, which, compared to the approved expenditure for the current year, amounting to £T195,954,619, shows an increase of £T10,337,049. This extra charge on the Government is equivalent to the estimated surplus revenue.

The vote of the Ministry of National Defence represents 33.75 per cent. of the total budget, which, compared to the credits allocated under the same heading in the budgets of 1926-27 and 1927-28, representing respectively 39.60 and 36 per cent. of total expenditure, shows a tendency towards a gradual reduction in the military vote. On the other hand, there has been a steady increase in the vote for public works, owing to the cost involved by the Government's programme of railway construction.

Industry.

Advances made to the peasants, the abolition of the tithe and later of the tax on produce, which replaced the former tax and other measures for the agricultural develop-

ment of the country enforced by the Government, have no doubt been important factors in the intensification of agriculture.

Crop forecasts for 1926-27 were reported favourable, but owing to drought the cereal harvests fell short of expectations and the crop was 25 per cent. less than that of the preceding year. Other crops approximate more or less closely to those of 1926, but the general result was disappointing, as it was hoped during the spring of 1927 that the crops would surpass all previous records since the War.

Cotton production in Adana amounted in 1927 to 80,000 bales, as against 70,000 in 1926. Prices in 1927 were from 40 to 50 per cent. higher than those of the preceding year, with the result that the financial situation of cotton growers in the Adana district has been materially improved and a large number who were heavily in debt as a result of the disastrous fall in prices in 1926 were able to pay off their debts by the close of 1927. Lack of labour in the Adana district is an effective bar to any hope for a large increase in the output of cotton.

Crop prospects for the present year were generally considered to be good, but much will depend on the climatic conditions during the spring and early summer. The winter has been extremely rigorous throughout Anatolia, and consequently certain centres have suffered. The heavy falls of snow have given rise to great scarcity of foodstuffs and fodder in interior districts where the means of communication are precarious.

As a result, there have been severe losses in livestock in many districts, the loss in some cases being as high as 50 per cent. This represents a serious loss to the peasant population.

The law for the encouragement of industry, by virtue of which certain customs and other immunities are granted in respect to the installation of factories, has given a slight impetus to the development of industry, and therefore some progress has been made in this connexion. This law, which came into force in June, 1927, exempts factories established in Turkey from certain taxes, namely:—Tax on buildings, land tax, profits tax, municipal surcharges on the foregoing taxes, and certain other municipal taxes.

In addition, factories in Turkey are granted customs exemption on imported constructional material, on raw materials, and packing, machinery and spare parts, and on rolling stock, transport material and power plant. A maximum bonus of 10 per cent. of the value of the total annual output may be granted by the Government to factories in the country, and Government departments, municipalities and concessionary companies are obliged to purchase their requirements from a native factory, if such exists, even in cases where the local product is 10 per cent. more expensive than the corresponding article imported from abroad.

The law is, therefore, capable of giving a considerable extension to industry in Turkey, and when the Turkish Government revises the existing customs tariffs, which remain in force until August, 1929, it is to be expected that local industry will be further encouraged by protective duties.

Trade.

According to the most recent Turkish Customs returns published, namely, those for 1926, the value of Turkey's imports during the year in question was £T234,591,722, as against exports to the value of £T187,742,801, or a total overseas trade of £T422,334,523. The following table establishes the comparison between Turkey's imports and exports in 1926 and 1925:—

	Imports	Exports	Total	Proportion of exports to total trade.
1925 ...	£T242,314,117	£T193,119,756	£T435,433,873	44.35 p.c.
1926 ...	£T234,591,722	£T187,742,801	£T422,334,523	44.45 p.c.

It will be seen from this table that the value of imports in 1926 decreased by £T7,722,395 (3.15 per cent.) as compared with those of the preceding year, whilst exports decreased in value by £T5,376,955 (2.8 per cent.), and Turkey's total overseas trade showed a decrease of £T13,099,350, or 3 per cent. as compared with 1925. The proportion of exports to the total trade was approximately the same in both years.

On a basis of comparison by weight Turkey's imports show a falling off in 1926 of 100,000 tons as compared with the preceding year, whilst on the other hand exports, despite a slight falling off in value as compared with 1925, show an increase in weight of over 100,000 tons.

As regards imports, the decrease in weight arose principally from the fact that in 1926 Turkey imported over 100,000 tons less grain than in 1925; while from the increase in the tonnage of Turkey's produce exported as compared with the decrease in value of these products, it is evident that market prices abroad must have fallen considerably in 1926 as compared with the preceding year.

Turkey's adverse trade balance during the years 1923 to 1926 was the following: 1923, £T60,137,482; 1924, £T34,843,091; 1925, £T49,194,361; 1926, £T46,848,921.

As in 1925, Turkey's principal article of import was cotton goods to the value of £T71,981,186, representing 30 per cent. of the total imports of the country.

In 1925 the value of Turkey's imports of cotton goods was £T74,127,634, or 30.6 per cent. of the total imports. The principal countries of supply under this heading are the following: Italy, £T24,029,948; United Kingdom, £T18,248,437; Japan, £T5,680,719; Belgium, £T4,878,768; Germany, £T4,576,310; Czechoslovakia, £T3,597,888; France, £T3,355,759; Syria, £T3,223,656; total, £T67,591,485. These eight countries between them supplied 94 per cent. of Turkey's requirements of cotton goods.

The marked shrinkage in our exports to Turkey in 1926 may be attributed principally to the heavy dumping which took place during that year of Italian piece goods. Local importers took advantage of the depreciated Italian lira and placed orders for goods far in excess of their normal requirements. Other contributory factors were the increasing interest shown in this market by Japanese, Belgian and other manufacturers.

Competition is extremely severe, and apart from certain classes of articles for which the United Kingdom has no serious competitor, the deciding factor on this market is, and will continue to be, that of price. No sovereign specific exists to cure this falling off in the United Kingdom's trade, and whilst our foreign competitors can with lower freights and lower production costs continue to undercut us, the only hope for an increase of British trade in cotton goods is to be found in a general improvement in the standard of living in Turkey, a contingency which is at least very remote.

The total value of woollen goods imported into Turkey in 1926 was £T20,952,897 (4,436 tons), as compared with £T17,625,521 (3,949 tons) in 1925. The principal countries of supply are the following: France, £T6,750,404; United Kingdom, £T4,628,915; Italy, £T2,696,336; Germany, £T2,043,587; Persia, £T1,983,124 (includes carpets).

The United Kingdom has been obliged to cede her first place to France, and Czechoslovakia is, at the present time, also a serious competitor. As in the case of cotton

goods, price is an important factor, but the question of credit also plays a leading rôle. There have been evident signs since 1926 that British woollen manufacturers have become fully alive to the importance of the question of credit, and it is hoped that the United Kingdom will have regained in 1927 some of the ground lost in 1926.

The value of metals imported in 1926 amounted to £T22,242,167, or 9 per cent. of the total imports. The principal countries of supply were the following: Germany, £T6,949,104; Belgium £T4,082,144; United Kingdom, £T3,382,439; France, £T2,564,434. Germany and Belgium share between them the greater part of the supplies of steel rails and structural steel work. The United Kingdom's principal interest under this heading is tin-plate.

As in 1925, Turkey's principal export was tobacco, to the value of £T67,500,000 (41,562 tons). According to the customs returns the principal importer of Turkish tobacco was Italy, with imports to the value of £T36,000,000. An examination of Turkey's exports by country of destination is of little real value, particularly in the case of Italy, which is shown in the customs returns as being Turkey's principal customer, whereas in reality the amount of Turkish produce really imported into Italy is very small, and the greater part of the merchandise shown as exported to Italy is merely shipped to Trieste, where it is manipulated in bond or stored in transit prior to re-exportation to Central Europe or to America. Of the tobacco to the value of £T36,000,000 shown as exported to Italy, at least five-sixths were manipulated in Trieste and eventually re-exported. Apart from Italy, Turkey's principal customer for tobacco was Germany, whose imports amounted to £T12,000,000.

No customs returns have yet been published which would give a reliable indication of the trend of trade in 1927, but it is obvious that both the import and export trade were disappointing. As regards exports, Turkey has much to learn as far as marketing her products is concerned. In the case of those articles whose export is principally in the hands of long established foreign traders, such as mohair, dried fruit, etc., marketing is efficiently carried out, but as regards other products the lack of co-ordination amongst exporters and their disregard of world prices and crops nullify the efforts made by the Government and growers to intensify cultivation and production.

The 1927 harvest of tobacco, which constitutes Turkey's principal source of wealth, was fairly satisfactory as regards production, but the selling campaign has been a disastrous failure, and growers, unable to meet the advances made by local banks against their crops, have been obliged to sell at unremunerative rates, in some cases at half the price obtained for similar grades of tobacco in 1926.

The cereal harvest was comparatively a failure owing to the prolonged drought during the spring and early summer of 1927, and the production of wheat fell short of the 1920 crop by 25 per cent.

The winter of 1927-28 was exceptionally severe and communication became difficult, if not impossible, in the central plateau of Anatolia and the Eastern provinces, with the result that in many outlying districts the population was threatened with famine, and heavy losses of live stock were sustained owing to the lack of fodder.

As regards other exports, conditions were more normal, but the failure of the tobacco and cereal crops was a serious blow to the economic stability of the country.

These factors had an unfavourable repercussion on the import trade, and particularly on the import of cotton goods, which normally represent 30 to 35 per cent. of Turkey's total imports. The stabilisation of the Italian lira and the shrinkage of the demand from Anatolia have placed a number of the leading importers of cotton goods in Constantinople in a most unenviable situation, and the early months of 1928 have been marked by a series of failures and suspensions of payment on the part of textile importers.

There is no doubt that the failure of many firms in Constantinople was due to the unhealthy conditions prevailing on the local market.

Competition is exceptionally severe and there are far too many manufacturers' agents; in order to maintain a footing foreign manufacturers were induced to grant credits up to 12 months without sufficient regard to the status and financial stability of their local clients. Italian manufacturers in particular have been hard hit by the partial collapse of the Constantinople textile market.

Imports from the United Kingdom have suffered a decline, but it is at least satisfactory to observe that the caution displayed by British manufacturers in granting credit on this market has reduced their losses to a minimum. This policy of caution should be continued, as the market is still in an unsettled state.

Railways.

In August, 1927, the length of railways in Turkey under exploitation was approximately as follows:—4,296 kilometres—normal gauge; 212 kilometres—metre gauge; 267.5 kilometres—75 centimetre gauge; 124 kilometres—Russian broad gauge. The above figures include the normal gauge line from Yenidje to Nisibin, a distance of 834

kilometres, of which the section from Yenidje to Islahic is in Turkish territory, whilst a large portion of the section from Yenidje to Nisibin forms a boundary between Turkey and Syria, the whole section being administered by the French Direction of the *Chemins de fer de Syrie du Nord*.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Chloride of lime.—The Egyptian Department of Public Health invites tenders for the supply of 20 tons of stabilised chloride of lime, October 2. (D.O.T.).

Ejectors, etc.—The Egyptian Ministry of Public Works invites tenders for the supply and delivery of (a) One set of duplicate 750 gallons (liquid capacity) ejectors, (b) Three sets of duplicate 500 gallons (liquid capacity) ejectors, (c) Four exhaust air ventilation columns, October 15. (D.O.T.).

Internal combustion units.—The Director-General, Mechanical Department, Cairo, invites tenders for the supply of two (60 B.H.P. each) marine internal combustion units, Diesel type, airless injection: one port and the other starboard side, required for Government Workshops, Boulak, Cairo, October 6.

Iron rivets.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 56,000 kilos best Yorkshire iron snap head rivets to specification, October 24.

Steel Fire-Float.—The Engineering Department of the Egyptian Ports and Lighthouses Administration is inviting tenders for one self propelled petrol motor fire-float for use in Suez Harbour and Roads. August 31. (D.O.T.).

TURKEY.

Excavating machinery.—A local firm at Constantinople are desirous of receiving quotations for excavating machinery. (D.O.T.).

Cotton.—The "Direction Générale des Fabriques Militaires," Angora, invite tenders for the supply of 50,000 kilos of cotton required by the powder factories, August 25. (D.O.T.).

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahrona for Calcutta (Birkenhead, August 16); s.s. Mahanada for Calcutta (Birkenhead, August 30).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 22).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, August 11); s.s. Masula for Colombo, Madras, and Calcutta (London, August 11).

Cunard Line.—S.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste and Fiume (Liverpool August 18, and Swansea August 21); s.s. Bosnia for Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea August 25).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29).

P. and O. Line.—S.s. Ranpura for Bombay (London, August 17); s.s. Kaisar-i-Hind for Bombay (London, August 31).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 18); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 1); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 1).

Ellerman & Papayanni Lines.—S.s. Assyrian for Malta, Alexandria, Jaffa, Haifa, and Haifa* (Liverpool, August 18); s.s. Mardinian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 18, Swansea, August 18). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian Ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.
LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvers and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 7.

On the whole the stock markets have been quiet, with prices showing a somewhat irregular tendency. This was quite in accordance with expectations, being chiefly due to the approach of Bank Holiday week. Nor is the forthcoming week likely to witness any general improvement. In the main gilt-edged securities were weak, being under the influence of the less favourable monetary situation. Five per cent. War Loan was an exception and displayed marked strength. Several gold exchanges have moved against London and the Bank of England has lost gold, mainly to Germany. There are no fears, however, of an immediate rise in Bank Rate. The future of the Marconi Company and of the cable companies has been discussed on the publication of the Imperial Conference report; prices declined slightly, but in principle the report is satisfactory. Insurance shares were strong, while tobacco shares received attention. Reference is made to the home railway interim dividends and stock prices in the succeeding paragraph.

The Home Railway Dividends.

A few weeks ago we expressed the opinion that the depression in home railway stocks had been over-done. The past week has justified this view, the majority of home railway stocks having shown a rising tendency, though the closing quotations were below the highest. This follows the declaration of the interim dividends and the acceptance by the railwaymen's trade union leaders of a reduction in wages. The interim dividends, as expected, showed a reduction as compared with a year ago, the London Midland and Scottish being $1\frac{1}{4}$ per cent., against 2 per cent., and the Great Western $1\frac{1}{2}$ per cent., against $2\frac{3}{4}$ per cent. The London and North Eastern is meeting its interest payments as a year ago and the Southern, as usual, will not consider its deferred dividend until the end of the year. In several cases the dividend announcements were accompanied by interesting statements regarding the economies that have been effected in the past half year. These were shown to be of very substantial proportions. The Southern, for instance, completely offset its loss of traffic by economies. The lower

price of coal has been a fruitful source of saving. Further economies are possible in the near future, since the railwaymen's trade union leaders have agreed to recommend the acceptance of a cut of $2\frac{1}{2}$ per cent. in wages, this also applying to salaries. Other favourable factors include the probability—one might almost say the certainty—of the companies shortly obtaining road powers, while indirectly they will doubtless benefit by the Government's latest scheme of assistance to the heavy industries.

Profits from Stout.

The movements in the price of Guinness's ordinary stock a little while ago seemed to indicate some concern regarding the forthcoming dividend and accounts. These fears have now been set at rest, for the total distribution, at 28 per cent. tax free, is maintained at the same figure as for the preceding twelve months. For the two preceding years, however, the total distribution was 32 per cent. On the whole, the accounts make a fairly satisfactory showing. The gross sales of stout and sundry products, less expenses of manufacture, it is true, disclose a fall, the figure being £10,731,190, against £11,504,604. Taxation, however, though still at the substantial level of £8,446,910, has been less heavy than a year ago. Consequently the net profit, after deducting maintenance of buildings, etc. (£120,483 against £135,590) depreciation and other routine items, and adding income from investments, was nearly £50,000 larger at £2,311,601.

The general financial position, already strong, shows further improvement. The reserve now amounts to £2,100,000, against an issued capital of £9,500,000. The holding of gilt-edged stocks and cash total nearly £5,500,000.

Investment Stocks.

In the prevailing temper, as we recently noted, the investing public is seeking sound investments, the purely speculative securities being largely ignored. But the task of finding such investments to give a fair return is far from easy. The values of investment stocks have recently tended upwards and they are now receiving a further fillip. A number of suggestions have already been put forward in this column, but in view of the marked public interest it is advisable to return to the subject. In the present circumstances there is one danger which deserves passing notice. The investment highways having been thoroughly searched, there is a tendency to explore the by-ways. It is true that bargains are occasionally found in this way, but very often a seeming bargain turns out a disastrous failure. Not the least of the disadvantages of little known securities is that they do not command a ready market. The prior charge securities of carefully chosen investment trusts offer many attractions. The trusts are prosperous, the interest on the prior charge capital being well covered by expanding revenue. The 4 per cent. debentures of the Alliance Trust, which are redeemable 1952, give a return of £5 10s. per cent. The 4½ per cent. preference stock of the Alliance Investment Trust yields £5 13s. per cent. The Army and Navy Investment Trust 5 per cent. cumulative preference stock can be obtained to return £5 12s. per cent.

The value of Egypt's imports of hosiery in 1927 was £E823,968, as compared with £E834,896 in 1926.

H.M. Senior Trade Commissioner in India reports that the number of motor vehicles registered in the Lucknow District during the first quarter of 1928 was as follows:—motor cars, 47; taxis, 5; buses, 20; and lorries, 1.

The Sudan Government Railways have awarded contracts for 75 30-ton bogie covered goods wagons to the Gloucester Railway Carriage and Wagon Company, and for 50 30-ton open bogie goods wagons to Cammell Laird and Co. of Nottingham.

The traffic receipts of the South Indian Railway Company for the week ended July 7 amounted to Rs.12,90,923, making the total from April 1 Rs.1,79,04,767 as compared with Rs.1,69,46,197 for the corresponding period of the previous twelve months.

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition.

Motors and Motoring.

By G. B. B.

"Practically in as bad a position as it was during the slump!" That is a considered view of a leader in the British motor manufacturing industry; a man who knows. I can tell him the remedy. The remedy lies in extending one's sphere of sales operations and in selling British cars in overseas and, particularly, in Eastern markets. The Near and Middle East and India alone could, if properly exploited, take all the British cars we have to spare for some time to come—at any rate until the majority of the pay-as-you-ride cars in this country went to the scrap heap.

Ariel Cycles and West Africa.

During his recent visit to Birmingham, Sir Ofori Atta, the West African Chief, who is a keen motorist, visited the Ariel Motor Cycle Works. He was welcomed by Mr. J. Sangster, managing director, and Mr. V. H. Mole, sales director, and with his retinue made a complete tour of the works, being much impressed by the up-to-date manufacturing methods. The huge stamping machines particularly interested him and he stayed some minutes to see the operations on a connecting rod. He was also very interested by the travelling track erecting system on which one machine is completed every five minutes of the day, and by the frame brazing and enamelling processes, and watched wheel assembly and tyrefitting with evident appreciation. When the tour was over, Sir Ofori mounted a sidecar combination and expressed himself as well satisfied with its comfort. The Chief was then presented by Mr. Sangster with a pair of gold-plated Ariel "horses" suitably inscribed. At the conclusion of the visit he took delivery of a sidecar outfit which is being sent out to the Gold Coast for use on his return home.

Country Hotels and the Motorist.

I suppose it is of little use saying anything further regarding the shortsightedness of so many country hotels in "catering" for the motorist. They had a golden opportunity which they have allowed to go by, and one which probably will never again present itself. But even now much could be done to retrieve their unenviable position and to re-establish the hotel habit in the motoring public. People do not want to drag luncheon baskets and Thermos flasks about with them if they can help it, but what are they to do in these days of family motoring? Hotel service is usually bad and expensive; hotel catering is usually expensive and bad and the average hotel keeper seems to have but one idea as to how to improve his position which is to make the catering and service still worse and more costly. One man writes to say that for an omelette and a cup of coffee in a country hotel he was charged 4s., with an extra 9d. for half a grape fruit. He found the charge made for the bedroom he had occupied was 25s., with an extra 1s. for a morning cup of tea. Tips amounted to a further 2s. He wants to know how the average motorist can afford to stay at such hotels. I am sure I cannot tell him. Another motorist tells me he was charged 5s., full dinner rate, for a plate of cold ham, bread and pickles, excuse being given that he could have had all that was going had he asked for it! Personally I believe that an offer of meals à la carte instead of the compulsory table d'hôte would do much to remedy matters. But probably the matter has gone too far to be remedied. Most motorists to-day avoid hotels whenever possible, with the exception of the new-rich section who seem to think that wherever they go, their importance is gauged by the amount of money they spend.

A New 16 h.p. Rover.

One of the smartest cars I have seen of late is the new model, two-litre, six cylinder, 16 h.p. Rover, with a four-

seater coupé body, known as the sportsman's coupé. The coachwork is built on the Weymann principle of flexible construction and is fabric covered. There are two large bucket seats in front of the quick adjustable type, and on each side is a door wide enough to give access to the back part of the car as well as to the front. The back seat, giving ample room for two passengers, extends the full width of the car and has pneumatic cushioning. The car is well and tastefully upholstered in furniture hide, the front section of the roof can be folded back from inside the car, single handed, whilst the car is stationary and at the back of the body is a large trunk containing two large luggage cases. Wire wheels, single-panel adjustable wind screen with wiper and deep wells in the floor of the car to give plenty of room for the legs of the passengers are also good features.

In June 1,099 tons of locust beans were exported from Cyprus, reducing the stock to 200 tons.

It is reported that a new cargo service is to be inaugurated between Yugoslavia and America, with steamers of 7,000 to 10,000 tons each.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E7,189, making the total from April 1 £E68,657.

Arms have been granted to the Westminster Bank as follows: Azure semee of roses argent, barbed and seeded proper, a fesse wavy, also argent, in the quarter a portcullis or. The portcullis and the national rose are derived from the arms of the city of Westminster and the heraldic wave has reference to the County of London.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 1:—

Egyptian Futures.—Sakel Contract.—A series of nervous and susceptible markets have been witnessed. Immediately following our last report good markets in New York and Alexandria were responsible for a further recovery of some 50 points here, and November contracts reached 19.55d. under pressure from covering by nervous shorts and Continental and Alexandria buying. The recovery failed to hold, however, and values have since displayed a sagging tendency, closing to-day at 23 points above the lowest of the week with November quoted 18.43d.

As regards the future course of prices, everything depends on the indication about to be given us in the Bureau Report due for publication on August 8. In view of the uncertainty attending this pronouncement, we consider that the soundest policy is one which awaits further developments before embarking on fresh commitments.

During July 1,750 bales of Sakel were tendered against contracts. **Upper Contract.**—Trading has been very quiet on the whole and movements have been dictated largely by the course of the American markets. Further liquidation by the stale "Bulls" has been in evidence and, at times, short selling for a quick turn. This latter operation has not been quite so popular of late owing to the improved off-take for Upper and the comparatively reasonable parity at which our contract stands with America. This parity has fluctuated between 275 and 300 points. At current levels Upper cotton is finding favour amongst buyers, but, at the same time, it does not appear that the volume of trade is sufficient to relieve us of our stock of old crop cotton before the new crop begins to appear. This fact has kept the near months somewhat depressed and July expired at 20 points below November. A further 800 bales was tendered yesterday, July 31 making a total of 3,850 bales for July.

Egyptian Spot.—An improvement has again to be recorded in the off-take for spot Egyptian, and this in the face of a further decline in prices. Possibly the temporary recovery which took place a week ago tempted spinners to believe that the bottom was not far off. Liverpool is not only a cheaper market than Alexandria at the moment, but has also apparently a better selection of the medium grades of both Upper and Sakel to offer. Evidence of has recently been given by the number of inquiries emanating from America which have appeared in this market, inquiries which normally go direct to Alexandria. The differences with American cotton have, of course, narrowed in considerably, and Egyptian cotton at

to-day's level is a much more attractive proposition than it was, say, at the end of June.

The local inquiry for Sakel has embraced all qualities with the exception of the very best, and the very low. The former at present appears to be beyond the reach of spinners on account of price, or, to put it, another way, holders of this cotton are too dear. For the latter, the demand has died away simply because there has been nothing with which to feed it. As we have had occasion to point out before, the stock of Medium Sakel (i.e., F.G.F. to strict F.G.F.), staple is hardening steadily. A burst of really good buying would dispose of this cotton in a very short time.

A good inquiry for Uppers at from "to pass 25 on" has been in evidence and a steady turnover has taken place, with the basis inclined to harden. The better cotton has also received attention in a minor degree. In Pilon a small business has been reported at very firm rates. White cotton, Maarad, etc., have all received some small degree of attention. Sudan Sakel has met with a slightly improved off-take and an odd inquiry has been met with here and there for Tokar cotton.

C.i.f. business has been very quiet. Forwardings to spinners for week ended July 27 were returned as 10,087 bales Egyptian and 15,07 bales Sudan. Quotations of Sakel show a net decline of 50 points and those of Upper and Pilon 30 points. F.G.F. Sakel to-day 18.95d. F.G.F. Upper to-day 13.55d. F.G.F. Pilon to-day 14.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week July 26, state:—

The market during the week under review has been active, and the tone at the close to-day was fairly steady. The week's summary of price movements is as follow:—Sakellarides: November, 39.55 dollars, 0.80 dollars up; January, 39.70 dollars, 0.72 dollars up. Ashmouni: August, 25.70 dollars, 0.20 dollars down; October, 26.45 dollars, 0.20 dollars down; December, 26.75 dollars, 0.10 down.

Sakellarides.—Prices show an advance on the week of only about $\frac{1}{4}$ dollars, but this is about $2\frac{1}{2}$ dollars up from the low point touched on Monday last. The revival of the two last days has been nothing more than a reaction after the steep decline from 43 $\frac{1}{2}$ dollars for November.

At the third July tender 5,750 kantars dockets were issued bringing the total for the month to 19,500 kantars.

Uppers.—This market is down on the week, about quarter dollar; it has not followed the American decline to the full extent, and the American/Ashmouni straddle has improved to 588 points against 521 last week. Demand has run on rather improved lines, but much of inquiry has been for immediate shipment. America has taken a fair quantity of Uppers recently, evidently considering it cheap compared to their staples. We have a favourable opinion of the Uppers market, always providing, of course, that we do not get any serious break in American.

General.—The statistical position remains strong, but, of course, it is becoming every week less and less a factor in the situation; within a month now we shall be getting new cotton down, and with the trade so poor a stock of 1,650,000 kantars (even allowing that this includes 400,00 kantars Government cotton, which apparently, will not be pushed for sale) cannot be considered a dangerously small one.

The week's receipts amount to 411 kantars, against exports 88,772 kantars; the stock in Alexandria stands at 1,674,694.

The official figures of arrivals and exports for the period September 1, 1927 to July 18, 1928 are as follows:

Arrivals.—Sakellaridis, 2,631,539; Ashmouni and Zagora 2,913,539; 2,960,989 kantars; Pilon 271,973 kantars; Various 218,510 kantars; Scarco, 138,141 kantars; total 6,003,639.

Exports.—Sakellarides, 2,414,026 kantars; Ashmouni and Zagora, 2,960,989 kantars; Pilon 282,646 kantars; Various, 202,972 kantars; total, 6,048,582 kantars.

Spot.—The market has shown considerable activity during the week, total sales amounting to about 7,000 bales, of which we estimate 3,000 bales Sakellaridis, 3,800 bales Ashmouni and Zagora, and 200 bales other varieties.

Sakellaridis.—The demand is still concentrated on Fully Good Fair and below with some inquiry for Fully Good Fair/Good. On switching over to the November contract as basis, differences were very erratic and have not yet stabilised; sellers are holding out for high prices and, in many cases, successfully owing to the limited stocks and the demand from abroad being practically entirely for immediate shipment.

Ashmouni and Zagora.—There has been a very good demand for all grades from Good Fair to Good, but the medium grades have again been most in favour and spot differences for these qualities have stiffened considerably owing to the fact that good style cotton is daily more difficult to find on the market.

Other Varieties.—The only business recorded has been in Pilon; White owing to its scarcity, is quoted somewhat higher.

Crop, 1928.—Temperature has been slightly above normal during the week, and although humidity has been high, the weather in general has been favourable, and the plant is hastening to maturity. Bolls are opening in many parts of Upper Egypt, and the crop looks well; the number of bolls per plant is well up to the average. Boll worm has been reported in the Delta but, so far, the percentage of bolls attacked is very small.

Notes of the Week.

The Yugoslav Crisis.

The death of M. Stepan Raditch, leader of the Croat Peasant Party and head of the Anti-Serb *bloc* in Yugoslavia, cannot fail to intensify the gravity of the Yugoslav crisis. To the bulk of the Croats it will seem to mark the climax of Serbo-Croat incompatibility of temperament, and will provide a strong argument in favour of the federal system to replace the over-centralization hitherto insisted upon by the Serbs. It is, perhaps, well that the rôles in the country are not reversed; that the Croats and not the Serbs are the dissentients. Otherwise by now there must have been civil war. M. Raditch was not unique among his people, but he was *facile princeps* in his political violence and lack of restraint. With his disturbing and magnetic personality removed, it may be that Croat counsels will be characterized by greater reflexion, before action is taken or public statements issued. For the Serbs the net result may appear more dangerous, because they will have to deal with more cautious opponents and will not be able to profit by M. Raditch's frequent mistakes of policy and tactics. They are likely to be kept waiting for a little time, before they learn what the Peasant Democrat Group intends to do. On Sunday the funeral of M. Raditch took place in Zagreb. It was for Croatia a national occasion, and not until the day had passed would the Croat leaders take steps to deliberate upon their future policy. Belgrade in the meantime remains on tenterhooks. Some indication of its frame of mind is given by belated attempts to placate Croat feeling. The Government parties in the Skupshtina, which before the death of M. Raditch had declined to suspend the parliamentary immunity of two deputies implicated in the shooting drama of June 20, hurriedly voted the suspension at their next session. The

Skupshtina was adjourned for a day after the Vice-President had delivered a speech in memory of M. Raditch; schools and educational establishments were ordered to fly flags at half-mast. Croat policy will lose nothing in effectiveness by being decided upon calmly and with deliberation.

Brigandage in Greece.

The recrudescence of brigandage in Greece is an indication that political difficulties have had their inevitable result of weakening authority in the provinces. When officials have all their time taken up with trimming their sails to the political breezes from Athens, law and order are at a discount in the outlying districts. There is a certain piquancy added to the tragic element in the recent capture of parliamentary candidates at no great distance from Yanina, the capital of Epirus. The captives belonged to Opposition parties; M. Venizelos himself was at the time visiting the province. Political fervour, however, has not been able to make more out of the situation than for the Opposition, on the one hand, to call attention to the fact that the outbreak of brigandage coincides with M. Venizelos's return to power, while, on the other, the Prime Minister has to counter the statement by pointing out that the evil is due to the shortcomings of preceding Governments. All the captives have now been liberated, and it is probable that the incident will not assume serious proportions, as M. Venizelos's Government can be relied upon to deal vigorously with the brigands.

The Greek General Election.

On Sunday next will be held the general election which is to decide the fate of M. Venizelos's position in Greece. He has let it be understood that, unless his party is returned with a workable majority, he himself will retire

once more from politics. In other words, he has realized the truth of the discovery made by General Pangalos that the deadlock in Greek party politics is fatal to the interests of the country. General Pangalos could devise no other way out of the difficulty than a dictatorship open and avowed. Unfortunately, he was not gifted enough himself to carry through his plan, which failed as a result of his own mistakes and the shortcomings of those upon whose help he had to rely. M. Venizelos's régime will also be a dictatorship in everything but name, if he obtains the backing that he requires at the general election. His Cabinet can be relied upon to give him unquestioning obedience, as he brooks no independence of thought in his entourage. His challenge to King Constantine sprang from the same motives as the action which called in question M. Kaphandaris's rise to power at the head of the Liberal Party and drove him into the wilderness. M. Venizelos can give Greece abler leadership than General Pangalos could, and the endorsement of his return to power at the general election will be entirely in keeping with the conviction of the Greek people as a whole that the country wants strong government and freedom from party faction.

Turkey's Latin Alphabet.

It is a feature of the Turkish character that the people and Press should render semi-divine honours to the National Hero, the Ghazi President. The practice would seem to be extending to other residents in the country, when the correspondent of an important London newspaper reports of Mustapha Kemal Pasha that "endowed with the strongest will, it is even said that he is gradually forcing himself to forget the old Arabic characters by only reading newspapers which do not contain Arabic characters." If the impression that it is desired to convey is that some of Turkey's newspapers are already appearing with Turkish in Latin characters, the Ghazi's powers must be divine in good sooth, as, according to the Press of the day, the committee charged with the task of introducing the adoption of Latin characters for the writing of Turkish has not yet completed its labours and for a paper to appear in characters of its own selection at this stage would amount almost to *lèse majesté*. A Latin alphabet, it is understood, has already been adopted in Trans-Caucasia, but it is not to be supposed that the Ghazi would be unpatriotic enough to ignore his own loyal Press for that of foreign countries. He is enthusiastically devoted to the reform of Turkish writing, as he is to all other reforms for which he has been responsible, and has now ordained that "in two

years everyone must have learned how to read and write with the new characters." Things in Turkey are undoubtedly moving with great rapidity, but it is to be hoped that when the practice of writing Turkish in Latin characters is introduced, the mistake will not be made of having a variety of Latin letters for the one Turkish equivalent.

The Desert Mail.

By a curious coincidence the Nairn trans-desert motor service has again been interrupted just at the time when fear of the Wahhabis is manifest in Northern Arabia—it will be remembered that a few months ago Jaafar Pasha, in travelling across from Baghdad to Syria, was reported to have been sought after by thousands of Wahhabi foes. Of course the breakdown of the Jidda Conference has nothing whatever to do with this attack on the local convoy and on the Nairn cars on August 10 ten miles west of Rutbah Wells. This last affair, in which three Mussulmans are stated to have been killed and the overland mail to have been stolen by the bandits, can be reasonably connected with nothing but the fact that there still exist men in the Middle East, as they exist nearer home, who prefer the life of the highway robber to less exciting and more peaceful occupations. Very possibly the miscreants are, as has been suggested, the same body which attacked a convoy last March: if so, it is doubly to be hoped that they will be brought to justice by the Iraqi police. But obviously their capture will be a difficult affair, and it will need all the sleuth-like efficiency for which the Iraqi police are becoming renowned to teach the bandits that the Baghdad-Damascus route is one of the highways of the world, on which robbery is not only a crime but also a folly. It is comforting to learn, as we go to Press, that the mails have been recovered and sent on to Damascus, and that all convoys are proceeding according to programme.

Iraq and Najd.

It is a mistake, in our opinion, to represent the present quarrel between Iraq and Najd as merely a personal vendetta between the Hashimite and the Saoudi families, undissipated though the long-standing differences between the two Houses may be. For, as we have indicated in the article on the following page, there is at stake a principle, or, rather, there are two principles, in this Iraq-Najd *impasse*. On the one hand, King Faisal, as head of a modern, progressive State, demands the right to place (within the terms of the Treaties to which he is committed) whatever signs of authority he and his advisers judge best for the good ordering of his State, in whatever spots in that State. On the other hand, King Ibn Saoud takes his position on the immemorial sanctity of desert law. Judged in the longest aspect, it would appear that progress lies in the civilisation of the desert, in making it accustomed, that is, to modern conceptions of law and order. That this will take time and may ultimately fail is admitted, as the Romans and others who have built forts in the desert discovered. But no good is done by denouncing King Ibn Saoud as being hopelessly involved in an expansionist policy. It is to the best interests of all in Arabia that he, the strongest man of his generation in Arabia, should remain in full power to check the impetuosity of his *Akhwan*; and those who assert that malevolence is the guiding motive on the part either of Iraq or Najd are doing no service to the cause of a united Arabia which is the dream of every good Arab. Prejudice exists, of course, in plenty; but it is by their actions alone that the rulers of Iraq and of Najd and the Hijaz should be judged. On this latter basis both monarchs come out well enough. The more fully it is realised that bedrock principles, rather than mere "family feuds," the effect of which it is, in any case, within the power of Great Britain to negate, are involved, the better chance is there of circumscribing the results of the breakdown of the Jidda Conference.

THE CONTROL OF THE DESERT.

More disappointment than surprise will have been caused at the failure of Ibn Saoud, the Wahhabi King, to agree to the British and Iraqi point of view upon the construction of police posts in the desert—for, in the absence of full details, it is to be assumed that it was over this question of posts in the desert that the conference between the Wahhabis, the Iraqis, and the British Mandatory Power broke down. There will be no need to recapitulate fully to readers of THE NEAR EAST AND INDIA the story of this desert quarrel between Iraqis and Najdis. Suffice it to recall that last November members of the Mutair tribe from Najd demolished the uncompleted police post at Busaiyah, and massacred the labourers who were erecting it. Other raids followed, together with punishment of the *Akhwan* by the Royal Air Force. About March these activities came to an end, through climatic and other reasons. The subsequent conference at Jidda between King Ibn Saoud and Sir Gilbert Clayton was interrupted by the *Haj*. In the interim there was afforded the opportunity of making known to the British Government the Wahhabi King's views upon the Iraq-Najd affair. Sir Gilbert returned to the Hijaz last month with his original instructions confirmed: no concession could be made to the argument that the building of a police-post some seventy miles within the Iraq frontier was a violation of the Uqair Protocol of the Treaty of Muhammadarah of 1922; nor could the right be foregone of Iraq to govern her own deserts according to her own ideas. In short, the process which Great Britain has taken in hand, as Mandatory Power, of civilising the desert, could not be interrupted for the sake of one who, however mighty a tribal ruler, did base his régime on desert law and desert conceptions of justice. Between these two views of the desert, the new and the old, there could be no compromise, and any considerable hope to the contrary indicated a lack of faith either in Great Britain's resolve to adhere to her mandatory responsibilities in Iraq, or in King Ibn Saoud's steadfast upholding of the cause of his renowned *Akhwan*.

Now the question which will naturally be asked in England is: how far are the police-posts essential to the good conduct of Iraq? Are there real interests at stake in controlling the vague desert area between the Sown, by the Euphrates, and the artificial line drawn by Sir Percy Cox and Sultan Ibn Saoud to indicate the conditional frontier between the Mandatory Arab State and the independent Najd? Into the Iraqi official suspicion that King Ibn Saoud's intentions towards the State of King Faisal are not wholly above board, there is no need to inquire now; any quarrel between Arab and Arab, *qua* stake-

holder in Arabia, is a matter for the Arabs themselves to resolve, one into which it would be folly of Great Britain to interfere. But obviously the Mandatory authorities have satisfied themselves that essential interests are involved in controlling the refugee Shammar and other tribes by the means of these police-posts at Busaiyah, Salman, and Sabicha, and in maintaining the right of Iraq to take whatever steps she pleases, provided that she infringes no international convention, for the preservation of internal order and for the prohibition of raids upon neighbouring States.

That the Wahhabi monarch should have apparently failed to appreciate the effect of this British conviction holds, indeed, no immediate menace to Iraqi-Najdi relations; for one thing, climatic conditions would seem to inhibit the recrudescence of any considerable military activity; and for another, and more important, thing, King Ibn Saoud has reiterated his goodwill and his willingness to preserve the *status quo*. But this sharp and insuperable difference of opinion upon the control of the desert is highly unfortunate, from both the Iraqi and the Najdi points of view. There may be people in Iraq who will be far from discontented that there should have arisen difficulties between the British and the Puritan conquerors of the ex-Hashimite Hijaz; there will certainly be sympathisers in Iraq with those Najdi Arabs whose families have recently suffered loss through the activities of the Royal Air Force. But if Iraq is to progress, and to become a modern, civilised State, her people in general will surely realise that frontiers, even artificial frontiers, must be respected by her neighbours, and they must, therefore, be behind the claim upheld by the British and their countrymen at the Jidda Conference. It is well, by the way, to point out in this connexion that Nouri Pasha's recent declaration in the Baghdad Majliss in favour of Conscription had little to do with this Jidda Conference, although the attempt has been made to connect the two. Even had there never been Wahhabi raids from the South, the Minister of Defence and those Arabs and British who think with him would have been in favour of some measure of compulsory military service in Iraq. The present dependence upon the Royal Air Force of King Faisal's State, in this matter of the incursions of the *Akhwan*, is purely incidental, and may conceivably be used as an argument either for or against Conscription. No: the whole problem arising out of the breakdown of the negotiations in the Hijaz really derives from the question of the Iraq-Najd frontier and from the question of the control of the desert lying between that frontier and the Sown. There are those who believe that the chief interest of Iraq lies not in pushing out into the desert (which, in their view, can be called Iraq or Najd only in an arbitrary and useless way), but in attracting the Desert to the Sown; and against them are those who believe that, since Najd has agreed to desert frontiers, Iraq would be failing in her capital duty were she to neglect to control that section of the Desert allotted to her. No question exists that, on the purely legal or literal aspect of this Iraq-Najd quarrel, Iraq is absolutely in the right; it is on the moral, or general side, that King Ibn Saoud obviously feels so wounded that he cannot concede even to his friends, the British. The best that can be hoped for from the failure of this Jidda Conference is that, having registered his protest against what he considers, in the vague and untutored yet understandable way of the *Badawin*, to be an intolerable violation of desert custom, King Ibn Saoud may so restrain his *Akhwan* that in time they may become accustomed to the existence of a Power in the North which at last has found the means of prohibiting the fleeting presence of the Shammar in their midst. If, however, the leader of the Wahhabis prefer to foster the idea that he made a mistake in 1922 in conditionally accepting the present Iraq-Najd frontier, and that by a series of pin-pricks he must in future seek to rectify the error, there may be in Arabia during the next year events of far-reaching importance. But we believe in King Ibn Saoud's statesmanship, and that he will find a peaceful way out of the disappointing *impasse* just reached.

*The Near and Middle East

From Our Own Correspondents.

Baghdad, July 30.

Parliament.

The presence of certain Najdi tribal elements in Iraq territory gave rise to a question in Parliament, to which the Prime Minister replied that the Government felt no anxiety on this score, the three places at which the tribesmen had settled being technically within the neutral zone known as Baqlawah. No further raids had taken place, and an investigation of the reported theft of 225 camels showed that the culprits were members of the Mutair tribe, whose chief had promised to return the camels. The tribesmen round Salman post belong to that part of the Shammar which had taken refuge with Iraq.

Muzahim Beg al Pachachi, formerly Iraq Diplomatic Agent in London, is returning to Baghdad to resume his work as an advocate at the Bar. Replying to a question, the Foreign Minister said that Muzahim Beg was recalled from his post in London for political reasons which necessitated the appointment of Jaafar Pasha in his place; there was no question of his recall being due to his opposition to the new Anglo-Iraq Treaty. Sir Abdul Muhsin Beg then paid a tribute to his services while Diplomatic Agent.

A statement made in Parliament to the effect that the improvement of irrigation on the Gharraf was being neglected by the Government drew from the Prime Minister an interesting statement on the financial position of Iraq. Sir Abdul Muhsin Beg said that without resorting to loans it was impossible for the Government to carry out any big development schemes at present. The financial position of the country was very critical, all the reserve funds, amounting to Rs.1,200,000, having been expended in respect of Iraq's share of the Ottoman Debt. Thirty-seven lakhs of rupees had been allocated to improvement schemes, and of this nothing was left. Only if the Government succeeded in raising fresh revenue in the coming year could any fresh development undertakings be considered.

The Jidda Conference.

Taufiq Beg Suwaidi, Minister of Education, with the two other members of the Iraq delegation, left Baghdad by air this week for Port Said, on their way to attend the resumed Jidda Conference. The Government of Iraq is taking its part in the negotiations in a spirit of conciliation, and hopes are entertained here of a successful issue. The appointment is expected of an Iraqi Diplomatic

Agent at Riyadh, and of a Najdi in Baghdad. In the absence of Taufiq Beg, the Minister of Justice (Daud Beg Haidari) will officiate at the Ministry of Education.

The Locust Menace.

The Union of South Africa has lent to the Iraq Government its Chief Locust Officer, Mr. R. H. Williams, "in order that he might be in a position to recommend suitable measures for the extermination of the pests, or, if that were not possible, measures which would result in a diminution of the damage which is done to growing crops in Northern Iraq." Mr. Williams has now completed a careful inspection of the locust-infested districts and the breeding areas, and has issued a report: "Suggested Methods of Control of Locusts in Iraq," which is obtainable from the Ministry of Agriculture.

The ideal scheme for locust prevention would be, Mr. Williams suggests, the establishment of one Locust Department for the whole of the Middle East, the countries concerned contributing to a common fund and promulgating common regulations for uniform methods of destruction. Unfortunately such a plan is not at present practicable, but the appointment of an advisory Locust Officer for the Middle East is recommended; his duties would be to "visit the countries concerned; carry on locust propaganda methods, and demonstrate to the authorities the latest destruction methods, and endeavour to get them adopted generally. Further, as the first step towards general combined action, he should aim at co-operation along the frontiers."

In the meantime several practical steps are recommended to the consideration of the Iraq Government; chief among these are the amendment of the law so that the onus of locust destruction is placed on the legal occupiers of the land, the formation of a Locust Department under the Ministry of Agriculture, with an officer in charge. In view of the extreme importance of this question to the whole country, every touring official of the Government, of whatever Department, should make a point of assisting the Locust Department by inquiring for and transmitting information in connexion with locusts. Mr. Williams considers the use of aeroplanes for scouting and poisoning purposes uneconomical and to some extent dangerous to stock, while ploughing he stigmatises as primitive and amateurish. Only a method which accounts for practically every locust in a swarm can be considered effective, and for this spraying with arsenite of soda solution is recommended, especially where—as largely in Iraq—motor sprays can be used.

Electricity in Baghdad.

Under the new Baghdad Electric Tramways and Lighting Concession, a maximum price of eight annas a unit is to be charged to consumers. This apparently high price is causing very unfavourable comment in the local Press, which thinks that a charge of four annas a unit would give a vast profit to the concessionaires. The difficulty lies in Baghdad's very low consumption of electricity. Costly machinery has to be installed and kept constantly working, but in winter except for three or four hours in the evenings only a very small amount of current is consumed, while in summer the Baghdadis spend twelve out of the 24 hours on their roofs, where they use neither light nor fans. As the town as yet has no large manufacturing industry, there is no demand for electricity on a big scale. In order to increase the consumption of units, it is in the Company's interest to lower the price as soon as this is economically possible. Current is already supplied to Government offices (which consume over 50 per cent.

of the electricity used in Baghdad) at a reduced rate; moreover, half the Company's profits go to the Iraq Government.

General News.

Two cases of armed robbery occurred near Baghdad during the past month, and the fact that the criminals on both occasions were traced and arrested within a few days reflects great credit on the police force. In the first case, a man and a child were seriously assaulted and robbed of clothing and money on the desert road outside Kadhima; five men were arrested, and the clothing recovered. Of the three Arabs concerned in the second affair, an attempt at theft from the tents of the Masahala tribe in the Yusifiyah area, one was shot dead by the tribesmen, and the others have since been arrested.

On receiving a protest from the Iraq Government on the cutting off of the drinking-water supply of the town of Mandali, the Persian Government took prompt measures. The officials sent to investigate reported that the inhabitants of the town lying opposite to Mandali in Persian territory had cut off the water without the knowledge of the Persian authorities. The incident was closed by an agreement reached by both Governments for the enforcement of the Frontier Agreement of 1914, and by a promise on the part of the Persian authorities that the water should not again be interfered with.

An accountant officer of the R.A.F., Flying Officer J. O. Morrison, was drowned on July 21 while bathing in the Tigris. He had passed the R.A.F. river test, but was not a strong swimmer; when only about fifty yards from the boat he sank suddenly, and was not seen again in spite of repeated efforts on the part of his brother officers. The body was recovered two days later, and was buried with full service honours at Hinaidi, in the presence of about seventy British officers, including the Air Vice-Marshal, who has just returned to Baghdad.

Ahmed Fathi Beg al Akkad, Secretary to the Egyptian Legation at Teheran, visited Baghdad last week. He was received at the Royal Palace, and also called upon the Prime Minister and the President of the Council of Ministries before returning to Teheran.

Jerusalem, August 4.

Departure of Lord Plumer.

This week Palestine has said good-bye to Lord and Lady Plumer, and said it with deep regret. The result of scanning rapidly conditions in Palestine in 1925, when Lord Plumer came as the new High Commissioner in

place of Sir Herbert Samuel, until to-day, and of comparing the sort of popular impression in 1925 of what Lord Plumer might be expected to be like with the impression that he is actually leaving behind him—is to place to Lord Plumer's credit a decided triumph, administrative and personal. In the summer of 1925 the Syrian rebellion was still a matter of serious concern to the peace of Palestine and Trans-Jordan; this was followed by the serious economic crisis within the country, reducing to a dingy pink all the rosy visions on which Palestine—particularly Jewish Palestine—had lived for five years; and there was also thrown in the condition of chronic unease belonging to Palestine's peculiar little political problem.

The prospect of a famous soldier well on in years taking charge after the suavity of a Samuel, did not seem promising either to the Jew, with his old instinctive horror of the heavy, unsympathetic military hand, or to the Arab politician, who himself had little faith in his sole weapon—a solid aggrieved Arab opposition—which for years he had used to counter the "British-Zionist-Colonising" policy.

The passage of three years, despite the disturbing interruptions of the earthquake, sees the prevalence of utter peace around us and within, guarded by an almost microscopic military arm; economically the country is settling into a condition which, if not noticeably fat, is at least of a healthy leanness, and its prospects are now reasonably secure if not fantastically enticing. In his personal influence Lord Plumer has shown himself to all sections of the community to be nothing of the imagined unimpressible military despot, but quite the contrary—a never impatient, always sympathetic, easily accessible, and unfailingly wise listener and adviser. It has been an experience surprising to many, who have taken to him their castles-in-the-air, to find that he has studied their scheme unhurriedly, grasped its most technical details, and detected just how far it could or could not be brought down to solid earth.

May Palestine continue to be as fortunate in its higher officials!

The Chief Secretary.

Our new Chief Secretary, Mr. H. C. Luke, has arrived, and is now the Acting High Commissioner. Naturally he has been warmly welcomed back by all his old acquaintances. The Arab Press is greeting him with a spate of "open letters," full of hopes for better days, and of advice on the best policy that a rightly guided Chief Secretary will pursue. *Al Falastin*, which is not too hopeful, writes:—

When all is said and done you are only a British official. The people of the East have become accustomed to regard British officials as dumb images, mere tools in the hands of the Colonial Office. But you we wish to regard differently, for are you not a man of intellect? And certainly the Central Government has seen some necessity for sending you here.

The paper goes on at length to describe how the Arab majority is oppressed by the Jewish and English minority, and calls upon the new Chief Secretary to take his stand on the side of truth and justice, and so become one of the great figures in Palestine's history.

Mirdal ash-Sharq contrasts the prosperous condition of the country when Mr. Luke was here before with its

present evil plight. The paper asks but two things: to ensure justice in the country in every sense of the term, to do which it will first be necessary to reform the Government before any good can be expected to penetrate to the people; and then to put right the economic crisis! By so doing, Mr. Luke, is assured, he will restore to Great Britain that confidence which Palestine had in it long since before the War, but which it has now lost awhile.

Port Said, August 5.

Port Said has been very busy the last few days arranging for the passage of the two parts of the great Singapore Dock, which arrived in the harbour at the beginning of the week, towed from the Tyne by eight Dutch tugs. It is the largest dock which has ever been built, measuring 75 feet in height, 171 feet in breadth and 860 feet in length. The passage out here took about forty days, one section arriving a few days before the other. The journey was eventful for both of them; the first section lost two tugs in the English Channel, and the second section met bad weather outside Gibraltar, where, for three days the three tugs could make no headway against the contrary wind. The height of the dock makes it exceedingly unwieldy and liable to be affected by the slightest wind, and it is this which, combined with its breadth, is making the passage of the Canal a ticklish proposition, for there is only 15 feet clearance on each side. On Saturday morning at dawn these two great leviathans of iron embarked on this adventure of crossing the desert by a waterway, which stretches 100 miles odd from Port Said to Suez. Between 5 and 6 a.m. every boat and buoy were cleared to the side of the harbour and not a ship was allowed to move. There was presented, therefore, an unusually

deserted and quiet scene for one of the biggest ports in the world. But this hush in the harbour traffic was an effective stage-setting for the passage of these two great masses of metal. Once in motion, however, the first section looked very fine as it glided down the Canal past the town at the rate of about five knots. It took a quarter of an hour to reach the entrance to the Canal. Then suddenly the wind came, and, catching the towering walls, blew the dock nearly sideways on, but a strong tug of 3,000 h.p. in the rear managed to right it gradually by steaming backwards. The second section started about twenty minutes after its fellow, and it is not expected to get to Singapore till about two weeks after the other, as it is very much more bulky. As the two parts of the dock proceeded up the Canal they looked like two gigantic suspension bridges towering above the desert. Boats had preceded the dock at early morning and had removed all the buoys close into the banks, because the dock extends over the deep channel which is marked out for the big ships, and if it were not for the smallness of the dock's draught it would not be able to pass down the Canal; the twenty dredgers which are usually working in the Canal had also been moved out into the harbour some weeks previously.

All shipping has to be stopped while the dock is passing down to Suez, but the Canal Company have done all they can to stop the traffic as little as possible. The dock is making three halts. The first is at Kantara, where a basin has been especially dredged so that ships may pass; the two sections arrived there yesterday afternoon and they wait there the night while the ships sail by homeward bound. To-day the dock proceeds to Ismailia, to-morrow it should arrive at the Bitter Lakes, and on Tuesday its desert journey is due to finish at Suez. If the southwest monsoon is still blowing the dock will proceed to Colombo, where it will bunker. It expects to arrive in Singapore at the end of October.

The Political Situation.

With regard to the political situation, there is little doubt that the Cabinet's prestige is on the increase, especially since July 28, when about 150 members of the Wafd formed themselves into a pseudo-Parliament. The feeling of relief at the establishment of a strong Government is exemplified by the many deputations that come to see the Prime Minister at Alexandria from the provinces of Middle and Upper Egypt, which in many cases means a considerable journey. An article, too, has been published in the Wafdist paper, *Al Ahram*, by a Wafdist ex-Deputy in praise of Mohamed Pasha Mahmoud. "Not to take a pessimistic view," he says, "we should interpret the present circumstances as favourable for making a real step forward towards complete independence. Once we arrive at that goal it will be easy to obtain a Constitution that embodies real liberty. . . . Although it may not please *Al Ahram*, I have sent them this article believing that a constitutional régime is of no use so long as it is over-ruled by a foreign force."

GREECE.

Athens, August 6.

Brigandage in Epirus.

The triumphant tour of M. Venizelos through Epirus has been marred by an unfortunate incident. Two parliamentary candidates of the Progressive Party (i.e., Venizelists although not Liberals), M. Mylonas, a former Under-Minister of Finance, and M. Melas, a former Deputy, have been kidnapped and held to ransom a short distance outside Yanina on the day of M. Venizelos' arrival in the town. The incident occurred at a bridge, 13 kilometres north of Yanina on the road to Konitza and to Santi Quaranta. The candidates were returning from an electioneering visit to the small village of Protopappa. As the car approached the bridge it was held up by two men dressed in khaki, the passengers were made to get down, and were then conducted to a spot nearby in the bed of a

torrent, where five more brigands were in hiding. The ransom demanded is five million drachmæ (about £14,000). If it is not forthcoming, the prisoners will be murdered. Their companion was sent to Yanina with letters to their relatives.

It is a sinister feature of the incident that it took place in broad daylight on a public road, at a spot where there are no trees and no cover of any kind and where there is a considerable amount of traffic: all of which shows with what confidence in their immunity the brigands acted. One only wonders why they did not kidnap M. Venizelos himself.

M. Venizelos and the Outrage.

The incident cast a cloud on the reception of M. Venizelos, who showed clearly in his speech how deeply he was annoyed. The question of public safety in Epirus has long been very serious, and he, if anyone, is capable of dealing with it. At Yanina he went so far as to say that he would regard it as one of the principal points in his programme, and if he failed in it he would regard the rest of his work as a failure and resign. He is known to be a man of his word, and thus, from the brigands' point of view, the incident is badly timed. Brigandage and politics have always been intimately connected in Greece, but the result, which was perhaps intended, viz., to embarrass his position and reputation, will certainly miss fire. It is more likely to increase his votes and, once he is in power with a strong majority, it will be a bad look-out for the brigands who infest not only this but also other parts of the country.

Brigands' Crimes.

For brigandage, though chronic in Greece, always flourishes most when Governments are weak. Latterly there has been a serious recrudescence of it. All the principal mountains of North and Central Greece harbour brigands, Cithæron, Helikon, Parnassus. Olympus has been fairly free since the rounding up of the Yakoulas band in 1926. But the whole of Pindus, especially the neighbourhood of Grevena, is full of them, and the peasants either support them or live in terror of their lives. The notorious Bambanis, who escaped after being taken prisoner on Olympus (he has scratched his autograph on a stone on the summit), is still at large. Between Grevena and Samarina a band of seven Albanians were working until recently, when they were surrounded at night by gendarmes, some killed, others taken prisoner and the rest dispersed. In the neighbourhood of Samarina a short time ago a famous brigand siezed two shepherds who insisted on grazing their flocks in a place of which he disapproved, tied them together, cut the throat of one of them, then cut off his ears and nose, and sent the other man back with them to the relatives, to show how he treated those who disobeyed him. A year or two ago seventeen gendarmes were shot by one brigand in two days. They are all buried in one grave in the cemetery at Grevena. The Petra crime, in which seven were killed and 15 million drachmæ stolen, is still fresh in people's minds. The culprits have not yet been brought to justice. In the same district an American archæological student was shot a few days ago, and it was on the Yanina-Santa Quaranta road that General Tellini was murdered in 1923. As these lines are being written, news has just reached Athens of another hold-up at Yanina. This time it is a local lawyer—the spot, very near where the two candidates were captured—the ransom, a million drachmæ.

The causes which contribute to brigandage in Greece were well analysed by the historian Finlay in an article contributed to the *Saturday Review* in 1871, and what he said then is substantially true to-day. He attributed it to feeble Governments, to the hard life of the peasants, which makes the life of a brigand with the possibility of getting rich quickly, preferable, in spite of its risks, to his own, to the complicity of politicians, and to the inadequacy of prisons, and the frequent granting of amnesties. To these may be added the romance that in many eyes still invests a traditional profession, the difficulty of the country, and the inadequate training of the gendarmerie.

The Gendarmerie.

As to the gendarmerie, the report of Col. Ring, who has been studying the question on behalf of the Greek Government, is particularly timely. It has not yet been made public. But its existence is a good augury that the country intends to tackle the problem seriously. The present writer, who has just returned from a tour on foot through the worst districts, can testify to the excellent material of both officers and men to be found in the gendarmerie. Their efficiency in action he had no opportunity of judging.

The Captor of M. Mylonas.

Since these lines were written it is announced that M. Mylonas has arrived in Yanina (rather tired and dishevelled but otherwise none the worse), having been released by the brigands in order to facilitate the collection of the ransom. The head brigand informed him with pride that he had twelve murders in one year to his credit, that his ambition was to surpass the record of a rival brigand, and expressed regret that he had not a photograph of himself which M. Mylonas might insert in the newspapers after his release. So vanity plays a large part in brigand psychology.

CYPRUS.

Nicosia, July 25.

Mid-Summer Heat.

Oppressive heat continues. Many visitors are still arriving, especially from Egypt. One paper remarks sarcastically that "the heat need not trouble our rulers, who, in the heights of Olympus, amidst cool and refreshing breezes, can work for our interests and progress. And we shall perhaps very soon be able to admire the results of their labours in the form of fresh taxes and burdens."

The Legislative Council.

The Legislative Council has been summoned to meet at Nicosia on August 7. The following have been appointed to fill the places of official members now on leave: the Rev. Canon Newham, Mr. Wilson, Chief Collector of Customs, and Mr. Montague, of the Police. Canon Newham will also act as member of the Executive Council.

Judicial Work.

The people of Cyprus are nothing if not litigious, and work in the law courts has often fallen into arrears, especially at Nicosia. The annual summer vacation of the judicial Department has been reduced from eleven to seven weeks, owing to pressure of work. The number of natives, especially Greeks, who have been called to the Bar in England, and are now practising in the Courts, is considerable. Another Greek, M. Lukios Zeno, son of

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

an able advocate in Limassol, has been recently "called," and has returned to practise in the island.

Motor Traffic.

The number of private cars is being largely increased, and, as one result, various accidents have occurred. One benefit that should be gained is that important improvements will have inevitably to be carried out, in the widening and alignment of streets. In Nicosia especially, there is much to be done, in its many narrow and tortuous streets and alleys; and calls for action on the part of municipalities are now urgent; and must receive attention even if loans are necessary. Circumstances show that there should be no hesitation in proceeding to the task.

A Latin Bishop.

For the first time, at any rate for a long period, a Catholic Bishop has been appointed at Patriarchal Vicar: the Rev. Godric Kean. He was partly educated at the University of Fribourg. He served as chaplain in the late War in France, Egypt, and Palestine, and in 1923 became chaplain to the Catholic Patriarch in Jerusalem.

M. STEPAN RADITCH.

With the death of M. Stepan Raditch, who was wounded in the Skupshtina on June 20, and, after making apparently a complete recovery, succumbed on August 8 to the effects of the wound on his general health, passes the outstanding figure in Croatian history since the War. Born in 1871 of peasant parents in a Croatian village, he gave early proof of the driving force in him by achieving an adequate education, in spite of the handicaps of poverty and exceptional short-sight. He studied at Zagreb and at Prague, and at the age of 25 years finished his education in Paris. Before then, however, he had attracted attention in Austria-Hungary as a Croat leader uncompromisingly hostile to all Magyar attempts to denationalize the Slavs. In 1904 he founded the Croat Peasant Party and became a prominent figure in the Provincial Parliament of Croatia. During the War he remained loyal to the Austro-Hungarian Monarchy, but when the Croatian National Council voted for union with Serbia he urged the creation of a Croat republic. He persisted in his republican views to the extent of boycotting at first, with his party, the Skupshtina. In 1923 he left Yugoslavia to escape arrest; a few months were spent in London, and after a visit to Vienna, he proceeded to Moscow. His return to Yugoslavia in 1924 was followed by a formal declaration in favour of the Third International, and M. Raditch was thereupon arrested and sentenced to imprisonment. At the end of six months his views had undergone a complete change. Speaking on his behalf, his nephew, M. Pavle Raditch, who was also shot in the Skupshtina and died almost immediately, announced that the Party accepted the Monarchy in Yugoslavia and recognised the Constitution. M. Raditch was liberated and before the end of 1925 had entered a Coalition Government under M. Pashitch, becoming Minister of Education. He displayed little sense of ministerial responsibility, for his speeches were as violent and indiscreet as ever, and in April 1926 he left the Cabinet.

From that date until the outrages of June 20 he maintained unrelenting opposition to successive Belgrade Governments.

M. Raditch must be judged mainly by the fact that throughout his career he retained the unfaltering support of his Croat peasants. Nothing that could be laid to his charge, if he was judged by other standards—his violence, indiscretions, exaggerations, contradictions and instability—affected his popularity among his own people. He commanded an inexhaustible flow of eloquence, whether on the public platform or in private life, and his effective and fearless baiting of Serb politicians and Serb officials made a strong appeal to the Croats. Neither in his acts, nor in his speeches, however, did he reveal any real constructive sense. His Croat patriotism was above challenge, but his rôle was ever that of a destructive critic.

NEWS IN BRIEF.

Slight earthquake shocks were felt on August 6 at Leninakan, Armenia.

King Alexander of Yugoslavia left his summer residence in Bosnia on August 6 and returned to Belgrade.

A provisional agreement between Persia and Sweden was signed at Teheran on August 10.

M. Titulescu's reappointment as Roumanian Minister to Great Britain was gazetted in Bucharest on August 11.

The Italian Government has conferred on Dr. B. Soucail, Director of the Veterinary Service of the Quarantine Board at Alexandria, the Cross of the Crown of Italy.

The will of Mr. Robert Earle Monteith Smith, M.A., LL.B. (65), of Cannes, France, and of Edinburgh, advocate, late of the Ministry of the Interior, Egypt, has been proved at £7,237 (personal estate).

Following a heat wave, with a temperature as high as 99.32 degrees Fahr. in the shade, a figure only exceeded in Sofia on two occasions since 1887, a gale was experienced there on August 6 with a heavy fall of rain.

Many speeches, including one by Nejati Bey, Turkish Minister of Education, were made at the unveiling on August 8, of Signor Canonica's statue of Ghazi Mustapha Kemal Pasha, President of the Turkish Republic, in Taksim Square, Pera, Constantinople.

Mirza Ghaffar Khan, Persian Minister in Cairo, left Egypt on July 31 for Syria on his return to Persia, where he is taking up an important post in the Administration. Before his departure, H.M. King Fuad conferred on him the Grand Cordon of the Nile.

Sir Walter Frederick Becker, K.B.E., of Villa Becker, Val Salice, Turin, Italy, and of Roquebrune, Menton, France, late Consul-General of Siam, who died on May 1, 1927, left English estate valued for probate at £4,588.

According to a Constantinople message the notorious brigand Halid Oglou Rizzo has been killed by a patrol of Turkish *gendarmes* near Mardin. Halid, who had crossed into Turkey from Syria, was responsible for many murders and thefts, and recently he robbed the post wagon between Diarbekir and Seerd.

It is announced that the exhibition of antiquities from Ur, discovered by the joint expedition of the British Museum and of the Museum of the University of Pennsylvania, which was opened some weeks ago in the Assyrian Basement of the British Museum, will remain open until the late autumn.

Mirza Abdul Husein Khan Taymoor Tash, Persian Minister of the Court, arrived in Rome on August 10 for some days from Paris and was received by the Persian Minister, the entire *personnel* of the Legation, the Foreign Minister, and high officials. He was received on August 11 by Signor Mussolini.

It is reported that a Berlin firm of contractors, Lenz and Company, has been given an order by the Afghan Government for the construction and maintenance of all railway lines in Afghanistan. The company will co-operate with the firm of Dyckerhoff and Widmann in the construction of the railways. Several German engineers are leaving for Afghanistan shortly to undertake preliminary work.

In response to an invitation from the Yugoslav Society of Great Britain to arrange an exhibition of British art in Yugoslavia, the committee of Sir Joseph Duveen's "British Artists' Exhibitions" have decided to make a selection from the works now on view at the Venice International Exhibition, which is due to close at the end of October. Exhibitions will be held in Belgrade, Zagreb, and, possibly, Liubliana during the winter.

MOUSSA, THE SNAKE-CHARMER.

BY A. STANLEY PARKER.

Most visitors to Luxor know Moussa, the snake-charmer. Snake-charming, according to him, is in his blood, for his father and his grandfather and his great-grandfather and countless generations before him, had and exercised the power which Moussa claims to enjoy over all things creeping. Indeed, according to Moussa, a man who would catch snakes must come of a snake-catching family; snake-charmers are born and not made; the secret is one which can be handed down, but not taught. Moussa's young son, according to his proud father, is a chip of the old block, and bids fair to be one day the head of all the Hawis (snake-charmers). There is a story, and the visitor to Luxor will hear it, that Moussa's father, two of his brothers, and one of his sons all died of snake-bites. This, however, Moussa denies, stating that it was his grandfather only who came to an untimely end in that manner; and that was through a slip of the tongue, when the old man had grown old, and perhaps a little careless. When handling a particularly large and vindictive cobra, grandpapa, wishing to command the reptile to lie still, unfortunately gave him the order, in Arabic, "Eat me," which the snake complied with, to the best of its ability. *Si non e vero.*

So much for Moussa and his genealogy. Having previously made arrangements for his attendance, we took him in our carriage to an open piece of waste land to the south-east of Karnak Temple. Here he descended from the vehicle, and walked slowly forward, his nose in the wind, like a pointers, and his keen eyes closely inspecting the ground. On approaching a patch of date palms, surrounded by low mud walls, where, he said, there might be snakes or scorpions, Moussa offered to be searched to prove that there was nothing up his sleeves. The invitation, however, was declined, and we went on. Immediately afterwards, Moussa declared that he smelt some kind of reptile, and began a kind of droning incantation in Arabic of which a free translation is: "Oh, ye creeping and crawling things, I conjure you, by Shaikh Ahmad Rifaai, by Saiyid Abdul Daim, by Abdul Rahim al Kanawi, by al Ilfawi, to come forth. If ye be a creeper, if ye be a crawler, come forth. Come straight out. I adjure you to hear the oath and to come forth. Bismillah, Bismillah, I beseech you, by the name of Saiyid Suliman to hear the oath and to come forth. If ye be of the poisonous kind come forth. If ye be a creeper, come forth creeping. Come out, and peace be with you. By the permission of God, O snake ye must come forth. None of you can stand against the power of God. Come forth, in the name of the Saiyid Suliman, come straight forth and do not turn. Bismillah," and so on, endlessly, much of it sheer nonsense, with no meaning to it.

A few moments later, Moussa said, "Here is a scorpion," and bending down to the bottom of one of the wells, scratched the sand a little, and a moment later held up a wriggling light brown scorpion, about four inches from head to tip of tail. The reptile appear to attempt to sting its captor several times, with no apparent result. Moussa placed the creature on the top of the wall, spat upon it and ordered it to remain motionless, which it did until placed in the snake charmer's bag.

The incantation was now resumed, much of it unintelligible but largely a repetition of what had gone before, with occasional variations, such as "I conjure you, by the Shaikh Ahmad Ibn Talig, to come out on a holiday." Two minutes later the snake-charmer stopped dead. "I

smell a snake," and in a moment he was down on hands and knees feeling in recesses of the wall. An instant later he had in his hands part of the body of a speckled brown snake, which appeared to resist capture with all its strength and which could be drawn out only with difficulty. Eventually it was extracted, and proved to be a grass snake of some kind, about 3 ft. 6 in. long. Moussa handled the reptile with great unconcern, although he declared it to be poisonous—a statement which a very elementary knowledge of reptiles was sufficient to discredit. Moussa also volunteered the interesting although scarcely accurate information that there are in Egypt 366 species of snakes, of which some hundred are poisonous. A work of reference on local reptilia would have told the snake-charmer that he had overstated the number of kinds by 345, and that, of the twenty-one sorts, only eight are poisonous, and but two, the horned viper and the cobra, dangerously so. It was a little surprising that a man of Moussa's high-standing in the snake-charming hierarchy should commit himself to such obviously inaccurate statements.

Next followed a visit to an old rubbish heap, on approaching which Moussa declared that he smelt a very big and very poisonous snake. Sure enough, when he had climbed up to the top, he was soon on the track of something or other, and after much incanting and digging into the rubbish with his stick, he unearthed a large horned viper (*cerastis*), which appeared to be exceedingly vexed at being disturbed and which, making the horrid F-F-F-F sound which this type of snake produces, not (as some people suppose) with its mouth, but by coiling up and grating its scales against each other, struck out violently every time its would-be captor attempted to seize it. Moussa was anxious to impress his audience with the extremely venomous character of this snake, and the very wary manner in which he tackled it was the best confirmation of his words. Eventually he had it by the neck and, opening its jaws, pressed its fangs through a part of his galabia—doubtless to eject the poison. This done, the charmer placed the snake around his neck, where it seemed to feel quite at home. On being placed on the ground again, however, the viper was once more very active and very vicious and stoutly resisted recapture. Despite its struggles it soon disappeared into the bag, along with the scorpion and the grass-snake.

There followed the capture of another scorpion and another brown speckled snake, somewhat similar to the first, which was found in the wall surrounding Karnak Temple. It was interesting to see this snake, as soon as it was placed on the ground, disappear under the sand, not wriggling nor burrowing, but going straight in, out of sight. It disappeared completely from view in fifteen or twenty seconds, and to the untrained eye there was no indication of the snake's presence. Moussa, however, soon had the reptile out from its hiding place.

This concluded the snake-catching in that particular area, and a very good piece of work it had been. Three snakes, including one certainly poisonous, and two scorpions had been caught in exactly thirty-three minutes.

Next we went to the Luxor Hotel, and on entering the gardens were told by workmen that a large snake had been seen crossing a path that morning. Going in the direction indicated, we crossed a half-buried drain-pipe, ten or twelve feet long, and Moussa immediately declared that the snake was up the pipe. After closer inspection he stated that the snake was a long way up the pipe. However, after an incantation, which presumably induced the

reptile to come down, Moussa thrust in his hand and pulled out, by the tail, a brown grass snake, a good six feet long. Since it had been seized by the tail, the snake had presumably come down the pipe tail first—a surprising fact, if it was the case. Anyhow, Moussa did not explain.

Thus ended an interesting and amusing morning. Moussa certainly gives good value for his money, and he does catch snakes. In fact, he catches them almost too well, for, even in the middle of winter, when snakes are few and far between, Moussa never disappoints his tourist patrons. There is no doubt that Moussa is exceedingly skilled in observing the tracks of a snake, noting signs which to the untrained eye are invisible. In handling reptiles, too, he is remarkably expert. But that he can charm snakes it is difficult to believe, while still more incredible is it that he can allow snakes or scorpions to bite or sting him, with no harmful results. Even that, of course, is not impossible, for an immunity can be built up to any snake poison, by a course of small doses of the poison itself. This, however, is a long and tiresome process, to which Moussa would be hardly likely to submit. I am told, although I have not yet had an opportunity of testing the statement, that an examination under a magnifying glass of the stings of the scorpions which Moussa catches will show why it is that he can allow them to attack him with impunity. However this may be, it is a fact that Moussa has declined to handle scorpions which other people have caught.

Moussa at work is certainly one of the most interesting things to be seen at Luxor. He can be taken whither his employer wishes, without being informed where he is going, and, no matter where he be taken, can always find snakes. His system of working with his accomplice, or accomplices, whom he undoubtedly uses, must, therefore, be very clever and very carefully worked out. How many snakes he catches, other than those which have been put there for him to catch, it is hard to say. That he can catch snakes, real, wild snakes, is indubitable, for a considerable part of his living during the summer, when there are no tourists, but snakes abound, is made by catching snakes in the gardens and houses of residents of Luxor and the surrounding district. But in winter, when, relatively speaking, there are no snakes but plenty of tourists, he probably finds it vastly simpler to catch only such reptiles as his small boy assistant has placed there beforehand, with an agreed sign, indistinguishable to anyone else, to mark the spot. But, even if Moussa is mostly charlatan, he is a very clever and diverting charlatan, and a morning in his company is far from being wasted time.

NOTES OF THE WEEK

(Continued from page 186.)

Syrians and the Mandatary.

It looks as though the French authorities in Syria had got themselves into a tangle. Having permitted the formation of a Constitutional Assembly in Damascus, and having entrusted to a Commission from that Assembly the drawing up of a Constitution—we recorded last week some of the details of this Draft Constitution—they now, according to reports from Beyrout, have stated that they cannot agree to this Draft, because it runs counter to their mandatory responsibilities. It is stated that M. Ponsot, High Commissioner, requested the Assembly to modify certain of the "impossible" Articles of the Draft Constitution; but the Assembly spurned the request by 44 votes to six. Obviously, therefore, there are considerable difficulties in store for the French authorities, who have taken the bold but perhaps the only possible step of suspending the Constituent Assembly for three months. What else could be done in face of the Nationalists' insistent demand for control of the right to exercise martial law and of the direction of foreign relations between Syria and outside Powers, it is not easy to see. But it is a profound pity that the first serious step in Syria towards constitutional governance should so signally have failed.

PERSONAL AND GENERAL

TO-DAY

August 16, 1928 (New Style).

August 3, 1928 (Old Style).

Saphar 28, 1347 A.H., of the Muslim Calendar.

Ab 30, 5689, of the Jewish Calendar.

The Minister of the Kingdom of Serbs, Croats and Slovenes left London on August 8 for Switzerland.

The Afghan Minister left London last week for Paris. He is expected to return to London next week.

Sir Philip and Lady Grey-Egerton arrived last week at Oulton Park, Tarporley, Cheshire, for a stay of several weeks.

Lady Irwin left London last week to join her family at Garrowby, Buckthorpe, Yorkshire, where she will remain for about two months.

Lord and Lady Sinha left London last week for Switzerland. Lord Sinha is expected to return to London about the middle of September.

Field-Marshal Lord Plumer and Lady Plumer, who were passengers to England in the Mooltan, arrived in London from Palestine on August 11.

The Amir Ghazi, Crown Prince of Iraq, left London on August 10 for Paris. He was seen off at Victoria by Jaafar Pasha, Iraq Diplomatic Agent in London.

Sir Kay and Lady Muir are entertaining friends at Blair Drummond, Perthshire, for August 12, including Mr. and Mrs. George Whigham, Captain and Mrs. James Campbell, M. Guepin, Baron Chadenet, Miss Bell, Miss S. Bell, Captain and Mrs. Desmond Fitzgerald, and Miss Addison.

The Air Ministry announces that Air-Marshal Sir John H. Salmond will succeed Air Vice-Marshal Sir Philip W. Game as Air Member of Council for Personnel at the beginning of January next, and that Air Vice-Marshal Sir Edward L. Ellington will at the same time succeed Air-Marshal Sir John Salmond as Air Officer Commanding-in-Chief, Air Defence of Great Britain. Air-Marshal Sir John Salmond was the first Air Officer to command the combined British Forces in Iraq. Air Vice-Marshal Sir Edward Ellington was in 1923 appointed Air Officer Commanding, R.A.F., India. Since November, 1926, he has commanded the British Forces in Iraq.

THE WEEK AT HOME

London, Tuesday Morning.

Unemployment.

Without any question at all the dominant issue at the present time is Unemployment. Industrially, things are very bad indeed. Since the end of May, the figures of the unemployed have gone up by 20,000 a week, and the total number of unemployed is now 1,300,000, or nearly 250,000 more than at this time last year. And when it is remembered that unemployment always increases during the winter, it is not difficult to see that the coming winter may be one of very serious discontent indeed.

There are faithful souls who believe that this curse could be modified by Governmental action, but the Conservative Administration, which is well aware of the criticisms that it will have to encounter on this subject of Unemployment, does not profess such optimistic economy. All that it is attempting is a form of palliative measures, appeals to employers not to dismiss men, a little emigration for harvesting in Canada, and, most important of all, the de-rating proposals.

It is practically certain that this cloud of Unemployment will cost the Conservative Party many votes, but whatever changes there may be in the respective strengths of the political parties, it is a cloud that is likely to hover over us for some considerable time.

Liberals' Wisdom.

There has been gaiety as well as the inevitable portentousness at the Annual Summer School of the Liberals, but it was sufficiently evident that the Party is in deadly earnest. It was made quite plain that the Liberals will never again yield such unconditional support as, for disastrous reasons of their own, they gave to the Labour Government in 1924. It was also made plain that these Liberals in congress were opposed to the power of the modern Government of forcing a dissolution upon any issue chosen. They believe that no Government should resign except upon a direct vote of no confidence.

These two dicta are very interesting in view of the next General Election, when, in the opinion of some observers, the Conservatives may be fewer in number than the Liberal and Labour parties combined.

British Agriculture.

Attention has before been called in these paragraphs to the plight of British agriculture, but the seriousness of the situation is brought out in an alarming way in the

agricultural returns for England and Wales which have just been issued. These figures show a decline during the past twelve months of nearly 200,000 acres in arable land, a general reduction in wheat acreage, especially in the Eastern Counties and in Yorkshire, a decrease of more than 21 per cent. in the sugar beet area, and a big falling-off in the cultivation of potatoes. I have mentioned previously the decrease in the number of sheep, cattle, and horses on agricultural holdings.

On the credit side are to be set an increase during the past year of 13 per cent. in the barley acreage, a slight increase in the area under oats, and a considerable increase in the area devoted to vegetables. It is hoped, moreover, that this year there will be enjoyed an excellent harvest. But one rather doubts whether the process of decay in British agriculture has not already gone too far. From the political parties there is no hope, because agriculture perhaps less than any industry can be treated as the sport of parties. If it is to be saved it must be by a national effort, and of that there is at present no sign.

British Athletes.

At the Olympic Games in Amsterdam the representatives of the Empire did far better than was generally thought probable, at any rate in England, and it was a distinct disappointment to have the United States victorious over the Empire at Stamford Bridge last Saturday. The American athletes had fallen so far short of common expectation at Amsterdam, that the tussle at Chelsea was looked upon with great hopefulness.

But, although beaten by eight events to six—and that very unluckily, as America would be the first to admit—the Empire put up a quite remarkable show, particularly in running and hurdling. Only one of the six field events was snatched from the omnivorous jaws of America. Yet it should not be supposed that the Americans are not also first-class runners: the contest was one between men who were fully aware of the sterling merits of their opponents. There is too much talk of the "machinery," the making of sport into a "business" on the part of the Americans. For they have shown great sportsmanship and friendliness and versatility.

The L.B.W. Rule.

The rules of cricket need no alteration. Such, at any rate, is the opinion of club cricketers, who, after all, are the backbone of the game. There is something wrong with the club which scores more than a few draws in a season.

In county cricket it is, of course, different. There it might quite well be a good thing to make things easier for the bowler. It is now being officially asked of County Committees, in fact, whether they are in favour (a) of giving the batsman out who would have been out L.B.W. but for the fact that he had nicked the ball first; and (b) of giving a batsman out L.B.W. to an off-break that would have hit the wicket but for his pads.

Concerning the first suggestion, it is a fact, I believe, that umpires can rightly give a man out L.B.W., even though he has nicked the ball—although they never do: and concerning the second, it certainly would rid the game of that horrible contempt or suspicion of the off ball, and the covering up with the pads, which has largely ruined modern first-class cricket.

The trouble is that you cannot make one set of rules for the County Championship, and another for the literal amateurs of the game.

ALTER EGO.

M. André Caloyani, Attaché to the Ministry of Foreign Affairs at Athens, has been appointed Greek Vice-Consul at Alexandria.

The Egyptian Ministry of Finance has approved the scheme, at a cost of approximately £1,500,000, for the construction of 100 hospitals in various towns and villages in Egypt, to be completed within the next five years.

INDIAN WEIGHTS AND MEASURES.

The Royal Commission on Indian Agriculture has done well to direct attention to the urgent need for standardising weights and measures in India. This is a reform which is long overdue. It has been talked about for many years, but it does not come; and Indian weights and measures remain in what the Commission describes as "a chaotic condition." This description is not a bit too strong. In fact the word "chaotic" is hardly a strong enough description of the existing muddle. The report quotes several instances of unnecessary complications created by the present absence of system. For example, in one district of the Bombay Presidency a single unit of weight—the maund—has thirteen different values ranging from $21\frac{1}{2}$ seers to 80 seers. It must not be supposed also that such divergencies are known in the Bombay Presidency only. The example quoted is typical of all the provinces, and the Commission rightly points out that "innumerable other examples of a similar character could be cited." Such a state of affairs is of course opposed to the interests of the cultivator, because it gives unscrupulous dealers and others most excellent opportunities of cheating him. Nor is the evil resulting from it confined to the cultivator. Commercial transactions are hampered by it, and it is in every way unsatisfactory.

For many years past the Government of India have been alive to the importance of attaining uniformity. Indeed, as far back as 1871 they legislated with this object in view. By the Act which they then adopted—the Indian Weights and Measures Act, 1871—the Governor-General is empowered to introduce a system of weights and measures of capacity consistent with a statutory unit, which is defined as being a weight to be called a *ser* and to be equal to the kilogramme. But no Governor-General has ever attempted to put the Act into force. It was hoped at first that the weights and measures based upon the statutory unit would be gradually adopted without intervention on the part of the Government. But this hope has never been realised. All that has been done is that the Indian Railways and various Government departments have adopted as standard the tola of 180 grains, the seer of 80 tolas, and the maund of 40 seers. Between 1890 and 1894 the Government of India consulted the local Governments on the question, and it was agreed that, as the necessity might arise attempts should be made to prescribe for particular districts, or groups of districts, standard weights and measures similar to those adopted by the Indian railways and the Government Departments. But when reviewing the question in 1913 the Government of India said that although some of the local Governments had taken action in this direction the then existing state of affairs was far from satisfactory. They were convinced that the lack of uniformity was seriously prejudicial to trade; and they thought that the development of commerce, and of railway communications, and the advance of munici-

pal and trade organisations had gone far to remove the objections which had been formerly raised to the introduction of a single uniform system. Holding this view the Government re-opened the question and appointed a Committee to investigate it.

The Committee made an exhaustive inquiry, coming finally to the unanimous conclusion that the desire and the necessity for the establishment of a uniform system were wide-spread. As regards the particular system to be adopted the members of the Committee were not unanimous; one of them advocating the introduction of the metric system, and the others the Indian railway system which is explained above. The majority likewise made recommendations for standardising various measures of length, area, capacity and cubic content. After the publication of the report the Government of India again consulted the local Governments, but no definite steps in the way of introducing uniformity were taken. And at the present time, as the report of the Agricultural Commission says, "matters remain much as they were prior to the appointment of the Committee." It is greatly to be hoped that the Commission's strongly expressed recommendation for a re-examination of the question with a view to action, will be accepted. Admittedly there are difficulties in way of the successful introduction of uniformity. But these ought not to be insuperable. It is possible that there might be some disturbance to trade at first; and the time would therefore have to be allowed between the prescription of the new system and its enforcement. The Committee of 1913 suggested that the change should be made gradually, the new uniform system being applied first to the large centres, then to the more advanced rural areas and finally to the less advanced, excepting for a number of years specially backward tracts. Under this scheme it would be within the discretion of the local Governments to select the areas and to decide when and how each advance should be made. The Agricultural Commission recommends that the Government of India should lay down general principles to which the provincial governments would adhere as far as possible without due interference with local trade custom. The Commission makes no recommendation as to the particular system to be adopted. There are two systems which have been seriously suggested in the past, namely the metric, and the Indian railway system. Opinion in India has not so far greatly favoured the metric system, seeing that it is not in force in the United Kingdom or the United States. But it is probable that considerable support would be forthcoming for the Indian railway system which is based on the tola of 180 grains. Under the system the maund would weigh $87\frac{1}{2}$ lbs. avoirdupois, or 40 seers. The only weight which is at present more or less generally known throughout India, is the tola of 180 grains, which is in fact the weight of a newly coined rupee. It is, therefore, as the Committee of 1913 recognised, a unit which is likely to be a reasonably good foundation upon which to construct a uniform system.

CURRENT TOPICS.

Wiser Counsels.

The news that the Bardoli dispute has been settled at the eleventh hour will be received with widespread relief and satisfaction. That the cultivators in a single district should have disputed the fairness of a land revenue reassessment and refused to pay the increased taxation demanded might not at first be a matter of more than local importance. But, as we have more than once pointed out in these columns, the dispute did not long remain, even if, which we gravely doubt, it ever was, merely a question of the justice or injustice of the revised assessment. It is true that Mr. Patel has always contended that "the Bardoli people are not fighting in order to have the right of civil disobedience vindicated. They are fighting by way of civil disobedience to induce the Government to waive the enhancement or to appoint an impartial independent inquiry." The distinction is a subtle one quite beyond our comprehension. And the fact remains that the Swarajist party, quick to seize the slenderest opportunity for retrieving its fading popularity, took early charge of the situation; and from the moment that Bardoli—no more harshly dealt with, to all appearance, than the neighbouring talukas where similar reassessments had evoked no protest—became the rallying-point of political agitators and all who were anxiously seeking for examples of British "injustice," the question became one of grave moment to the whole of India.

That the settlement should have been construed as a great victory for Mr. Vallabhai Patel and his party is natural enough in the circumstances. But it would certainly be more true to the facts, as disclosed in last week's telegraphic reports, to say that both sides are satisfied and that there has been a welcome, if tardy, manifestation of the spirit of give and take by all concerned. The Government, as the *Times of India* observes, "though slow to assert its authority, has upheld the administrative power, which is its sole function, and by getting the two main and original terms (that the whole assessment should be paid and that the agitation should immediately cease) accepted has shown that no form of civil disobedience can be tolerated even under the most distressing conditions." The cultivators, on the other hand, have secured their fresh inquiry, and to show that it is to be no mere formal affair the terms and the nature of the investigation have been clearly stated, although it appears that the actual work, which will be carried out by an experienced revenue official, with whom a judicial officer, as an additional safeguard, will be associated, cannot be commenced until the beginning of October.

The Hindu-Muslim Pact in Sind.

The feeling of tension between the two great communities in Sind is becoming chronic; but at present it is excited on the question of the separation of the Province from Bombay. The Muhammadans as a whole are anxious for the separation. They are dissatisfied because their share of official posts is so much below their proportion of the population, though this is chiefly due to their deficiency in education. They very genuinely fear that measures which they think necessary to prevent their ancestral lands from passing into the hands of their opponents, such as a Land Alienation Act, will never pass through the Bombay Legislative Council with its unfriendly Hindu majority; and they are also afraid of unsympathetic treatment at the hands of a remote Government in the distribution of the land and water made available by the Sukkur Barrage. The wish for separation is naturally supported by the leading Muhammadan politicians of Upper India, who desire to add another to the small number of Provinces with a Muhammadan majority, even if the new Province be relatively a small one. The mass of the Sind Hindus are, as might be expected, equally hostile to the proposal. They profess to be afraid of the probable course of action of a Muhammadan majority; they are genuinely reluctant to lose the strong position which superior education, and greater astuteness in the

Law Courts have given them; and they do not wish to lose the support of the Hindu majority in the Legislative Council of Bombay. There is, however, a small but intelligent minority of Hindus who believe that the risks of separation would be counterbalanced by the advantages of local autonomy, and of careers confined to local talent; and the minorities in Sind, such as the Sikhs and the Karachi Parsis, communities small in numbers but distinguished in ability and good sense, would probably welcome a separation, if the representation of minorities was ensured.

With such a sharp contest of opinion, it was somewhat surprising recently to learn that a pact had been arrived at between the Hindus and Muhammadans, agreeing to the separation of the Province on certain terms. These were, put briefly, that the local Council should be formed of Muhammadans and Hindus in proportion to the population, with a 20 per cent. allowance added to the representation of the Hindu minority; but with the proviso that the Hindus should vote in the election of the Muhammadan representatives, as well as in that of their own candidates, and vice versa. This last provision is a dearly loved tenet of the Hindu politician, who professes to see in it the antidote of the evils of communal representation, though to the ordinary person it would appear to make such representation farcical. So contrary is the Pact to the feelings of the majority of Sind Hindus that the suspicion is aroused that the Pact was dictated by outside politicians who intended to use Sind as a pawn in the all-India political game. Unfortunately, however, the Pact has had a very bad reception in Sind. It must be admitted that the standing of those who arrived at it did not command confidence. The Muhammadan representatives were a few insignificant ex-Khilafatists. The Hindus only represented one section of extreme political opinion. The names of the big land-holders, and of the leading business men were painfully lacking in the list of signatories. Both the Muhammadan and Hindu communities have been unanimous in repudiating the so-called Pact; while minorities, such as the Sikhs, point out that they are apparently to be entirely ignored under its conditions. The Pact, therefore, has not affected the question of separation one way or another. Yet the question is likely to rise again with increased acuteness; such subjects as the alienation of land held by Muhammadans to Hindu owners, and the disposal of the Barrage lands must bring it into early prominence. Probably the most suitable solution would be local autonomy with a local Provincial Council and a Chief Commissioner, under the benevolent suzerainty of the Governor of Bombay in Council.

Films in India.

Although comment on the somewhat divided counsels disclosed in the telegraphic summaries of the report of the Indian Films Committee must be withheld until access can be had to the complete document, the majority proposals, as outlined, make interesting reading. The Committee, it will be recalled, was appointed by the Government of India in October last to examine the present system of film censorship in India, to proceed from that to a survey of the nascent Indian film industry, and specifically to recommend what steps, if any, should be taken, in response to the suggestion of the Imperial Conference of 1926, to encourage the exhibition of films of Empire production. The personnel of the Committee consisted of the Chairman—Diwan Bahadur Rangachariar—three Englishmen and two other Indian members. The outstanding feature of the report are the rejection of any suggestion that special encouragement should be given to the exhibition of Empire films, the proposed institution of a Central Cinema Bureau with a non-official advisory Committee, assisted by technical advisers and staffs, and a somewhat grandiose plan for the development of a national Indian cinema industry. The latter scheme, which is based on that of the Canadian Government's Motion Picture Bureau, it is proposed, should be financed by an increase of 5 per cent. in the

present import duty on films, by a cess on the films exhibited, and by contributions from the Government of India and the Provincial Governments. The three English members apparently challenge the utility of the further suggestions that, as many Indian film producers suffer from the lack of adequate finance, they should receive assistance from public funds, that public bodies should be authorised to finance the opening of cinema halls, and that every cinema proprietor should be compelled to exhibit a proportion of Indian-produced films increasing in five years to a quota of 50 per cent.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 26.

Child Marriage and Age of Consent.

A meeting of the Bengal Presidency Council of Women, presided over by Mrs. P. Chaudhuri (Indira Devi), was held at the Y.W.C.A. recently to consider the Child Marriage Bill and the Age of Consent Bill, those children of Mr. Harbilas Sarda and Sir H. S. Gur. The principal speaker was the writer's old friend, Mrs. P. K. Ray, well known for her association in educational work with Mr. Gokhale, the politician who so often crossed swords with Lord Curzon in debate. Mrs. Ray, a warm supporter of both measures, "declared that all women's associations in Bengal should come forward and express their opinion on these matters, and thus help the promoters of the Bills in the Legislative Assembly." "There are provinces where girls," Mrs. Ray said in another passage, "though given in marriage early, are not sent to the father-in-law's house before they attain the age of puberty; but in Bengal we have no such restriction. If the orders of the father-in-law's house are not carried out, and the girl is not sent any time they like, the husband can marry again. Consequently the evil effects of early marriage is more pronounced here. Most of our intellectual men, and especially the orthodox communities, are against this Bill. They quote the *Shashtra* and prove that it is a religious mandate. They also impute that girls can only be kept 'chaste' if they are married early."

Mrs. Ray is herself a member of a community, the *Brahmo Samaja*, in which early marriage is unknown. It is all the more credit to her to advocate reforms affecting others. It is commonly thought, when people hear nowadays of such movements, that they are a consequence of the publication of "Mother India," and are a proof of the good Miss Mayo has done. The fact is that the movements were begun before Miss Mayo was born. Many years before she was born, in fact.

Government School of Art.

Mr. Mukul Chandra Dey, well known in artistic circles in London as a drawer and teacher, and more widely known for his work on the paintings of the Ajanta and Bagh caves, is the new Principal of the Government School of Art. His first disciplinary measures have provoked a strike of the students. One must wish, for Mr. Dey's sake, that it will soon be over, and indeed for the students' sake too. No worker in literature or art can point to a strike as the beginning of his success, whether it be one of the common kind, or a throwing of palette or pen out of the window in a temper at the insuperable difficulties of expression.

The Statutory Commission and the Anglo-Indians.

The memorandum submitted to the Statutory Commission by the Anglo-Indian community has now been published. A strong plea for protection and for greater educational facilities for the Anglo-Indians and those known as the Domiciled Europeans is put forward. The memorandum states that "no scheme of self-government can afford to ignore the rights of minorities and . . . the element of sentimental attachment and racial responsibility should help to reinforce the political plea for protection."

A claim for more appointments in the public Services is made. "We strongly protest," say the authors of the memorandum, "against the manner in which the policy of Indianisation has been manipulated to our disadvantage." That a fair share should be secured to the Anglo-Indians and the Domiciled Europeans one must wish, but that Sir John Simon and his colleagues should ever agree with the leaders of those communities upon the measure by which that share should be measured—is not that a thing beyond hope? It will have to be, one fears, a rough measure. The fact is that the Anglo-Indians' claim on England is morally stronger than their claim on India. England is their father; India their mother. Men look to their fathers to advance them in life. They do not look to their mothers.

South Indian Railway Strike.

The strike with violence on the South Indian Railway, especially as likely to interfere with the regularity of the Calcutta-Australian mails, is being followed here with no less interest than we showed over the strikes on the Bengal-Nagpur and the East Indian systems. The origin of all three strikes was the same—the need to reduce the workshop force, or lose the benefit of centralisation and more up-to-date machinery and tools. The railway workshops at Negapatam, Podanur, and Trichinopoly on the South Indian system having been found hopelessly inadequate to cope efficiently with the construction and repair of locomotives, etc., central shops were constructed at Golden Rock, near Trichinopoly, at the cost of some Rs. 3½ crores. These new shops will require a smaller labour force than the old ones that they are replacing. This has been known for some time, and all that could be done, as by securing voluntary resignations, to bring in the reduction with the least possible hardship to the men affected, appears to have been done. It was a reasonable hope that a strike might be averted. One has not been, however: the labour leaders had influence enough over the men in the shops, as well as over the station staffs, to bring about a general strike on July 19, following a strike that developed into a lock-out in the shops. There has been more determined violence, and more casualties in killed and injured, than in either of the Bengal railway strikes. The last news are that things are quieter, following arrests, including that of the president of the S. I. R. Central Labour Union.

The Belur Disaster.

The East India Railway offered the reward of Rs. 30,000 for information that would lead to the conviction of those responsible for the disaster to the Calcutta-Gaya express at Belur. Following sensational revelations in an alleged statement made by an accused, the police have made a large number of arrests. Abdul Rahim is the man's name. Practically the whole of the menial staff of Dankuni, the station next to Belur, has been arrested. There is to be a demonstration parade, when Abdul Rahim will be called on to point out those who he alleges were his confederates. The desire that the guilty should be laid hold of is widespread in Calcutta. It transpires that Indian children are commonly brought up to believe that, whenever there is a railway accident, the orders issued to the European employees of the railway will be to kill the wounded and conceal their bodies. One may meet a cultured Bengali who still says that, until after he began his professional life he fully believed such stories himself.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 28.

The Madras Constitutionalists.

The South Indian Liberal Federation, Madras, has at last decided to supply the Press with copies of the memorandum on Constitutional reforms which it had submitted to the Simon Commission in the last week of May. The delay, we are told, is due to a difference of opinion about the propriety of doing so, but the fact that others had

submitted copies of their memoranda to the Indian Press persuaded the Executive Committee of the party to forward copies to the newspapers. The aims of the party are laid down at the commencement of the memorandum—a procedure which the newly constituted parties submitting memoranda to the Commission would do well to follow, as it is not easy even for Indians to distinguish between the various parties that have sprung up during the last six months. "We accept," write the Constitutionalists, "that the ultimate determination of the time, the manner and the extent of the constitutional progress of India is entirely at the discretion of the British Parliament. But in the Bill that may hereafter be passed by the Parliament making constitutional changes in India, it should be recognized that it is so passed out of deference to the wishes of the people of India—so that the emphasis of the people might indicate the democratic origin of the Constitution and foreshadow its nature." The Madras Non-Brahmins are very anxious that a semblance of democracy should be kept up. The goal of the party is full Dominion status, "leading up to absolute equality of status with Great Britain." The members of the party wish to make it clear that separation from Great Britain is not by any means their desire. The demands of the party are the immediate introduction of (1) complete Provincial Autonomy; (2) the principle of responsibility in the Central Government; (3) a federal system of government for India, and (4) a declaration of rights. The party favours the introduction of bicameral legislatures in the provinces—a Legislative Council and a Senate. The Council will be an entirely elected one, while the Senate will in part be nominated. There will not only be the present reservation of seats for the backward communities in Bombay and Madras and separate electorates for the Muslims, the Indian Christians and the Europeans, but separate electorates, with separate electoral qualifications, are to be established for the depressed classes. In the Central Legislature the Lower House is to be composed on these communal lines and the Upper Chamber on a provincial basis. It is but natural that the South Indian Liberal Federation—which is not in any way connected with the All-Indian Liberal Federation, but is the party of the Madras Non-Brahmins—should be more anxious to provide for the interests of its own members than for the democratic principles of which it speaks so enthusiastically at the outset.

Two Pronouncements on Bardoli.

We have had this week two pronouncements from Government on the Bardoli problem. Sir Leslie Wilson opened the last session of the Bombay Council at Poona with his promised statement on Bardoli. Much was expected from this as His Excellency has won the hearts of the people of this Presidency during his Governorship and there is a general feeling that he has the welfare of the province at heart. The speech was a personal appeal from beginning to end, and Sir Leslie Wilson tried hard to convince his hearers that, in telling them of Government's determination in the last resort to use coercive measures, he was not holding out threats to the people of this country. Unfortunately, Lord Winterton's speech, reported by Reuter the same evening, conveyed the impression that Government would "crush the movement if the conditions mentioned by Sir Leslie Wilson in the Council were not satisfied." Sir Leslie Wilson mentioned no conditions in the Council; he only referred to them. These I have already stated in my last week's letter, and the chief one is that before the inquiry is appointed the revenue due to Government under the recently revised assessment must be fully paid. Sir Leslie Wilson, speaking on this point, said: "This is obviously a vital condition, the revenue collection being a lawful and constitutional demand, the repudiation of which is both unlawful and unconstitutional." The members of the Bombay Legislature are faced with a problem which they have been asked to solve within fourteen days. However anxious they may be to satisfy the Governor, they cannot proceed very far without taking Mr. Vallabhbhai Patel with them, and Mr. Patel, on

the other hand, is not at all willing to accept a settlement on those terms. The situation is further complicated by the fact that the agriculturists are more likely to throw the M.L.C.s overboard than to ask Mr. Patel to resign his leadership.

Strikes All Over.

The workers on the South Indian Railway have gone on strike. It is regrettable, however, that they should have departed from the custom of the other strikers in other provinces and resorted to violent measures to gain their ends. Every other day news comes from Madras of the wreckage of some passenger train owing to the removal of fishplates by persons presumably among the strikers. There is a general demand that the strike should be brought to an end, and the workmen have alienated public sympathy from their cause. It is reassuring that in this crisis all the newspapers in Madras have declared themselves against the strike.

THE STATUTORY COMMISSION.

The following announcement is made by the Indian Statutory Commission:—

Arrangements for the work of the Education Committee, auxiliary to the inquiry of the Indian Statutory Commission, are being rapidly advanced.

The chairman, Sir Philip Hartog, has had a number of consultations with his colleagues, both Indian and British, and a scheme of procedure is under consideration. All memoranda on the subject of education received by the Commission will be considered by the Committee, and form part of the material for the review it has undertaken to draw up for the Commission, and it is hoped that the Commission will meet members of the committee, probably in Calcutta, in the month of January, after the Committee's review has been presented to the Commission.

The statement, it will be observed, follows closely the lines foreshadowed in THE NEAR EAST AND INDIA of August 2, when the work entrusted to the Education Committee was reviewed in detail. The scope of the inquiry is further explained in the minute of appointment of the Committee signed by Sir John Simon as Chairman of the Commission, which was issued last week for publication. The minute says:—

The Commission understands its terms of reference regarding education as requiring from it, not a general survey of the whole field of education in all its branches and aspects throughout British India, but a review within moderate compass, limited by the general scope and purpose of the broad inquiry with which the Commission is charged. The Commissioners therefore regard themselves as primarily concerned with education and its organisation in British India in relation to political and constitutional conditions and potentialities of progress.

It is in this sense, therefore, that the Commission desires the reference to the Auxiliary Committee on the Growth of Education to be interpreted. Subject to this, the Committee will be free to pursue its inquiries and to draw up its review in whatever way seems best to it.

It is the Commission's intention, without excluding such general evidence as it may receive on the question in the ordinary course of its inquiry, to set apart a portion of the time available during its next visit to India for the special consideration of that part of its terms of reference which deals with the growth of education in British India, and it will desire to have the review of the Auxiliary Committee before it in good time for this purpose. After the Committee's review has been received, and the Commission has had sufficient time to digest its contents, it is hoped that there may be an opportunity for the Commission to discuss the contents of the document, probably in some place in Northern India, with the members of the Auxiliary Committee, or some of them. In view of the great importance of the subject, the Commission desires to give the Auxiliary Committee the longest time possible for its work, but, on the other hand, it is important that the discussion between the Commission and the Committee on the Committee's review should take place before the Commission's tour of inquiry has progressed too far. For these reasons it is desired that the Auxiliary Committee's review should be in the hands of the Commission not later than December 15, 1928. The review will be treated as confidential in the first instance (it will, of course, be made available to Committees of Indian Legislatures collaborating with the Commission), but it is contemplated that it will at a later stage form part of the documents published as an appendix to the Commission's report.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslavia's Position.

As was the case practically throughout the Near East, 1927 was a disappointing year for Yugoslavia. Broadly speaking, the Balkans are dependent on agriculture, and unfortunately last year's harvests were generally poor. The effect of this on the position in Yugoslavia was pronounced. Mr. Murray Harvey points out in his report on Yugoslavia, extracts from which are given elsewhere in these columns, that all branches of economic life were influenced and that both for the peasants and the small traders the results were disastrous. Naturally the trade statistics reflected the prevailing conditions, and for the first time for several years Yugoslavia had an adverse trade balance. If, however, the year was one of widespread depression it was not without redeeming features. Thus in a number of industries notable progress was made, a development of special importance being the advance of the timber industry. Vicissitudes such as Yugoslavia experienced in 1927 are inevitable from time to time in countries mainly dependent on agriculture, and, as Mr. Murray Harvey justly remarks, too pessimistic a view should not be taken of the immediate future. A good harvest can bring about an entirely opposite state of things, and, as I pointed out last week, this time Yugoslavia's harvest is uniformly good, and the large amount of cereals which will be available for export should go a long way towards helping the country to recover from the experiences of 1927.

British Trade with Yugoslavia.

Mr. Murray Harvey comments in detail on the position of British trade with Yugoslavia, and his survey is on the whole not encouraging. As regards manufactured goods generally, he points out that the bulk of the population neither appreciates the high quality of British goods nor can afford to buy them, and it is rather in machinery and technical material that a development of the British export trade to Yugoslavia is to be anticipated. The question of quality and price can be overcome, of course, given the requisite initiative on the part of our manufacturers. Their object is to develop trade, and if the goods they at present manufacture are unsuitable for a particular outlet, the obvious remedy is to provide goods which are acceptable. That the maintenance of quality is an outstanding virtue is not to be disputed, but there is such a thing as making too great a fetish of it, and if in any market quality is unimportant, then it is clearly sound policy to give that market what it wants if that is the only way by which trade can be obtained. As a matter of fact, from what Mr. Murray Harvey says regarding the falling off in the number of representatives of British business houses visiting Yugoslavia, it looks very much as if our exporters as a whole, as a result of their experiences, were paying less attention to this market. It is to be hoped that they will not persist in any such policy, the only result of which can be to give an advantage to our Continental rivals such as they would not possess if our traders cultivated the market energetically.

Bulgarian Customs Duties.

Bulgaria's action in raising the Customs duties, with the double object of providing increased revenue with a view to assuring a balanced budget and of increasing the yield of the revenues which are to provide the guarantee both for Reparations and the Stabilisation Loan, has met with opposition on the part of other countries, and identical Notes have been presented to the Bulgarian Foreign Office by the British and French and other Legations in Sofia protesting against the decision. The point raised is that the action is contrary to the resolutions taken at the International Economic Conference to which Bulgaria was a party; but while that is unquestionable, Bulgaria's decision, in view of her economic situation, is understandable, and the development rather serves to illustrate the difficulty in the way of bringing about greater trade freedom in the existing conditions. The demand put forward in the Notes that there should be exemption from the increased duties for those goods which at the time of the alteration were on their way to Bulgaria or were passing through the Customs is only reasonable, and it may be assumed that it will be granted.

Coal for the Near East.

Particulars of the tenders submitted for the supply of 140,000 tons of coal to the Egyptian State Railways are distinctly encouraging as showing that Great Britain is able to compete on very favourable terms with her Continental rivals. It may be taken for granted that this order will be given to this country. It is impossible, however, to generalise from this instance and to suppose that British coal can compete on equal terms throughout the Mediterranean. In each case it depends on what is required. If it is a question of the best quality coal then a British success may confidently be anticipated, but if that consideration does not obtain then our coal exporters may be at a disadvantage.

Imperial Bank of India.

Reference is made in the half-yearly report of the Imperial Bank of India to the money stringency which prevailed in India during the first five months of this year. The average Bank rate for the six months was 6.945 per cent., as compared with 6.508 per cent. for the corresponding period of 1927. The prevailing stringency, it is pointed out, was accentuated by Government requirements which were secured by weekly issues of Treasury Bills. The net profits of the bank for the half-year amounted to Rs.71,38,557 as against Rs.76,15,229.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

SHIPPING CONDITIONS IN TURKEY.

Colonel H. Woods, O.B.E., Commercial Secretary, H.M. Embassy, Constantinople, in his report on economic conditions in Turkey, states that there is little of an encouraging nature to report in 1927 as regards shipping questions.

There has been some attempt on the part of the Turkish authorities to reduce the delays arising from the various controls to which foreign vessels passing through the port of Constantinople are subjected, but difficulties continue to be placed in the ways of agents in respect to effective supervision of operations on the vessels of the companies they represent.

The frequent cases of loss and pilferage of cargoes discharged in the port of Constantinople have given rise to many complaints and to an increase in insurance rates, but the Turkish Customs and the Constantinople Port Monopoly have been making serious efforts to combat this practice and some improvement in the situation was noticeable by the end of 1927.

Another cause of complaint was the congestion which prevailed from time to time in Customs depots, but a solution of this difficulty has, it is hoped, been found during the present year.

As regards British shipping, 978 vessels flying the British flag passed through the port of Constantinople in 1927, as compared with 1,073 vessels in 1926, whilst British tonnage declined from 2,470,036 tons in 1926 to 2,075,018 tons in 1927. Excluding Turkish shipping, 15.5 per cent of the vessels passing through this port in 1927 were under the British flag, as against 18 per cent. in 1926, whilst on the basis of tonnage there was a slight decline—23.6 per cent. in 1926 as compared with 21 per cent. in 1927.

A total of 1,125 vessels carried out commercial operations in the port of Constantinople during the year 1927, the total quantity of goods discharged being 366,361 tons, i.e., an average of 325 tons per vessel. Of this amount 62,790 tons, or 17 per cent. of the total, were discharged from 235 vessels under the British flag.

The institution of port monopolies by the Turkish Government cannot be said to have worked without friction with shipping, as under the new conditions agents were deprived of the use of their own staff, of their lighters, and of their organisations. For some considerable time conditions in the port of Constantinople, wherein the first port monopoly was instituted, were unsatisfactory, the port monopoly being unable adequately to administer the monopolised services owing to insufficiency of lighters and of experienced tally clerks, defective administration and lack of necessary machinery in general.

One of the first difficulties arising out of these changed conditions was the question of responsibility vis-à-vis the

Customs in respect of missing packages. In the port of Constantinople, as in the case of other Turkish ports, packages are not discharged from ship's tackle on to Customs wharves. They remain in lighters for several days, thereby being exposed to theft. It was only natural that shipping agents, who previously handled cargoes and delivered them to the Customs by means of their own organisations, could no longer accept responsibility for packages being taken over by the Port Monopoly from ship's tackle and found to be missing at a later date. It was after repeated representations had been made that the Customs Administration and Port Monopoly were obliged to admit that, in principle, the responsibility of shipping agents ceased to exist from the time the Monopoly took delivery of packages from ship's tackle, but some considerable time elapsed before the Port Monopoly could be induced to put this into practice and to regulate the issue and prompt delivery of clear receipts to shipping agents for packages taken over by them.

There are still many difficulties with which shipping has to contend, due to police measures or to other factors. The nationalisation of port services as interpreted by the police and port authorities almost constitutes a barrier between agents ashore and their vessels afloat.

Conditions are unsatisfactory in other Turkish ports wherein monopolies have been instituted, agents being faced with the same difficulties as those with which agents in Constantinople had to contend, such as insufficiency of lighters, tugs and other material, responsibility for cargoes, etc. This is particularly apparent in the port of Mersina (an open roadstead), where a port monopoly was instituted some months ago. A settlement has still to be effected in respect to the shortage of lighters and to responsibility, both the Customs and Port Monopoly taking up the same attitude as the authorities at Constantinople before a satisfactory arrangement was reached in this latter port.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, August 30); s.s. Manipur for Calcutta (Birkenhead, September 6).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 22).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, August 25); s.s. Golconda for Bombay and Karachi (London, September 8).

Cunard Line.—S.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool August 18, and Swansea August 21); s.s. Bosnia for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, August 25).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1); s.s. Drömöre for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29).

P. and O. Line.—S.s. Ranpura for Bombay (London, August 17); s.s. Kaisar-i-Hind for Bombay (London, August 31).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 18); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 1); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 1).

Ellerman & Papayanni Lines.—S.s. Assyrian for Malta, Alexandria, Jaffa,* and Haifa* (Liverpool, August 18); s.s. Mardinian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 18, Swansea, August 18). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian Ports via Algiers; Morocco ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CASTALIA ... Aug. 28	†ASSYRIA ... Sept. 28
*CIRCASSIA ... Sept. 14	*BRITANNIA ... Oct. 9

*First class passengers only. †First and Third Class Passengers. Specially low fares. †Calls Port Sudan.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punks Louvers and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.*(By Our Financial Expert.)**London, August 14.*

The Stock Exchange returned from the holidays to find business on the traditional limited scale, a further retarding influence being the fact that the week was near the end of a three week account. In many directions, however, prices were well maintained. In particular there was considerable firmness in the industrial share market, though gramophones finished weak after early buoyancy. The speculative markets also received support. Gilt-edged stocks were again inclined to be easy owing to the monetary situation, the market rate of discount being firm. The German exchange has moved to a point at which further withdrawals of gold in the immediate future are not expected, but the position in New York is not free from obscurities. Apparently a further effort is being made to curb speculation in that centre. There was no rise in the rediscount rate this week, but it remains to be seen whether a higher rate is avoided. Meanwhile, it is satisfactory to observe that the Bank of England has strengthened its position during the week, the proportion of the reserve to liabilities being $48\frac{7}{8}$ per cent.

The Rubber Outlook.

During the past few weeks the price of rubber has shown a considerable degree of stability and, indeed, there has been a slightly improving tendency. Demand appears to be fairly satisfactory, while London stocks have lately shown an appreciable reduction. The latest total of London stocks is 33,649 tons, which compares with over 64,000 tons at the beginning of the year; present stocks are thus not much above the exceptionally low figure of 27,972 tons recorded at this time in 1926. There is likely to be little disposition, however, to indulge in speculation, the fact that restriction comes to an end on November 1 acting as an effective brake. November will inaugurate a phase of uncertainty in the rubber industry. The market is taking it for granted that there will be a large increase in shipments from November onwards. The extent to which shipments will increase in the first few weeks of November is largely a matter for conjecture, since there is no entirely reliable data with regard to stocks in producers' hands. But even assuming that the highest estimates are realised, the situation is not without redeeming features. American

consumption is fairly well maintained, and apparently reclaimed rubber is being used somewhat less extensively. Moreover, the present price of the commodity is discouraging the production of native rubber in the Dutch East Indies.

Shipping Prospects.

The world's wheat crops are on a distinctly encouraging scale, and this fact is welcomed by shippers since it will be reflected in an increased demand for tonnage to ship the grain from the producing countries to the consuming centres. This demand, in fact, has already made itself felt. Freights have taken an upward turn, the "Economist" index number for July showing an increase of 2.66 per cent. as compared with June. The index number, however, is still below the level of January last. This should serve as a reminder that all is not well with the shipping industry. Recent statistics show that the supply of tonnage greatly exceeds the demand, with the result that freights have been forced down to a level at which they afford only a very narrow margin of profit. There are no signs that this state of affairs will be ended in the near future. There will doubtless be seasonal improvements, and there may also be a gradual improvement extending over a long period of time. Of course, certain companies, being more efficient than others, will be more fortunate with regard to earnings. During recent months share prices have been somewhat irregular, but the yields on the shares of the strongest companies remain modest. A good prior charge security is available in the White Star Line $6\frac{1}{2}$ per cent. cumulative preference shares, the return being £6 2s. per cent.

Brewery Company Results.

A number of the larger brewery companies closed their annual accounts on June 30. The first batch of results has lately been published and many more are due in the coming weeks. The returns at present available suggest that brewery earnings have recently been stable. In cases where increases are shown these are no more than might have been expected in view of the fact that the previous year's accounts covered six months of the coal stoppage of 1926. Have brewery companies, therefore, reached the zenith of their prosperity? A generalised answer, one way or the other, is impossible. It is possible, however, to draw attention to several factors which suggest the need for caution on the part of the investor contemplating an investment in this industry. Over a period of recent years the production of beer tends to diminish rather than increase. Clearly ever-increasing prosperity cannot be reckoned with. Again, it seems unlikely that any further economies on a substantial scale will be effected in production. Other factors also point to the conclusion that profit margins, though undoubtedly still generous in many cases, will not in all probability widen materially. The larger companies should not experience great difficulty in maintaining revenue, but the smaller companies are apparently less fortunately circumstanced. Finally, some investors allow a margin for political risk.

British Consular Reports

IV.—YUGOSLAVIA.

The following extracts are taken from the Report on Economic Conditions in Yugoslavia of Mr. E. Murray Harvey, O.B.E., M.C., Commercial Secretary, H.M. Legation, Belgrade:—

A certain amount of progress was made towards the economic consolidation of Yugoslavia during 1927, notably in the virtual stabilization of the national currency; the transference of certain administrative functions from the central government to local authorities; the elaboration of a new law to unify taxation throughout the country; the development of certain industries. In a country so dependent on agriculture the effects of an abnormally dry season and exceptionally poor harvest could not fail to influence all branches of economic life; and many small traders, whose businesses had been founded during the post-war "boom," were unable any longer to struggle against the effects of the long period of stagnation, and succumbed; the number of insolvencies recorded for the year reaching the unprecedented figure of 1,060. For the first time for several years Yugoslavia's foreign trade showed an adverse balance. The peasants, formerly comparatively prosperous, besides being conservative in their business transactions, had also begun to speculate to some extent, usually in land or produce, and had been driven to raise money at very high rates of interest, frequently on the security of their standing crops. In many districts the results of this are believed to have been so grave that the Government is now considering proposals for a remedy in the form of a moratorium and the forced reduction of the rates of interest exacted, which in some instances are said to amount to nearly 100 per cent. per annum. The shortage and consequent dearth of hay and other fodder led to an increased export of cattle and other livestock which in the opinion of many has resulted in the too great depletion of stocks of breeding animals. There was also a scarcity of food in the comparatively unproductive districts of Dalmatia, Montenegro and Herzegovina; and it became necessary to vote a credit to provide relief in those regions. While there was no shortage of money at the banks, bankers are said to have experienced difficulty in finding sufficient sound business in which to employ their resources; they consequently were obliged to confine the granting of credit to well-chosen customers; and it is significant that only the smaller financial institutions found it necessary to take up the full amount of their credit at the National Bank.

On the other hand, the timber industry, which pro-

vides such a large proportion of Yugoslavia's exports, emerged from the long period of depression caused by exchange movements, and is making great progress; textile manufacture, fostered by a high customs tariff is rapidly developing, and other branches of industry which are prospering are mining, cement, leather, boots and shoes, beet-sugar and certain chemicals.

A great deal of building was carried out, particularly in Belgrade, Zagreb and Liubliana; the chief source of capital being the State Mortgage Bank which, utilising for this purpose the government and other pensions funds entrusted to it, together with the proceeds of a number of loans which were obtained in former years from Switzerland, as well as some from America during 1927, advances money on first mortgage to owners of real estate.

In spite of the adverse circumstances of 1927, too pessimistic a view of the immediate future should not be taken. Although a bad harvest has an immediate effect on general trade, the converse is also true, and a good harvest in 1928, would no doubt do much to remedy matters. It is, at the time of writing, too early to make predictions regarding maize, which is the staple crop, but present prospects for the earlier harvests, those of wheat, barley, rye and oats, are distinctly good, and there should be abundance of hay.

Foreign Commerce.

The year 1927 has been the least favourable for some years past with regard to Yugoslavia's foreign trade. In the three years previous to this there was a balance in favour of the exports, but owing largely to the bad harvest in 1927, exports fell to 87.84 per cent. of the value of the imports for the year.

Whereas the total value of import and export in 1927 amounted to some 13,686 millions of paper dinars it amounted in 1926 to 15,449 millions in round figures. There was a falling off of some 18 per cent. in the exports for 1927 as compared with the previous year, while imports fell off by only about 4.75 per cent. The principal cause of this adverse balance lies of course in the bad harvest of 1927, and the consequent shortage of grain for export; in addition to this the price of Yugoslav cereals was frequently above world market prices, which hindered their exportation.

Maize, in some years the principal article of export, comes only fifth in order of value in the list of exports for 1927, the value of the maize exported in that year having been only some 337 millions of dinars as compared with 1,338 odd millions in the previous year. The wheat

exported in 1926 was of a value of 846 millions of dinars whereas the value of that exported in 1927 was only 195½ millions. Prunes, another important article of export, provided only 156 millions of dinars in 1927 as against 233½ millions in the previous year. On the other hand there was an important increase in the quantity of building timber exported, 1,150,071 tons being exported in 1927, as against 1,086,314 tons in the previous year. The increase in the value of the timber exports was, however, owing to the fall in prices, comparatively slight. The quantity of fresh fruit exported in 1927 also shows an increase over that of the previous year and there was also some considerable increase in the quantity of livestock exported, especially of swine.

With regard to imports, a falling off is shown in the amount of coal imported, due to the increased production of Yugoslav coal. The amount of textiles imported has also decreased since the previous year, which is no doubt partly explained by increased activity in the Yugoslav textile industry. Under most other heads, there is a slight falling off in importation. This is less to be attributed to increased production of the Yugoslav industries than to an actual decline in trade, due to decreased purchasing power. The trade balance, therefore, gives some anxiety, although much is hoped from the harvest of 1928.

(To be continued.)

The Persian Post Office, having exhausted its supply of the provisional air mail stamps issued last year, has had recourse (according to *The Times*), to over-printing a limited number of fiscal stamps pending receipt of a definitive series now on order. The overprint is somewhat similar to that previously employed, consisting of the words "Air Post" in Persian and French characters, together with the device of an aeroplane in flight, but with the addition of the value in English, namely:—3 krans orange-brown, 5 kr. dark brown, 1 toman violet, 2 tom. green and brown, and 3 tom. green.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

The three months under review may be termed the summer quarter, when business in all departments is at its lowest ebb and when the principals of many of the leading houses retire to Europe for their summer holidays. Activity, therefore, has been confined to the business strictly necessary to keep the wheels revolving. Cotton has been subject to violent fluctuations, as is usual during the growing period with its conflicting crop news.

The stock and share market has exhibited seasonal weakness and quotations generally show a decline. The growing cotton crop is the most favourable feature in the situation and reports indicating that the crop is making excellent progress and that no adverse factors have made their appearance, continue to arrive.

During April and May, the native holidays caused considerable activity in cotton goods, but the usual slackness at this time of the year is now being experienced. Throughout the whole period, the cereal markets have been dull, there being little demand for either local consumption or export. Stocks in all departments are steadily increasing, but the poor demand is keeping prices low. The market in gunnies has been very brisk and business in this article has greatly improved. The coffee market has also been satisfactory, the greatest demand being for Santos Superior.

The Sudan.

The most important feature of the period under review has been the continued prosperity of the motor trade, there being a large demand for vehicles of every description. The increased transport facilities thus created bring the more isolated districts within reach of the local markets, a factor which naturally reacts beneficially on trade in general and leads to a better circulation of money and to an improved distribution of goods.

Transactions in local produce have been held in abeyance, owing to exporters not being inclined to quote unless good prices were obtained and although the demands from importers abroad have been few, high prices were maintained, particularly in respect of gum, sesame and dura. The demand for tea and coffee has been steady and prices remained good. Activity in the various markets, however, is now falling off and business will remain very quiet until the harvests in December.

Palestine.

There is little change to report in the general situation in Palestine, and owing to the scarcity of money, many local merchants are insisting on cash settlement and are content with a small profit. The cereal markets remain steady, with wheat showing a slight improvement. The recent hot weather has caused some doubt with regard to next season's orange crop and, in consequence, prices are advancing. A marked decrease has occurred in both imports and exports, as compared with the same period last year. Although the general decrease in imports was only 1½ per cent., which includes all classes of goods, with the exception of benzene and fuel oil, the decline in exports was 11 per cent., mainly accounted for by smaller shipments of oranges, barley, olive oil and soap. The failure of the olive crops has made it necessary to import large quantities of olive oil for the manufacture of soap and this industry will undoubtedly suffer owing to the lack of the local supply.

The labour situation has shown great improvement, owing to the increased activities in the building trade and the planting of new orange groves. It is also anticipated that a new field of employment will soon be opened through the commencement of work on the Haifa Harbour and on other Government undertakings, for which a sum of £1,500,000 has been set aside from the proceeds of the Palestine Loan.

SMYRNA DRIED FRUIT PROSPECTS.

The outlook for the Smyrna dried fruit trade is summarised by Messrs. C. J. Giraud and Co. in the following report:—

Sultanas.—Estimates of the production vary between 43-46,000 tons. Atmospheric conditions during the past winter have been favourable, with a normal rainfall, and the grapes appear to be well developed and give promise of good quality. The yield is reckoned to be about a week late on last season, and first arrivals of new fruit are expected in about ten days' time. We give below the approximate figures dealing with the extent and disposal of the yield during the past two seasons:—

Shipments, Continent, 1926, 15,800 tons, 1927, 26,900 tons; U.K., 1926, 12,100 tons, 1927, 11,600 tons; sundries, 1926, 1,100 tons, 1927, 1,500 tons; consumed locally, 1926, 5,000 tons, 1927, 9,000 tons; total production, 1926, 34,000 tons, 1927, 49,000 tons.

For the purposes also of comparison, it may be interesting to note the average level of prices which have ruled for, say, our type No. 13 during the first four months of the season in the past two years. These are as under: 1926, per cwt. c.i.f., Sept., 53s.; Oct., 58s.; Nov., 57s.; Dec., 58s. 1927, per cwt. c.i.f., Sept., 47s.; Oct., 43s.; Nov., 41s.; Dec., 42s.

These figures are instructive in comparison with the current quotations of to-day for type No. 13 which we are at present quoting for September shipment at 39s. c.i.f. London, or Fls. 47 c.i.f. Continent, for October shipment at 38s. c.i.f. London or Fls. 36 c.i.f. Continent.

The lower values now being quoted for Smyrna sultanas are due to the pressure of Californian competition, the effect of which is being reflected in the reduced volume of business which has so far been done for forward delivery. It is estimated that barely 5,000 tons have been sold forward for August to October shipment as opposed to 10-12,000 tons commitments to the like date during the past two seasons.

Another point which should be noted is the annually increasing quantity of sultanas required by the Turkish Alcohol Monopoly. With the installation of new distilleries in different part of the country, it is reckoned that the wants of the Monopoly during the coming year are likely to absorb 14-15,000 tons of dried fruits of various descriptions.

Figs.—Present forecasts estimate the growing crop as likely to yield approximately last year's quantity (22,000 tons). On the other hand, owing to the abundant rainfall we have had this winter, the fruit is reported to be well developed and of better quality than last year.

Mr. H. K. M. Kindersley, of Messrs. Lazard Bros. and Co., has been elected a director of the Royal Exchange Assurance.

INCREASE IN CYPRUS IMPORTS.

The report on Cyprus trade in June shows that the value of imports during the month under review was £144,855, £13,167 more than for June, 1927, and £38,229 more than the quinquennial average. With the exception of a large consignment of Roumanian timber (2,394 cub. metres), which was landed at Limassol, the increase is general. The annual importation of chemical manures commenced with consignments from Greece and Holland.

The export trade at £110,643, while showing an increase of £17,374 over the quinquennial average, is £18,272 lower than that of June, 1927. The reason for this decrease is that certain items, e.g., beans and peas, barley, oranges, sumac and terra umbra, valued at £17,044, last year exported in June, were this year shipped in May.

Nearly 2,000 tons of asbestos were exported during the month under review. Shipments of potatoes were not so good as in 1927. The fact that neighbouring countries are increasing their production of potatoes may continue to have an adverse effect on local exports under this head.

Shipping maintained a good average level.

AMERICA AND MOSUL OIL.

The announcement was forthcoming last week that negotiations have now been concluded for the participation by representative American oil interests in the Turkish Petroleum Company, which has a concession for the development of the oil resources of the Baghdad and Mosul vilayets of Iraq.

The shares in the Turkish Petroleum Company will in future be held as follows: D'Arcy Exploration Company (Anglo-Persian Oil Company) 23.75 per cent.; Anglo-Saxon Petroleum (Royal Dutch Shell Group) 23.75 per cent.; Compagnie Francaise des Petroles (French Group) 23.75 per cent.; Near East Development Corporation (American Group) 23.75 per cent.; Participations and Investments (Mr. C. S. Gulbenkian) 5.00 per cent.

The American group, represented by the Near East Development Corporation, is composed of the following companies: Standard Oil Company (New Jersey), Standard Oil Company of New York, Atlantic Refining Company, Pan American Petroleum and Transport Company and Gulf Oil Corporation (of Pennsylvania).

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company, Bucharest, for July was 54,900 tons.

A Cairo message states that the Egyptian State Railways have received 14 tenders for the supply of 140,000 tons of coal. The lowest tender was submitted by Messrs. Watts Watts, namely, 22s. 4d. for Northumberland coal. Messrs. Benyons quoted the lowest price for Welsh coal at 26s. 9d. Germany quoted 27s. 7d. for Rhenish-Westphalian coal.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 8:—

Egyptian Futures.—Sakel Contract.—A further substantial drop in values has again to be recorded, and on the eve of the first Bureau report the market finds itself in a more nervous and expectant state than has been the case for a long time past.

We ourselves find it difficult to believe that the decline has not been overdone, for, apart altogether from reports of bad trade, buyers the whole world over have been holding aloof during the last few weeks, until this report is out of the way. The flood of "bearish" crop estimates which have been received from America during the past week, has succeeded in completely occupying attention to the exclusion of all other crop news and, with the exception of a temporary reaction last Wednesday, following the settlement of the Ramsey Mill dispute, prices have sagged steadily. Fixing of "on call" cotton, which has been steadily increasing, has never been of sufficient weight to arrest the decline more than temporarily, and the same remark applies to covering by professional "shorts." It is probable that the amount of covering will increase to-day, and that the market will show a steadier tone, for so great is the uncertainty of the coming report, few but the very boldest operators will care to retain an open interest.

Perhaps the most interesting feature of the week has been the Egyptian Government's acreage estimates published last Friday. For several days previously advices had been received here preparing for a slight decrease in the Sakel acreage and an increase in the Upper acreage. The published figures were as follows:—Sakel acreage, 799,523 feddans; Upper acreage, 768,441 feddans; Various acreage, 170,538 feddans; total, 1,738,472 feddans.

These figures caused something in the nature of a sensation, both here and in Alexandria, and prices broke sharply. If anything, the weaker tendency was displayed in Egypt.

In spite of the continued poor trade reports an improved business has been taking place, both in spot and forward cotton, and we are inclined to think that once this momentous report is disposed of, a much more healthy tone will develop. Should it prove "bullish" we look for a trade buying movement of importance. If, on the other hand, prices are forced still lower by larger figures than are generally anticipated, we consider that the opportunity to acquire cotton will be taken advantage of by speculators and merchants generally.

At the beginning of August, 1926, when the prospect of a record American crop hung over the market, Egyptian Sakel cotton, November delivery, was quoted at about 14.75d. per lb. The Egyptian crop that year was one of approximately 8,000,000 kantars.

Upper Contract.—Business in this contract has shown slightly more activity and values have been largely ruled by the downward tendency displayed in other markets and the large acreage report issued by the Egyptian Government. No tenders have been made so far this month, and the near position has firmed up slightly in relation to more distant months. The premium over American has now come down to a level which many competent observers regard as attractive. At one time it dropped to as low as 225 points, and straddle buying against sales of American was noticeable at round about this figure. Fixing of "on call" cotton has been in evidence, and whilst our local trade has as yet shown no decided inclination to enter the market, a steady business has continued for export to America. We can only repeat that at the current levels the cotton looks cheap.

Egyptian Spot.—The improvement in the demand for spot Egyptian has been maintained during the four business days under review, but a further reduction in values has taken place. This is not surprising, in view of the weakness displayed in the various futures markets and the excellent crop report published by the Alexandria General Produce Association on the 6th inst., which latter report followed closely on the increased acreage figures previously published by the Government.

The trade generally has shown a disposition to await to-day's Bureau report before committing themselves, but, in spite of this rather natural inclination, the drop in prices has induced a certain amount of covering by spinners and the basis (for all cotton quoted in this manner) has been very firm. Advices from Alexandria have again reiterated the firmness of their spot market in spite of a dearth of business there.

The local inquiry for Sakel cotton has been concerned chiefly with cotton at from 300 off contracts to about 200 on. Qualities outside this range have met with scant inquiry. The bulk of the business

has been done in Upper and Zagora at from 25 off contracts to 25 on. The inquiry from America for this cotton, which has in recent weeks been quite a feature, has been maintained, and we learn from Egyptian sources that Alexandria has been benefiting in a similar manner. Approximately, a thousand bales have been done this week for export from Liverpool and certain qualities are becoming scarce. The attraction, of course, is the low premium over American at which our Upper contract stands, and the comparative cheapness of the actual cotton as compared with outside growths, such as East African, etc. The better grades have been neglected.

White cotton, Pilon, and Nahda have received little attention this week. A slightly improved business has taken place in the lower qualities of Sudan Sakel, but the stock of Tokar Sakel continues to increase, with no improvement in the offtake. Most of the recent arrivals have been of a very undesirable character.

One or two lines of c.i.f. business have been reported, but the improvement has not been of a general character. Forwardings to spinners, 3,356 bales Egyptian and 832 bales Sudan. Estimated spot sales (4 days), 1,900 bales Egyptian and 550 bales Sudan. Quotations of Sakel show a net decline of 45 points; those of Upper and Pilon are 60 points lower. F.G.F. Sakel to-day, 18.50d. F.G.F. Upper to-day, 12.90d. F.G.F. Pilon to-day, 13.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 2, state:—

Since our last report the market has continued its downward course and prices are heavily down on the week. The week's summary of price movements is as follows:—Sakellaridis: November, 37.34 dollars, 2.21 dollars down; January, 37.55 dollars, 2.15 dollars down. Ashmouni: August, 24.28 dollars, 1.42 dollars down; October, 24.90 dollars, 1.55 dollars down; December, 25.27 dollars, 1.48 dollars down.

Sakellaridis:—Once again Sakellaridis has shown considerable weakness. Liquidation has been practically continuous and the drop since last Thursday is about 2½ dollars. From time to time there has been some buying on the reaction theory, but these purchases have been invariably liquidated the following day when it was realised that no outside help was forthcoming.

The demand has again been very poor, and, apart from isolated cases, it does not seem to have extended to new crops. In this connexion it may be well to remember that mill stocks are very low; with wretched trade reports constantly coming in, one is apt to regard the depression as chronic and to ignore the fact that demand is principally controlled by price. Prices have dropped fairly heavily recently, and with each decline the demand comes nearer. Whether we have yet arrived at a level sufficiently low to induce demand yet remains to be seen, but it is a factor not to be lost sight of.

The Government has this week definitely declared that it has no intention of putting its stock on the market during the present season; this settles a point which has long been in doubt.

The Sakel/Ashmouni straddle has narrowed in again to 1.24 points, and the tendency seems to be for a still further narrowing.

Uppers.—This variety has also been weak, but the decline has not been so severe as Sakellaridis, being limited to about 1½ dollars. Spinners' demand has shrunk still further, and even the interest shown by America has now evaporated. The American/Ashmouni straddle stands at 525 points against 588 points a week ago.

General.—The statistical position is considerably better on the week, and the local stock is down to about 1,500,000 kantars. However, as we pointed out last week, the size of the stock is no longer of importance, and from now on the all-important factor of supply and demand will dominate the situation. Supply will, within a few weeks, be capable of rough estimation, and attention must then be concentrated on the question of demand, in which connexion, we repeat, the recent decline must play an important part.

The week's receipts amount to 2,448 kantars, against exports 114,005 kantars; the stock in Alexandria stands at 1,536,137 kantars.

Spot.—The demand on the whole has somewhat slackened off with the fulfilling of the July commitments. Total sales amount to about 4,450 bales, of which we estimate 1,400 bales Sakellaridis, 3,000 bales Ashmouni and Zagora, and 50 bales other varieties.

Sakellaridis: There has been a great increase in the demand for this variety; with the small existing stocks of desirable cotton showing it would seem that export houses are no longer able to offer freely abroad. Sellers, however, continue to maintain a firm attitude and spot differences show no signs of easing.

Ashmouni and Zagora: There is always a good inquiry for cotton round about Fully Good Fair, but rather less interest has been shown for other grades; spot differences remain steady with an upward tendency. In spite of the approaching arrival of New Crop cotton, sellers do not seem anxious to dispose of their stocks.

Other Varieties: Practically no business to report; only one or two lots of Pilon have changed hands at about last week's rates.

Crop, 1928: Advices from all our up-country agencies are unanimous in reporting the continued satisfactory progress of the crop. In Upper Egypt the bolls are already opening, and picking will seriously commence in a few days in the southern districts. In the Delta the plants are maturing well and the boll worm attack is, for the moment, very light. Temperature is high and in favour of early maturity, but, on the other hand, humidity is excessive and if it continues so damp we may see some damage to the plant from this cause.

Notes of the Week.

The Greek Elections.

Although at the moment of writing the final results of the Greek elections are not known, it is established that they have resulted in an overwhelming majority for M. Venizelos. This verdict, it is to be hoped, represents the considered judgment of the country and has not been influenced by incidents such as the mobbing of Opposition candidates reported from some districts. Greece needs a strong and a stable Government, but the interests of the country also require that the Government should carry conviction among the people. It is all to the good that the feeling aroused at first by the return of M. Venizelos to politics should have given place to the reflexion that the national welfare overrides personal considerations. The Coalition Governments of M. Zaimis were the first steps in the burying of the hatchet as between Monarchists and Republicans. It was found, however, that, although the Coalition spelt political peace, it was the negation of all concrete achievements in the administrative sphere. A higher level of patriotism has now been reached, if former Monarchists have decided that the country must, in the absence of any other strong man, have recourse to the one who was anathema to them previously. M. Venizelos will now assume power under better auspices than in 1924. His star may not be as high as it was, but he comes before the country with a definite programme, which holds out the promise of concrete results in the material rehabilitation of Greece.

Italy and Yugoslavia.

The ratification by the Skupshtina of the Nettuno Conventions passed according to plan on August 13, no member of the Opposition being present to vote against them. By far the strongest argument for their ratification was the fact that Yugoslavia had already received her share in the bargain, the evacuation by Italy of the last Dalmatian ports and islands. Only when the full text of these Conventions is published will it be possible to determine whether the Yugoslavs have been called upon to pay too high a price for the benefits received. At the time of signature it was supposed that the agreements

would insure correct relations, if not actual friendship, between the two countries, and this aspect of the bargain must have appealed strongly to the Yugoslav Government, when making its concessions. Friendly feeling between peoples, however, has to be based on something stronger than documents signed by their respective Governments. Italians and Yugoslavs have remained at arms' length, and it is significant that ratification has not been urged as a seal of friendship, but is regarded merely as the removal of one obstacle among many in the way of the distant goal of friendship. The boomerang effect of this peace weapon has been shown by the outbreak, a few days after ratification, of rioting at Shibenik (Sebenico) and Split. Anti-Italian demonstrations were staged at both towns and at the former the Italian Consul became the object of the crowd's attention. No serious harm was done, but the incidents, coming, as they do, on the top of the Croats' abstention from the Skupshtina, will be held in Italy to justify the very guarded reception accorded to the ratification of the Nettuno Conventions. In this matter of Italo-Yugoslav friendship the Belgrade Government seems likely to be ploughing a lonely furrow. In the face of Croat hostility it is apparently to receive no assistance from Italy. The leader of the Yugoslav Agrarians could well ask how the Conventions, which were being ratified against the will of a large portion of the nation, were to bring about friendship with Italy, which the Pact of Rome had failed to promote; and his question has to remain unanswered.

The Yugoslav Crisis.

The incidents at Split and Shibenik took place in spite of the orders of the Executive of the Peasant-Democrat Coalition that there were to be no demonstrations against the Nettuno Conventions. The Croat leaders appear to have realised that in the presence of much explosive material it behoves them to act warily. There is a section in Serbia that has not forgotten the success that attended the adoption a few years ago of extreme measures against the Croats, whose deputies were arrested and

imprisoned until the idea of co-operation with Belgrade began to appeal to them: The breach between the two provinces is, if possible, wider than it was then, and so far the Serbs have not shown any indication that they favour any less forceful methods of conciliating Croat opinion on the present occasion. So long as Belgrade is boycotted by the Croats there must be a danger that the Serbs may have recourse to drastic methods for terminating the crisis. That such a solution would bring about no permanent settlement would not deter the Serbs from attempting it. The Croat leaders, therefore, have to pick their way carefully, lest obstruction of the administrative machinery brings down upon them the heavy hand of the Belgrade Government. They may protest that their desire is merely to negotiate in the cause of good government, but the course that they have chosen promises to deprive them of any opportunity of opening those negotiations.

Bulgaria and Her Macedonians.

The British and French Governments have taken upon themselves a delicate task in making joint representations to the Bulgarian Government on the subject of the Macedonian Revolutionary Organisation. As far as Bulgaria can be held responsible for the activities of that body, the problem belongs essentially to the internal administration of the country. Interference from outside, therefore, can be justified only by the urgency of the matter or by extreme solicitude for Bulgarian interests. It is to be hoped that the Anglo-French *démarche* will have satisfied the Sofia Government on both these points. The dissensions in the executive body of the Organization seem to afford an opportune moment for winning the moderate section over to greater moderation by dealing drastically with the extremists, without incurring the reproach of hostility to the Macedonian cause. At the same time there can be no doubt that Bulgaria stands in urgent need of a loan, and no one is in a better position than the British and French Governments to know how susceptible financial interests are to the influence of disturbed conditions in the Balkans. The natural instinct of every Bulgarian Government must be to avoid, as far as possible, interference with the Macedonian problem; therefore, if anything is ever to be done, it may need just that small amount of outside suggestion without which no Cabinet in Sofia will have an inducement to take even the most obvious steps. Bulgarian opinion will be quick to note that the action of the British and French Governments has not synchronized with a complementary *démarche* in Belgrade; but it will not be

forgotten that representations on the subject of Macedonia were made some time ago to the Yugoslav Government. Conditions in Belgrade now, however, are not favourable to any constructive policy on the part of a Cabinet as precariously situated as that of Dr. Koroshetz. In these circumstances it would be a mistake for Sofia to defer action, if an opportunity offers of dealing effectively with the Macedonian Organization. The Bulgarians in this matter can be sure of one point: that Great Britain and France have no axe to grind apart from Bulgaria's own interests in supplying her with the stimulus required for eliminating the Macedonian extremists. At the same time they can derive no little amusement from Italy's unctuous rectitude in ostentatiously dissociating herself from a step which is taken for Bulgaria's good.

The Status of Albania.

After many *ballons d'essai* Albania, or at least those primarily responsible for her destinies, would seem to have decided that a monarchy is to be preferred to a republic. It has frequently been asserted that Ahmed Bey Zogu, like Riza Khan of Persia, would ultimately become the crowned head of the country; but so long as such a step was calculated to embitter Albania's relations with one or more of her neighbours, it was wisely postponed. Italy in particular was understood to be hostile to the suggestion, on the ground that Ahmed Bey Zogu's improved status might render him less amenable to Italian influence. If Italy's consent has now been secured, it may be inferred either that, with the success attending Italian measures of penetration, the attitude of the ruler of the country has acquired less importance in Italian eyes or that disappointment over Ahmed Bey Zogu renders the Italian Government less averse from the prospect of his becoming embroiled with his own people over an alteration of the three-year old Constitution. As far as Yugoslavia is concerned, the status of Albania is a matter of little moment, and, although the declaration of a monarchy would have been strongly resented a year ago, there is reason to suppose that Belgrade is now wiser, and will be prepared to accept any decision on the subject that Albania takes. There remains the point of view of the Albanians themselves. In the first place it may be laid down as an axiom that anywhere east of the Adriatic the republican idea is essentially of exotic growth. Circumstances may render a republic a useful *pis aller*, and in the first resort, under conditions of a virtual dictatorship, it may be worked successfully. With the passing of the first dictator, however, comes the question of a successor, and, unless the rôle of President is to continue to be the reward of military prowess, presidential elections are likely to entail political struggles even more intensified than parliamentary contests. A monarchy, with an established dynasty, provides an element of stability that a republic in the East will always lack. Albania, the least predisposed to republican ideas of all countries, may well argue, in view of her smallness and her inexperience in constitutional procedure, that she cannot afford to risk the constant danger of presidential elections being made a trial of strength for rival chieftains; and, as the first President of the Republic has so far outstripped all other potential competitors to be the only possible nominee for a native dynasty, she may hope to be furthering the cause of internal peace by seating him on the throne. Arguments in favour of the introduction of a foreign dynasty are unlikely to carry much weight in the face of the country's experience as a Principality in 1914.

The Hijaz Railway.

One failure of negotiations with the Wahhabis succeeds another, although it was possibly a foregone conclusion that, after Sir Gilbert Clayton had left Jidda in disappointment, the conference which was begun on July 26 at Haifa between British, French, and Wahhabi representatives on the subject of the Hijaz Railway, would be

adjourned. The breakdown of this Haifa conference will have been particularly lamented by the Wahhabi representatives, who have long been waiting for the realisation of the Anglo-French agreement made in regard to the Pilgrim Railway at Lausanne in 1923. It is stated, in the brief report from Palestine, that the conference broke down owing to a difference of opinion between the French and the Wahhabi representatives about the scope of the negotiations, the Mandatory Power for Syria having come to discuss technical details only, while the Wahhabis under Dr. Abdullah Damluji wished to discuss the whole question of ownership and control. In this matter one can hardly blame the Wahhabis, whose theoretical basis of argument, founded on the joint Anglo-French declaration, was quite sound. Whether it would have been policy for the Wahhabis to have accepted whatever concessions were offered, hoping for a better settlement of the major problem subsequently, it is impossible at this distance from the scene of discussion to say. But it is difficult not to deplore the disappointment that will surely have been caused in Arabia at the second failure of Mandatory Powers to come to terms with the Keepers of the Holy Places. Had the British and the French never recognised the Hijaz Railway as a religious railway; had they never consented to the formation of a Muslim Advisory Board to sit at Madina, in order to supervise the Railway; had they never gone out of their way, so to speak, to meet Muslim sentiments on this Pilgrim Line, then this attitude of *non possumus* would have been easier to comprehend. As things are now, it is inconceivable that, however the Exchequers of Syria and of Palestine and Trans-Jordan may benefit, the good name of the Mandatories will be strengthened in the world of Islam.

Iraq and Najd.

It is very comforting news to read from Baghdad that the frontier situation as between Iraq and Najd continues to be absolutely satisfactory. Evidently King Ibn Saoud has given strict injunctions that nothing shall be done to inflame the delicate position in which things have been left as the result of the failure of the Jidda Conference. It is stated, indeed, that the Mutair, under Shaikh Faisal al Dawish, have actually returned the camels recently stolen by them from the Dhafir of Iraq; and Iraq in general seems to be fearing possibilities less than is her wont. As we remarked last week, the best that can be hoped is that both sides will observe tact, and that time will provide the solution. After all, there are in other parts of the world artificial frontiers across which migrating tribes have been wont to roam in search of sustenance; Iraq certainly has them on other fronts than her Najd border. As against this migrating habit the police posts which the Iraq Government have built militate in no real way, and one should not despair of the Najdis' ultimately seeing things in this light. It is a misinterpretation to represent the construction of these disputed posts as being in direct conflict with economic tradition and habit, for their object is to check illegal, not legal, activities on the part of the Iraqi and Najdi tribes. That there are arguments both for and against the erection of these forts is obvious to anyone who has impartially studied the problem, but an over-simplification of the case, such as this denunciation of the frontier as an unfair attempt to break economic and traditional customs, does not, we think, help to demolish the case which is being upheld by the British and Iraq Governments.

Alarmist Reports.

Obviously the deserts of Arabia, despite their disappointing sterility last spring, when busy journalists sowed abundant seeds of a "Holy War," are not yet to be treated by all sections of the Press as poor "copy." For already the word has gone out (from omniscient Jerusalem) that the "desert stretch south of Kuwait and north of Hayil" is "an armed camp," from which the fanatical Wahhabis are prepared, as a result of the failure of the Jidda Conference, to debouch on their unfortunate

neighbours. Not content with mere generalisation, however, a correspondent at Jerusalem brings in the slaughter of men, women, and children at the hands of the Wahhabis: the murdered innocents being said to owe allegiance to the Amir Abdullah of Trans-Jordan. Elsewhere in the Press we note references to the irresistible impulse of King Ibn Saoud's "expansionist policy," the inference being made that this feud with the Sharifian family is a factor greatly overriding such minor considerations as his pledged word, expressed in the Agreements made with the Iraq and Trans-Jordan Governments in 1925. It seems necessary, therefore, to utter a warning in regard to this very stupid Press campaign. So far, King Ibn Saoud is holding his hand, that is, he is restraining his *Akhwan*; and nothing could be more harmful to the prospects of peace in Arabia than to suppose that he is either unwilling or incapable in that respect.

Armed Forces in Iraq.

Steadily the issue of the nature and the composition of the military forces in Iraq draws nearer to decision. The problem of Conscription, which attained great prominence during the last Premiership of Jaafar Pasha, was shelved for a time, owing to the declaration by the British Government that British forces would in no circumstances be used to compel Iraqis to join a national Army. A compromise was suggested: that Iraq should pay the difference in cost between the upkeep of British forces in Iraq and their upkeep at home; this would have permitted the retention of both the voluntary Iraq Army and the Royal Air Force in Iraq. Now, however, it is seen that the Iraqis will not consent to such an arrangement, for the Prime Minister, Sir Abdul Muhsin Beg, has just disclosed in the Majlis that his Government would never consent to such a payment as has been suggested, and has made the counter-proposal that, if the political and economic interests of Great Britain in Iraq are worth protecting, they should be protected at the expense of Great Britain alone. Thus it is made clear that if Iraq is not to have Conscription, at least the British Government must pay for its own troops in Iraq. This question of armed forces in Iraq has to be settled one way or another during this present year, as has the Financial Agreement subsidiary to the Anglo-Iraq Treaty. The clear statement of Sir Abdul Muhsin Beg is to be welcomed, and it is to be hoped that before the end of the present extraordinary session of the Majlis further light may be thrown upon the opinions of the Iraqis on the Subsidiary Agreements.

THURSDAY, AUGUST 23, 1928.

1878—1928.

For an event that was hailed at the time as a "glorious success" and a triumph of "the firm force of English resolve" the fiftieth anniversary of the Treaty of Berlin has been allowed to pass with what might seem to be unworthy neglect in an age devoted to celebrations. The passage of time, however, has not dealt kindly with that great landmark in the history of the Eastern Question, and the best purpose that its consideration to-day can serve is to provide a touchstone for a verdict, in the light of current events, on the attempt made forty years later to re-draw the map of South-Eastern Europe. The Congress of Berlin met on June 13, 1878; the last sitting, when the Treaty was signed, was held on July 13, and ratification followed on August 3. It is true that the Congress sanctioned the independence of Roumania, Serbia, and Montenegro, and the autonomy of Bulgaria; that in providing extensions of territory for these States it accorded recognition to the principle of nationality as no previous congress had done, and that it couched a lance for the principle of religious liberty. As an instrument of peace, however, the Treaty was not successful. Its failure, as we see to-day, was due to the fact that the Powers controlling the Congress could not bring themselves to regard the rights and aspirations of the smaller States as a thing apart, to be adjudicated upon without reference to their own individual interests. The security of Austria-Hungary was held to require the dismemberment of the Southern Slavs, and the security of India was supposed to depend on the dismemberment of the Bulgarian race. The great fault of the Congress of Berlin, as has been well said, was the failure to recognize that the peace of Europe is not ensured, nor the interests of any Power permanently served, by creating unnatural, unjust and intolerable conditions; the failure to recognize that even in international politics justice is, in the long run, the surest foundation of States and nations.

The first alteration of the Treaty of Berlin was effected in 1886, when the new State of Bulgaria, which had been restricted to territory between the Danube and the Balkan Mountains, annexed the Turkish province of Eastern Roumelia. Russia in the same year, it is worthy of note, denounced Article LIX of the Treaty, which had provided for the constitution of Batoum as a free port. In 1908 the revolution of the Young Turks led Austria-Hungary on October 3 to annex Bosnia and Herzegovina, in violation of Article XXV, and Prince Ferdinand two days later proclaimed the complete independence of the Principality of Bulgaria and invested it with the status of a Kingdom. Any sanctity that the Treaty of Berlin ever possessed, however, had already been dissipated by the

failure of Turkey to introduce those reforms to secure which, Russia, whatever territorial ambitions she may have entertained, made herself the champion of Europe's conscience in embarking on the Russo-Turkish War. The Treaty of San Stefano, which the Berlin Congress was summoned to tear up, had placed the greater portion of Macedonia under the jurisdiction of Bulgaria, to which by ethnical rights of priority it belonged. By the Treaty of Berlin the Macedonians were left under Turkish rule with the promise of a reformed administration. This arrangement gave rise to all the subsequent trouble that has made the Balkans a by-word in European history. The process of claim-pegging in Macedonia embittered the relations of the countries concerned; it was responsible for the provisions of the Treaty of Bucharest, which registered the defeat of Bulgaria in the Second Balkan War at the hands of Serbia, Greece and Roumania; it drove Bulgarians into the arms of the Central Powers in the Great War, and determined their fate in the settlement enacted by the Treaty of Neuilly. Macedonian unrest still continues; it has kept Yugoslavia and Bulgaria at arm's length and has played its part in the political unsettlement of Yugoslavia.

Ten years after the end of the Great War it is difficult to claim that the settlement which the Peace Conference provided for South-Eastern Europe is likely to stand the test of time any better than the provisions of the Treaty of Berlin. Like the latter the post-War settlement can point to its achievements in furtherance of the principle of nationality. If the Croats and Slovenes on the one hand and the Transylvanians on the other find that their incorporation in the national State has not yet brought about the consummation of earlier hopes, the fault does not lie with the framers of the Peace Treaties. The efforts of the latter for the cause of nationality, however, were unequal and were allowed to exhaust themselves on behalf of Yugoslavia and Roumania. In the light of experience it is easy to prove to-day that the Greater Bulgaria of the Treaty of San Stefano would not have been the menace to British interests that Lord Beaconsfield imagined at the time. It is equally certain that the fears of Bulgaria entertained by her Balkan neighbours nine years ago served to obscure their vision of what the interests of the Peninsula as a whole required. Gradually it is being brought home to each country that economic prosperity is of greater importance to the contentment of a nation than political catchwords. Fate, however, is likely to be kinder to the Peace Conference of 1919-20 than it was to the Berlin Congress. Where modification of its settlement takes place it is more likely to be by peaceful means than by violence. The course of events has indeed determined that the Macedonian problem should achieve the solution enacted for it only by the application of force, and it may now be doubted whether the material necessary for any other settlement, such as a Macedonia as a separate political entity, is still in existence. Bulgaria, it is true, remains without her outlet on the Aegean Sea, guaranteed her by the Treaty of Neuilly and required by the exigencies of modern development. She can, however, hope for a settlement of this point only by agreement, and to that end her general policy should be shaped. The lesson of the Berlin Congress is that, although treaties may seem at the time to represent the acme of wisdom, experience shows that they are of necessity imperfect instruments, the more provocative of evil and unrest the more they offend against the canons of impartial justice. It is unreasonable to suppose that the Peace Conference of nine years ago reached a higher standard. Common sense and self-interest require, therefore, that all concerned should keep a sharp look-out for opportunities to amend the weak parts of the later Treaties before they lead to the adoption of more drastic remedies.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, August 15.

Latin Characters and Western Music.

The Constantinople sector of the People's Republican Party gave a *soirée* at the Gulhane Park Casino last Thursday night, at which the President of the Republic was the principal guest.

The Gulhane Park, which abuts on the Seraglio Point, the promontory known to every traveller entering Constantinople, either by sea or by rail, was at one time the old-world pleasure and rose-garden surrounding the Top-Kapou Palace, the Imperial Residence in those spacious days when Sultans and Sultanas preferred Stamboul to the more modern and Europeanised quarters of Constantinople. This little promontory is unique. Its stone façade and white marble steps are lapped by the blue waters of the Bosphorus, the Sea of Marmora and Golden Horn. Facing the observer there is the long unbroken vista of the green and chocolate hills of Europe and Asia divided by the sparkling waterway up which once ferried the Argonauts in search of the Golden Fleece; behind him rises the stately pile of the old Imperial Seraglio backed by the swelling domes of St. Irene and of St. Sophia, together with the graceful Corinthian column of granite which commemorates the defeat of the Goths at Nissa by the Emperor Claudius Gothicus.

The Ghazi, after being acclaimed vociferously by the Party members and their wives, rose to his feet and stated that, instead of making an *extempore* speech, he would call upon one of the younger members of the Party to read an address which he himself had been at some pains to draft. A young Effendi was called up and handed a sheet of foolscap. A look of amazement overspread his features. He hesitated and was dumb. The onlookers were non-plussed. Having taken back the document, the Ghazi explained that the address was written in the "new Turkish script" and he called upon Rifki Bey, a deputy, to read the message.

"Dear brothers," so ran the gist of the peroration, "it is incumbent upon every one of you to discard the cabalistic signs and letters which for centuries past have encircled our brains with hoops of steel. The whole world will shortly witness the results which can be achieved by perseverance and fixity of purpose. At the present moment close upon 80 per cent. of our population is illiterate. I earnestly appeal to every citizen to help in this noble task of educating the masses. In one year, or, at the latest, two years, every Turkish man, woman, or child the poorest boatman and *hammal* (porter) must be able to read and write in the new Turkish characters. Our nation, by its writing and culture, will then be in a position to prove to all and sundry that we are on a level with the rest of the civilised world."

Turning to other matters, the Ghazi went on to say: "To-night, by a praiseworthy effort, we have been regaled by exponents of both Oriental and Western music."

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Munire Hanoum has given us a glowing example of the high level to which Oriental music can be brought. Nevertheless, this music, this simple, doleful music is not sufficient to satisfy the artistic aspirations of the Turk. We have just heard and enjoyed a selection of music of the Western World. You, who all appeared depressed and dejected whilst listening to Oriental strains, at once brightened up and smiled as soon as the European orchestra started playing. You danced, you laughed, you were happy as Nature intended that you should be. The Turk is in verity a cheerful and joyous being, and he can now afford to be care-free and happy because it is no longer necessary for him to prove that to attack him is dangerous. This innermost conviction also expresses his most earnest hope."

Lastly, lifting his glass, the Ghazi added: "There were at one time impostors who surreptitiously consumed this very drink in the secrecy of their locked Palace-chambers whilst they plotted against the liberties of the nation. I am no hypocrite. I drink openly and I toast the health of my people."

Bobbed Hair, Short Skirts, and the Veil.

As an additional side-light on the rapid advance towards Westernisation which is manifesting itself more and more as the days go by in the higher ranks of Turkish social circles, it is interesting to hear the views expressed a week ago to a Turkish reporter by Kiazim Pasha, President of the National Assembly, on the subject of women's fashions.

For a shingled Turkish woman—they are all that now—to allow her hair to grow long again, says the Speaker of the Turkish House of Commons, would spell, if not retrogression, at least reaction. Bobbed hair is not a manifestation of the caprice of feminine fashions and foibles but a distinct sign of advance. Man discarded the fashion of wearing his hair long ages ago. It is now the turn of the women—even the most stubbornly conservative among them cannot possibly put back the hands of the clock. The same reasoning applies to short skirts, adds the Pasha. Nowadays no civilised woman, unless she wished to make herself ridiculous, would think of sweeping the dust off the streets with trailing skirt, nor is there any reason why any woman should desire to camouflage her nether limbs under a ballooning, voluminous and ungainly sack as so many do to this day

in Anatolia, in violation of the most elementary canons of æsthetic taste.

As for the dainty little slips of brightly coloured veil or figured voile with which the younger generation of Turkish women now adorn their heads—their faces, of course, being uncovered—the Pasha unmercifully stigmatises them as *bonnets de nuit*, or night-caps, and he suggests that the sooner they are discarded the better. Their Western sisters, he insists, would have adopted this mode of head-dress ages ago had it appealed to their æsthetic sense, and the fact that they have not done so is proof enough, to his way of thinking, that the fashion is an unbecoming one. The Pasha suggests no alternative, although there is, of course, only one which is obvious.

The Turkish Speaker is a gallant soldier, and the last thing one would wish to do would be to tilt a lance at him over Turkish sartorial matters in which he must have greater experience than any Westerner. One cannot help feeling, however, that he is a little unfair to the up-to-date Turkish *mondaine*. If there is one thing which we mere males of the West do ungrudgingly admire about the modern Hanoum, it is the taste, artistry and coquetterie with which she can don—thereby outshining many a Christian sister—a mere whisp of flimsy, gauzy veil through which auburn hair shines up like burnished gold and darker tresses take on an ebon hue. The voile has, in these hard times, the added advantage of costing but a few pence.

Cairo, August 13.

The Singapore Dock.

The Singapore floating dock passed through the Suez Canal without any misadventure *en route*, and glided out into the Red Sea, passing the Attaka Mountains and the pretty harbour of Suez on August 7. The shady avenue at Port Tewfik, which is at the entrance to the Canal, was crowded with people from early in the morning, and soon after ten o'clock a wave of excitement went through the throng, for looming out of the white, dazzling desert came the first section of the dock. As it came closer it towered up out of the water like a giant, led along by three pigmy tugs which have towed it all the way from the Tyne, and are taking it out to Singapore. On the other side of the Canal the *Badawin* had come out of their deserts and lined the shore to watch these two monsters glide by. The second portion came by about two hours later, and they both went straight on out to sea without waiting. The passage down the Canal of these two huge Leviathans is a very creditable perform-

ance for the Canal Company, for their pilots, and for the Dutch towing company.

Cape to Stockholm by Car.

The Chevrolet Cape-to-Stockholm expedition arrived at the Pyramids in Cairo on August 7, having left Cape Town on March 7 and having travelled 10,000 miles in five months. The expedition consists of a Chevrolet Sedan and a Chevrolet one-ton truck. The reason they did not average more than about sixty miles per day was that the territories of Rhodesia, Tanganyika, Kenya, Uganda, and the Sudan were transformed into swamps and the expedition on occasions were able to do no more than three miles a day. The undertaking was in order to determine the possibility of joining Cape Town to Cairo by road, but mainly as an advertisement for General Motors cars. The four members of the expedition state that they had no mechanical trouble. They are proceeding through Palestine, Syria, Constantinople, Athens, Rome, Berlin, Paris, London, and finally by Antwerp to Stockholm.

Suppression of Newspapers.

There were in Egypt a few days ago more newspaper "rags" that were probably to be found in any other country, but they have now wisely been suppressed. The Cabinet has issued an *arrêté* cancelling the licences of daily papers which have not appeared within three months following the date of issue of their licences or which have suspended publication a year or more before the issue of the present *arrêté*. Licences of daily newspapers which are not published regularly have also been cancelled.

Schoolboys and Politics.

Steps have at last been taken by Mohamed Pasha Mahmoud's Cabinet to put a stop to the participation of schoolboys in politics. In the past the Wafd party have done untold wrong to the youth of Egypt by weaning them from their studies at an early age and encouraging them to howl and demonstrate in the street in support of the Wafd party. Aly Shamsi Pasha, as Minister of Education in the Nahas Cabinet, tried to do something to stop the disorder, but he was fighting all the time against the bad traditions of the Wafd, and it has been left for Ahmed Lutfy Bey es Sayyid, the present Minister of Education, to take drastic steps. At the end of last month a Note was passed by the Council of Ministers and circulated to the various schools stating that any student or schoolboy taking part in politics either through writing or belonging to a committee shall be dismissed his school. This has been followed by an invitation to all political parties to dissolve any student organisations and to discontinue all efforts to enlist schoolboy support.

The Prince of Wales and Egypt.

Next month a P. and O. liner will be specially diverted from its normal course to bring Their Royal Highnesses the Prince of Wales and the Duke of Gloucester to Alexandria. They will stay one night there, proceeding next day to Cairo, where they will stay in a boat on the Nile. They will then make a tour of the Sudan and the British East African territories.

Egypt's Death Rate.

A movement is being made by the Alexandria Municipality to clear up the town's slum area, and a committee has been studying the question since 1926, when Dr. Saleh Hamdi Bey, having returned from studying conditions in Europe to become Director of the Sanitary Services in the Alexandria Municipality, submitted a detailed report on conditions in the city. He lays especial stress on the high death rates throughout the towns of Egypt, which are considerably higher than in the country villages, despite the lack of pure water and a sufficient number of hospitals in the latter. The following are the death rates given per thousand in 1925: Alexandria, 36.2; Cairo, 37.2; Tanta, 35; Mansoura, 26.2; Assiut, 34.7. Infant mortality rates per thousand in 1922 were: Alexandria, 203; Cairo, 237; Tanta, 183; Mansoura, 171. Dr. Hamdi Bey adds that in some quarters in Alexandria

the infant mortality is as high as 400 and 450 per thousand; which is a terrible state of affairs. The proposal is that tenement blocks of three storeys, each of eight apartments, are more suitable for the purpose than separate dwellings for each family. Each block will cost £E7,500, and for a start 211 blocks will be built, of which the total cost would be £E1,582,500, plus £E300,000 for expropriations. The expenditure, it is suggested, should be spread over a period of 20 years, which would mean £E95,000 per annum.

Such schemes, combined with the present Government's definite desire to improve and regulate the lot of the working man, will do much to ameliorate the terrible conditions that exist in Egypt.

Sofia, August 14.

The War between the Macedonian Revolutionaries.

The Anti-Mihailovist Central Committee of the Macedonian Revolutionary Organisation has issued, under the signature of MM. Peter Shandanoff and George Popchristoff, the following Note, which explains, better than anything else, the gravity of the situation created by the inter-Macedonian tension in connexion with the assassination of General Protogueroff:—

"On July 7 last, at night, Alexander Protogueroff, a member of the Central Committee of the Macedonian

Revolutionary Organisation, was treacherously assassinated in Sofia. It was officially announced in due course that the assassination was carried out by order of Ivan Mihailoff. But the higher authorities of the Macedonian Revolutionary Organisation have, up to the present time, received no official communication from Ivan Mihailoff on the subject of this assassination, nor on the subject of the reasons which made him order it.

The assassination was regarded as a disgrace by Macedonian emigrants and by the Bulgarian and the foreign public. The most eloquent proof of this sentiment was furnished in the solemnity attending Protogueroff's funeral and in the attitude adopted by the Press. Immediately, and on all sides, a cessation of further fratricidal struggles between the Macedonian revolutionaries was urged.

Conscious of the grave responsibilities which would be assumed if the path of reciprocal extermination were followed, the responsible governing body of the Macedonian Revolutionary Organisation gave orders that recourse to vengeance and persecutions was not to be had, because they foresaw that the Macedonian cause stood only to lose in such a struggle.

We hoped that the country, in whose capital Protogueroff was killed, was administered by a responsible Government, which would demand a reckoning from those who had decided to trouble the public conscience by a cruel crime. But, to our great surprise, we saw both the actual assassins as well as the intellectual opponents of Protogueroff walking about freely the very day after the murder in the streets of Sofia without being molested by anyone. The restless Macedonians, not being able to bear quietly the sight of this tolerance by certain organs of authority of the assassins of Protogueroff, resolved to act according to their own methods, but thanks to the severe orders of the M.R.O.—to avoid any shedding of blood—they had to be patient. Certain among them wished to depart from Sofia, so as no longer to witness this state of affairs. One of these was the unforgettable hero, Pando

R. B. W. Holmes,
General Manager,
HAIFA.

Nicoloff Stroumishki, who, as a civilian, without rifle and armed only with a revolver, was on July 25 attacked in an ambush, at the "Youndola," by aggressors armed with rifles, and was killed on the spot by order of the assassins of Protogueroff. But do they know whom they have killed?

They have killed the hero who last year sustained a desperate combat lasting several days with 5,000 men—Serbian troops and gendarmerie. He saved himself then, to be treacherously killed now by the "Macedonian revolutionaries" and Bulgarian police. . . .

In spite of this second attempt against the men of the M.R.O. on the part of Ivan Mihailoff, the responsible heads of the M.R.O. confirmed afresh their decision not to resort to bloody reprisals, in the hope that public opinion would not fail to disparage this dastardly assassination. The public was influenced in error and from all parts voices were still heard demanding the cessation of the war of reciprocal extermination. The general cry was: Enough! We were, nevertheless, convinced that that sincere "Enough" would in no way shake the demoniacal nature of Protogueroff's assassins.

In his own journal, *Svoboda ili Smert* ("Freedom or Death"), Ivan Mihailoff, reasoning on "The Philosophy of Revolution," declares that *he is interested neither in Bulgarian internal public security, nor in her prestige abroad*. He considers himself as the most worthy Macedonian Revolutionary, and he is resolved to kill all those who block the way, wherever they are.

Our conceptions differ from those of Ivan Mihailoff. We cannot admit for a moment that we had the moral right to interfere in the internal life of the Bulgarian State, nor to cause it annoyance, knowing that this country has sheltered 500,000 Macedonian refugees and that it has sacrificed hundreds of thousands of its sons for the freedom of Macedonia. We do not wish, through our struggles, to lower the prestige of that country before the world. And that is why we still possess the moral force to wait. But to what end have we waited?

On July 31, at one o'clock in the afternoon, Steftcho Karkalacheff and Dontcho Zaphyroff—the latter one of the actual assassins of Protogueroff—assaulted the revolutionary Athanas Kaltcheff in his own building. Dontcho Zaphyroff brought out his revolver without being seen, and fired on Kaltcheff, but did not hit him with the first shot. After that, Kaltcheff's companions threw themselves on him with their arms and wounded him in two places. At this moment Steftcho Karkalacheff also tried to draw his revolver, but he was caught by Kaltcheff, who disarmed him. The two assassins were handed over to the police.

In making the foregoing brief report, we present it for the judgment of the Macedonian and the Bulgarian conscience.

At the same time we declare that henceforth we shall be in a state of legitimate defence and that we shall not be able in future to welcome with crossed hands the *coups* which are prepared against us by Ivan Mihailoff.

In fulfilling this supreme duty towards our country, we on our part reject responsibility for the consequences of Ivan Mihailoff's follies, as much on account of our work

of liberation as for the Bulgarian State itself, the calm and tranquillity of which must above all be the care of its own rulers."

The Anglo-French "Demarche."

It is known that Ivan Mihailoff has refused, and for good reasons, to recognise the Committee; he has, meanwhile, called a meeting of revolutionary friends, which has proclaimed itself a congress of the Organisation. It has not only absolved its leader for the assassination of his colleague Alexander Protogueroff, but has also voted him its thanks for this "heroic" act, after which it elected a new Central Committee, composed of Ivan Mihailoff, Ivan Karajoff, formerly a Lycée Professor, and Strachil Razvigoroff, brother of one of the assassins of the Serbian General Kovatchevitch, at Shtip last October. But it should be remarked that in order to be legally considered as a congress, this meeting must comprise regularly, in accordance with the Statutes of the Organisation, 40 delegates from different revolutionary districts in Macedonia, which for revolutionary purposes has its own administrative divisions. The meeting convened by Mihailoff had only 18 delegates; all the others, representing the true revolutionary Macedonia, that is three or four districts, abstained from attending, although elected and provided with their full powers, and remained faithful to the former Committee comprising George Popchistoff and Peter Shandanoff.

The two sections will, then, continue to fight each other, and the split in the ranks of the Organisation will become deeper and deeper. This division has inspired the Serbs and the Greeks to suggest a big blow at the Revolutionary Organisation which will be a death blow for the Macedonian movement and which, as such, would relieve these two countries, especially Yugoslavia, of the permanent danger which this movement has been to their Governments. And as they could not act efficaciously themselves at Sofia, they have tried to induce their great Allies, England, France and Italy, to act. Their suggestions have ended in an Anglo-French protest, with which Italy, however, has refused to associate herself. This *démarche*, which took place on August 10, would have been made even without the Serbo-Greek suggestion, because England has for over a year pursued in the Balkans a vigorous policy of stabilisation and appeasement by the elimination of every source of misunderstanding and discord between the different Balkan nations. And it will be remembered that ever since last autumn British diplomacy at Sofia has attacked the Macedonian revolutionaries, whom it regards as a serious obstacle to the establishment of an effective peace in the Peninsula. It could not allow the opportunity to escape of returning to the charge. Thus England took the initiative in a collective representation to the Bulgarian Government, drawing attention to the change that had come about in Macedonian affairs after the assassination of Alexander Protogueroff and the consequences proceeding therefrom, which considerably weakened the hitherto formidable power of the Revolutionary Organisation. This formidable power having constantly been advanced by the Bulgarian Government as a decisive hindrance to the application of all

repressive action against the Revolutionary Organisation, that weakness itself rendered this latter more vulnerable and permitted, in consequence, the taking of serious measures on the part of the Bulgarian authorities. This is what the British Minister, Mr. Sperling, seconded by the French Chargé d'Affaires, M. Elie, pointed out to M. Bourroff in their interview of August 10, explaining all the measures it would be useful to take with regard to the Macedonian Revolutionaries in order to shatter their organisation and reduce them to an inoffensive state. These measures are of various kinds. They do not exclude the arrest of the leaders, notably the members of the two Central Committees.

It is not yet known what the Government will decide, and especially what it will be in a position to do. But its good will is beyond doubt. It is for this reason that the Italian Legation has preferred not to complicate the situation by an inopportune intervention, and to leave Bulgaria to clear up the situation herself in the fulness of her sovereignty, being confident that she will take, of her own initiative, all the measures which the situation demands.

Zagreb, August 12.

The Late M. Raditch.

The importance of M. Raditch's death on Yugoslav politics cannot easily be exaggerated. He was the idol, as well as the only real leader and teacher, of the peasant masses of Croatia. Single-handed he built up the solid organisation of the Croat Peasant Party; on foot or in springless peasant carts he visited every village, almost every house of his country; everywhere he was known, loved, revered, and thus he was able to lead his peasants wherever he wished. Thus his constant changes of front, usually very understandable from a tactical point of view, but bewildering for those who tried to square one attitude with another, one speech with the last, were always accepted enthusiastically and unquestioningly. In this way he was able, when he considered the time ripe, to lead them to Belgrade—when this venture failed, to lead them back to Zagreb. In this way he would have been able—had he lived—to lead them again to Belgrade, to explain away the past and find good reasons for their return.

Now, Raditch's last words, his attitude of antagonism to Belgrade, will become a permanent motto, a sacred trust to many of his faithful followers, and it will be a long and difficult process to bring about the change which he could have made in a few months.

The Funeral Scenes.

Raditch's funeral was most impressive. Apart from the effect of hundreds of thousands of peasants and townsfolk, rich and poor, gathered from every corner of Western Yugoslavia, in costumes often of great beauty, richly

embroidered, brightly hued—there was an air of patient, disciplined decision, which could not fail to strike the onlooker. Organisation, discipline, unanimity—these words recur continually in every account of the ceremony and express the strength of the Croatian cause—for the Serbs remain unorganised, undisciplined politically, and undecided, and divided as to what course to take.

The speeches made from the verandah of the Peasants' Hall were remarkable for their moderation. M. Matchek, now leader of the Croat Peasant Party, M. Pribitchevitch and a number of delegates from Bosnia, Herzegovina, Dalmatia, Montenegro, Slavonia and the Voivodina, all spoke in the same vein—one of sorrow for the loss of their great teacher and leader, and of the sure conviction that his fifty years of struggle had not been in vain, and that their lives should be devoted to bringing about the realisation of his great ideals and plans—the liberty and equality of the peoples of all the different South Slav provinces united in a federal State, which should eventually include Bulgaria and stretch from the Adriatic to the Black Sea. M. Pribitchevitch emphasised the solidarity of the "Pretchanski" Serbs with the Croats, and declared that all the many attempts being made from Belgrade to separate them would be in vain.

Several thousand wreaths—including martyr's wreaths of thorn and the King's silver wreath, borne by four sergeants of the Royal Guards—were carried past the bier by peasant men and women from all parts, and a defile of Sokols, Scouts, and peasant organisations passed steadily for over three hours. Over 300,000 peasants must have come from Zagreb for the funeral, and most of them were delegates representing the whole Croat nation.

While in Belgrade the full seriousness of the situation is not realised and the solidarity and purpose of the people of the ex-Hapsburg provinces are not appreciated abroad, too much attention seems to have been paid to the extreme utterances of certain Croat leaders and too much significance to have been paid to the holding of meetings of the P.D.B. Club in the old Croatian Sabor and to the appointment of an Executive Committee divided into departments, which has given rise to wild talk of a rival parliament and a rival Government to that in Belgrade.

A dinner was given by the Hungarian Government at Budapest on August 16 in honour of Dr. Tewfik Rushdi Bey, Turkish Foreign Minister.

The Nettuno Conventions were ratified in the Yugoslav Skupshtina at Belgrade on August 13.

The Greek Upper Naval Council has decided to build four destroyers, with a speed of 36 knots, at a cost of £2,000,000, and also two torpedo-boats as soon as funds are available.

King Fuad has placed his Royal river yacht at the disposal of the Prince of Wales and the Duke of Gloucester for use during their coming stay in Egypt next month, though it is not yet known what route they will travel by on their way to the Sudan.

Mohamad Gad El-Mawla Bey, Minister at the Egyptian Ministry of Education, left Egypt on August 9 to represent the Egyptian Government at the International Congress of Orientalists, which will meet at Oxford from August 27 to September 1.

In consequence of an accident at Skaikh Othman, Aden, to a Fairey 3F machine, on August 14, Flight-Lieutenant E. N. T. Edwardes, the pilot, was killed, and the passenger, 362026, Leading Aircraftman A. W. Jones, was slightly injured.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
Further particulars may be obtained of
74, Grosvenor Street W.1. E. H. Keeling, Hon. Sec.

School of Oriental Studies, London Institution (University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

PERSONAL AND GENERAL

TO-DAY

August 23, 1928 (New Style).

August 10, 1928 (Old Style).

Rabia I, 6, 1347 A.H., of the Muslim Calendar.

Ellul 7, 5689, of the Jewish Calendar.

The Hon. Mrs. Emmett sailed in the s.s. Ranpura on August 17 for India.

The Prince of Wales received Lord Lloyd, High Commissioner for Egypt and the Sudan, at St. James's Palace on August 17.

Sir Arthur and Lady Froom and the Hon. Sir Maneckji Dadabhoy left London on August 16 for Marseilles, to join the Morea at Bombay.

Lady Hailey, who has been on a three-weeks' visit to England, left London on August 16 for India, to join Sir Malcolm Hailey, Governor of the United Provinces.

Earl and Countess Winterton left London on August 16 by air for France before proceeding to Czechoslovakia and Poland. They will return to London about September 24.

Field-Marshal Lord Plumer was received in audience by the King at Buckingham Palace on August 15, upon relinquishing his appointment as High Commissioner and Commander-in-Chief, Palestine. Lord and Lady Plumer left London on August 16 for Buxton.

NEWS IN BRIEF.

M. Henri Ponsot, French High Commissioner for Syria, is expected soon in Paris to discuss with the French Government the difficulties which have arisen owing to the action of the Syrian Constituent Assembly in declining to delete from the draft Constitution those articles to which he has taken exception.

During May 287 immigrants entered Palestine, including 223 Jews; 158 persons (including 111 Jews) entered the country as travellers and were given permission to remain permanently. Nineteen prospective immigrants were refused admission; 312 persons left the country permanently, including 264 Jews.

The *Morning Post* correspondent at Simla states that King Amanullah's reforms in the educational system of Afghanistan are to be based on Turkish principles, and for this purpose a Turkish educational committee is visiting Kabul to revise the curricula of the primary and high schools. Twenty-five Afghan students have been dispatched to Turkey to complete their education.

The Skupshtina in Belgrade on August 14 unanimously ratified the Judicial and Consular Conventions with Poland and a trade agreement with Greece. The Skupshtina also voted the suspension of the immunity of the two Yugoslav deputies alleged to have been concerned with M. Punisha Ratchitch in the shooting of the Croat deputies on June 20. After that it adjourned *sine die*.

A message from Riga states that the Soviet steamer Tobolsk is reported to have returned to Odessa after a successful expedition to the Persian Gulf, the first trip to those waters by a Russian ship since 1914. The Tobolsk discharged 800 tons of sugar and textiles at Hudaida, Bundar Abbas, and Bushire, making a great impression in the Yaman, where the Imam Yahia and the Governor of Hudaida expressed a hope for further closer relations with the Soviet Union.

The Commission set up by Field-Marshal Lord Plumer as High Commissioner for Palestine to investigate the position of unskilled labour in Palestine (complicated by the great difference of scale of living between Arabs and Jews) has completed its work, and its findings have been sent to the Secretary of State for the Colonies. It is said that the Commission recommends a minimum daily wage of 120 mils (about half-a-crown).

The Index to Volume XXXIII (January 5—June 28, 1928) of "THE NEAR EAST AND INDIA" is now ready, and copies will be forwarded to subscribers gratis on application to the Manager, *The Near East and India*, 170 Strand, London, W.C.2.

APPOINTMENTS AND PROMOTIONS.

M. Ant. Saktouris, formerly Greek Minister at Cairo, has been appointed Minister in Vienna.

M. Vassili Lappas, Greek Vice-Consul in Cairo, has been appointed First Secretary to the Ministry of Foreign Affairs in Athens, and is being replaced by M. Capetanidis.

M. Sourlas, Greek Vice-Consul at Alexandria, has been appointed Secretary to the Greek Legation at Belgrade.

The following appointments to the Colonial Service have been made by the Secretary of State for the Colonies:—

Iraq.—Mr. E. R. Guest, B.Sc., A.R.C.S., to be Plant Breeder. Palestine.—Mr. N. H. Anabtawy, to be Administrative Officer, Class 3; Miss I. G. Cooper, to be Nursing Sister.

CONGRESS OF ORIENTALISTS.

The Seventeenth International Congress of Orientalists will open at Oxford on August 27, and nearly 600 delegates will be present. Papers will be read on Asiatic and Egyptian subjects by English, French, German, Italian, Indian, and American scholars, and popular lectures will be delivered on the excavations at Ur, Kish, Kirkuk, the Indus Valley, and on Southern Arabia and the Levant. The Congress will be presided over by Lord Chalmers, and the Chairman will be Professor F. W. Thomas.

The last International Congress of Orientalists was held at Athens in 1912.

THE WEEK AT HOME

London, Tuesday Morning.

Aberdeen.

Aberdeen is not notorious for handing out anything at all lavishly, and it may have been due to the native caution of that place that, at the quite important by-election which took place there last week, only 56 per cent. of the electorate should have recorded their votes. Nor was this omission owing to the lack of alternative choice, for there were the victorious Labour man, Capt. Wedgwood Benn, who recently "ratted" from the Liberal Party, the Conservative candidate, a Communist fellow, who put up a respectable show (in the numerical sense), and, of course, the inevitable defeated Liberal candidate, on whom to place the costless vote.

The only two obvious lessons that can be learned from this affair at North Aberdeen are that the de-rating proposals of the Government have so far brought it little popularity; and that the Liberals, in putting into every field a candidate, are merely wasting their money. For the few surprises which the Liberals have sprung upon an apathetic country, they have a most melancholy record of "Also Rans."

It will be quite fun to have Capt. Wedgwood Benn back in the House. He is both able and versatile; and it is probable that, with him about, a certain other Liberal who drifted successfully to the Labour Party will no longer have the monopoly of the "questions."

Lord Haldane.

There is not, I think, likely to be much difference of opinion upon the merit of the services which Lord Haldane rendered to Great Britain: Haig's dictum that he was the greatest Secretary for War we have ever had is now accepted generally. He had a genius for organisation, and it was a genius used to the finest ends.

Apart from his services as War Secretary, however, it is improbable that Lord Haldane's name will bulk largely in our national history. He was never the essential Liberal, and unquestionably it was his Hegelianism, his idealism of the State, which made his conversion to the Labour or Socialist Party so easy and unlamented a step. His philosophy and his ideals have largely been beclouded by the robust realism of the present day. But his name will always be remembered with gratitude, because his services before and at the beginning of the Great War were of inestimable value.

Sir George Trevelyan.

Very few of this generation are at all familiar with the work of Sir George Trevelyan, who has just died, as a politician of the Gladstonian school. But his services to what is called historical literature will long be remembered. It is true that his outlook was one which is not fashionable to-day, for the revolt against the Whig reading of English history, although it has not yet come full circle, is in steady process. Undoubtedly there is a reluctance now to accept the gloss which historians of the Macaulay school put upon the actions of older statesmen, particularly of eighteenth century statesmen.

But Trevelyan had an element of greatness. His work on Charles James Fox is a fine work, and the biography of Macaulay is not only indispensable but permanently readable. In addition, of course, Sir George was a magnificent survival into this curious modern age of the quintessential English gentleman.

Char-a-banc and Train.

The Railways have quickly shown what advantage they intend to reap from the recent reduction of two and a half per cent. in wages and salaries. They are about to issue long week-end tickets (Friday to Tuesday) at reduced fares, thus endeavouring to cut the ground from under the feet of the motor-transport companies.

What effect this will have on the motor traffic it is impossible yet to say. It is anticipated in some quarters

that the Railways will inevitably take passengers from the Road, so that the motor companies will in turn have to reduce their fares; and by others the new move is regarded as merely a temporary measure to be adopted while the Railways get their own road vehicles or force the existing road transport companies to accept their own terms. For myself, however, I think that the motor transport will continue to hold its newly-won own over the short distances, and that the Railways, which, incidentally, are far more comfortable to travel in when the weather is of the usual, not of the present, kind in England, will be favoured for the long distance. And, of course, for heavy transport the Railways' future is secure.

The County Championship.

There was gloom in the hearts of Southron folk last week when Lancashire so decisively beat Kent, but much admiration was expressed for the team wearing the Red Rose, for without doubt Lancashire are a tremendously efficient side, full of Northern determination, steadiness, thoroughness. Their joy in the game of cricket, their indulgence in its unique graces, pleasures, and pleasantries may not be manifest; but as a match-winning combination they are—as must ungrudgingly be admitted by everyone—the team of the year.

The County Championship being thus practically decided, humble observers can concentrate upon the doings of individuals. Here, nothing has been so remarkable as the all-round ability of Hammond, who, born in Kent, plays in the capacity of W. G. Grace's successor for Gloucestershire, and the consistent batting of Hobbs. Hobbs is still England's No. 1 batsman, and Hammond could be played in Test matches for his fielding alone.

Concerning the proposed alterations in the L.B.W. rule, by the way, I can find no support for them among club cricketers. So far as is ascertainable now, there is little chance of the bowlers' being more favoured in this matter. But the problem is going to take months to thresh out.

Smoking Habits.

Everyone knows that the habit of cigarette smoking received an enormous impetus during the War, but I should not have thought the substitution of the pipe by the "fag" was as great as it is found to be by the Report on Tobacco just issued by the Stationery Office. Therein it is shown that in 1907, of the total consumption of tobacco in the United Kingdom, cigarettes provided 23.8 per cent., pipe tobacco, 71.1 per cent., and cigars, 5.1 per cent. In 1924, however, these percentages had changed to 58.5, 40.0, and 1.5 respectively. And it is thought that since 1924, the consumption of pipe tobacco has decreased still further—by 5 per cent.

This is extraordinary. But apparently England is not the only sinner in regard to the "gasper." In Germany, where pipe tobacco still predominates, cigarettes are increasingly favoured; and the same is true of the United States. Does this mean that mankind as a whole is becoming more "jumpy," less contented, less considered? Personally, I would always prefer—other things being equal—the judgment on human affairs of a man who smoked a pipe to that of a man whose lips itched to contain a cigarette.

From a patriotic point of view it is good to read of the growth in the consumption of Imperial tobacco. In 1921, out of the 228 million lb. imported, Empire tobacco supplied 7½ million lb. In 1927, out of 222 million lb. it supplied 41 million lb. But, try as I will, I can cultivate a taste neither for pipe nor for cigarette tobacco from the Empire.

ALTER EGO.

The Third Destroyer Flotilla arrived on August 12 at Port Said from China, and sailed for Malta on August 15.

Signor Mussolini on August 13 entertained at luncheon H.H. Mirza Abdul Husein Khan Taymoor Tash, Minister of the Court in Persia, and the Persian Minister to the Quirinal, with some members of the Italian Cabinet.

THE INDIA OF THE FUTURE.

Two interesting and noteworthy contributions to the discussion of the Indian constitutional question have appeared during the week. One of these is the report of the Committee which was appointed on May 28 last by the All-Parties Conference; and the other is a memorandum framed for the Statutory Commission by the Associated Chambers of Commerce. The memorandum may be accepted as an expression of the considered opinion of the European commercial and industrial community, as it is endorsed by all but two of the constituent Chambers. The report, on the other hand, is the work of a specially appointed Committee and it will be discussed at a meeting of the All-Parties Conference to be held at Lucknow on August 25. It may or may not be adopted by the Conference, and it consequently cannot be regarded at the moment as a final statement. But according to the telegraphic summaries which have been received in this country it is a document deserving of close attention; for it apparently defines the Indian demands more clearly and with greater precision than has been hitherto attempted. It recommends that India should be styled the Commonwealth of India, and should have the same constitutional status within the British Empire as Canada, Australia, New Zealand, South Africa and the Irish Free State, with a Parliament and an Executive responsible to it. The Parliament would consist of the King; a Senate of 200 members to be elected by the Provincial Legislative Councils; and a House of Representatives of 500 members to be elected directly by constituencies, every person of both sexes of full age being entitled to vote. The Executive would be exercised by the Governor-General, acting on the advice of a Council of seven Ministers responsible to the legislature. There would be an Advisory Committee of Defence to effect such economies in the military expenditure as would be compatible with the safety of India. The precise character of the recommendations concerning the provinces is not altogether clear from the telegraphic reports; but it would seem that provincial autonomy with unicameral legislatures is contemplated.

If the report is accepted by the All-Parties Conference it will, we think, have served a useful purpose. It does not, of course, solve the many complex difficulties by which the road to self-government in India is beset. But it does state clearly and definitely what the Indian wants; and this is in itself a great step in advance. Furthermore it is reasonable and sane in tone, and it merits therefore serious consideration. Although its authors are severe critics of this country, it recommends a system of government which is exclusively British. But unfortunately it ignores the tremendous differences in the circumstances and conditions of Britain and India. For instance, it is only within the last few months that universal suffrage has been established in these islands, after centuries of experience of parliamentary govern-

ment. But the framers of the report have unhesitatingly recommended its adoption in India although the Indians are almost entirely without experience of self-government and are, to an enormous extent, illiterate. Again the report contemplates that the Commonwealth of India should exercise the same rights in relation to, and should discharge the same obligations towards, the Indian States, arising out of treaties or otherwise, as the Government of India has hitherto exercised and discharged. If this means that the Government of India in its imperial capacity—as the Paramount Power that is to say—is to be made responsible to a legislature elected only by British India it is obviously impracticable. The Indian legislature cannot possibly claim to exercise authority over States and peoples that are not represented in it. In other words the people of British India have no right to exercise authority over the people of the Indian States.

We have pointed out over and over again in these columns that the European community in India is not opposed to the Reforms scheme; and the memorandum which the Chambers of Commerce have submitted to the Commission abundantly proves this statement. The Chambers recognise that the pledge which Great Britain gave in 1917 to establish representative institutions must be honoured; and for this reason they recommend that a further advance should now be made. As they rightly say it would be difficult to prove that the Indians are capable of governing themselves. But, on the other hand, it would be equally difficult to prove that the Indians are incapable of governing themselves. Nothing, therefore, is to be gained by a prolonged wrangle on this point, and the Chambers are accordingly of the opinion that the full provincial autonomy should now be established in the provinces. That is to say, the next step which would naturally follow after ten years' experience of the Reforms should now be taken. They are prepared to agree to the transfer to autonomous provincial governments of the control of the police and the responsibility for the maintenance of law and order. They would, it is true, introduce certain special safeguards with the object of preventing magistrates and police being unfairly treated. But they take the view that the surest way to make those responsible for the Government realise the need for an efficient police force is to make them responsible for the maintenance of law and order. Under the Chamber's scheme the provincial executive councils would disappear, as there would be no reserved subjects; and all departments of each provincial Government would be under the control of a Ministry. The Chambers favour bicameral legislatures in the provinces; and they also urge that the Central Government should be given powers of intervention in the event of the breakdown of the administration in any province. But subject to this restriction they support the grant of full provincial autonomy forthwith. Their attitude towards the Government of India is not clearly defined in the summarised statements which have been published here. But it would seem that they do not contemplate the introduction of the principle of responsi-

bility into the Central Government. They suggest that *vis-à-vis* the Assembly the Government should be strengthened, presumably by the addition of more nominated members. But in the absence of full information as to what they propose in this connexion no useful comment is possible. One of the recommendations which they have made is, we think, certain to attract a great deal of attention. It is that in the new Government of India Act there should be inserted a clause forbidding discrimination against industrial and commercial interests in central and provincial legislation and taxation, and in municipal by-laws and taxes. The tendency, which has been of late so plentifully exhibited by Indian politicians, to introduce legislation discriminating against British commercial interests in India has naturally alarmed the Chambers. They do not ask for privileges, but they justifiably contend that British commerce in India is entitled to the same impartial treatment that Indian commerce receives in Great Britain. They do not ask for more than this, but they cannot be expected to accept less.

CURRENT TOPICS.

Tobacco and Timber.

When the Imperial Economic Committee was appointed it was agreed between the constituent Governments that recommendations affecting the policy of Customs preference should be excluded from its mandate. This limitation of its reference has been scrupulously respected in each of the interesting earlier reports which the Committee has published on the marketing of food-stuffs within the Empire. But we doubt whether the extent of the handicap imposed by the veto was fully realised until the Committee came to consider the case of tobacco, which forms the subject of the ninth volume issued last week. Although, however, the Committee regarded it as no part of its duty to advocate or oppose any extension of the preference which has been granted on a considerable scale in the United Kingdom, it devotes much space to an instructive analysis of the effects, "since that preference is now one of the dominating facts in the situation." Clearly in such an inquiry India, in spite of the fact that its exportable surplus is small in relation to a crop of 1,000 million pounds, or over one-fifth of the world outturn, has a particular interest. And the presence on the Committee of the High Commissioner, Sir Atul Chatterjee, and of Sir David Chadwick, the former Commerce Secretary to the Government of India, as its very capable Secretary, affords the best possible assurance that the special circumstances of India have received due recognition at every stage of the inquiry. It is, therefore, somewhat surprising to find that, for the reason above stated, and on account of the variations in the total crop being so marked, owing to seasonal and other causes, "it is difficult to ascribe any portion of the growth of production to the direct action of the preference given to the United Kingdom." At the same time it will be noted that whereas the average imports into this country during the three years 1919-21 (inclusive) were only 5 million pounds, during 1925-27 they had risen to practically double that figure. Although cigar smoking has decreased of late in the United Kingdom the Indian producers will note with satisfaction that the Committee does not regard a limited revival as impossible, especially in the case of mild cigars. But manifestly the greatest opportunity before Empire producers in general in this market is in cigarette tobaccos, of which only one per cent. of the total importations are at present drawn from Empire sources, and none from India. The Com-

mittee's valuable suggestions in that connexion merit close attention in that country, where research work, as we pointed out some time ago in these columns, on suitable varieties of leaf has been in progress for several years.

In one sense it was a little unfortunate that another report from the same Committee, also of particular interest to India, should appear with only a few days' interval. But time is the essence of forestry and results are often slow. Demands therefore have to be anticipated and provided for long before they occur. And as the quinquennial meeting of the British Empire Forestry Conference will be held in Australia next month, it was obviously wise to publish the results of the Committee's subsequent investigation into the marketing of timber with the minimum delay. Those concerned in newspaper production do not need to be reminded of the need for an authoritative review of the question on wider grounds as well. The leading forestry authorities are agreed that available supplies of the principal timbers of commerce are rapidly approaching exhaustion. The outlook with regard to soft woods, which constitute about 80 per cent. of the industrial demand, is particularly unsatisfactory. At present the United States alone consumes nearly half of the world's lumber production, and its own softwood resources will soon be limited to the few Western States. When they are exhausted it will be compelled to seek its future supplies almost entirely from the British Empire, and a serious shortage, with all its attendant evils, appears inevitable within a period of less than thirty years. Fortunately the position is not so critical in the case of hardwoods, and the problem which confronts the responsible authorities throughout the Empire is to determine the extent to which certain lighter hardwoods from its great tropical forests can be transformed into efficient substitutes for the softer varieties. India, with its increasing annual outturn consisting chiefly of hardwoods and already representing nearly one-half of the Empire supply of those varieties, has an especial interest in such an inquiry, for the exportable surplus is likely to attain its largest dimensions within the period during which it is expected that the world shortage will occur.

The Kashmir Ice Dam.

The reliability of the annual forecasts of the south-west monsoon by the Indian Meteorological Department, as has been emphasised on several occasions, has been materially improved in recent years. Marked progress, in particular, has been made in the observation of the upper air, and weather conditions in India can now be connected with various prior meteorological occurrences in Africa, South America and other distant countries. But in his evidence before the Royal Commission on Agriculture in India last summer, Sir Gilbert Walker, who is responsible in no small measure for the fact that a department, which for many years was not inaptly described as a step-child of the Government of India, has at last come into its own, explained that while an opinion could be formed of the snowfall in the Himalayas no estimate could be given of the date at which the subsequent floods might come down. Similarly, to foretell the probable extent of catastrophes of the nature of that with which Kashmir has been threatened during the past week is not, of course, likely to be a question of practical politics for many years to come. At the same time much can be done, as was demonstrated on the occasion of the disastrous floods in the Bombay Presidency last year, to mitigate the consequences of such disasters if timely warning is given. Happily the latest indications are that the dam will not burst after all this season, or that if it does burst, a channel will be formed, thus giving gradual relief. At present the Indus is well below normal for this time of the year and even if the earlier reports had proved correct it now seems improbable that any serious damage would have been caused in the surrounding districts while, fortunately, the Sukkar barrage works are amply protected, so far as can at present be ascertained.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 2.

Bengal Council and India's Constitution.

Had it lain with the Bengal Council to settle the new Constitution for India, the matter would already be settled. The Council has been in session since Tuesday, when Sir Abdur Rahim, not to be out-distanced by any one, moved :—

"That in order to secure a satisfactory and lasting solution of the political and constitutional problems that have arisen it is the opinion of this Council that :

"(a) The status of India should be that of a self-governing Dominion under the British Crown as an equal partner in the Commonwealth of Nations within the British Empire . . . ;

"(b) The Constitution of India be on a basis of a Federation of autonomous States, the Federal or Central Government administering only such subjects as concern the whole of India ;

"(c) the present system of government in the provinces, popularly known as diarchy, be abolished and full responsible government be inaugurated in the provinces ;

"(d) in the constitutional instruments the citizens' rights as recognised by all responsible Governments be defined and adequate, and effective safeguards be provided for the protection of the rights and interests of minorities."

There was more of it, but the rest is relatively unimportant. Explaining the scheme embodied in his motion, Sir Abdur Rahim said, among other things, "As regards British interests what we say is this: we want to make our own country worth living in. We want them to remember that this is our own home and our ambition is to make it worth living in. We do not want to injure their interests in any way. In fact, the condition of the country is such that to improve our condition we shall be only too glad to avail ourselves of their knowledge of science, technical skill and power of organisation. But what we want is that whatever intellect we have in this country should have the fullest scope. Indians have never been hostile to the British people, and there is really nothing to be afraid of."

The debate that followed Sir Abdur's speech was described by the *Englishman's* special representative as follows :—

"The debate . . . was a fiasco. A pact had been entered into in the lobby between the Swarajists and the Muhammadans not to press certain amendments likely to lead to bitter controversy, and everything had been so nicely arranged that, after the prayer interval, it looked as if the House would have to adjourn for want of a quorum. But the necessary number responded to the warning bell, and Mr. Nalini Sircar proceeded to upset the whole apple-cart. The Swarajist Whip had prepared an oration on the amendment standing in his name, and, pact or no pact, it had to be delivered. The result was a farcical division, an alteration in the wording of the protection of minorities clause in the Dominion status resolution which the Muhammadans resented, and the rising of Mr. Fazlul-Huq to press his amendment in favour of communal electorates as the only means of safeguarding Muslim rights. Thereafter the debate degenerated into a bitter communal squabble."

Neither the Government nor the European group in the Council took part either in the debate or the division on Mr. Fazlul-Huq's amendment. It was lost by 50 votes against 30. Sir Abdur Rahim's motion was carried without a division.

Bengal Legislation.

The session of the Council was opened by His Excellency the Governor. "In view," His Excellency said, "of the important nature of the subjects with which the

Council will be asked to deal during the session, I have thought it advisable to take advantage of my privilege of addressing the members to-day." The subjects include the Bengal Tenancy Act Amendment Bill, a very difficult piece of legislation, and one that has been before the Council, in one form or another, for over two years. The Amending Bill aims at granting substantial rights to under-ryots, and there is general agreement that legislation is overdue. Another piece of legislation, on the supreme importance of which His Excellency dwelt, is the Bengal Rural Primary Education Bill. That too much money is being spent on universal and secondary education in Bengal, at the expense of the education of the masses, is the view expressed in a quinquennial review of the progress of education in the province that has just been published. Illiteracy is still rampant, despite the strenuous efforts that are being made to kill it, and the review shows that 79.5 per cent. of boys of school-going age are still unschooled.

To speak so is to speak in the language of the authorities: it is the language of the quinquennial review. I have before this expressed my own opinion, which is that a little knowledge to read, which is presumably all that the peasantry of a country will ever possess, is not the good thing that it is imagined to be, but an evil thing. I know, however, that I am at present a voice on that subject crying in the wilderness. Word has gone forth that education is *the* thing, even in Afghanistan.

The Political Detenus.

His Excellency made an important pronouncement to the Council on the subject of the political *détenus*. The sentence of most importance in this part of His Excellency's speech is the one, it may be feared, that least attention will be paid to. It was this: "I sincerely trust that a movement which was met, and in similar circumstances *would always have to be met, by exceptional measures*, however repugnant it might be to Government to use them, will not again develop to the infinite harm of the Province." There are now no political *détenus* in the jails, and only sixteen in village or home domicile, or exiled from certain areas in the Province, or from the whole Province, and His Excellency hopes that the number will be greatly reduced, if not extinguished, in the course of a few more weeks.

Appointments.

By the appointment of Sir Malcolm Hailey, now Governor of the Punjab, to succeed Sir Alexander Muddiman as Governor of the United Provinces, his services are secured to India for a further term, and there can be little doubt of the wisdom of the step. Sir Geoffrey de Montmorency, at present the Chief Secretary to the Punjab Government, will be the new Governor of the Punjab. The King-Emperor has appointed the Hon. Sir P. C. Mitter to the Bengal Executive Council in the vacancy caused by the death of the Maharaja Bahadur of Nadia. That is undoubtedly another good appointment.

East India Railway.

Though the East India Railway strike ended so recently, there is trouble again, and the authorities have closed the Lillooah workshops for a week, while the Agent goes to Simla to discuss matters with the Railway Board. There should be matter of more moment to report next week.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 4.

The Committee of the Bombay Council.

On Wednesday Sir Chunilal Mahta moved the following resolution: "That the Legislative Council do proceed to elect a committee of seven representatives to take part in the joint conference of the Indian Statutory Commis-

sion, as stated in the letter from the Chairman of the Indian Statutory Commission to his Excellency the Viceroy and Governor-General, dated February 6, 1928." In discussing the resolution the House descended to a very low level of debate—in fact, the lowest seen in this Presidency. Sir Chunilal made a very short speech in proposing the resolution and gave the impression that he was not very enthusiastic about the question; this most probably was due to a desire to keep on good terms with both parties. It is interesting to note that the House set up the record of 42 speeches on the resolution. The voting was on Thursday, and it was not a surprise when the resolution was passed by a majority of 24 votes. Yesterday the Council elected the Committee. It is composed of the following gentlemen:—Khan Bahadur Bhutto, Leader of the Muslim party in Sind, who headed the poll with 53 votes; Khan Sahib Abdul Latif of Sholapur; Syed Mahomed Shah, the new member for Hyderabad; Sardar Muzumdar; Mr. B. V. Jadhav, leader of the Non-Brahmins in Bombay; Dr. Ambedkar, another leader of the Non-Brahmins; and Mr. E. Miller, of the Bombay Chamber of Commerce.

Bardoli Negotiations.

The arrival of Mr. Gandhi at Surat was followed by Mr. Patel's departure to Poona. Mr. Patel left for Poona at the invitation of the members of the Council who wished to confer with him. It is significant that Mr. Patel is staying at Sir Chunilal's place in Poona, and the general feeling is that the chances of arriving at a settlement were never better than at present. While the persons present at the Conference are anxious not to wreck the chances of settlement by a too early disclosure of their plans, certain incidents which have taken place at Poona during the week lend support to the view that the dispute will be ended in a few days. The most important event is the interview which Sir Leslie Wilson had this week with Mr. Patel. Mr. Patel has expressed himself ready for an honourable settlement, and I have reason to state that he is eager to settle the question, because there is a general feeling that he missed his opportunity when he refused the terms of the Governor of Surat. The entire responsibility of the settlement has been thrown on the Surat members of the Council, and it must be said to their credit that they are sparing no pains to arrive at a compromise. The reports in the Press are conflicting and it is by no means easy to decide whether the negotiations will succeed, as some reports have it, or whether they will break-down, but there is no doubt that the public are anxious to bring the matter to an end, and that in itself is a good omen.

The Coastal Traffic Reservation Bill.

Mr. Sarabhai Haji, an employee of the Scindia Steam Navigation Company, seeks through two Bills to give effect to the recommendations of the Indian Mercantile Marine Committee that indigenous shipping should be encouraged by a system of "bounties, subsidies, etc."; the object of the two Bills is to secure the coastal traffic to Indians. The first Bill is intended to do away with all monopolies, and the second aims at getting all the coastal traffic into the hands of Indians in the next five years. The Bill, should they come up before the Assembly, have every chance of being passed. Mr. Gandhi expresses the public sentiment when he writes in *Young India*: "I should welcome and support all such action that would protect the organised industries from foreign competition, especially when it is grossly unfair, as it is in the case of shipping." In this connexion it is interesting to note that two directors of the Scindia Steam Navigation Company are at present in England; Mr. Walchand Hirachand Doshi and Mr. H. P. Mody have gone over to see Lord Inchcape with regard to certain complaints about the agreement between the S.S.N. Company and the British India Company made ten years ago.

The Agricultural Commission.

An interesting address was delivered last Saturday by

Sir Lalubhai Samaldas at the Institute of Political and Social Science, when Dr. Harold Mann presided. Both the Chairman and the speaker are recognised authorities on agriculture and kindred subjects. Sir Lalubhai dealt with the Agricultural Commission's Report in all its aspects. Criticising the terms of reference of the Commission, he said that the exclusion of the systems of land tenure and revenue assessment from them was a mistake. He held that the personnel of the Commission was not satisfactory, and that the method of inquiry was also faulty. Out of the 395 witnesses examined, only twenty were agriculturists *bona fide*, the case of the small landholders thus going by default. Two important questions were dealt with only cursorily by the Commission: the effect of the present rate of exchange on the economic condition of the agriculturists and the extent of rural indebtedness in the various provinces. The report had only taken the Government point of view and, in fact, only two recommendations were to be found in it, viz., the projected establishment of a Council of Research and the proposal to increase the salaries of the Directors of Agriculture. Dr. Mann, in his speech, disposed of the report as a "wearisome product with nothing in it worthy of the conception of a statesman." He further pointed out that the idea apparently entertained by the Commission that the increase of the production of crop per acre would be a panacea for all the ills of the cultivator was not correct.

OBITUARY.

SIR J. S. CAMPBELL.

Sir John Stratheden Campbell, K.C.S.I., who has died at Sidmouth, was born in 1863, and was educated at Rugby and Balliol College, Oxford. He entered the Indian Civil Service in 1881, and served as Joint Magistrate, Deputy-Commissioner, and Magistrate and Collector. He became Commissioner, United Provinces, in 1906, was a Famine Commissioner in 1907, and was appointed to the Board of Revenue, U.P., in 1913, retiring five years later.

SIR FRANK BEAMAN.

Sir Frank Beaman, whose death, at the age of 71, after a long and distinguished judicial career in India, is announced, was the son of the late Surgeon-General Arden Hulme Beaman, and was educated at Bedford Grammar School and Queen's College, Oxford. He passed into the Indian Civil Service by the examination of 1877, and, arriving in India at the end of 1879, served in Bombay as Assistant Collector and Magistrate. After further service in the Panch Mahals district he was appointed in 1886 special Settlement Officer in Baroda, and in 1891 became judicial assistant to the Political Agent in Kathiawar. Promotions duly followed, and after a few years as Judicial Commissioner of Sind he was appointed in 1907 a Judge of the High Court of Bombay, where the rest of his service was spent until his retirement in November, 1918. He was knighted in the June of the preceding year. After his return to England Sir Frank Beaman by no means lost touch with events and political movements in India. In his later years he suffered from declining sight, but that physical impairment by no means weakened his intellectual vigour or the philosophical and ethical studies to which he devoted himself, and on which he wrote with great conviction.

Mr. Suleiman, Acting Chief Justice of the Allahabad High Court, on August 7 inaugurated the first Bar Council formed under the Indian Bar Councils Act.

The Secretary of State for India in Council has appointed Mr. Edwin Howard to the post of Information Officer at the India Office, vacant owing to the death of Mr. O. Lloyd Evans.

Mr. Surendra Nath Mallik, C.I.E., Member of the Council of India, has been appointed Member of the Indian Delegation to the forthcoming Assembly of the League of Nations in place of Sir Basanta Kumar Mullick, who is detained in India by his duties as Acting Member of the Executive Council of the Governor of Bihar and Orissa.

The Government of India has given formal approval to the Articles of Association of the Bengal Flying Club, and the initial subsidy is being made in October. This comprises a grant of 20,000 rupees (about £1,500), with 9,000 rupees (about £700) besides, for the erection of a hangar, the gift of two light aeroplanes, and rebate off customs duty on equipment. The Bengal Flying Club, which was founded in Calcutta last year, is the fourth light aeroplane club in India to be officially recognised by the Government, the others being at Delhi, Bombay, and Karachi.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Stabilisation.

The various financial measures taken recently by the Roumanian Government, foreshadowing the issue of a large stabilisation loan, which now seems to be a distinct possibility in the autumn, have naturally been received by the Roumanians with considerable satisfaction, for it is realised very clearly that the obtaining of a large loan from abroad, coupled with the stabilisation of the currency, are the inevitable preliminaries for the country's recovery from the economic difficulties from which it has suffered ever since 1918. As our Bucharest Correspondent points out this week, the policy of M. Bratianu to avoid further foreign obligations has been responsible for the lack of assistance from abroad hitherto, but it is now evident that this policy is being modified, as indeed it must be if Roumania is to regain her former position in the Balkans. Thus our Correspondent records the arrival of two experts to draw up a scheme for the better development of the mining and metallurgical industries, while it is reported that an English and an American railway expert have been engaged to examine the condition of the railways. It looks, therefore, as if, once the loan is a *fait accompli*, developments in Roumania will be fairly rapid. The country is certainly in a position to make a quick recovery, given favourable conditions, and her economic progress, it must be emphasised, is going to make an enormous difference not only to the Near East but to world trade generally.

Cyprus Asbestos Company.

Further very satisfactory progress was made by the Cyprus Asbestos Company in 1927, and at the recent general meeting, a report of which will be found elsewhere in these columns, Mr. Runacres, who presided, was able to give a most encouraging report of the company's position and prospects. In 1927 the production of asbestos increased by 5,003 tons, and thus for two years in succession the production has been very nearly doubled. The tonnage milled in 1927 was 301,839, and Mr. Runacres stated that the company expects to mill this year a minimum of 400,000 tons, which on the same recovery basis as last year means a production of 14,800 tons.

Greek Loan Service.

Particulars of the yield of the new and old revenues assigned to the Greek Seven per Cent. Refugee Loan of 1924 for the first half of this year show a substantial increase in both cases. For the six months the new revenues amounted to 444,807,246 drachmæ, an increase of 6,110,366 drachmæ, while the total of the old revenues was 1,589,122,605 drachmæ, an increase of 219,282,427 drachmæ. The loan has a first charge on the new revenues and on the surplus of the old revenues after the prior charges, which for the current year are estimated at 29 per cent., have been satisfied. The security available for the Refugee Loan for the first six months of this year is put at about 1,557,193,069 drachmæ, representing £4,152,514 at the stabilised rate of exchange. The service of the loan requires £461,250 for the half year, so that it is at present covered nine times over. It is not surprising in the circumstances that the loan, which was issued at 88, should now stand at 102½. The increase in the revenues is an index of the gradual improvement of the economic position of Greece in recent months, a

development which will be continued if, as is to be hoped, the new Government is able to give to Greece the political tranquillity of which she stands in need.

Suez Canal Traffic.

The figures for the Suez Canal traffic for the first half of this year show that the great improvement shown in the first quarter was more than maintained in the ensuing three months. For the second quarter the tonnage totalled 8,139,000 tons as against 7,853,000 tons for January to March, the figures for the half-year being thus 15,992,000 tons. This total, it is interesting to note, is 1,490,000 tons above the previous record for the same period of the year. As regards the direction of the traffic in the six months, 7,484,000 tons represented the outward and 8,508,000 tons the homeward movement. Of the total tonnage the shipping under the British flag totalled 9,043,000, an increase of 767,000 tons on the figures for the first half of last year. Holland was second with 1,686,000 tons, an increase of 185,000 tons, and Germany was third with 1,518,000 tons, an increase of 288,000 tons. A feature of the returns was the increase of 71,000 tons in the shipping under the Greek flag. Greece only figures tenth in the list of countries, but this increase was the fourth highest. It will be remembered that at the meeting of the Suez Canal Company a warning was given as to the trade prospects for the later part of the year. We are now in a position to estimate the values of the various harvests, and as this summer has been almost a uniformly good one for the crops, it is obvious that the demand for tonnage will increase.

The Motor in India.

Further evidence of the effect of the competition of the motor on the railways in India is forthcoming in the report of the Darjeeling-Himalayan Railway for the past year. There was a decline of Rs. 56,000 in the passenger receipts, which was due to the development of motor-bus services. As I have already pointed out, the railways in India are in a special position as regards motor competition, and it is only over relatively short distances and in large centres of population that the rivalry of the motor is at present likely to be serious. No doubt in India, as elsewhere, the railways will ultimately have to take to the roads, and in view of experiences elsewhere the sooner this development happens the better it is likely to be for the railways.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 15.

Stabilisation of the Currency.

There are two subjects occupying the minds of most people in this country at the present time; these are, the intended stabilisation of the currency and the heat wave and long drought.

With regard to the first there is little new to report. Ministers are on holiday and the negotiations appear to be in abeyance. But the country as a whole is enthusiastically in favour of the step, which all financial and commercial circles believe will mark the beginning of a gradual improvement in the economic condition of the country. All the Chambers of Commerce and of Agriculture have expressed their approval, and the Union of Roumanian Industrialists at a meeting on August 9 passed a motion heartily approving of the efforts of the Government to effect the stabilisation, and stating that they hoped that this measure, when brought into operation, would encourage an important influx of foreign capital into the country. Apparently the Minister of Finance has somewhat modified his tactics in this regard, for it is to-day reported in the Press that two important engineer experts, one French and one German, have arrived in Roumania at the request of the Roumanian Government and are visiting the mining districts with a view to elaborating a scheme for the more efficient development of the Roumanian mining and metallurgical industries. It is further reported that an English and an American railway expert have been engaged by the Roumanian Government to examine the condition of the State Railways from the administrative and technical point of view and to draw up a scheme for their improvement, covering the necessary new construction. So many abortive attempts have been made to set the railways on their feet that one feels diffident about building great hopes on the present information; still, as there does seem to be a probability that the negotiations for a stabilisation and railway loan are destined to bear fruit this autumn, it may reasonably be hoped that something will really be done this time to enable Roumania to develop her great natural wealth.

All attempts made by foreign groups to lend assistance in this direction have hitherto been wrecked by the consistent policy of M. Vintila Bratianu (whose word has been law during most of that period) to incur no further foreign obligations until all existing debts had either been paid or consolidated, and his measures to this end affected not the policy of the State, but also discouraged the co-operation of private foreign capital in Roumanian industries. From the above statement regarding the proposed development of the mining industries, it would appear that M. Bratianu has now modified his policy. There is no doubt that there is great scope for capital investment in Roumania, but it remains to be seen whether the conditions offered will be acceptable to foreign capitalists.

The Agricultural Situation.

At the beginning of the summer all the cereal crops promised a "bumper" harvest, but on June 24 a period of intense heat began, and in some districts no rain at all has

fallen since then. In other parts, however, and especially in Transylvania, there has been sufficient rain to save the maize crop, which in a great part of the Danube valley has suffered very severely from the drought. The last official report, which is always rather inclined to optimism, states that the maize crop in most parts of Old Roumania is badly in need of moisture. Some local rains have fallen since then, but it is not certain that they were in time to do much good. Heavy hail storms in the late spring did great damage to the fruit trees in many parts of the country, so that tree fruits, such as apricots, apples, and pears are scarce and very expensive this year. Owing to the prolonged drought also all vegetables cost double the usual price this summer. This, however, only affects the town dwellers, and it is the maize crop that chiefly interests the majority of the population, for maize is the staple diet of the peasants, for whom it largely takes the place of bread. Hence a failure of the maize crop is something like a national disaster, so it is to be hoped that the final returns will show that the general situation is less critical than it appears to be.

The Vice-President of the Union of Chambers of Agriculture has made a public statement to the effect that the reports from the different districts as to the quantity and quality of this year's harvest vary enormously. In the north of Moldavia, the Banat, the Dobruja and the north of Bessarabia they are said to be excellent, while in the hilly districts of Muntenia and in the south of Bessarabia they are very poor. Barley is generally reported to be excellent, but in many parts there is no seed-wheat and many petitions have been received at the Chambers of Agriculture for assistance in this direction, by the distribution of seed-wheat. There are no complaints as regards transport.

Italy and Roumania.

The Roumanian press comments with great satisfaction on the ratification by Italy of her official sanction of the union of Bessarabia to Roumania, by the publication of the relative law in the Italian Official Gazette.

The Banca Commerciale Italiana of Milan has offered a loan of 12 million dollars to the Roumanian Banking Institution, the "Credit Industrial," which is to be used for the discounting of industrial Bills. This sign of goodwill from the Italian group has been greatly appreciated in official circles and has raised the status of the affiliated Italian Bank in this country, the Banca Commerciale Italiana si Romana.

Roumano-German Differences.

A delegation headed by M. Oromolu, formerly Governor of the National Bank, has arrived in Berlin for the purpose of starting negotiations with a view to settling the outstanding financial differences between the two countries, i.e., the question of indemnity for the bank notes issued by the Banca Generale during the German occupation of this country; and the question of the recognition by Roumania of her obligations in regard to the stocks of certain issues of Roumanian loans on the German market. These are some of the questions which have hitherto obstructed all loan negotiations, and it is understood that both parties are now determined to come to an agreement.

GLASGOW

THE BULGARIAN BUDGET.

The Bulgarian Budget for 1928-9 in the form in which it was presented to and left the Sobranie showed a total expenditure of 7,481,500,000 leva (ordinary expenditure, 6,750,000,000 leva; special expenditure, 731,500,000 leva) and a total revenue of 7,565,000,000 leva (ordinary, 6,788,000,000; special funds, 777,000,000). Minor alterations were made during the passage of the Budget through Parliament, but without affecting the total. The special expenditure included as its main items: Agriculture and Domains, 283,000,000 leva; Railways and Ports, 253,000,000; War, 99,000,000; Justice, 87,000,000 leva. The details of the Budget are as follows:—

EXPENDITURE.

	1928-9. Millions of leva.	1927-8. Millions of leva.
Court, Parliament, and Cabinet	57	52
Public Debt	1,787	1,577
Audit Office	22	25
Ministries—		
Foreign Affairs and Religion		
Foreign Affairs	94	97
Religion	45	46
Interior and Public Health		
Interior (including Police)	285	295
Public Health	161	167
Public Instruction	892	871
Finance	196	205
Justice	188	191
War	1,110	1,182
Commerce, Industry, and Labour	133	154
Agriculture and Domains	207	229
Public Works		
Roads and Works	209	269
Forced Labour	163	171
Railways, Posts and Telegraphs		
Railways and Ports	805	981
Posts, Telegraphs, and Telephones	223	248
Aviation	30	31
Reparations	39	52
Amortisation of Debt to National Bank	100	150
	6,750	6,992

REVENUE.

	1928-9. Millions of leva.	1927-8. Millions of leva.
Direct Taxation	918	897
Indirect Taxation	2,647	2,730
Fiscal Duties	636	615
Fines and Confiscations	72	70
Railways and Ports	1,168	1,171
Posts, Telegraphs and Telephones	261	267
State Domains and Enterprises	397	181
Local Contributions for Education	445	433
Miscellaneous Receipts	110	
Balance from previous Budget		

The Bulgarian financial year of 1927-1928 closed with a surplus of 238,000,000 leva (about £355,000) after the necessary expenditure and supplementary credits necessitated by the liquidation of War debts.

Company Meeting.

CYPRUS ASBESTOS COMPANY.

Production Again Nearly Doubled.

The ordinary general meeting of the Cyprus Asbestos Company, Limited, was held at Amiandos on July 31 last.

Mr. A. S. Runacres, who presided, said:—Gentlemen,—As you will have seen from the directors' report and accounts, the production for the year 1927 increased by 5,003 tons, which compares with an increase in 1926 of 2,976 tons, and our production for the second year in succession has been again very nearly doubled.

The tonnage milled in 1927 was 301,839, as against 154,595 in 1926. On the basis of the recovery yield of 4 per cent. obtained in 1926, we should have produced 12,000 tons of asbestos without any appreciable increase in working costs. The yield, however, dropped to 3.7 per cent., and results, although showing substantial progress, were not so good as at one time were expected. However, I am glad to say that the recovery yield shows no sign of falling any further; on the contrary, indications point to a somewhat slow but steady improvement.

We expect to mill this year a minimum of 400,000 tons, which, on a recovery yield on the same basis as last year of 3.7 per cent., would produce 14,800 tons. Possibly we shall do better than this, as the production to date amounts to 7,130 tons, as compared with 5,049 tons last year, so that we are to-day (July 31) 2,081 tons ahead of last year's figures. We have installed a fourth 330 k.w. set in the central power station, and a fifth 330 k.w. set will be added shortly.

Quarry Organisation.

Primary Mill No. 6 started up on July 1, and is being fully supplied with ore. The quarry organisation is working satisfactorily, and we are now benefiting by the large amount of development work done during the last two years. No difficulties are anticipated in the future in increasing quarry production to keep pace with increased milling capacity.

The quarries are still in the very early stages of development, and although some time hence we may reach a point when an improved recovery yield will give us a yearly increased tonnage of asbestos and larger profits without having to instal additional plant, this stage has not yet been reached, and in the meantime we must look mainly to further development work and the milling of an increasing yearly tonnage to enable us to earn larger profits each succeeding year. The whole business is working smoothly and satisfactorily, and the profit for the year 1928 is expected to show a substantial increase over that shown in the accounts now before you.

FORTHCOMING SAILINGS.

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, August 30); s.s. Manipur for Calcutta (Birkenhead, September 6).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 5).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, August 25); s.s. Golconda for Bombay and Karachi (London, September 8).

Cunard Line.—S.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, August 25); s.s. Bantria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool September 15, and Swansea September 18).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29).

P. and O. Line.—S.s. Kaiser-i-Hind for Bombay (London, August 31); s.s. Nagoya for Colombo, Madras, and Calcutta (London, September 1).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 1); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 1).

Ellerman and Parry Lines.—S.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool, August 25); s.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool September 1, Swansea September 6); s.s. Dido for Malta, Alexandria, Jaffa, and Haifa (Liverpool, September 8); s.s. Gerano for Gibraltar, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 8); s.s. Lesbian for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 22).

** Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian Ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 21.

The volume of Stock Exchange business is at a low ebb, as is usually the case at the height of the holiday season, but there are few signs of weakness, and the new account has opened with a steady tone. The only market presenting features of exceptional interest is the oil share section where most of the leaders have advanced in price as a result of persistent buying, prompted by more optimistic views of the future of the industry.

Markets being quiet, attention in investment circles has been largely absorbed by two important announcements made by the Treasury on Thursday night. One concerned the result of the offer of 5 per cent. Treasury Bonds 1933-35 to convert during July into 4 per cent. Consols. The response to this offer has been far better than was expected, £134 millions out of a total of £217 millions having been converted. The other announcement is of a new issue of £35 million 5 per cent. Treasury Bonds, the proceeds to be used to pay off the outstanding portion of the 4 per cent. and 5 per cent. National War Bonds which mature on September 1. The new bonds are to be sold by tender, the minimum price being 101. These are steps preparatory to a bigger conversion operation for which the Treasury is biding its time and watching for suitable monetary circumstances. But the success of each step lightens the bigger task ahead, and the good conversion result just announced should serve to strengthen the tone of British Government securities, which have been slightly affected of late by monetary doubts.

The "Tote."

One of the events of the week has been the exemplary action taken by the Stock Exchange Committee in order to protect the investing public. A prospectus was issued by a company called "Totalisators, Limited," which, in view of the recent legalisation of betting by totalisator in Great Britain, has been formed to purchase the rights for Great Britain and the Irish Free State in the "Premier" totalisator machine from an Australian company. The issue of the prospectus was followed by a statement by the Stock Exchange Committee that no

dealings would be allowed in respect of any totalisator flotation unless it was stated that the machine concerned had been adopted by the Racecourse Betting Control Board. As a result the directors of Totalisators, Ltd., have postponed making the allotments and it will be interesting to see what further steps they will take. The Stock Exchange Committee, it has been said, might have acted earlier, and there is much difference of opinion whether the Committee took the right course. The Stock Exchange Committee, whatever the technical merits of their action, has served the investing public well if it has thereby stopped a flood of prospectuses of a premature type.

The Oil Outlook.

The oil share market has recently shown more buoyancy than for some time past. This is due less to any outstanding tangible fact than to a general belief that the worst is passed. American production, it is true, shows a somewhat declining tendency, while the oil war in the East was lately terminated. But, although American production is lower, the phase of overproduction is by no means at an end. There have recently been rumours that a number of the world's leading oil magnates are meeting in Scotland with a view to arriving at an international agreement to restrict production. It remains to be seen how much substance there is in these rumours. Many authorities, however, would welcome such an agreement, since they hold that there is urgent need for conserving the world's oil resources. In the words of one observer: "Although few things are more dangerous than attempting to prophesy future events where oil is concerned, it is difficult to escape the conviction that the world is using up its oil resources of liquid petroleum at such a rate that bankruptcy is inevitable." It will be remembered that Sir John Cadman, speaking as a geologist and business man, said substantially the same thing at the last meeting of the Anglo-Persian Oil Company. In a word, whatever the immediate future may hold, the present signs would seem to point to the likelihood of the more distant future favouring the holder of good oil shares.

Port of London Stocks.

The report of the Port of London Authority for the year ended March 31 last again makes a satisfactory showing, the surplus of revenue over expenditure amounting to £1,347,548. This compares with £1,403,513 for 1926-27 and £1,308,236 for 1925-26. The sum remaining to be carried to the balance sheet was £591,399. The undertaking occupies a very strong financial position. There are various reserve funds, including a general reserve fund, separately invested, of £1,000,000, which together make a substantial total. The comparative stability of the earnings of the Authority, and the fact that they are likely to increase rather than decline, lend interest to the Authority's stocks for those investors who cannot afford to take risks. The yields, it is true, are correspondingly modest, but virtually gilt-edged security is not accompanied by generous returns. At any rate, the yields are appreciably above those given by British Government securities. Taking the long-dated stocks the 4 per cent. inscribed stock, redeemable 1940-60, gives a return of £5 2s. per cent. This is also the yield given by the 4 per cent. inscribed stock of which the years of redemption are likewise 1940-60.

TENDERS INVITED.

EGYPT.

Tools, Etc.—The Office of the Principal, Royal School of Engineering, Giza, invites tenders for the supply of small workshop tools and accessories, accumulator battery, switchboard, etc. October 4. Generator Set.—The Ministry of the Interior invites tenders for the supply and delivery of the material required for an additional D.C. generator set for the Beni Mazar Power Station. October 20.

Motors and Motoring.

By G. B. B.

New Bean Car.

The name of Hadfield, of Sheffield steel fame, has been given to a 75-mile-an-hour sports model produced by Bean Cars, Ltd., Tipton, England, which is under the control of the firm of which Sir Robert Hadfield is head. The car has been built in response to representations from overseas countries where the lively performance of the 14/45 horse-power touring model led users to believe that it would lend itself to "hotting up." Speed is combined with safety equipment, including splinterless glass, four-wheel brakes, and headlights that give a 200-yard beam.

Two types of bodywork are fitted—a light fabric saloon and a smart fabric open body, both equipped with pneumatic upholstery. All essential parts are made with Hadfield's steel, and the tyres, on wire wheels, are reinforced Dunlop cords.

The chassis weighs 16 cwt.; ground clearance is nine inches, with clean design underneath; and the track four feet, nine inches. The chassis will be known as the "Hadfield" Bean 14/70 sports model. The 14/45 horse-power model continues to be made.

New Motor Roads Scheme.

The suggestion that has been made so frequently that big motor roads should be constructed from London to other centres, privately owned and kept in condition by tolls levied on the users, seems to be taking tangible shape at last. I have heard many arguments in favour of the scheme, and private car owners generally welcome the prospect of being able, in the near future, to drive their cars at full speed. Personally, I shall need convincing, and a good deal of convincing at that, before I favour the proposal. If the use of such roads is to be confined to trained racing drivers, well and good. If they are to be open to all who care to pay the toll, then I have no hesitation in saying that before they have been open for any length of time, we shall be appalled by the number of accidents, and serious accidents at that, which will take place. It is not every driver who wants to drive fast and knows how to drive fast, and we shall therefore always be exposed, on such roads, to the risk of meeting or of being overtaken by a driver who dashes along at from 70 to 80 m.p.h. and then loses control!

I see Mr. Shrapnel-Smith, who is president of the Commercial Motor Users' Association, is not in agreement with the proposal. He said the other day that after looking into the question carefully, he had arrived at the conclusion that speed roads such as those proposed were not desirable from an economic point of view. He added: "The Commercial Motor Users' Association does not want them. It is of no use making comparisons with Italy. The standard of our own road construction is vastly superior. Further, the motorist already pays large sums in road taxation and I do not think that he would be willing to pay more. Consider the proposed road from London to Brighton. The suggestion is that this would start at the Kingston by-pass. It would take a motorist half an hour to reach that point from Pall Mall. By that time he would be getting into the country, and it is just at this point that he is to be asked to pay more or less heavily just for the pleasure of being allowed to go on a speed road for about 30 miles. Then, just as he was nearing Brighton, he would have to leave the track and take to the ordinary public roads again. I doubt if he would find the saving of time worth while. If he could start on his speed road in the centre of London it would be a different thing. So it would if he could follow it to the centre of the town to which he was going. I am of opinion that our present roads have not reached saturation point."

Mr. J. H. Lowe, of the Motor Drivers' Association, is also not in favour of the speed roads. His view is that

if there be no speed limit imposed, they will develop into mere racing tracks, an opinion which is held by most people. He added: "I cannot imagine what such a road would be like without speed restrictions. I do not think any motor-coach owners would care to send their vehicles on these roads."

A further point is that if such roads are to be a financial success, they would have to be well patronised by commercial transport firms. But heavily laden lorries are not the speediest of vehicles, and their presence would add considerably to the risks of fast driving by other vehicles. An accident to one of these, in the shape of a broken axle, or a bad skid resulting in an overturn would cause bad congestion and it might easily be found, in practice, that these speed roads were such only in name and not in fact.

NEWS FROM ALL SOURCES.

The National Bank of Egypt has declared an interim dividend of 8s. per share (4 per cent.) on account of the profits for 1928.

The number of new motor cars registered in Iraq during May was 47 and that of motor trucks and omnibuses 11.

The Bombay, Baroda, and Central India Railway Company has given a contract to the Sentinel Waggon Works, Shrewsbury, for three "Sentinel-Cammell" steam rail cars.

The Sudan Government Railways have awarded contracts for 75 30-ton bogie covered goods waggons to the Gloucester Railway Carriage and Wagon Company, and for 50 30-ton open bogie goods waggons to Cammell, Laird, and Co., Nottingham.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 15:—

Egyptian Futures.—Sakel Contract.—This contract jumped 50 points (November) after the publication of last Wednesday's Bureau report and then reacted sharply in sympathy with the weakness in the American market. Not for a long time past has our market presented such a demoralised appearance as it did during the two days immediately following the report, but by midday on the Friday a generally sold out feeling prevailed and the tone was much quieter.

Outside speculative interests were temporarily scared away and the professional traders had apparently closed their books in disgust. At this, the first sign of steadiness, with the November contract quoted at about 17.10d., legitimate trade began to show signs of revival. A fair amount of "Fixing" of cotton took place and inquiries for actual poured in. No great weight of business resulted, but it was a welcome change after a long period of inactivity. Further weakness in New York and the American market here failed to choke the demand entirely, and it has become increasingly evident during the last few days that the current levels for Egyptian cotton are considered a commercial proposition.

Fluctuations have latterly been restricted within comparatively narrow limits and November contracts have shown a considerable amount of resistance in the neighbourhood of 17d. It would be folly to prophesy a speedy recovery at this stage, but we would again remind our readers that the statistical position is a strong one and any sustained revival in trade demand is likely to be reflected in our market to no uncertain degree, even allowing for the fact that the present premium of 750 points over American contracts looks an ample one at the rates ruling.

We doubt if there is much of a short interest open after the recent heavy drop, and as the weight of a possibly huge American crop still hangs over the market it is unlikely that the prospects of a "bull" campaign will offer much attraction to outside interests for the time being. We are rather inclined to look for a period of comparative steadiness (provided, of course, that there is no further collapse in American cotton) with possibly an upward tendency sustained by an improved offtake for actual cotton.

Our market has widened out again with Alexandria, the discount ruling at the moment being approximately 30 points, but this probably will be only a temporary movement and we expect to see the difference close in again.

Upper Contract.—More activity has been witnessed in this contract. After the Bureau figures were received November was quoted at 13.10d. (a jump of 55 points), but two days later, in sympathy with the marked weakness in American contracts, a relapse took place, at one time to as low as 12d. At this period it was possible to engage in the Upper/American straddle at a difference of 225 points—a very reasonable-looking proposition, of which advantage was taken by many traders. This straddle buying, together with trade support, caused a recovery of some 35 points, but renewed weakness in American cotton and heavy selling on Continental and Alexandria account, induced by "bearish" crop cables, caused a further decline, and November broke through the 12d. level. At the lowest, trading in this month took place at 11.74d.; that was on Monday, the 12th inst., and since then a much improved tone has developed as a result of trade support and stronger American markets. As we write, the November delivery is very firm in the neighbourhood of 12.50d. per lb., or practically unchanged from when we last wrote just prior to the Bureau report.

Egyptian Spot.—The excitement which followed the Bureau announcement, and the fluctuations which took place, were not calculated to inspire confidence amongst traders, and it was only on Friday last, when prices had had a chance to find a level (more or less), that trade interest began to make itself felt. About mid-day inquiries poured into the market, and although no great weight of business was put through at first, a much better tone has resulted in the Egyptian section in consequence, and we are pleased to be able to record that up to date the improvement in the demand has been fully maintained.

Sakel cotton at 750 points over American contracts does not, to our mind, look unreasonable, and Uppers at a difference of from 225 to 235 over look cheap compared with competitive growths. It is evident from what has occurred during the past few days that the trade is much of the same mind.

The local inquiry has been principally concerned with Upper cotton at from pass to 50 on contracts, with a certain amount of attention also paid to the lower grades, at from 10 off to 75 off. The

top qualities, though not much in request, are very hard to find. Sakel cotton at from pass to 100 on has been in good request and quite a brisk inquiry for the lower quality at from 15d. to 16½d. has sprung up to-day. The best Sakels have been in only moderate request. Pillion, White, and Nahda have all come in for a share of attention. Pillion, of course, has become very scarce. The grade of White cotton in demand at the moment appears to be about Good Fair to Strict Good Fair. A steady improvement in the demand for Sudan Sakel has been witnessed, but Tokar Sakel still remains very neglected. Inferior qualities of all growths have, generally speaking, been in moderate request only. America has again been in the market both for Uppers and Sakel.

C.i.f. business has been quiet, which is hardly surprising when one realises the tightness of the Alexandria spot market. Forwardings to spinners for the week ending the 10th inst. were returned as 6,555 bales Egyptian and 1,195 bales Sudan. Estimated spot sales, 2,300 bales Egyptian and 1,150 bales Sudan. Quotations of Sakel are reduced 20 points and those of Upper 10 points on the week. F.G.F. Sakel to-day, 18.30d. F.G.F. Upper to-day, 12.80d. F.G.F. Pillion to-day, 14.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 9, state:—

The futures market during the week under review has been fairly active, but prices have fluctuated rather wildly; the tone at the close to-day was barely steady. The week's summary of price movements is as follows:—Sakellaridis: November, 36.78 dollars, 0.56 dollars down; January, 36.98 dollars, 0.57 dollars down. Ashmouni: August, 23.92 dollars, 0.36 dollars down; October, 24.45 dollars, 0.45 dollars down; December, 24.87 dollars, 0.40 dollars down.

Sakellaridis.—The event of the week was the publication on Friday last, towards the close of the market, of the Government estimate of the acreage planted in cotton in Egypt this year. The estimate was much above expectations, showing, as it did, an all-round increase of about 15 per cent. The Sakellaridis acreage is given as 799,523 against 795,740, the Government figure last year, and as the market had been expecting a reduction of about 60,000 feddans, prices rapidly declined until, in the space of about an hour, they were down a dollar and a half from the previous close.

The appearance of the American Bureau report last evening was reflected in a rise to-day of about 75 points, but the market is not at all enthusiastic. Sentiment is distinctly bearish, and the bullish nature of the Bureau report is ignored.

No new factor has appeared in our market. The demand is as poor as ever and the drop has not brought in any inquiry. Spinners just buy their immediate requirements and no more; their abstention from new crop purchases has certainly been profitable this year, but it is as well to remember that prices are now 7 dollars down from those of two months ago.

The Sakellaridis-Ashmouni straddle stands at about the same as last week.

Uppers.—This market has shared in the general movement of prices and the loss on the week is about 40 points. The acreage estimated for Ashmouni and Zagora shows a very large increase over last year, as much as 28 per cent. We are inclined to think that the increase indicated is on the top side; certainly, in addition to the general increase in Upper Egypt more land has been given over to Zagora in the Delta, but we do not think that the increase is as much as shown in the Government report.

Demand in Uppers has been fair, but, as usual, restricted to the grades in small supply. The American-Ashmouni straddle has narrowed in considerably, Uppers have lost about 40 points, while Americans have gained about 50 points, so that the straddle stands at 433 points against 525 points last week.

General.—Exports during the week have been quite good, being nearly 100,000 kantars, and it looks as if we shall finish the season with a stock of about 1,200,000 kantars.

Spot.—Total sales this week amount to about 6,100 bales, of which we estimate 2,000 bales Sakellaridis, 4,000 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis. The week started with a fairly good demand for all grades, but towards the later part of the week business fell off. Spot differences are well maintained. Sellers are not anxious to part with what small stocks they hold, and exporters thus find themselves in the position of being unable to offer abroad.

Ashmouni and Zagora. There has been a very good demand for all grades up to Good and high premiums have been paid for Good Fair and Fully Good Fair. As mentioned in previous reports, this cotton is getting daily scarcer and Fully Good Fair and below is now practically non-existent.

Other Varieties. A small business has been done in White. Spot differences for this variety have eased considerably, holders being anxious to dispose of their stocks before the arrival of the new crop.

Crop, 1928.—The crop is progressing normally under favourable climatic conditions. Temperature has been high and humidity fairly intense. One hears of damage from excessive humidity, but we do not find that this is serious. Boll worm damage is increasing, as is natural, but the attack, for the time being, is light. Picking has already commenced in Upper Egypt, and within a few days cotton will be arriving in the ginning factories. There has been a little shedding of bolls, but it is not serious.

Notes of the Week.

The Kingdom of Albania.

An Albanian republic was as much an anomaly in practice as it was in theory. Ahmed Bey Zogu can, therefore claim to be doing no violence to the Albanian conscience in arranging to put an end to it. Any hesitation on his part probably had reference to the effect that was likely to be produced abroad rather than to uncertainty regarding the way in which the step would be received in the country itself. As soon as he was assured that no complications with foreign Powers were to be feared, the ground was prepared with characteristic confidence for the necessary action. A wave of monarchical enthusiasm swept over the whole country, terminating in a demonstration in Tirana, which in the name of the whole Albanian people called upon the President of the Republic to accept the crown of Skanderbeg. The resultant formalities follow this week, when Ahmed Zogu is to be crowned as King Skanderbeg III. By styling her new monarch the third of that name, Albania pays him and herself the subtle compliment of recalling in his person the country's link with Alexander the Great. The new King differs from his medieval predecessor in that he mounts the throne as a Muslim; not the least part of Skanderbeg's fame rests on the fact that, before being proclaimed Chief of the League of the Albanian Peoples, he had abjured Islam, the religion of his country's enemies, and had returned to the faith of his race. If there is to be opposition to the new order in Albania, the religion of the sovereign may form a convenient rallying cry for some of the malcontents. It is more likely, however, that, if King Skanderbeg III is to encounter obstacles from within the country, they will spring from the inherent reluctance of Albanian chieftains to subscribe to their own permanent inferiority to one of their number, with which religious questions have nothing in common. Ahmed Bey Zogu has maintained his position as President of the Republic mainly by the strength of his own right hand, and he will have to rely on the same agency for the maintenance of his throne.

His personal rule has not been unattended by success, but whether it has lasted long enough to have become broad-based upon the people's will and gratitude must still remain an open question.

A Rival Claimant.

It was not to be expected that Prince William of Wied would allow the occasion of the accession of King Skanderbeg III to pass without a formal protest against the new monarch's assumption of power. The Albanians were royalist enough at heart to welcome anyone selected for them as their sovereign, but it may be doubted whether their Mpret of six months' standing fourteen years ago was cast in a sufficiently heroic mould to make any real and lasting impression on a naturally warlike people. If Prince William had wished to show himself suitably endowed with the qualifications for his difficult post, he would have left the country less precipitately in 1914, and would have asserted his claims at an earlier date after the War. In a less troubled State he might have proved a wise and able ruler; but the situation in Albania in 1928 no less than in 1914 calls for a monarch who knows his own mind and is able to act with decision. If the enthusiasm with which the conversion of the Republic into a Monarchy has been hailed in Albania is regarded as spontaneous and genuine, it may be that the section of Albanians which Ahmed Bey Zogu has disappointed most of all—the political refugees from his régime—will seek to profit by the monarchical sentiment of the people by adopting Prince William of Wied as their nominee for the throne. To-day their chances of success are not bright, and it is doubtful whether they would be improved by an attempt to support the candidature of one who has been tried and found wanting.

Serbs and Croats.

It is human nature to air grievances, and the wider the audience the greater as a rule the satisfaction derived. From their representative character international congresses provide an ideal arena for the broadcasting of

protests. Hence the conference of the Inter-Parliamentary Union now being held in Berlin supplies an attractive medium for submitting complaints bearing on matters affecting parliaments in different countries. Among the seven hundred delegates assembled at this year's conference it is natural to find some at least who are more anxious to denounce conditions in their own countries than to contribute to the general cause of parliamentarism. Mr. de Valera from Ireland will criticize Great Britain, Egyptians will inveigh against the actions of their present Prime Minister, and Italians will lament the eclipse of the Italian Parliament under the régime of Signor Mussolini. It has been left to the Croats to send a deputation of their own, in order to challenge the right of the official delegates from the Yugoslav Skupshtina to appear. The incident is not calculated to trouble the Congress much, as it will have no difficulty in admitting the legitimacy of the official Yugoslav delegation. Nor will the majority of the countries that are denounced before the Congress take the matter much to heart. Yugoslavia, however, promises to be an exception. Here the Belgrade Government is credited with the intention of regarding the action of the Croat malcontents as treasonable and of taking proceedings against them. Lack of humour, imagination and commonsense will never have served the Serbs a worse turn than if they attempt to take notice of the letting off of Croat steam in Berlin. The Inter-Parliamentary Union has no status for sitting in judgment on the Skupshtina; all the world knows what the Croats think of Belgrade, and they cannot add anything to that knowledge by sending telegrams or delegates to the Congress. If on the other hand the Yugoslav Government shows itself so intolerant of criticism as to goad the Croats further into desperation, the world, apart from any Inter-Parliamentary Union, will decide that conditions in Yugoslavia are such that no other section of the Southern Slavs can be blamed for being unable to co-operate with Serbs.

The Macedonian Problem in Bulgaria.

The reception accorded in Bulgaria to the Anglo-French *démarche* regarding the position of the Macedonian Revolutionary Organization is another proof of the level-headedness of the people and its Government. In the face of the insistence of the press in close touch with the Cabinet that the representations made were inspired by feelings of the greatest benevolence towards Bulgaria, it is evident that Italy's attempt to make capital out of the *démarche* has misfired, and the Italian press is left to inveigh generally against Anglo-French diplomatic co-

operation. The only sphere in which the incident, as far as Bulgaria was concerned, promised to find a repercussion was in that of home politics. The details of what took place are not clear, but it is understood that M. Bouroff, Minister for Foreign Affairs, had decided that the presence in the Cabinet of General Volkoff as Minister of War was an obstacle to Bulgaria's giving suitable effect to the Anglo-French representations. M. Buroff has since denied that there was any dispute between him and General Volkoff; but the matter was serious enough to cause a large number of Ministerialist Deputies to protest to the Prime Minister against any attempt to draw the Ministry of War into the arena of politics. Whatever may lie behind these alarms and excursions, the trouble seems to have been adjusted for the present, and the Cabinet is able to resume the appearance of a united front. Differences of opinion in a Bulgarian Ministry are almost inevitable when it is a question of coming to close grips with the Macedonian Organization; but it would be unfortunate if Bulgaria were to lose her opportunity of ridding herself of a national nightmare owing to a serious Ministerial crisis. The Macedonian cause may be as sound as ever in principle; the trouble is the conduct of a body of men who are abusing Macedonian patriotism as a cloak for terrorism and assassination.

The Nettuno Conventions.

The omission on the part of the Yugoslav Government to publish the text of the Nettuno Conventions and the political opposition in Yugoslavia to their ratification have, not unnaturally, given rise to the general impression that their terms must be wholly unfavourable to the Yugoslavs. It is of interest, therefore, to find that from a purely commercial point of view something is being said in favour of the Conventions by Yugoslav business men. According to the opinion of one of the latter the ratification presents endless economic possibilities for Yugoslavia. As a small Power, she is now offered by Italy, a Great and largely industrialised Power, access to her ports and her means of transport, as well as facilities for trade, including transit trade, which tend to make of Italy for British merchants a convenient *pied-à-terre* for closer touch with the Yugoslav market. The Nettuno Conventions, so it is declared, open up fresh routes for Yugoslav products, mainly agricultural, and at the same time place within reach of the Yugoslav consumer the products of Italian industry. At the same time they can assist the growth of new industries in Yugoslavia, especially in connexion with the export of such goods as leather, wooden products, fruit juices, wines and spirits, vinegar, tannin, cement and bauxite.

Anglo-Iraqi Agreements.

The Military and Financial Subsidiary Agreements to the Anglo-Iraqi Treaty were postponed last year, when King Faisal of Iraq and his Prime Minister, then Jaafar Pasha, visited London, and when a new Treaty was signed, for settlement during the present year. It was always realised, however, that these Agreements were very thorny subjects of discussion. On the military side, there was the attitude of the majority of Cabinet members in Baghdad that the present voluntary Arab Army is far too expensive for the resources of a poor country, and on the financial side there was the attitude of Iraqis in general that the value set by the British Government upon certain assets which it had introduced into the country was too high. Already, in the opinion of the Baghdad Majlis, an indication has been given of the feelings of the Cabinet of Sir Abdul Muhsin Beg as Saadun on these military and financial matters. The Iraqi Prime Minister maintains that if the political and economic interests of Great Britain are so considerable as to necessitate her keeping troops in the country, she should pay for them herself; he, at any rate, will have none of the proposal that the Iraqi Government should make good the differ-

THE ESSENCE OF INSURANCE IS SECURITY.

ence between the pay of the Royal Air Force on service at home and on service abroad. It is to be presumed that the Iraqi Prime Minister, like all other Iraqi Prime Ministers, is in favour of conscription for his country. Such an attitude is known to have the support of King Faisal. It is not unnatural, then, that any compromise with it should fail to include a tacit consent to the desirability of the combination of the voluntary Arab Army and the Royal Air Force which at the present time serves to maintain internal security in Iraq and the defence of the country from external aggression. The probabilities are that much more will be heard on this subject of the defence of Iraq before the end of the present year.

The Iraq Railways.

But if the composition of the military forces in Iraq is a matter of some doubt or anxiety, no happier is the position—as yet, at any rate—in regard to the Iraq Railways, which play, of course, a prominent part in the Financial Agreement. According to Article 8 of that Agreement, the Iraq Railways should, by next December, be transferred wholly to the Iraq Government, provided that no prior sale of them be made. Now the Iraqis want these Railways as a free gift. If the generosity of the British Government is not so elastic as that, then they are prepared to pay for them; but only at a reasonable rate. So far, however, no agreement has been found possible on the rate of evaluation. The general Iraqi estimate seems to indicate something round about half a million pounds: it is all a question of by how much the original expense of constructing the lines should be reduced. But the experts who have gone out to advise the Colonial Office on this matter of the future of the Railways have advocated the retention by the British Government of its interests in the Railways; it remains to be seen whether that advice will be accepted. It seems fairly obvious that, if a loan had to be raised for the Railways—for new locomotives, for repairing the permanent way, for the extension to Mosul, and so on, it could be more easily obtained on the security of the British Government than on the security of the Iraq Government, which at the moment is unusually pressed for money. The other alternative is that the Railways be sold to a private group of concessionaires. In this event, the Iraqis would probably try to ensure that the existing railways were not accorded to the same concessionaire as ultimately obtains the privilege of building a line from Baghdad to the Mediterranean.

The Syrian Impasse.

Between the present time and October the French Government has to solve the very delicate problem in which it has been placed as a result of the drafting of a Constitution by a Commission of the Damascus Constituent Assembly. As we have already recorded, M. Henri Ponsot, High Commissioner, was forced, as a consequence of the inclusion in the Draft Constitution of certain Articles which were held to conflict with France's obligations as Mandatory Power in Syria, to suspend the Assembly for three months. The Articles to which the High Commissioner in vain took exception referred to the President of the Republic's right of pardoning in individual cases (although general amnesty cannot be granted except by special legislation), to the President's right to conclude international treaties, to his choosing the Prime Minister, approving the nomination of other Ministers, appointing diplomatic agents abroad, appointing civil officials and judges, and so on, to the organisation of the Army by special legislation, and to the President's right to proclaim martial law in accordance with the Ministry's demand. Apparently the Nationalists were quite willing to admit that these conditions interfered with the duties of the Mandatory Power, but since it is stated that their consent has been gained to three months' suspension of Parliament, all may yet be well. It is, at any rate, a welcome fact that France interfered in no way with the drafting of the Constitution: M. Ponsot's concili-

atory yet firm attitude appears to be one eminently suited to the necessities of the situation.

Persians and Arabs in the Gulf.

There is a certain obscurity surrounding the situation which has arisen through the seizure, a short time ago, by Persian authorities of an Arab boat in the Gulf containing sugar. On this dhow, which, according to the Persian version, was carrying on a contraband trade, were some Arab men and women. These people were seized by the Persian Customs officers, as well as their belongings and the cargo. On the representation of the British Minister at Teheran, it is stated, the Persian authorities were persuaded to release the Arab prisoners; and from the Persian point of view the matter was then at an end. Apparently, however, neither the Government of India nor the Arabs in the Gulf are yet satisfied that justice has been done. It has been obvious for some time past that the Persian Government are resolved upon a more vigorous policy in the Gulf, which may or may not be in the best interests of the Shah—their recent futile protest in regard to the ownership of Bahrain was a prominent feature of this policy. The delicacy of this present affair appears to lie in the disposition of the Arabs plying their craft between Abu Musa, the Tanb Islands and other centres to demand the privileges of being British subjects. There is, of course, little love lost between Arabs and Persians in this part of the world. As we have said, the issue is still too obscure to say where the precise rights and wrongs lie in this affair; it is probable, however, that more light will be thrown on the affair, for such feelings as the Government of India seems to entertain on this matter will consort ill with the sentiments engendered and the accomplishments achieved recently by Sir Robert Clive on the major question of Anglo-Prussian relations. Incidentally, illumination may be provided upon the force which is impelling the Persians repeatedly to appear to match their authority against the authority which alone secured the peace of the Persian Gulf, that is, the British.

An Orientalist Congress.

England is proud, and Oxford particularly happy, at the opportunity given this week to entertain the most distinguished visitors who have come from overseas to contribute their wisdom to the first international Congress of Orientalists held since 1912. One has only to compare this Congress, which started on August 27, with that at Athens sixteen years ago, to realise the immense accession to the world's knowledge of the East which has come about consequent upon the Great War. Alike in the Far East, in India, in Central Asia, Persia, the Middle East, Arabia, Asia Minor, Africa, and elsewhere, this passion for the discovery of how men lived and thought and spoke and acted in the East in centuries gone by has been steadily indulged and with most gratifying results. The quest is, of course, abundantly worth the labour for its own sake, but it undoubtedly tends to lead to conclusions which are far from lacking an influence upon the life of the East to-day. It should not be supposed, therefore, that this Oxford Congress holds interest for the professed scholar only, for scholars' discoveries have sometimes profound effect upon hodiernal tendencies. The religions, philosophies, civilisations of the East, when refashioned by the hands of the Orientalist, are seen very clearly to possess threads which often are woven deep into the very existence of living peoples. Of the East perhaps more than anywhere else in the world is it true that men cannot escape from their past, and the study of that past, particularly to-day, when such endeavours are being made, in certain countries, in part to disown it, or at least to turn their back upon it, should be the object of every observer of the East. It is to be hoped that the representatives of all countries who are this week enlightening the world on various aspects of human life as it has been between the Pacific and the Atlantic will be as content in Oxford as Oxford is pleased to welcome them.

THE NEW REGIME IN GREECE.

The overwhelming character of M. Venizelos's victory in the Greek elections has materially facilitated the task that he has set himself. His political opponents have not been given even an opportunity of pretending to deceive themselves, for their defeat has been too complete for any specious explanations. They accepted the challenge thrown down to them, and a fair appeal was made to the Greek electorate. That body has decided against the Monarchists with no uncertain voice, with the result that no one can claim that the question whether Greece be a Monarchy or a Republic remains to-day a live issue. Before the recent elections the general Monarchist character of the Peloponnese would have been conceded by the most confirmed Venizelists, as readily as their opponents would have admitted the devotion of the refugee population to M. Venizelos. At Patras, however, the Royalist stronghold *par excellence*, all the Monarchist candidates were rejected and five Liberal deputies chosen in their place. The only interpretation that can be put upon this *volte face* of the Greek electorate is that the Monarchist parties, or more especially their leaders, have been weighed in the balance and found wanting. As all the Republican parties, apart from the Liberals whom M. Venizelos himself leads, have fared more or less in the same way, it is not unreasonable to argue that the Greek people have given expression to their distrust of all the ordinary politicians and have turned to M. Venizelos as the only man in Greece who is able to raise the country out of the political quagmire into which it had been forced by self-seeking politicians. To this extent the Monarchy-Republic issue may be said not to have been raised at the elections, however decisively it has been settled by the results. The electorate was called upon to choose between continued political chaos with maladministration on the one hand, and the probability of good government on the other. It has recorded its choice with unmistakable emphasis, and the country stands to gain by knowing its own mind and thus simplifying the task of the new Administration.

M. Venizelos has never shown greater wisdom and statesmanship than in forbidding his followers to indulge in celebrations of their victory at the polls. The mischief that has been done in Greece during the last ten years has arisen mainly from the tendency of the hostile camps into which the nation has been divided to acclaim their respective leaders—M. Venizelos and King Constantine—as demi-gods. It was a rôle which neither would have claimed for himself, and it is essential for the future welfare of Greece that the practice in regard to M. Venizelos should be discontinued. There is, indeed, less likelihood of its indulgence in Greece itself than among M. Venizelos's admirers abroad. In his own country it has been impossible to ignore the fact that against all the earlier achievements which rightly won for him the position of a national hero has to be set the signal disservice of splitting the country into two bitterly antagonistic factions—a state of affairs which for the

greater part of ten years has reduced Greece to a condition of marking time in her material development. The mistakes and shortcomings of his political opponents have played into M. Venizelos's hands; he has bided his time in a masterly way, and the country has now turned to him with a degree of unanimity that could not have been anticipated a few months ago to free it from the stagnation, political, moral and economic, into which it had fallen. His staunchest supporters will do well to avoid any attempt to prove to-day that M. Venizelos has always been right and that everything that he has ever done has always been Heaven-inspired. It is the future and not the past that matters to-day, and nothing should be done to stir latent bitterness. The elimination of the Republic-Monarchy controversy is due to the good sense or to the exhaustion of the Greek people. M. Venizelos came once before to their help, finding no obstacle in the existence of the Monarchy; he returns under a Republic, and again the form of government is beside the point. Certain it is that mere flair for leadership will be of little use to Greece at the present time. What the country needs is the practical application of good and enlightened administration in the routine of everyday life and in all departments of public affairs.

There is every reason to suppose that M. Venizelos appreciates the seriousness of the responsibility now laid upon him. In the face of determined opposition it is always possible to attribute the failure of administrative reforms to the perversity of opponents. For all practical purposes M. Venizelos, with a compact, two-thirds majority over all possible combinations in the Chamber, has no opposition to contend with, and the record of his achievements will rest on the merits of his programme and on the ability of his Government to give effect to it. That programme, as he outlined it at Salonika before the elections, touches all the important aspects of Greek national life to-day. In the forefront he placed economy in public expenditure, in particular by means of reducing the number of State officials. There could be no immediate reduction of taxation, but he hoped to introduce certain modifications which would tend to make the distribution of the burden more equitable. The administrative and judicial machinery is to be overhauled, and the vexed question of the rival forces of the gendarmerie and the police is to be regulated. In no direction, perhaps, has the country suffered more from the administrative stagnation of recent years than in regard to public health. M. Venizelos had already placed the subject high up on his programme of reforms; the outbreak of a serious epidemic of dengue fever will make its consideration even more urgent, for coming, as it does, on the top of such widespread maladies as malaria and tuberculosis, and a high infantile mortality rate, it suggests that the administration of public health in Greece has much ground to make up in the immediate future. Linked up with the general problem of the material developments of the country is the carrying out of public works. As to the ideal programme there is general agreement; differences of opinion arise only in connexion with the priority of urgency of the individual undertakings. M. Venizelos enters upon office committed to a certain number of these undertakings, construction of roads and reclamation of lands by drainage, and can hope to enlarge the country's commitments only after having obtained the necessary funds by economies in the first place. Finally, he is pledged to the reform of education with the object of giving Young Greece more practical help in the way of earning its living than it has received hitherto. In all departments of the Administration the principle of decentralisation is to be gradually introduced, as the system of directing everything, down to the smallest item, from Athens, is not only pernicious, but has been proved unworkable. The success of such a programme depends on the Government's capacity for attention to details, and in particular on the constant presence at the centre of M. Venizelos himself, who will have to deny himself indulgence in long absences from the country.

*The Near and Middle East

From Our Own Correspondents.

(From Our Own Correspondent.)

Cairo, August 19.

The Nile Water.

Two main questions have interested the public and the Arabic Press during the last week; first, the visit of Ibrahim Fahmy Bey, Minister of Public Works, to London, and secondly the Arbitration Treaty which is being negotiated between the United States of America and Egypt. Of the latter, however, nothing authoritative is as yet known here.

The visit of Fahmy Bey to England, in order to discuss irrigation questions with Lord Lloyd, the Governor of Uganda and others, has been the subject of agitated comment in the local Press. The Opposition papers have been virulent in their attacks, saying that they had had suspicions that Ibrahim Fahmy Bey was "playing the game of the British," when he held the same post in the Nahas Cabinet, and now these suspicions have been confirmed by the fact that he has rushed over to England at the first opportunity under the new Cabinet, with the object, so it is alleged, of letting the British have their way and get control of the waters of Egypt. This sort of propaganda is intended to be effective among the fellahen, who naturally are dependent on the water supply, and it is probably for this reason that these very stupid things have been said or written. As a matter of fact, it is the English experts who have taken a long view of Egypt's wants for the future, recommending the building of a new barrage at Gebel Aulia; whereas many Egyptians have tried to argue that it is sufficient to heighten the Assuan Dam and in this way to save themselves expense. They forget, however, when it is convenient for them to do so, that Egypt's population is supposed to be increasing by from two to three thousand annually and that, whereas the Assuan Dam cost £5,000,000, the annual value of the crops from the lands it irrigates is worth considerably more. The execution of these various projects has been suspended far too long, and it is sincerely hoped that a satisfactory agreement will be arrived at among the various experts concerned in London.

The Fellah's Friend.

It is not only the fellah of the country districts whose condition Mohamed Mahmoud Pasha, Prime Minister, wishes to improve, but also the labourer of the town. As I said last week, there is a comprehensive scheme on foot in Alexandria by which the Municipality, with Dr. Hamdi Bey as the prime mover, intends to rebuild the slum areas, where in some quarters the infant mortality is as high as half the total number of births; figures which appal a European are given in Dr. Hamdi Bey's extensive and very thorough report. The scheme for the new buildings, which are going to be on a very big scale, have almost

now been approved; but it needed much patience and a hard fight against various members of the Municipality and a section of the Press, and it has really been due to the insistence of the present Government that the reforms are, as far as one can see, going to be put through. So interested has the Government been in the scheme that one or two of the Ministers have been taken round some of the worst quarters by Dr. Hamdi Bey, and they intend to apply the principles drawn up by him in the reform of Cairo's insanitary districts.

The Cutting of the Khalig.

The ceremony of cutting the Khalig was held in Old Cairo on August 17 with its usual paraphernalia of celebration. Formerly the ceremony consisted in cutting the dam which separates the Nile from the surrounding irrigation canals. This is no longer done; but it remains an important ceremony, because it is the sign that the Nile has reached its full height and will spread its life-giving flood throughout the land of Egypt, thus making her one of the richest countries in the world. The celebrations are also coloured by the fact that the Khalig was the precursor of the Suez Canal and that on this day, not only did the fellahen rejoice, but also the trader, merchant and sailor, for the waterway provided means of transport from the Mediterranean to the Red Sea.

The "Nationality" Treaties.

Two important treaties have been concluded recently between Italy and Egypt and between Persia and Egypt concerning the question of nationality. The first concerned the status of the inhabitants of the Dodecanese, which Italy took from Turkey in the war of 1911. The inhabitants remained Ottoman subjects until the Treaty of Lausanne was concluded in 1923, and Italy's right to the islands was definitely settled. Egypt, however, was not a party to this treaty and, therefore, as far as she was concerned, the inhabitants of the islands remained Ottoman subjects and were not included in the privileges of the Capitulations. By the present treaty, however, they have been recognised as Italian subjects and will be judged for any offence by their Consular Courts instead of by the Native Courts.

With regard to the treaty with Persia, it became necessary for various Powers to conclude separate treaties with that country after she abolished the Capitulations. This treaty with Egypt has, therefore, as its object the regularising of the position of Egyptians in Persia and of Persians in Egypt.

Diplomatic Changes.

The Opposition Press have worked up rumours about dissensions in the Cabinet, stating that Mohamed Suliman Pasha, Minister of Communications, was going to resign and that Nashat Pasha was going to be recalled from Teheran and given a post in the Cabinet. This, it was alleged, was infuriating Mohamed Mahmoud Pasha, who feared that the King was going to obtain too much power. Indeed, rumour suggested that Egypt was going to succumb to a particularly virulent and interesting

intrigue with the possible entry into the political arena once more of Hassan Nashat Pasha. None of these rumours had any foundation, however, the Cabinet is working perfectly well together and Hassan Nashat Pasha is going to Berlin, in the place of Seifullah Yusri Pasha, who resigned recently.

Other changes in the Diplomatic Corps of Egypt are Hamid Khulussi Bey, Governor of the Suez Canal District, who will succeed Nashat Pasha at Teheran; and Sadek Wahba Pasha, now Egyptian Minister in Athens, is being transferred to Brussels.

CYPRUS.

(From Our Own Correspondent.)

August 15.

Forest Fires.

Almost every summer forest fires, more or less serious in extent, occur in the large range of Mt. Troodos. In past years widespread destruction has occasionally been caused. There have been some recent outbreaks, and villagers have had to be summoned in considerable numbers to fight the flames. As a consequence, some of the papers once again repeat their complaints that these calamities are due to the exclusion of goats from the State forests, under the stringent Woods and Forests Laws; being caused by goatherds who thus seek to retaliate for their grievances.

On the other hand, it is satisfactory to learn that villagers are becoming in increasing numbers alive to the value of the forests, and to the need of protective measures, which include the exclusion of that deadly enemy the goat. Among the draft laws to be submitted to the Legislative Council, is one—to be introduced by an elected Greek member—which provides that, should a majority of property-owners of a village so decide, a portion of the village lands, not exceeding one-fifth, may be set apart for the planting of trees, and for strict preservation against the grazing of any animals whatsoever. Should this measure become law, it will be another proof of an awakening to the great benefits of re-forestation and arboriculture.

Exportation of Fruit.

Large shipments of various fruits have been, and are being, made from the districts of Papho and Limassol, especially to Egypt, by sailing vessels; and grapes are now being sent to Port Said and Alexandria. Boats from Egypt, with their latine sails, are to be seen in the roadsteads. Grapes find a ready sale in a country where the fruit was once grown abundantly. In Cyprus many fruits, including the apricot and pomegranate, should be far more largely grown. Attention, however, is being rightly given to the production of the excellent island oranges, including the Jaffa variety, for winter export.

"The Cypriot Brotherhood" in London.

Reports regarding the establishment of this Society, to which Sir Ronald Storrs was invited and promised his

support, have evoked considerable interest. It numbers over 300 members. Amongst the projects which it supports is that of a School in London, in which free instruction is given in Greek and English. It is considered that the association may be able to afford considerable help towards the effort now being made to promote the interests and progress of the island.

"Union with Greece."

The Greek Archbishop and leaders have received a reply, dated August 1, from the Colonial Office, to the memorial which they, yet again, submitted in June, asking for union with Greece. They are informed that, the matter being definitely closed, Mr. Amery has nothing to add to the communication published in the official *Cyprus Gazette* of February 26, 1926.

New Health and Summer Resorts.

The large and now important village of Platres retains its pre-eminence as a summer abode for visitors. But a few other places are coming into favour. In a district called Marathasa, on the northerly slopes of Troodos, there are several villages along the course of a stream which finds its way down to the North Coast, near the large and fertile village of Lefka. At some of these places are hot springs with medicinal waters, which are visited, in increasing numbers, not only by patients suffering from rheumatic and other complaints, but by ordinary tourists, who seek rest and quiet in picturesque retreats. Hotels have sprung up, and good accommodation is offered. At a village called Moutoula a new hotel has been opened. A ride to these villages will repay sojourners at Platres and Troodos.

THE LATE STEPHEN SKOULLOUDIS.

M. Stephen Skouloudis, the veteran of Greek politics, died in Athens on August 19 at the age of 90 years. Born in Constantinople in 1838, he remained an Ottoman subject until he was nearly forty, when he retired from business (he was one of the founders of the Banque de Constantinople) and repaired to Greece. With a short interval during which he represented Greece in Madrid, he devoted himself to politics, and in 1892 became Minister of Marine under M. Tricoupis. After the disastrous war with Turkey in 1897 he withdrew from politics and remained in private life until in 1912, at the urgent bidding of M. Venizelos, he headed the Greek Delegation which came to London to negotiate peace terms with the Turks. In 1915 he accepted office as Prime Minister under King Constantine, and had a troubled term of power until June, 1916. M. Skouloudis was a man of considerable wealth, and when his Government made way for M. Venizelos, his political enemies sought to impeach him for treasonable dealings with the Central Powers, but, failing in their attempt, were content to loot his house in Constitution Square, Athens. His estate is reported to have been valued at a thousand million drachmæ (approximately £2,600,000).

Major Alfred Arakiel Agabeg, V.D. (67), of The Hall, Pinner, and Joga House, Calcutta, left (estate in England) £40,014.

In addition to the ££30,000 already provided for in the Budget to fight malaria and other epidemics, the Egyptian Government has by decree earmarked a further ££20,000 for the same purpose.

THE LATE STEPAN RADITCH.

(From Our Liubliana Correspondent.)

With unprecedented pomp, with a following that numbered hundreds of thousands, the Croatian people accompanied Stepan Raditch to his last rest. His funeral was so great that it became a political event and a mighty demonstration, proclaiming plainly and unequivocally that the Croats would remain faithful to their leader also after his death and would continue to fight for his ideals. Thus the last journey of the Croat peasant leader was also his final victory.

This triumph was well deserved, for the love Stepan Raditch bore his people was staunch and true. Always and at any time he was prepared with word and deed to fight and to suffer for his people. He was ever in the forefront of its battles, as a schoolboy no less than in manhood's riper years. Ten years of his eventful life Stepan Raditch spent in terms of imprisonment, to which he was sentenced in turn by Hungarian, Austrian, and finally Yugoslav authorities. But no persecution could break his pugnacious spirit, and from prison he would go straight to work again for his people and for Croatia. Herein lies the principal reason for Raditch's immense success with his peasants. They could see that he was at all times prepared to enter the lists on their behalf; that politics were not a mere business with him; but that he lived solely for their common ideals. So they clung to him without reserve and became his own for good and all. For this reason too, Raditch's most glaring inconsistencies could do him no harm. The Croat peasants followed him to a man, no matter whether it was a case of swearing allegiance to a very nebulous pacifist and wonder-working republic, or of protesting their fidelity to the Serbian dynasty of the Karageorgevitch.

There was another notable reason for Raditch's exceptional position among his people. Stepan Raditch was the first political leader of note to go among the people and to get to know the Croatian village. For twenty years Raditch waded the mud of Croatian villages, and during this time he laid the foundations of his subsequent eminence and made sure of his electorate. Furthermore, Raditch possessed brilliant gifts to qualify him for popular leadership. He had a stupendous memory, and it was sufficient for him to have spoken but once to one of his electors in order to recognize him years afterwards. He spoke ten languages fluently, travelled through almost the whole of Europe, and came in contact with large numbers of leading political men. All this endowed him with such a halo of authority in the eyes of his all but illiterate electors, that all other politicians seemed colourless by contrast.

Besides this, his style of oratory was well calculated to win the peasantry. His speeches were saturated with popular idioms—or, perhaps, he habitually used such popular terms and turns of speech that they became idiomatic. His parables, too, were famous and strikingly effective. To quote but one example. At a certain meeting, Raditch wished to warn his hearers against exaggerated animosity against the educated classes, and, therefore, gave them the parable of the hand and its fingers. He said:—A people is like unto a hand. As the human hand cannot work efficiently, unless all its fingers work in harmony, even so a people cannot endure unless all classes labour in harmony with one another. But the fingers are not all equal in importance, and the same applies to the classes.

The thumb is the peasant; the greatest part of the work is his due, and the greatest say also. The working man is the first finger, because he comes second in numbers and importance. The artisan is the middle finger; the merchant is the third, the ring-wearing finger, because he turns the labours of the others into gold. The little finger is the intellectual class. Without it the hand is not complete. This finger, too, is necessary; but it is the least in importance, and therefore the intellectual class should have the smallest say, and not the greatest, in the affairs of a people.

As I said before, Raditch was often inconsistent, but only over questions which he deemed of minor importance. He was always true to the main line of his policy, and Croatian nationalism and the Peasant Idea always found a loyal champion in him.

Raditch was a Croatian nationalist from conviction, and his chief aim was to restore the complete sovereignty of Croatia. To this ideal he subordinated all other matters and for the sake of this ideal he was prepared to accept every compromise. It was the reason for his travels to London and to Moscow; it was the reason for his cordiality towards everybody of whom he hoped that he was able and willing to further his ideal. Despite the great animosity which prevails between Croats and Italians, Raditch could see his way to giving extravagant praise even to Signor Mussolini, were the latter to display, even half-way, serious sympathy for Raditch's Croatian ideals.

Yes, Raditch was a Croatian nationalist by conviction, but not in the accepted sense as nationalism was understood by the Croat petty middle class, which was the only exponent of the nationalist idea in the days of Raditch's youth. When Stepan Raditch embarked upon his public career, Croat political life was limited to the towns and hamlets, and, even there, to the educated and half-educated elements; the mass of the people were shut out from all political activity. At that time the suffrage was very limited. It was not until after the constitution of Yugoslavia, in 1920, that the Croats for the first time went to the polls under a law of universal and equal suffrage. The programme of former Croatian politics was very meagre. It oscillated between Vienna and Budapest, and State constitutional questions took precedence of matters of general interest, whereby dreams and aspirations came to be taken more seriously than the actual state of affairs. Liberal phrases were ostentatiously paraded; but this petty middle class liberalism was only a terribly imperfect copy of modern European liberalism, with which it had nothing in common but the name. In the meantime, personal profit was not forgotten, and the Croat peasant was often worse exploited by his co-nationals than by the national enemy.

But it is the Croat peasant who is really the Croatian people, the Croat nation! That was Raditch's axiom. To that he owed his victories, and it was this that placed him in sharp opposition to all bourgeois parties. Without mercy he attacked the wordmongers, and within a short time the catchword of the corrupt and degenerate policy of the gentry took such firm root in the Croatian villages, that adherents of this policy dared not show their faces in any of them, and to this day it is made impossible for them to canvass the Croat peasantry.

Thus Raditch's chief merit may be summed up thus:—*He won the Croat peasant for the Croatian national idea; he widened the extremely narrow horizon of Croatian politics and got the entire Croat people to take part in the*

country's political life. This great achievement gave Raditch his position of undisputed leadership, and the bourgeois parties had to acknowledge him, willy-nilly, as leader of the Croats; because he alone was backed by the peasant masses, and without the latter all struggle against Belgrade was foredoomed to failure.

No success, however, attended Raditch in his second aim, viz., to deliver the Croatian peasant out of the hands of the money-lender, by the methods successfully employed by the Slovene People's Party in Slovenia. Thanks to the efforts of the Slovene educated classes, and especially of the clergy, the Slovene peasant is altogether out of the hands of the usurer, and pays only five or seven per cent. to his co-operative, whereas the Croatian peasant pays twenty per cent., and in Bosnia and Dalmatia interest exceeds forty per cent. Raditch tried to introduce the Slovene system, and was even given funds for this purpose by the great Slovene leader, the Rev. Dr. Krek, but without success. The devoted voluntary services of the country clergy were lacking: as regards ordinary practical enlightenment, the Slovene peasant is far ahead of his Croatian kinsman, and finally Raditch himself was not sufficiently heart and soul in this task, being almost exclusively taken up with political questions of the day. Hence he could not achieve the social emancipation of the Croat peasant, and this great task still awaits its expert. In the meantime there are no signs that this expert is likely to appear shortly, and, therefore, we cannot venture to forecast who will be the future leader of the Croats. Croatian politics are only in process of formation. The bases of their future development are as yet quite unknown. Hence the many surprises provided by Yugoslav internal politics.

Raditch was above all an impulsive politician, reacting passionately to every event, often without sufficient consideration. This was specially noticeable in his dealings with Belgrade. Did a Belgrade politician utter a word in praise of Raditch or his Croats, Raditch would positively revel in expressions of profoundest appreciation—and then change his mind within a week. In other matters, too, he was quite incalculable. To-day he would be for the Republic; to-morrow he would extol the Dynasty; one day he hoped everything from Britain; next day from Moscow. In his youth he was a pronounced Yugoslav nationalist, spoke enthusiastically of the union of the three Yugoslav peoples, and as far back as in 1903 hailed King Peter of Serbia as the future King of Yugoslavia. During the World War he composed poems in praise of the Habsburg Emperor; and later on became the Croatian separatist, who stigmatised the doctrine of Yugoslav unity as treason to Croatia.

It is likewise quite impossible to say what notions Raditch entertained regarding the practical construction of Yugoslavia. When asked what practical solution of the agrarian question he contemplated, Raditch replied: "When our party comes into power, it will solve this question also as it ought to be solved." Of course, his electorate accepted this reply; for every one of Raditch's utterances was received as truth unalloyed, without criticism.

There is also no unfairness to Stepan Raditch in claiming that he was by no means clear in his own mind as to what way he should take. And Croatian politics as a whole have been equally aimless since the constitution of Yugoslavia. In 1918, straight after the Revolution, the Croats surrendered all power to Belgrade, without compulsion and of their own accord. Even the territorial force as it existed under Austria-Hungary, was demobilised. At a stroke the Croats stood there empty-handed, save for the hope that Belgrade would prove an ideal brother. Disappointed in this hope and sobered, the Croats made their second mistake and fell into the other extreme. They shone by their non-appearance in the Skupshtina—and the natural result of this was the passing of a thoroughly centralist Constitution. Then came the revulsion and Pavle Raditch read his famous speech in the Skupshtina, accepting the Constitution and

recognising the Dynasty and the *de facto* existing state of affairs. The grand slogan of a republic was to be dropped; the Raditch Party entered the Government in the secret hope that it would succeed in breaking up the Serbian parties, and—thanks to the cultural superiority of the Croats—obtain the decisive say in the Government. But these speculations were based on false premises. Most certainly Serbia was both economically and educationally backward, having suffered for hundreds of years under Turkish maladministration. But for fifty years she had already led an independent life as a sovereign State, and her politicians were, therefore, far superior to their Croat colleagues in the technique of statecraft and of politics. Moreover, the Serbian politicians, Radicals of many years' experience, were men of action, whereas the Croats were men of words. And therefore Raditch's activities in the Government failed to lead to any weakening of the Serbian parties. On the contrary, it was the Raditch Party that was weakened by the secession of the two Ministers, Nikitch and Shuperin, who with their partisans remained faithful to the Government and seceded from the Raditch Party.

After his exit from the Government, Raditch intensified his opposition tactics. He formed a coalition with his former bitterest enemy, Svetozar Pribitchevitch, who had twice got him into prison. Both together founded the Coalition of the Peasant Democracy (KDK), with the mission to unite all *prechani* (Yugoslavs of former Austro-Hungarian territory) in a grand struggle against the hegemony of Belgrade. In this, however, they failed, because the Slovene People's Party under Dr. Koroshetz and the Bosnian Muslims under Dr. Spaho joined the Government, as they feared that at the decisive moment Raditch might leave them in the lurch as he did in 1924.

All the same the Peasant-Democrat Coalition is justified in claiming to-day that it represents all Croatia, the Slovene Liberals, and the greater part of the former Austro-Hungarian Serbs. But it is doubtful whether it will continue to do so for long, because even in regard to the most important questions it is without a well-defined programme. There are good grounds for assuming that the whole Coalition is based in truth upon the negative programme of turning out the Government. And that is why those prognostications, that the shots in the Skupshtina and the death of Stepan Raditch would be followed by disturbances and bloodshed in Yugoslavia, were quite unfounded. On the contrary, all remained quiet, and will continue to do so, despite all newspaper protests and electoral meetings. All this talk of a State crisis is quite premature. It must not be forgotten that the forces which created Yugoslavia are still the same, and that, for reasons of foreign policy, even the most perfervid adherents of the Raditch Party are for Yugoslavia. If, nevertheless, big words are bandied about, it is only because Yugoslavia is young in politics, and her politics naturally bear a youthful character. This applies particularly to Croatian politics—and only in a political atmosphere of this type was the amazing career of Stepan Raditch possible.

Stepan Raditch worked hard and with great devotion for his people, and won his leadership of it by two great achievements: He organised the Croat peasantry, won it for the Croatian national idea, and so united the whole of the Croat people. Hereby he laid the foundation for a positive Croatian policy, whose chief aim is not the outcry against Belgrade, but sound, though irksome, work for the economic and cultural rise of Croatia and the social emancipation of her populace. Only it is to be feared that her present leaders do not realise the pressing need for such a programme, but will continue yet awhile to be ruled by sentimental considerations and historic dreams.

The fever epidemic which has been raging for some time past in certain parts of Greece has assumed alarming proportions. Up to August 27 there had been nearly 200,000 cases, and of these many proved fatal.

TURKISH IN LATIN CHARACTERS.

Writing forty-eight years ago, Dr. Charles Wells, a distinguished Turkish scholar, at one time Professor at the Imperial Naval College, Constantinople, declared that the adoption of Roman characters for Turkish, which many had advocated before his time, was as improbable as the employment of the phonetic system in England. He was of opinion that the Roman letters were quite unfitted for the purpose and that the change would lead to utter confusion. Dr. Wells reckoned without an infant born the same year at Salonika, who, as the Ghazi Mustapha Kemal Pasha, President of the Turkish Republic, has ordained that henceforth Turkish is to be written in Latin characters. The change, moreover, has been effected with a despatch thoroughly characteristic of the new order in Turkey. As soon as the decision to adopt Latin letters had been taken, a Commission was appointed to draw up the correct equivalents of the Arabic characters. Its proceedings were sufficiently leisurely to allow various unofficial Turkish alphabets to appear, especially since August 10, when Mustapha Kemal Pasha delivered a speech to an open-air gathering of the Popular Party, in which he urged all Turks to learn quickly "the new Turkish characters." Accordingly the Commission found itself obliged on August 16 to issue a statement declaring all the new Turkish alphabets that had been published to be "completely false and contrary to the decisions taken so far by the Commission." The official alphabet was promised within a few days, but at the same time the press was careful to point out that the new alphabet could not be regarded as official until it had been formally adopted by the Grand National Assembly, which would not be meeting until November.

This deliberate mode of procedure, however, does not appear to have been to the liking of the Ghazi; for a day or two later, it has to be inferred from an article in the *Jumhuriyet*, the new alphabet was either drawn up by, or received its *imprimatur* from, the President and a handful of his advisers. Yunus Nady Bey, Deputy of the National Assembly and proprietor of the *Jumhuriyet*, was anxious to take leave of the President before proceeding abroad and was ushered in to this important gathering. He was immediately required by the Ghazi to submit himself to an examination in the new alphabet, which took the form of writing down a passage dictated to him by "le Grand Homme." Although Yunus Nady Bey confesses himself to have been, in spite of his fourteen stone, "as nervous as a small schoolboy," he appears to have acquitted himself well in his ordeal, to judge from his effort as reproduced in facsimile in his newspaper, with the Ghazi's nine corrections in thirteen lines.

From this moment onwards Turkey has been all agog over the new "alphabet." Everybody who is anybody, it must be supposed, is engaged in learning the twenty-nine letters or in teaching them to someone else, and the whole nation is astounded at the rapidity with which it is acquiring the requisite knowledge. Ministers, it is recorded, are now signing their names in Latin characters, some of the public services have already begun to use them instead of the Arabic script, a start is being made in the newspapers, and an open-air lecture on the subject has been delivered with the aid of loud-speakers in Stamboul University. The most elaborate steps are being taken to spread as rapidly as possible a knowledge of the Latin equivalents of the Old Arabic characters.

These latter are in the meantime coming in for general denunciation. They were adopted "by pure historical chance," they have prevented the development of the Turkish language, and by reason of them that language has "lost a large part of its moral force." Doctors dare not draw up a single prescription in Arabic characters. Moreover, "to-day in banks, in commerce, in all the domains of science and above all in the case of all technical terms, the new characters are essential, and we can no longer tolerate that the intelligence of our children should be restricted by these Arabic characters which

constitute a real obstacle to the development of our language." The passages quoted are taken from the speech delivered at the conference at Stamboul University.

No time is being lost in using the new characters for public purposes. The vessels of the Seiri Sefain Shipping Company are having their names painted in both scripts, and foreign travellers on Turkish railways lacking a knowledge of Arabic will appreciate being able to read in future the names of stations.

In spite of Dr. Wells' pessimism, there would seem to be no reason why the adoption of Latin characters should present insuperable difficulties, as Turkish, unlike Arabic, has clearly defined vowel sounds. The new alphabet comprises 29 letters, of which eight are vowels, *o* and *u* being duplicated with a diaeresis and a distinction being made between *i* with a dot and without one. The addition of a cedilla to *s* gives the sound *sh*, and to *c*, which is the equivalent of *j*, that of *ch*; *g* with a diacritical mark has the sound of *gh*; *j* seems to have been retained, but as the alphabet also has *y*, it is not clear at present how it is distinguished from *c*. In the case of a number of words the precise equivalent in Latin characters will be a matter of argument, until something in the nature of an official pronouncing dictionary has been compiled. The reform, therefore, once started, should be carried to its logical conclusion, and in due course modifications in the grammar may be expected, which will materially simplify the present difficult task of learning the Turkish language.

For the benefit of English students of Turkish it may be pointed out that an English-Turkish Dictionary with the Turkish words in Arabic and in Latin characters was issued as recently as 1924 by Commander A. Vahid Bey, of the Turkish Navy.

THE SALONIKA RE-UNION ASSOCIATION.

The fourth annual muster of the Salonika Re-union Association, of which Field-Marshal Sir George Milne, Chief of the Imperial General Staff, is patron, will be held on the Horse Guards' Parade at 10.30 a.m. on September 30. Brigadier-General H. E. T. Kelly, C.B., C.M.G., Chairman of the Association, will be in charge, assisted by the chief marshal, Mr. C. E. Evans, and branch representatives. The parade will be formed up by 11 a.m. for inspection by Field-Marshal Sir George Milne, and afterwards a short service will be conducted by the Chaplain-General. Members will then march to the Cenotaph in column of route *via* the Park road, Great George Street, Parliament Street, and Whitehall. After passing the Cenotaph the parade will be dismissed on the Horse Guards' Parade, and members will then proceed to Lyons' Corner House, Coventry Street, W.1, where the dinner will be held at 1 p.m. sharp.

According to *The Times*, Dame Louisa Paget, wife of Sir Ralph Paget, who during the War was at the head of a Red Cross Hospital in Serbia, and there made the acquaintance of a Hungarian, Captain Halasz, late manager of the domains of Prince Louis Windischgratz, to whom she was deeply obliged for work done to her hospital in the War, arrived in Budapest on August 23 by aeroplane from Munich for the purpose of placing a wreath on the grave of Captain Halasz.

The acting Yugoslav Minister for Foreign Affairs, M. Shumenkovitch, on August 22 handed to the Italian Chargé d'Affaires in Belgrade the written answer to the Italian Note about the episode at Split (Spalato) on August 15, when the Italian Consul was insulted and assaulted. This gives an assurance that the compensation demanded by Italy will be forthcoming and that the Yugoslav authorities on their own initiative have made an inquiry into the incident and have already punished the people who caused the disorder.

PERSIAN SELF-TAUGHT

By SHAYKH HASAN.

In Roman Characters, with English Phonetic Pronunciation.

Containing the Persian Alphabet, Transliteration and Pronunciation Outline of Grammar with Persian Characters; Classified Vocabularies and Conversations; Travel Talk; Trade and Commerce; Persian Hand-writing; Money, with English and American Values; Weights and Measures; Illustration of the Persian Coinage.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE NETTUNO CONVENTIONS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Surely the writer of your Notes of the Week in the issue of THE NEAR EAST AND INDIA for August 23 was in error in stating that the strongest argument in favour of the ratification of the Nettuno Convention was "that Yugoslavia had already received her share in the bargain, the evacuation by Italy of the last Dalmatian ports and islands."

These ports and islands should have been handed over in accordance with the Treaty of Rapallo, ratified by Italy on November 27, 1920. In May, 1922 (*vide e.g. The Times*, May 20, 1922) was negotiated the Convention of S. Margherita which "settled" anew the status of Fiume, and provided *inter alia* for the evacuation of the "third zone" in Dalmatia. The Convention was ratified by Italy in February, 1923, and by the following week the third zone was evacuated (*vide the Morning Post*, March 14, 1923, correspondence from Belgrade). In January, 1924, were negotiated a treaty concerning Fiume, which again settled the status of that town, and the Pact of Rome, or Treaty of Friendship between Italy and Yugoslavia. The Convention of Nettuno was negotiated in July, 1925, two years after the evacuation of the "third zone," for the purpose of settling economic relationships in Dalmatia.

I think that perhaps the writer was for the moment confusing the Nettuno with the S. Margherita Convention—it is hard to keep count of these conventions and pacts. The evacuation of the third zone was carried out in accordance with the latter and was hardly a *quid pro quo* for stipulations negotiated in another regard two years later with two treaties intervening. I should not have called attention to what I take to be a slip of memory were a consideration of honour not involved. The Skupshtina was free to reject the Convention, as would be Parliament in the case of treaties submitted to it in accordance with an undertaking of the present Government. Reference to Parliament would otherwise be a farce. Italy's real

grievance was that Dr. Nintchitch did not himself present the Convention earlier to the Skupshtina. The delay was due to his fear of rejection.—I am, etc.,
Liphook, August 27. A. H. E. TAYLOR.

[The numerous technical agreements between Italy and Yugoslavia signed during 1924 and 1925, terminating in the Nettuno Conventions, were an essential part of the settlement of the relations between the two countries, and were foreshadowed by any Treaty settling the general lines of friendship. It would not seem, therefore, to be straining a point to describe the Nettuno Conventions as part of Yugoslavia's *quid pro quo* for her share in the comprehensive bargain which covered a score or more of subjects, including the establishment of friendship, evacuation of the Third Zone and—veterinary regulations. This, in any case, was the view expressed by the Yugoslav Acting Minister for Foreign Affairs in commending their ratification to the Skupshtina.—Ed.]

THE GREEK ELECTIONS.

The final returns of the Greek election held on August 19 give the following distribution of seats in the new Chamber:—

Government Parties—			
Liberal Party (M. Venizelos) ...	...	...	184
Democratic Union (M. Papanastasiou) ...	...	...	17
Nationalists (General Kondylis) ...	...	...	8
M. Zavitsianos ...	...	...	5
M. Michalakopoulos ...	...	...	4
Independents ...	...	...	5
			223
Opposition—			
Popular Party (M. Tsaldaris) ...	...	...	20
Progressives (M. Kaphandaris) ...	...	...	4
Anti-Venizelist Republicans (ex-Pangalists) ...	...	...	3
			27

NEWS IN BRIEF.

The new Greek Chamber will meet on September 17.

Mustapha Kemal Pasha, President of the Turkish Republic, is making a tour of the ports of the Sea of Marmora.

The death occurred in Paris last week of M. Charles Vergé, Vice-President of the Suez Canal Company, in his 79th year.

Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, returned to Turkey last week after a six weeks' holiday in Austria.

It is stated from Athens that it is reported from the Vodina district of Macedonia that two men, who had been captured by brigands and were held to ransom for 100,000 drachmæ (about £270), have been put to death because the ransom money was not paid.

According to *The Times* aeronautical correspondent an experimental air survey in Egypt was recently carried out by the Aircraft Operating Company, who photographed a small area in the Fayum Province at the request of Hussein Sirry Bey, Surveyor-General of Egypt, in order to exemplify the uses of air survey in mapping and revision. The work was completely successful, according to *The Times*, which adds that its main interest lies in the indication it gives of the modern and enterprising methods of the Surveyor-General of Egypt which made it possible. Through the sympathetic support of King Fuad, who is himself an eminent geographer, and the technical oversight of Hussein Sirry Bey, a remarkably complete atlas of Egypt has been produced on a scale far beyond that of ordinary atlases. This atlas was exhibited at the International Geographical Congress at Cambridge, where Hussein Sirry Bey read a paper on its preparation and on surveying in Egypt generally.

The funeral of M. Elie M. Elliadi took place on August 24 at the Greek Cemetery, Norwood. Archbishop Thyateira and Dr. Germanos officiated, assisted by Archimandrite Agathangelos Moschovakis. The principal mourners were the Greek Minister, Captain and Mme. Demetrius Papalexopoulos, Sir Arthur and Lady Crossfield, M. Collas, M. and Mme. Romanos, Miss Schilizzi, and Mr. Philip Argenti.

PERSONAL AND GENERAL

TO-DAY

August 30, 1928 (New Style).

August 17, 1928 (Old Style).

Rabia I, 13, 1347 A.H., of the Muslim Calendar.

Ellul 14, 5689, of the Jewish Calendar.

Sir Lucas and Lady Ralli have arrived in London from the Continent, and are staying at Claridge's Hotel.

Dr. Juritch, Minister of the Kingdom of Serbs, Croats, and Slovenes, returned to London from the Continent last week.

Lord Allenby has accepted an invitation to attend the national convention of the American Legion, which is to be held at San Antonio, Texas, from October 8 to 12.

Marshal Pilsudski arrived on August 20 in Roumania, where he was to be the guest of Dr. Skupiewski, a former Deputy. After about a month's stay the Marshal will pay an official visit to Bucharest.

Sultan Taimur bin Faisal of Muscat and Oman has undergone a successful operation at the hands of Colonel Lessel Stephens, late Civil Surgeon of Karachi. The Sultan becomes the official guest of the nation for a month as from September 15.

Dr. Taha Hussein, the Egyptian scholar whose researches into Islamic and pre-Islamic literature have caused considerable stir in Egypt, is among the delegates at the Congress of Orientalists which is being held this week at Oxford. The papers which he will submit to the Congress are, "Remarques sur l'emploi du pronom dans le Coran," "Quelques rapprochements curieux entre Leibnitz et les Motazilites musulmans," and "Influence des discussions théologiques aux deux premiers siècles de l'hégire sur la formation de la rhétorique arabe."

The funeral of Mr. Pandeli Ralli, who died on August 21, took place on August 24 at the Greek Cemetery, Norwood, the service being held in the Ralli Memorial Chapel. Archimandrite Agathangelos Moschovakis officiated. The principal mourners were Lady Moreton, Viscount and Viscountess Byng of Vimy, Sir Lucas and Lady Ralli, Lady Grey, Mr. Ronald Hamilton (representing Lady George Hamilton), Mr. and Mrs. Eumorfopoulos, Mrs. Julia Dilberoglu, Mr. H. Walrond, Mr. W. B. Cooper, Captain Stephen Ralli, and members of the household.

THE ORIENTALIST CONGRESS.

The Seventeenth International Congress of Orientalists opened at Oxford on August 27 with the general inaugural meeting of the Delegates in the Examination School. The President, Lord Chalmers, received the guests, and made a short speech of welcome.

During the week some papers of exceptional interest to readers of THE NEAR EAST AND INDIA are being read. These include: "The Archæological Service in Transjordan and its Works," by Mr. G. Horsfield; "The Human Khil'at," by Prof. F. W. Buckler; "Excavations at Jerash," by Mr. J. W. Crowfoot; "Beliefs of the People of the Gilgit region regarding supernaturally endowed beings and supernatural phenomena," by Lt.-Col. D. L. R. Lorimer; various papers on Assyriology and kindred subjects by Prof. A. H. Sayce, Prof. E. Chiera, Dr. A. E. Speiser, Prof. S. H. Langdon, Mr. C. L. Woolley; papers on Egypt and Africa by Mr. C. M. Firth, Prof. J. H. V. Breasted, Mons. J. Capart; papers on Central and Northern Asia, by Prof. A. Foucher, Prof. E. J. Rapson; papers on Iran, Armenia, and the Caucasus, by Dr. E. Herzfeld, Mons. B. Nikitine, Mr. A. Safrastian, Prof. H. Lommel, Prof. A. V. Williams Jackson; papers on Hebrew and Aramaic, by Prof. A. S. A. Yahuda, Dr.

S. A. Cook, Mr. P. L. O. Guy; papers on Islam and Turkey, by Mirza Muhammad Khan, Prof. T. Kowalski, Mons. V. Minorsky, Dr. J. H. Kramers, Dr. C. Rathjens, Dr. T. Hussein, Prof. Z. Smogorzewski, Prof. M. Abdur-Rahman, Mr. B. Thomas, Prof. D. S. Margoliouth, Dr. A. Haq, M. A. Gad el-Mawla Bey, Mrs. M. Hasluck; and papers on Oriental Art.

Among the Governments and Institutions represented at the Congress are those of Egypt (Mohamad Gad el-Mawla Bey), Cyprus (Sir Ronald Storrs), Palestine (Dr. L. A. Mayer), Ethiopia (Mr. G. Herui), France (Prof. A. Moret, Prof. H. Maspera), Republic of Lebanon (Mons. F. Hourani), Netherlands (Prof. C. Snouck Hurgronje), Turkey (Prof. K. Z. M. Fouad), Bristol (Dr. de L. O'Leary), Cambridge (Prof. R. A. Nicholson, Prof. E. J. Rapson, Prof. A. A. Bevan), Durham (Prof. A. Guillaume), Liverpool (Prof. T. E. Peet), Victoria University of Manchester (Prof. M. A. Canney), Dublin (Lt.-Col. E. G. Hart), Syria (Rev. H. Lammens, Rev. M. Bouyges, Rev. L. Jalabert), Yugoslavia (Dr. F. Bayraktarevitch), Central Asian Society (Sir T. Wolseley Haig, Col. H. Stevens), Egypt Exploration Society (Mr. H. I. Bell, D. H. R. Hall), India Society (Sir Francis Young-husband, Mr. F. J. P. Richter, Mr. E. B. Havell), Royal Asiatic Society (Sir J. H. Stewart Lockhart, Mr. A. G. Ellis, Mr. E. S. M. Perowone, Dr. M. Gaster), School of Oriental Studies (Sir E. Denison Ross, Prof. R. L. Turner), Palestine (Mr. J. W. Crowfoot, Rev. Prof. H. L. Vincent, Rev. Prof. A. B. Carrière), Egypt (Mr. R. J. Ellis, Mr. E. S. M. Perowne, Dr. M. Gaster), School of Archæology: Mlle. M. Baud—Institut Français d'Archéologie Orientale der Caire), Persia (Prof. P. V. Serebriakov-el Boursky—Institut Scientifique de Recherches Géographiques, Teheran), and Russia (Prof. A. S. Fedorovsky, Prof. F. Petrunne, Prof. M. F. Boltenko, Prof. S. M. Dimanskein, Prof. S. D. Ashpendiarov, Prof. I. N. Borosdin, and Prof. L. S. Mserianz).

Among members who were expected to be present, other than those already mentioned, were Shaikh Abdur-Rahman, Mr. A. Abd-al-Razig, Prof. W. F. Allwright, Mr. W. F. D. Allen, Mr. A. Y. Ali, Prof. C. H. Becker, Prof. F. C. Burkit, Capt. K. A. C. Cresswell, Sir John C. Cumming, M. A. Delawer Bey, Mr. G. R. Driver, Col. R. G. Elgood, Mr. H. A. R. Gibb, Dr. A. Haq, Mr. S. M. Husain, Mr. Y. Husain, (Mr. N. Ibscu, Prof. T. Jordanescu, Prof. D. M. Kay, Dr. A. R. S. Kennedy, Lord Lamington, Dr. A. Mingana, Prof. E. H. Minns, Bahadur Mirza Muhammad Khan, Prof. C. A. Nallino, Dr. A. Probsthain, Mr. C. N. Seddon, and Mr. M. G. Zubaid-Ahmad.

PALACE HOTEL :
Inland City of Nicosia.

OLYMPUS HOTEL : Port of Limassol.

(Opened! all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOUY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE WEEK AT HOME

London, Tuesday Morning.

"Dolce Far Niente."

What does happen in London in August? Nothing. The world is still. The machines of the newspapers revolve indeed, but to what end? There is no news. There are no meetings, no speakers, no exhibitions: the time is an eventless truce.

There are, of course, innumerable visitors to London, but they create nothing but curious sound and sight. Business men are away; social celebrities are away; the whole period belongs to the *fainéants*. As the *Manchester Guardian* has aptly said: "We are left alone, the six million of us, listening pleasantly to the fall of the plane-tree leaf." But really, for those who would learn, this newsless time is an incomparable opportunity for studying London.

Unemployment and the Premier.

It is a measure both of the seriousness of the problem created by increasing unemployment and of the difficulty of alleviating it by any artificial means that the Prime Minister should have appealed directly to employers, if possible, to employ more men, and at least not to "sack" those already in employment. But the mode of pious exhortation can effect little by itself, for the rightly sentimental temper towards the unemployed which was created by the War is now considerably dissipated, and the tendency for capitalists now is to consider everything in terms of returns.

But the Government is attempting to do something, particularly in the transference of young miners to regions where employment is to be found. The most considerable problem is still that which arises from the number of older miners, who, rooted to the spots in which they have lived their hard lives, can yet entertain no prospect at all of finding work there. For the revival of the industry of mining is unpredictable. During the second quarter of the year, output dropped $11\frac{1}{2}$ per cent., the numbers of miners unemployed (now more than 300,000) increased by three per cent., and the average debit balance to the colliery owners on the coal brought up during this quarter was fifteen pence a ton. What, then, is to be the future? The Government's rating relief does not come into operation until the autumn of next year—and in the meantime, as far as one can now foresee, pit after pit will close down. The distress involved will be terrible.

Swimming Women.

Although the swimming of the Channel is now a common enough performance, it is still a very considerable accomplishment. But the remarkable thing is that, of the ten swimmers who have crossed the Channel during the last three summers, six have been women—two of whom are not yet out of their teens. The girl who swam it last week was a "slip of a thing" of eighteen years.

This is most certainly a feather in the cap of our young women, who, despite the pessimistic utterances in regard to the effect of certain vain fashions upon their physique, are undoubtedly showing that the times are not so out of joint as certain ageing misogynists would suggest. One does not necessarily imply that Channel swimmers, tennis champions, sprinters, and the rest, would make the best wives and mothers, but one must admit the reality of feminine achievement in this post-War generation.

Railway Accidents.

The safety of the British railway carriage has become proverbial, but one is reminded, by a reading of the Report by the Minister of Transport on last year's railway accidents, that this safety has nothing of the mechanical or inevitable about it. It is procured, like so many other things, only at the cost of eternal vigilance.

Last year actually there was recorded a higher death-roll—27 passengers—than in any year since the War; and

this number exceeded the average for the generation before the War. But nowadays, of course, more people travel by train: the actual proportion of passengers killed was one to sixty-one millions.

Most of the accidents occurred at level crossings—194 cases were in fact so reported. Level crossings are of three kinds: crossings on public roads, occupation or private level crossings, and footpath crossings. It is the first only that have to be guarded by gate-keepers provided by the railway companies, and it is significant that it was on them that fewest deaths occurred.

The "Push-Bike."

One of the few pre-War institutions which has not only survived but also increased in popularity is the ordinary "push-bicycle." Of course, the motor traffic has largely driven the devotees of this form of transport off the main roads, but no observer of our countryside can fail to have been struck by the faithfulness with which bands of men—now supplemented by young women attired in masculine garb—turn out each week-end for "a spin with the Club."

Last Saturday the Cyclists' Touring Club, whose name may still be seen on many an inn far in the country, celebrated its jubilee; and it will be long before cycling as a pastime dies out. Personally I am all in favour of it, although the organised form is possibly a matter of cultivation. One is, unlike certain motorists, a nuisance to nobody—provided that one carries a rear light as a shield from the so superior motorist; one sees and breathes and enjoys the country much better than is possible in a machine doing all the work; and, of course, one is getting excellent exercise.

The Speed-Limit.

A new order has been issued raising the speed-limit of pneumatic-tyred vehicles from twelve to twenty miles an hour. Whether this is a boon to the motor-companies, or whether it implies that drivers doing more than twenty miles an hour will be fined, is as yet unknown. The motor-coach companies have been trying to get the Ministry of Transport to raise the limit to thirty miles an hour—which would be more in accordance with actual fact and it is said that there will be strong protests from both the companies and the goods transport interests.

The argument used is that the rigid enforcement of twenty miles an hour would inevitably mean greater congestion, owing to the general slowing down involved.

Cricket and Football.

There is no more ominous, more depressing sound to the cricketer than the thud of a football in the near or far distance. And yet that, so early as the end of August, is what he is forced, through the professionalism in Association which indulges in commercial theft at the expense of both ends of the Cricket season, to hear. Drips of rain from the Pavilion roof on a day in mid-June are whispers of joy compared with the melancholy boom of the distant inflated ball.

There are, however, still places inviolate from the winter games, wherein one may yet enjoy the incomparable sight of "flannelled fools" on a green field. And there, please Heaven, much gaiety will be until the end of September.

In the County Championship this year Lancashire are the unpopular, unworthy, yet wholly deserving champions once again. Theirs has been a triumph, not of the spirit, but rather of the temper. Primarily they owe their position to the fast bowling of Macdonald, who is peerless, and with slips worthy of him would have had amazing results; secondarily they owe it to stubbornness of their first few batsmen, whose knowledge of the "game" of playing for "keeps" is, happily, unsurpassed. And lastly, they owe it to the absurdly mathematical system of reckoning Championship points—a system which puts a premium upon the sporting spirit.

ALTER EGO.

COMMUNISM IN INDIA.

One of the greatest difficulties inherent in the working of the reformed Constitution is the necessity for the Executive to avoid as far as possible any appearance of moving in advance of public opinion. The outstanding example to which this applies is, of course, interference in matters concerning the religious observances and social customs of the people. The news that the Government of India has decided at last to grapple with the increasing menace presented by Communist agitation and Bolshevik agents has been received with feelings of widespread relief and satisfaction in this country. And we have little doubt that the action contemplated in the Public Safety (Removal from India) Bill, published last week, prior to its introduction at the forthcoming session of the Central Legislature, will command general approval in India as well. The provisions of the Bill are drastic and far-reaching, but not more so than appears to be warranted by the extent of the evil which is sought to be combatted. According to the telegraphic summaries the primary object of the measure is to empower the Governor-General-in-Council to order the removal of any Communist agents, other than British-Indian subjects or subjects of Indian States, within such time and in such a manner and by such route and means as the Order may specify. Hitherto the Government has been unable to deal with such persons if of British nationality—as so many unfortunately are—unless they break the common law, and this they have generally been too astute to do. The accused in the famous Cawnpore conspiracy case, although their complicity in an extensive Communistic organisation of a revolutionary character was proved, were condemned not on that account but as participants in a conspiracy “to wage war against the King-Emperor.” Such agents, if the Bill is passed, will in future be required to execute a bond giving security for good behaviour until their removal from British India, failing which they will be taken into custody. In the event of disobedience to a bond the accused will be liable to arrest without a warrant, a maximum term of imprisonment of twelve months and also a fine, subject to the proviso that the prosecuting authority shall be the Governor-General-in-Council only. The masters of all ships leaving British India ports shall receive such persons under order of removal when required to do so by a competent authority, the expenses of such removal being paid by the Government of India. No removal order can be called in question by any Court, and officers acting under the proposed law will be protected against legal proceedings for actions performed in good faith.

Whether the causes responsible for the present unprecedented labour unrest are entirely economic or not there can be no doubt that the avowedly Communistic aims of many of the self-constituted leaders of the workers and the clearly proved complicity of outside agencies known to be hostile to our rule in India have not only prolonged the disputes but go far to explain the violence and

“direct action” tactics which distinguish the present strikes from the majority of disturbances of a similar nature in the past. “It will probably be taken by them as a compliment, but it is a fact, nevertheless,” remarked the official organ of the Indian labour movement in a recent issue “that in almost every strike or labour trouble of recent date—at Bombay, Kharagpur, Calcutta, Madras, Negapatan—the Communists, with their general strike slogan, have been well in it.” At the last meeting of the All-India Trade Union Congress the Communists were sufficiently numerous to inspire and carry a number of the more militant resolutions. Again at the subsequent meeting of the Executive Council they succeeded in securing the rejection of a proposal to affiliate the Congress with the International Federation of Trade Unions at Amsterdam. Under the auspices of the Congress they have also managed to get a Council of Action appointed with representatives in each province, their idea being to organise a mass movement of the workers and peasants of India. “In one way,” the same journal pertinently observes, “it may be said that they have a right to call the tune seeing that they, that is Moscow, pay so much to the paper. One donation alone from the Council of Trades Unions, Moscow, amounts to Rs.13,625, or nearly 80 per cent. of the All-India Trade Union Congress income for last year.” Calling upon the accredited leaders of the movement “to bestir themselves and grapple vigorously with this enemy, disguised at present as a friend,” the journal points out that in India, where trade unionism is still in its infancy and the political situation tends to encourage revolutionary ideas, the “Red” menace is a very real one.

The relationship between the present industrial unrest and the activities of Bolshevik agitators was still more clearly brought out in the long letter made public in India recently from Mr. M. N. Roy, who ever since his flight from India's justice has been active in furthering of the aims of the U.S.S.R. from a distance. Addressing himself to the new workers and peasants' party he shows in familiar language how industrial mischief-making may be combined with nationalist agitation to destroy the foundations of the social and political order in India. And at the Communist International Congress in Riga last week the delegates, it will be recalled, were advised that the scene of the next revolutionary outburst would probably be India and frankly informed of the measures in hand for the realisation of that prospect. To suggest that advanced political leaders like Pandit Motilal Nehru or Sir Tej Bahadur Sapru would deliberately lend their support to such designs is, of course, unthinkable, but that some of their less experienced followers, in their anxiety to exercise the utmost possible pressure upon the Executive Government have fallen an easy prey to the Communist agents' machinations is not so improbable. The Communists' method, as Mr. Roy's letter clearly revealed, is to utilize ordinary political, as well as purely industrial, organizations for their own purpose by cleverly insinuating Communist propaganda into their pro-

grammes. in the hope subsequently of seizing the whole of the organization. And evidence has been steadily accumulating to show that the subversive intentions and activities of the Third International generally, and, of the intensive efforts it is directing against India in particular, are achieving a substantial measure of success.

CURRENT TOPICS.

The Lessons of Bihar and Orissa.

A variety of factors serve to confirm our belief that the political situation in India has undergone a progressive improvement during the last few months. There can be little doubt that the results of the recent debates in, first, the Bengal and then the Bombay Council have materially weakened the position of the supporters of the boycott movement, who received a further shock last week in the news that Bihar and Orissa Council, after a protracted discussion, had also agreed to the appointment of a provincial Committee to co-operate with the Statutory Commission. The usual Swarajist amendment in favour of a round talk Conference was apparently proposed but rejected, and the substantive proposition carried by fifty votes to forty-four. In the Central Provinces the issue is still in doubt, but, as we have previously remarked, now that Bombay and Bengal have come to a favourable decision it will not be easy for either the Central Provinces, Madras or the United Provinces to refuse to consider their previous adverse verdicts. Addressing the former Council at the beginning of the session, Sir Montagu Butler advised the members strongly in favour of such a course. At present, he admitted, there was no sign that the Council would pass the requisite motion, so none has been put before that body. But Sir Montagu made it plain that he would continue to hope, up to the last minute, that the Council would change its attitude, and that he would personally be greatly disappointed if he did not obtain a mandate to ask for more reforms for the Central Provinces. Without such a mandate, he emphasised, he would be crippled from the outset.

And anything approaching to unanimity in the Provinces ought to lead the Legislative Assembly to rescind its own resolution—which was carried by only a small majority—and co-operate with the Commission. Certainly, assuming, as we may, that there will be another discussion on the subject during the forthcoming Simla Session, there is no confidence on the part of the members of the boycotting parties that they will be able to effect a second defeat of the Government, and several Simla correspondents are of opinion that among the more moderate wing of the boycotters, that is to say the "responsive co-operators" and certain of Mr. Jinrah's Muslim followers an appreciable change of front is noticeable. "I am willing to venture the prediction," a particularly well-informed correspondent observes, "that if the Commission issue is again brought up before the Assembly the Government will win."

A Question of Education.

At a recent meeting of the East India Association the author of an interesting paper on "The Problem of the Domiciled Community in India," emphasised that the salvation of the Anglo-Indian Community is to be sought in education, academical as well as vocational. The community has shown in the most practical way that it fully accepts the position. Nearly all, if not all, the Anglo-Indian Associations maintain scholarship funds for the assistance of poor scholars. And as the last quinquennial report on education pointed out, the bulk of the cost of European education (about 65 per cent.) is met from school fees and private sources, the corresponding figure for Indian education being only 35 per cent. The balance of the cost of European education, about 35 per cent., is met from Government funds, and if the somewhat fairer basis of the actual amount per child expended from Government

sources is taken the comparison is still marked. Particular credit is due in this respect to the European Schools in India Improvement Association which has always recognised that members of the Anglo-Indian and Domiciled Community in India, owing largely to the reformed Constitution and the advance in education of the Indians themselves, are faced with special problems, chief among which is the difficulty in obtaining suitable employment such as was readily open to them in the past. We can conceive few objects worthier of the support of the mercantile community in this country than this enlightened and progressive organisation, with its notable record of achievement in the most deserving of all fields of social service.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 9.

India and Dominion Status.

A pronouncement of some importance, on the subject of Dominion status for India, was made by Sir Malcolm Hailey at a banquet in Simla given in his honour by the Executive Councillors and Ministers. He said: "Our ambition for India is the same. We are at one in our determination that she shall reach the goal she seeks. It should be no cause of bitterness or animosity that we differ as to the exact path by which we shall reach our journey's ending. There are those of us who believe that the goal must be attained, not by short and risky paths over dangerous ground, but by the surer path of progress through educational and social development, by training in political consciousness and the fostering of political responsibility, by consolidating what we have gained and building on that foundation a structure which will guarantee a fresh advance. There are those of us who have worked wholeheartedly with that purpose and for that end, honestly believing that only by this means can India gain a political status which will ensure her achieving her proper place among her sister Dominions of the Empire. We may be wrong, we may be unduly cautious in our view of the capacity of India for the rapid assimilation of modern political institutions, but we are not on that account enemies of India's aspirations or traitors to the salt we have eaten."

That may be accepted as an intelligent anticipation of the finding of the Statutory Commission. "Yes," it will say, "go on, but for mercy sake go slowly."

The Bengal Council.

After a debate that began on Tuesday, and was continued for three hours yesterday, the Bengal Council accepted the Bengal Tenancy Act Amendment Bill for consideration, which is the equivalent of a Second Reading in the House of Commons. Sir P. C. Mitter, the new member of the Executive Council, in introducing the Bill, described it as the most important piece of legislation that the reconstituted Council had been asked to consider. The first day the zemindars of the Province came in for a good deal of criticism, but yesterday the Maharaja of Nattore, speaking in their defence, maintained that a close study of the history of the Province would prove beyond all possible doubt that the zemindars as a class had been a boon and a blessing to the country. That may be; still, the ryots are admitted on all sides to have undoubted grievances. There would otherwise be no thought of legislation.

The Council last mail day refused the demand for Rs. 5,37,000 to cover the cost of raising the pay of the constables, sergeants, and sub-inspectors of the Calcutta and Bengal police. The majority was only nine votes. As Mr. Prentice, who moved the demand, had given figures, revealing a serious decline in the number and quality of the recruits of the last few years, the Council's decision is not thought to have done it much credit. Ex-Army men, Mr. Prentice stated, are no longer offering

themselves as sergeants because of the totally inadequate pay.

The Statutory Commission.

Two of the many memoranda that the Statutory Commission will have to consider, and report on, have been published during the week; those, namely, of the Marwari Association of Calcutta and the British Indian Association. It all looks less and less like a boycott, some will think. The Marwari Association considers that dyarchy should be replaced by provincial autonomy, but that law and order should be in charge of a special officer. Adequate financial provision should be made to enable the Ministers to administer their departments satisfactorily. That is to say, there must be a settlement very different from the Meston one. All Bengal is agreed on that score. The British Indian Association also advocates full provisional autonomy, but subject to the safeguard of a Second Chamber, one with the constitution and powers of the Council of State. The Association maintains that the rural interests of Bengal require that the zemindars and the ryots should be more adequately represented in the legislature.

Indian Cinematograph Committee.

The report of the Indian Cinematograph Committee has been published. The main proposals are:—

- (1) The formation of a Central Advisory Committee and Bureau, to be attached to the Commerce Department;
- (2) Financial aid to the producer;
- (3) Building of more cinemas;
- (4) Compulsory quota of Indian films; and
- (5) A Central Board of censors for the whole of British India, to be located at Bombay.

Budhist Bronzes.

At the Asiatic Society of Bengal, on Monday, the best and most important of the Buddhist bronzes recently discovered at Chittagong were on view, when Mr. Rakshit of the Archaeological Survey drew the attention of the members present to the features of most interest. The bronzes (the writer was present) are very fine works of art, one or two are especially beautiful, and they throw some light on points other than artistic. One will look forward to a monograph from the Asiatic Society on their subject. Before coming to the bronzes Mr. Rakshit spoke of an inscription of philological and other interest not long ago discovered near Katmandu in Nepal. The greater activity of the Society under the secretaryship of Mr. Van Manen is a thing that should be signalled.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 11.

The Bardoli Settlement.

The Bardoli dispute, which at one time threatened to culminate in bloodshed, has at last been settled amicably. What adds to the success of the settlement is the fact that each party believes that it has gained its point and that the other has had to climb down. All the parties have to be congratulated on the spirit in which they approached the problem of settlement. The Surat members of the Legislative Council have spared no pains to bring about peace and it is doubtful whether, without their efforts, anything could have been achieved through the negotiations. Among the Surat members, while all of them were anxious to do their share, Rao Bahadur Bhimabhai Naik deserves a large share of the credit. Mr. Vallabhai Patel must be congratulated on having accepted Government terms with a good grace and on stopping the Satyagraha movement after he had proved his strength, for it is useless to deny that Mr. Patel had it in his power to give the Government a troublesome time had he chosen to prolong the struggle. To Sir Leslie Wilson, however,

must be conceded the greatest share of the credit for the settlement; he has shown admirable patience and statesmanship in refraining from repressive measures.

It is well known in this Presidency that hard as was the task of persuading the Bardoli agitators to compromise undertaken by the Surat members, Sir Leslie had a still harder one—that of persuading his own colleagues of the wisdom of his policy. The Surat negotiations began on Sunday morning and lasted till ten in the night. Mr. Patel having told the Surat members of the Council what terms he was willing to accept, left for Bardoli at five o'clock on Sunday evening, leaving the Councillors to settle the question unhindered. Every point had been settled except the question of returning the forfeited lands sold by Government to other individuals, chief among them being Mr. Garda, a Sardar of Navsari, who had bought lands for a syndicate consisting of his son, his nephew and two or three others. Mr. Garda was willing to part with his lands at cost price—on certain conditions; a public apology from Mr. Patel for the incessant annoyance he had received at the hands of the Satyagrahis, compensation for material to the extent of Rs. 12,000 and an undertaking from the Satyagraha headquarters that the boycott imposed on him would not be continued in any form. It took the Collector and Mr. Naik several hours to talk Mr. Garda round. Mr. Cooverji, another of the purchasers of forfeited lands, was willing to give up his land at cost price provided he was given a piece of Government waste land in exchange! Sitting till ten o'clock that night, the Sub-Registrar effected the registration of the sale deeds, all of which have been executed in the name of Mr. Naik. The other conditions are: On the part of the Government the reinstatement of the patels and talatis who had resigned, that the *Satyagraha* prisoners should be released and a full, open and independent inquiry into the question of the reassessment be instituted; and, on the part of the Bardoli peasants, that the civil disobedience campaign be dropped.

The Trade Disputes Bill.

Now that Bardoli has been settled satisfactorily the unrest which has for the last three and a half months paralysed the industries not only in Bombay but all over the country has come to the foreground again. In the next session of the Assembly Government propose to introduce a Bill to prevent industrial disputes. The Trades Disputes Bill will set up Conciliation Boards and Courts of Inquiry. The Court of Inquiry shall consist of a Chairman and such other members as the appointing authority may think fit or may consist of only one person. The Board of Conciliation differs from the Court of Inquiry in two important points. Whilst in both cases the appointing authority is the Local Government or the Governor-General-in-Council, it is expressly stated that the members of the Conciliation Board will be appointed "on the recommendation of the parties concerned, provided that if any party fails to make the necessary recommendation within the prescribed time the appointing authority shall select and appoint such persons as it thinks fit to represent that party." Or if the Board is not composed of representatives of the parties in equal numbers, it will consist of *independent* persons—the Chairman in both cases being an *independent* person. The Court of Inquiry and the Conciliation Board is to have the same powers vested in them as other courts under the Civil Procedure Code, 1908, in (a) compelling the production of documents and other material objects, (b) enforcing the attendance of any person and examining him on oath, (c) and issuing commissions for the examination of witnesses. Every inquiry by such bodies shall be deemed a judicial proceeding under the sections of the Indian Penal Code regarding public utility services.

Making Strikes and Lock-outs Illegal.

Any person who is employed on a monthly wage basis in a public utility service—e.g., the railways, the telegraphs, the postal department or any other industry which

supplies light or water—shall be punishable with one month's imprisonment or with a fine of Rs.50, or with both, for voluntarily withdrawing from the duties of his office without leave or without giving his employers a month's notice. The abettor of such an offence is liable to imprisonment for three months or a fine extending to Rs.500, or both. Only the Court of a Presidency Magistrate or of a Magistrate with first-class powers can try such offences and that too solely on a complaint made by or under authority of the Governor-General-in-Council or the Local Government. There are special provisions for strikes and lock-outs. If the strike or lock-out has any object beyond the furtherance of a trade dispute within the trade or industry in which the strikers or employers are engaged or is calculated to coerce the Government by inflicting hardship on the public or directly, it shall become illegal. The instigator of a strike is liable to the same penalty as the person who abets another in withdrawing from the duties of his office without leave or notice. A person who refuses to take part in an illegal strike shall not be expelled from a trade union nor can he in any other way be deprived of a right or benefit which he or his legal representatives would otherwise have enjoyed. The Court has the power to order the person expelled to be restored to membership or award him compensation out of the funds of the union or society.

The Bill has long been overdue and it is assured of an easy passage in the Assembly. It is true that the fact that the abettor of an offence should receive a greater penalty than the offender himself may seem anomalous, but this is largely due to the belief prevalent here that most strikes arise not from the grievances of the workers but that the responsibility lies on the shoulders of outsiders who incite the workers of an industry to strike.

Tatas' Ultimatum.

Seeing that the workers have not availed themselves of the offer made on July 28 of liberal terms for the resumption of work by the required number of men and of valuable concessions to the men to be sent away as a measure of retrenchment, the Chairman of the Tata Iron and Steel Company has issued an announcement of policy to the Press. From Tuesday, August 14, the firm will commence filling up the vacancies. The posts will be filled up in the order in which the applications are received and as soon as the vacancies are filled it will not employ any man even if his name is not on the reduction list. If by the 20th the firm find that the strikers has not applied for the jobs it will commence filling them up with new men. Any man who applies not later than the 20th and to whom the company is unable to give employment on account of the place having been filled will receive in addition to his ordinary dues the full amount of his provident fund, including the company's share, a railway ticket to the station nearest his home and a month's salary for every year's service subject to a maximum of four months' pay. The company repeats its offer of the ten lakhs' bonus scheme.

THE WORKING OF DYARCHY IN INDIA.

In a little book published in Bombay, and entitled "The Working of Dyarchy in India 1919-1928" a writer styling himself "Kerala Putra" analyses the working of the reformed system of government with the object of ascertaining how far it has been successful as a first instalment of representative institutions in India. He begins with a sketch of the constitution of the Government of India before the Reforms, and he then gives an outline of the reformed constitution, and a more or less detailed analysis of its working. He writes from the Nationalist standpoint, but he is moderate in tone. He is of the opinion that the Montagu-Chelmsford Act fundamentally altered

the character of British rule in India. And he gives the Government the credit of adopting a policy designed increasingly to change British rule from an alien administration into an Indian government based on the British connexion, but nevertheless Indian in its outlook, and to a large extent Indian in its personnel. He attributes the apparent failure of the system of dyarchy to the unfavourable political atmosphere in which the scheme was launched. The Rowlatt Act, Amritsar, Regulation III. of 1818, and the Turkish treaty had, he maintains, created such an atmosphere of distrust and suspicion as to jeopardise the scheme from the very start. He is not, however, of the opinion that the scheme is an absolute failure. As a method of administration it has not, he thinks, achieved the success that its advocates hoped for; but it has been eminently successful in its fundamental object, which was that it should be a transitional method of familiarising the Councils with political responsibility. The political capacity of the new Councils has been proved, "Kerala Putra" thinks; and we agree that they have firmly established themselves. This would seem to be also the view of the European community in India, as is clear from the recommendation which the Associated Chambers of Commerce have made for the establishment of full provincial autonomy.

Regarding the future, "Kerala Putra" likewise favours the immediate establishment of provincial autonomy. But he would maintain a strong central government. "The powers of the central government must," he says, "remain unimpaired over a vast variety of subjects in view of India's peculiar social, political and racial structure." And again, "the most essential thing, if political unity is to be preserved, is to maintain a powerful central government." As to the nature of the central government, he would largely free the Government of India from the control of Whitehall. But he is under no illusion as to the Indian States. On the contrary he is perfectly clear that the Government of India, in its capacity as the paramount Power, cannot be made responsible to a legislature elected only for British India. He would bifurcate the functions of the Government of India. In relation to the Indian States the Governor General would continue to be the representative of the Crown, and would be responsible to Parliament. But in his capacity as chief governing agent of British India he would be responsible to the Indian legislature. In matters affecting imperial and foreign policy, defence, and vital constitutional changes, the Secretary of State would still possess effective authority. But he would cease to control the internal policy of the Government of India, and would no longer intervene in details of administration. In another important matter also "Kerala Putra" is more cautious than the Committee of the All Parties Conference. He holds that illiteracy must restrict the franchise, and he would not therefore rashly establish universal suffrage. In his view Indians must be content to accept the principle that universal adult suffrage is not immediately practicable. A restricted franchise based on a small property or minimum educational, or administrative, qualification will be a necessity for some time to come.

On the whole the book is a useful contribution to the discussion of a difficult question. It is, we think, a little unfortunate that the author should regard the Executive as being solely responsible for the difficulties, troubles, and failures that have occurred in connection with the working of dyarchy. The Ministers must surely have been sometimes in the wrong, but according to "Kerala Putra" no blame seems to attach to any of them for the defective working of the system. This weakness for blaming the Executive for every difficulty is, however, common to most Indian writers, and it seems to have become almost a part of their mental equipment. In other respects the book contains much that is of value; it is, moreover, clearly and carefully written; and the matter is well arranged.

"The Working of Dyarchy in India. By "Kerala Putra," D. B. Taraporeala Sons and Co. Rs.4 (6s. 6d.)

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Shipping Conditions in Turkey.

The view is taken in business circles here interested in trade with Turkey that shipping conditions generally at Constantinople at the present time are by no means as unsatisfactory as might be imagined from a perusal of the recent report of Colonel Woods, O.B.E., on the position in 1927. Of course the natural tendency in Turkey is for things to improve, but it is maintained that the recital of the various difficulties which arose in the past year is only one side of the picture, and that it is necessary to bear in mind the strenuous efforts that Angora is making to create a new Turkey and to give to the Turkish authorities due credit for such progress as they have made in the face of very serious obstacles. It hardly needs emphasis, of course, that the task of creating an economic system *de novo* is bound to be a lengthy process and also an uncomfortable one both for the country itself and for those who trade with it. There is a growing recognition in the English business world that the Turks are really trying to do all they can now to further the work of development, and there is a tendency rather to praise what they have so far accomplished than to lay too much stress on the inevitable shortcomings.

Traders' Difficulties.

In saying this I must not be taken as inferring that the voice of criticism is stilled. There are several points which cause considerable annoyance to British traders. One is the growth of formalities at Turkish ports, not only with regard to visitors to the country, but also with regard to goods. An example of the first is the fact that the numerous particulars demanded now include the name of the passenger's grandfather, a development which may possibly make Western travellers wonder whether Angora was the original house of Mr. Nosey Parker, but which is perhaps intelligible when the composite nature of the Turkish population is taken into consideration. As regards the latter one may cite the number of signatures required before goods are delivered over to the consignees. I was given an instance of this which is worth mentioning. A bale was a little short in weight, and before the Turkish officials would release it more than a dozen signatures had to be obtained, the process of getting them, needless to say, occupying a very considerable time. The difficulties which arise, however, are by no means wholly the fault of the Turks. For example, goods are described on bills of lading in the usual Western terms for the various classes of manufactures, but when these terms are translated by means of a dictionary into Turkish the result is not infrequently far from what it should be, and confusion ensues. The fault here is with the exporter, who ought to use the very simplest terms for describing his goods. Now that Turkey is adopting Latin characters it may simplify matters for traders who will be able to learn the correct Turkish expressions for their goods, and thus will avoid errors due to mistranslation at the other end.

The New Turkey Ideal.

Those difficulties I have referred to above may be termed of the administrative order; there are others and more serious ones which arise directly from the ambition of Angora to create a new Turkey. I propose to give two examples of this. The establishment of the Turkish

Republic was received with little confidence by the wealthy classes, and most of the rich Turks followed the Sultan out of the country, many of them going to Egypt and a few to Palestine. The effect of this on the Turkish market has been to reduce its purchasing power very appreciably, and there is no doubt that the long-drawn-out depression at Constantinople is due to some extent to this factor. If only the present Turkish régime could inspire sufficient confidence many of these emigrants would doubtless return, to the great advantage of the country, and it may be taken for granted, I imagine, that this important aspect has not been overlooked by the Angora authorities. The other example is of a different character. In common with other countries Turkey is endeavouring to develop new industries and to manufacture locally goods which were formerly imported, and recourse is being had to the imposition of heavy—one might say prohibitive—import duties to stimulate home enterprise. Unfortunately that policy is being carried out in an unthinking manner. Thus an article of poor quality is produced by the Turks and is "safeguarded" by an import duty of 80 per cent., but the said duty also applies to the same article of the best quality which the Turks are incapable of producing. The result is that the trade in the best quality article is killed. Admittedly this kind of thing arises purely from inexperience, but that is small consolation to traders who find the market gone while the Turks are learning the business of administration.

Imperial Airways.

A very marked improvement in results is shown in the preliminary figures of the Imperial Airways, Ltd., for the year ended March 31 last, and the directors have found it possible to propose an initial dividend of five per cent. For the period the net profits were £72,567, as compared with £11,461 for the previous year, figures which indicate very plainly the development of the company's services and the growing realisation by the public of the facilities offered by aviation as a means of transport. Even now flying is only in its infancy, but already business men here are anticipating the time when it will give them a more rapid and certain means of dispatching goods to overseas markets. I was talking the other day to someone interested in trade with the Near East, and he assured me that he was looking forward keenly to aviation as an aid to business development, as he found that speed in supplying customers is becoming more and more a factor

BANK OF ROUMANIA LIMITED

in the markets in that region. It is an unfortunate fact that so far Great Britain has not made the same progress in air services as some other countries, but the development of Imperial Airways, Ltd., which is essentially a national company, holds out every hope that before long British flying services will loom as prominently in world communications as those of any other country.

Sudan Trade.

The figures for the trade of the Sudan for the first five months of this year show a considerable improvement on the corresponding totals for 1927. The volume of trade at £E6,562,568 shows an increase of £E375,662, and with the exception of Government imports, which have decreased by £E90,297, the increase in the trade is general. The most satisfactory feature is the rise in imports from £E1,529,860 to £E1,682,805, which points to the gradual improvement in the economic position. As I have pointed out before, while rapid progress in the Sudan is not to be hoped for, the market is one which will gradually expand, and as the crops are good this year the general outlook for next year is distinctly promising.

COMMENTATOR.

Engineering Topics.

By G. B. B.

Plant Replacement.

The subject of depreciation and obsolescence is receiving rather greater attention amongst engineers to-day, a revival due to the somewhat intensive methods of production we have adopted in the majority of our works. Only a few years ago it was the practice to work valuable machines well within their capacity so that their life was as long as possible. The fallacy of this was so frequently pointed out that at length it became recognised, and the modern practice consequently is to work such machines up to the limit of their capacities, so that they turn out their maximum of production. This means that they wear out much more quickly.

I see that this practice of over-running machines is now carried out in the United States to such an extent that the Government, always keenly alive to matters of engineering production, have taken a further step forward by organising a survey of factory equipment, with a view to ascertaining how much is obsolete and how much is not. The idea is that this should be followed by an analysis which should enable the authorities to ascertain what effect this has upon the productive and competitive powers of the nation. We have always spoken, as though it were a proved fact, of the American readiness to scrap obsolete plant, but one rather doubts, after reading of this new Government move, whether the policy was carried, in that country, quite so far as we imagined.

Obviously plant scrapping may be rendered desirable for reasons other than those of mere depreciation; patterns may change, more efficient machines may be introduced, or some alteration in the character of the required products may put an almost new machine on the scrapheap. At the same time, the machinery thus condemned may possess years of useful life, and it would seem that it would be a financially sound policy to re-condition such plant, alter its design, or modify its features if necessary and put it to work again in some industry where the competition was not so fierce nor the conditions so exacting. The American survey may give us some valuable data for cost accounting and for estimating, as well as other information, and the published results will be awaited with interest.

Trade Stagnation.

Engineering circles acknowledge a certain stagnation in home markets, particularly in the motor industry, a stagnation probably due to intensive production during recent months. Renewed attention is being given to overseas markets, but as these, to British manufacturers, seem to consist of those cockpits of commerce in which the business-getters of all nations are conducting a tooth-and-nail war, it is unlikely that their somewhat belated efforts will meet with success. The great overseas markets that are filled with prospective buyers, such as India and the Middle East, have been largely neglected; although a brisk, well-devised business campaign would bring not only immediate but extensive results. There is a great increase in the demand for motor vehicles in India, and the engineers of the country are not only busily engaged in constructing new roads and bridges, but are bringing existing roads into a condition that will render them suitable for extremely heavy traffic. British motor engineers and manufacturers should keep themselves acquainted with road development schemes in India and should pay particular attention to the new districts thus opened up. The Indian market for light cars is rapidly expanding, and British makers should not allow the Americans to get the first foothold. The reduction of the import duty on motor cars to 20 per cent. *ad valorem*, instead of 30 per cent., has had a stimulating effect, and this, combined with the natural good will, should place the British light car maker in an unassailable position.

Need for Publicity.

Excellence of product is not everything in the Indian market, although our home manufacturers seem to think it is. The chief thing is to make certain that the prospective purchaser knows about that excellence. Hence the need for publicity. I am informed that the leading Canadian and American makers of cars are commencing an extensive publicity campaign in British India, a campaign which will be carried further than anything previously embarked upon. The only way to counteract this is to engage in a similar campaign and, in addition, to appoint efficient distributing agents in cities like Madras, Allahabad, Lahore, etc., as well as in Bombay and Calcutta. The distributors should be appointed on a generous commission on sales, a commission at least equal to that given by foreign manufacturers. Spare parts should be stocked and the Indian buyer should be impressed with the fact that if he purchases a British car he will not only be buying something superior to the American vehicle, but he will, in addition, be buying adequate service.

Locomotives for the Sudan.

An order has been placed with Robert Stephenson and Co., Ltd., by the Sudan Government for six locomotives and tenders. Five are heavy "Mikado" (2.8.2 type) superheated and weighing (light) 69 tons; and the other is a "Prairie" (2.6.2 type) superheated and weighing (light) 64 tons. The tenders in each case are of the double bogie type and weigh 23 tons (light). The total weights in working order of each type are respectively 131 tons and 127 tons, the gauge being 3 ft. 6 in. Both types have been built by the company for the Sudan Government on previous occasions.

Steel Industry Reviving.

Inquiries go to show that there is a slight revival in the British steel industry and the wave of depression appears to have receded. There is an increased demand for miscellaneous steel and some of the mills in the Black Country have had to curtail the annual holidays to get on with production. The chief trouble at present is the smallness and wide variety of the orders, which adds greatly to the cost of production. Sheffield is fairly busy on small steel goods, especially those of stainless steel. In the Middlesbrough district prospects for the autumn are better than usual, but orders are badly wanted to enable the present rate of production to be maintained.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report under date August 18, that the arrivals of sultanias since the opening of the season are estimated at 600 tons, the sales to date being put at 520 tons.

The market is quiet but steady. Prices opened at a moderate level, and have remained practically stationary throughout the week. The range of qualities represented by first arrivals is restricted to an assortment of medium grades, but the general standard for the season promises to be considerably better than last year. Drying operations are being carried out under ideal atmospheric conditions and, failing any rains over the next three weeks, we should have an abundant supply of good, sound fruit. Prices likewise should ease off from the present level in the course of September.

The first arrivals of figs came to the market to-day totalling about 400 tons. The quality is poor and indicates prematurely gathered fruit. The crop is late this year, and it will not be until the course of next week that properly matured, sound fruit will be available.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at June 30, 1928, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E14,018,003; Egyptian Government, £E19,215,349; Sudan Government £E181,435; Mixed Tribunals, £E2,024,456; bankers' accounts, £E353,114; cheques and bills payable, £E286,817; sundry other accounts, £E1,809,148—£E25,100,000. Assets: Government securities and securities guaranteed by the Egyptian Government, £E22,526,412; sundry securities, £E479,288; advances on merchandise, £E2,397,688; advances on securities, £E4,212,138; advances otherwise secured, £E1,323,532; sundry other advances, £E1,046,228; bills of exchange, £E4,119,770; local bills discounted, £E740,719; buildings and furniture, £E236,356; money at call and at short notice, £E1,170,000; bankers' accounts, £E1,876,572; sundry other accounts, £E1,158,856. Cash: Notes, £E1,451,245; gold, £E446,519; silver, nickel, etc., £E333,624—£E2,231,388—£E43,518,947. Issue Department.—Notes issued, £E25,100,000—£E25,100,000. Gold, £E3,339,570; *British Treasury Bills, £E9,210,430—£E12,550,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, National War Bonds, and British War Loan, £E11,050,000—£E12,550,000—£E25,100,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold (See *Journal Officiel* of October 30, 1916.)

According to figures issued by the Bulgarian Bureau of Statistics, the population of Bulgaria in January was 5,596,800. Of this total 2,806,700 were males and 2,790,100 females.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Motor Cars, Trucks, Etc.—The Tanzim Department, Ministry of Public Works, Cairo, invites tenders for the supply of sweeping cars, sprinkling and flushing cars, refuse collectors, tractors, trailer chassis, asphalt trailers, required during the year 1928/1929. September 15. (D.O.T.)

Stone Crushers, Etc.—The Public Works Ministry, the Tanzim Department, invites tenders for the supply of two stone crushers and one plant for pulverising limestone. September 29. (D.O.T.)

Filters.—The "Municipalities and Local Commissions Section" of the Egyptian Ministry of the Interior invites tenders for the supply and installation of two mechanical filters and accessories for the water-supply works at Aboukir. October 1. (D.O.T.)

INDIA.

Boring Plant.—The Indian Stores Department, Simla, invites tenders for the supply and delivery of boring plant, hand, or alternatively driven by I.C. engine. September 4. (D.O.T.)

Radial Gates.—The Indian Stores Department invites tenders for the supply of radial gates for the head and cross regulators for main canals and branches. November 6. (D.O.T.)

THE SUDAN.

Steam Launches.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of three steam launches for use on the Upper Nile. September 1.

TURKEY.

Road Rollers.—Tenders are invited for the supply of 30 road rollers to be driven by mazout, which are required by the Ministry of Public Works. September 17. (D.O.T.)

Lead.—The Direction Générale des Fabriques Militaires at Angora invites tenders for the supply of 252 tons of lead. September 26. (D.O.T.)

Zinc Sheets.—The Direction Générale des Fabriques Militaires, Angora, invites tenders for the supply of 124,525 kgs. of zinc sheets. September 26. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, September 8). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, August 30); s.s. Manipur for Calcutta (Birkenhead, September 6).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 5).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, September 8); s.s. Golconda for Bombay and Karachi (London, September 8).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, September 29); s.s. Bantria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool September 15, and Swansea September 18).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 1); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 29).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, August 31); s.s. Nagoya for Colombo, Madras, and Calcutta (London, September 1); s.s. Rawalpindi for Bombay (London, September 5).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 1); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 1).

Ellerman and Papayanni Lines.—S.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool September 1, Swansea September 6); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 8); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 8); s.s. Algerian for Gibraltar, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 8); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 15); s.s. Lesbian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 22). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*CASTALIA ...	Aug. 28	*BRITANNIA ...	Oct. 9

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 28.

Considering the time of year and in view of the approach of the end of the fortnightly account the tone of the stock markets has been good, and quite a fair business has been done in the industrial section, Imperial Chemicals being perhaps the most prominent feature. The gramophone group, too, has been firm, having been supported by some American buying, though the actual volume of business passing is, of course, small. The result of the tenders for £45 millions of Treasury Bonds on Thursday was slightly below market expectations, but the gilt-edged market remained very steady and Five per cent. War Loan improved slightly. Home rails were better in the early part of the week on the companies' latest effort to meet road competition by reducing week-end fares, but there was some reaction later in the absence of any public support for the market. Oil shares have again been attracting attention in view of the improvement in the statistical position, and rubber shares, though very quiet, have been inclined to harden.

Singer and Co.'s Prosperity.

Singer and Company, the motor manufacturers, continues upon its career of remarkable prosperity, the profits for the year ended July 31 last being well maintained. Though the capital has rapidly increased in recent years, it is clear that it has been profitably employed. For the past year profits were £171,222, compared with £140,364 for 1926-27 and £131,953 for 1925-26. The dividend is again 12½ per cent., and in addition the directors announce a cash bonus of 7½ per cent. The cash bonus last year was 12½ per cent., but the present distribution requires £133,352, against £104,181, owing to the larger amount of capital ranking for a full year's distribution. Moreover, in accordance with the intimation of last June, it is proposed to make a bonus distribution out of reserves of

one Seven per Cent. Cumulative Preference share for every two Ordinary shares. As the present Ordinary capital is £666,760, this will involve the capitalisation of £333,380 of the reserves. Singer and Company is one of the most consistently prosperous companies in the motor industry. Indeed, its record offers a striking contrast to those of many other companies, and the investor should certainly not assume that the Singer report is indicative of conditions in the motor industry as a whole.

Imperial Airways: The Maiden Dividend.

The preliminary figures of Imperial Airways Ltd., for the year ended March 31, indicate a conspicuous improvement in the company's fortunes. The net profits for the period amounted to £72,567, as compared with £11,461 for 1926-27. This enables the directors to declare their first dividend—namely, 5 per cent. A debit balance of £24,171 was brought forward from 1926-27, and this has, of course, been extinguished before declaring the dividend. The board also propose to write off one-half of the preliminary expenses and underwriting commission. This will absorb £20,663, the preliminary expenses having stood at £23,032, and the under-writing commission at £18,295. Any benefit which the company may derive from the new agreement with the British Government, under which the Government subsidy now amounts to £2,760,600 spread over 11 years from April 1 last, will, of course, affect the results of the current and future years. The full report has not yet been issued and until this is available it is impossible to tell what factors are chiefly responsible for the improvement. The previous report, however, showed distinct progress, the better trading results then disclosed being attributed mainly to the board's policy of aiming at the creation of a goodwill based on safety and reliability and the employment of multi-engined aeroplanes in pursuit of this policy.

The New Nitrate Selling Scheme.

The scheme for the centralisation of Chilean nitrate sales, according to advices published this week, has now been carried into effect. At a meeting recently held in Valparaiso, at which all producers except the Anglo-Chilean Consolidated Nitrate Corporation and the Grace Nitrate Company (representing together about 15½ per cent. of the existing production) were present, it was unanimously agreed to form a nitrate selling corporation for the period August 15, 1928, to June 30, 1930, on the basis of the plans drawn up by the committee appointed last month. A condition of the agreement, it is stated, was that the special concessions which the Chilean Government has promised to make will only be available to members of the corporation and not to those outside. It is announced that prices have now been fixed for Europe and Egypt with the approval of the Chilean Government and are being published in each country separately. Production is now on a considerably larger scale than a year ago, the total for July being 260,000 tons, against 125,000 tons in 1927 and 157,000 tons in 1926. It is hoped among nitrate producers that the centralisation of sales will lead to a stabilisation of prices in consuming markets and an increase in consumption. It remains to be seen, however, whether the scheme succeeds. Government activity in this direction has not always been successful in the past, while clearly the scheme does not command the undivided support of producers.

British Consular Reports

IV.—YUGOSLAVIA.

(Continued from page 206).

Trade with Great Britain.

Great Britain usually occupies fifth place in the list of countries supplying Yugoslavia's imports; while she has been in most years tenth among those to which Yugoslavia's export trade is directed. While Great Britain supplies an average of approximately 7 per cent. of Yugoslavia's imports she in return takes only about 1 per cent. of Yugoslavia's exports.

The great development which, fostered by the high customs tariff, is taking place in Yugoslavia's textile industry is sure to lead to reductions in imports of British cottons and woollens; but it is encouraging to know that some of the machinery with which the new factories are equipped is bought in the United Kingdom. Sales of British agricultural machinery are at present disappointing; the poor harvest of last year is one obstacle to trade in this direction. Moreover, the delivery from Germany of machinery ordered by private persons having claims on reparations has an effect on the market. A few stationary (oil and gas) engines for industrial use have been disposed of lately. Little headway is being made in the sale of British automobiles in this country, the majority of the new cars sold being of American origin; but there are indications of growing interest on the part of British manufacturers. It is probable that more business could be done in this direction if the low petrol consumption of British motor cars were better known, as motor spirit is subjected both to import duty and a high consumption tax, as a result of which its price is very high. Several different makes of British motor-cycles are to be seen on the roads, but of late the competition of a well-known German motor bicycle has been very strong. British motor tyres are well known on this market.

Such articles as jams, sauces, whiskies, biscuits, etc., of well known British brands are to be found in the best grocers' shops. Owing, however, to the high customs duties and other charges imported jams, biscuits and the like are sold at prices from four to five times as high as those ruling in the United Kingdom, and it is, therefore, only the foreigner who buys them.

It has lately been noticeable that the number of representatives of British business houses visiting Yugoslavia has tended to fall off, although it is constantly visited by the travellers of the industrial countries of Central Europe. This can no doubt be attributed partly to the economic depression which has been particularly felt in those branches of commerce in which Lancashire and Yorkshire are chiefly interested; and is probably not unconnected with the long delayed settlement of certain pre-war commercial debts. The circumstance that so many professional and technical men receive their training in France, Germany and Austria must influence the trend of trade; and arising out of this there is the language difficulty. While most business men know at least one foreign language, usually German or French, very few have any acquaintance with English, which is not taught in any schools in this country. The few who understand English are usually emigrants returned from the United States of America, or students who were educated in England during the War.

Customs tariff, high freight rates and the dearness of money. Further, as the bulk of the population is of the agricultural class, the number of actual purchasers is limited; and the trader perforce looks for his living to a high percentage of profit on a comparatively small turnover rather than to a large volume of trade. Most of the manufactured goods retailed are of low quality, although their prices are high, and the majority of the population at present neither appreciates the high quality of British manufactured goods nor can afford to buy them.

It is rather, as has already been indicated, in the direc-

tion of machinery and technical material that improvement in the British export trade to Yugoslavia is to be looked for.

Railways.

In 1926 there were in Yugoslavia 6,481 kilometres of normal gauge and 1,737 kilometres of narrow gauge railway in operation; but work on new lines is constantly proceeding, as funds for the purpose become available, so that the above figures have already been exceeded. The direction in which new railway construction proceeds is the linking up of existing lines and replacing the vertical lines built under the dual empire by the lateral ones so much needed to connect provinces formerly separated; the construction of new routes to give access to the Adriatic from the interior, and the doubling of the existing main east to west line running through Belgrade and Zagreb, which at present has only a single track for most of its length.

A number of sections of new railway were commenced in 1927, and many others are scheduled for commencement during 1928. Among the most important of the works now in hand or about to be done are the section of 40 kilometres of narrow gauge line Belgrade-Obrenovatz, which is nearing completion and will, when finished, give direct narrow-gauge communication between the capital and the Adriatic at Dubrovnik (Ragusa) via Uzitze, Vardishte and Sarajevo; the doubling of the track on the Zagreb-Novska section of the main Belgrade-Zagreb line which has been commenced; the doubling of the track on the Belgrade-Ripanye section of the main lateral railway; and the railway to connect Belgrade with Panchevo via the new bridge to be built across the Danube below Belgrade, work on which was commenced in March, 1927. The railway over the river Tissa (Theiss) which connects the fertile provinces of the Banat and Bachka was completed and opened to traffic in July. The route to be taken by the main Belgrade-Adriatic railway to be built out of the proceeds of the Blair loan, which under the terms of the loan agreement it was necessary to define, has now been fixed, its sea terminus will be on the Boka Kotorska (Gulf of Cattaro) and it will take the line Belgrade-Ripanye-Lazarevatz - Topola - Kraguyevatz - Kosovska - Mitrovitza-Podgoritza-Kotor.

In order to improve the working of the railways and it is hoped, to increase the revenue derived from them, it has been decided to "commercialise" the whole of the state railways undertaking, and the necessary authority to effect this change was included in the financial law for 1928-1929. While the plans for commercialisation were being prepared Yugoslav railway experts were sent to examine the methods by which the change in the management of certain other countries, such as Germany, had been carried out; but it was eventually decided that it was impossible to relinquish state control to such an extent as has been possible elsewhere. In effect the State Railways' Organisation has been converted into an autonomous body which, although always strictly under State control, will have its own working capital and be able to transact its affairs without, for instance, following the bureaucratic procedure, laid down by the law of government accounting, which at present is said to cause so much delay in purchasing the smallest urgently needed supplies.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 22:—

Egyptian Futures.—Sakel Contract.—Whilst some recovery in values has taken place during the past week, the undertone of the market continues to show a nervous and unsettled tendency; recent events have led to local spinners and operators practically adopting a watching attitude, so that the appreciation witnessed has been exclusively due to speculative purchases for Alexandria and Continental account.

Trade reports from the fine count section continue to be disappointing and consumers generally regard the present level with distrust; with these combined circumstances operating, it is not surprising that so little legitimate business is coming into the market; similar conditions hold sway in overseas consuming centres and little if any interest in new crop offers is being shown. Only minor alterations in the Liverpool-Alexandria straddle have taken place, but an appreciable widening in the Sakel premium over the American contract has occurred. With most of the buying coming into the market concentrating on the November position, this month at one time went to a premium over January, subsequently the transference of a limited amount of old straddle contracts quickly caused a readjustment to the previous difference.

Upper Contract.—Only a moderate business has transpired in this contract during the past week; in the earlier days values were depressed owing to further straddle operations against purchases of Sakel. More recently some hardening has taken place, due to the firmer tendency of the American departments and reports of damage to the crop. A fairly consistent spot demand has been experienced, orders coming to hand from United States consumers.

The announcement that the Egyptian Government are willing to finance growers on special terms has latterly contributed to establish a healthier undertone and the market is beginning to show more power of resistance.

Egyptian Spot.—The inquiry for spot Egyptian has been, on the whole, well maintained. Mistrust in current values is still prevalent, however, and on any signs of weakness in the American markets there has been a general tendency on the part of spinners to "hold off" and to await further developments. Reports from up-country have latterly been more optimistic and many good judges are of the opinion that we are on the eve of a buying movement, provided there is no further slump in prices. We are so near to the new crop now in any case, that probably many spinners will prefer to keep

going on the hand-to-mouth system until they are better able to judge the quality of the crop, rather than search the depleted stocks which remain in Liverpool or Alexandria for their requirements in the immediate future. There is no doubt that the demand is broadening steadily, and considerable difficulty is being experienced in finding certain qualities. Very little actual inquiry for new crop cotton has as yet appeared.

In Sakel, practically all qualities have been in request at one time or another, but cotton from 12d. to 15d., and from "pass" to 100 "on contracts" has received by far the largest share of attention. Good Sakel at about 200 "on" has been very difficult to find. A revival in the very low and "inferior" qualities at from 8d. to 10d. has been witnessed. The brisk demand for Uppers at from 15 to 30 on November contracts has continued, and probably it has been this cotton which has accounted for the bulk of the sales. The local selection (which a few weeks ago was a plentiful one) is being rapidly thinned out, and the basis has been hardening steadily. Needless to say, it is only the cotton which has some pretensions to staple which meets with a ready offtake. The demand for the best Uppers has been quietly maintained, and it has been rather in the nature of a surprise to find what a small stock of this quality exists here. Pilon has been rather neglected this week. Fancy growths, such as Nahda, Maarad, Fuadi, etc., have been but little in request. Sudan growths (Sakel) have been in moderate request only, and not an inquiry for Tokar Sakel has been received.

C.i.f. business has been very quiet. Alexandria shippers are loth to offer outright owing to the poor selection available over there, and business has been difficult to arrange even with bids in hand. Forwardings to spinners for the week ending the 17th inst. were returned as 3,652 bales Egyptian and 1,122 bales Sudan. Estimated sales for the week, 2,900 bales Egyptian and 250 bales Sudan. Quotations of Sakel show a rise of 35 points. Uppers and Pilon have been unusually steady and show no change on the week. F.G.F. Sakel to-day, 18.65d. F.G.F. Upper to-day, 12.80d. F.G.F. Pilon to-day, 14.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 16, state:—

The market during the past week has been rather less active; the tone at the close to-day was undecided. The week's summary of price movements is as follows:—Sakellaridis: November, 35.39 dollars, 1.39 dollars down; January, 35.50 dollars, 1.68 dollars down. Ashmouni: August, 22.75 dollars, 1.17 dollars down; October, 23.01 dollars, 1.44 dollars down; December, 23.30 dollars, 1.57 dollars down.

Sakellaridis.—The loss on the week is about a dollar and a half correspondingly with the drop in New York; there is no new local factor and speculative operations have not been so pronounced this week, operators contenting themselves with a moderate turn. The demand has continued to be poor. New crop business is hardly spoken of and there are, as yet, no indications that spinners are contemplating purchases, in spite of the recent heavy decline. It rather looks as if the reports that artificial silk has displaced a considerable portion of the Sakellaridis consumption, are more than mere talk. A feature, however, which reflects a belief that a demand will spring up and that the early arrivals will be well taken care of, is the improvement of November over January; from a discount last week of 20 points, November now stands at a premium over January of 9 points. The Sakellaridis-Ashmouni straddle stands at 1,238 points against 1,233 points a week ago.

Uppers.—This variety has enjoyed a rather better demand than Sakellaridis, but, nevertheless, shows about the same decline on the week. There has been less disposition on the part of speculators to sell, but the market is still influenced by the very large increase in the acreage shown by the Government estimate. The Ashmouni/American straddle stands at 410 points against 433 points last week, a further loss on the week of 23 points. Uppers at present prices do not seem unreasonable; the supply of Ashmouni and Zagora will be larger than last year, but we do not think that it will attain the 4,000,000 kantars generally expected, and, with mill stocks down to a very low point, a crop of anything below this figure will not be excessively difficult to absorb.

Spot.—Total sales this week amount to about 4,900 bales, of which we estimate 2,100 bales Sakellaridis, 2,700 bales Ashmouni and Zagora, and 100 bales other varieties.

Sakellaridis: There has been some demand for Fully Good Fair to Good and Good without much change in premiums. Good Fair/Fully Good Fair and Fully Good Fair are still in constant demand and there is keen competition for any lots appearing in the market.

Crop, 1928.—Crop news continues satisfactory, but reports are not quite so confidently optimistic as they have been up to now; with reports so monotonously satisfactory, the tendency has been to ignore worm and nadua damage, and it is a rude awakening to all but the most careful observers to find now that these pests are present and increasing, and reports show a tendency to swing round. Worm damage is still light, but the damp weather at present prevailing is not ideal for keeping down the ravages of this pest; in the meantime, however, the plant is maturing and the longer the attack is delayed the less dangerous it must be. Picking is becoming general in Upper Egypt and cotton is entering the ginning factories; indeed, in one or two of the factories farthest South ginning has already commenced.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent

Notes of the Week.

The Kingdom of Albania.

The change from a Republic to a Monarchy has been effected by Albania with all due regard for constitutional niceties. A vote by acclamation on the part of the Constituent Assembly in Tirana was not considered to meet the requirements of the situation. That vote was given on August 25 and was designed to serve as an indication of the spontaneous unanimity of the Albanian people. The Assembly then settled down to a more constitutional procedure. First of all, the election of each member had to be scrutinised and ratified; it was then decided to treat the redrafting of the Constitution as urgent business, in order that it might have priority of place on the agenda. A committee was subsequently appointed to draw up the text of the necessary amendments. By the end of the week these formalities were concluded. The Constituent Assembly on September 1 voted the amendments and proclaimed Ahmed Beg Zogu King of the Albanians; in the afternoon King Zogu I. was escorted to the Parliament House, where the oath to the revised Constitution was duly taken by his Majesty. It is difficult to determine the real attitude of the Albanian people as a whole to the events of the last few weeks. The participation of the Catholic Mirdites in the popular demonstrations suggests that there is some measure of conviction behind these in spite of the disciplined character that has been given to the proceedings leading up to the constitutional change. The precautions taken on Saturday at Tirana for the new King's personal safety do not indicate much reliance on the genuineness of popular support; but conditions in Albania are different from those in other European countries. Certainly, King Zogu's troubles are more likely to come from within than from without. The Yugoslav Government has been unwise enough to betray its pique over the new status of Albania, and has thereby helped to consolidate still further Italy's hold on the country. A greater degree of statesmanship in Belgrade would have prompted the Government to welcome the change in Albania as a means of placing the relations between the two countries on a more satisfac-

tory basis. If the affairs of the Balkan Peninsula are to take on the complexion that the interests of all the countries require, it is essential that Albania should be weaned from Italian tutelage in order to be able to play her part as an independent member in a Balkan federation. The diplomatic bungling of Belgrade in regard to Albania is likely to be responsible for the retarding of this desirable consummation.

The Roumano-Hungarian Dispute.

Proposal and counter-proposal have succeeded one another over such a long period in the interminable dispute between the Roumanian and Hungarian Governments in regard to the question of the so-called Optants that the long-suffering onlooker finds it difficult to decide to which party belongs the blame for the major degree of obstinacy and intransigence. It is, therefore, a discreet move on the part of Hungary to bring the matter back again to its original base, by calling upon that all too back-boneless body, the Council of the League of Nations, to act in accordance with the Treaty which is responsible for the state of affairs that has given rise to the dispute. The Roumanian Government would seem to have only itself to blame for the shifting of the controversy on to untenable ground. Its main concern is that Roumania should not have the Hungarian Optants exempted from the provisions of her Agrarian Laws in such a way as would involve the country in an expenditure that it ought not to be called upon to meet. On this point there is much to be said on Roumania's behalf, and it is difficult to believe that, even if a mixed Arbitral Tribunal decided against her, a wholly impartial body of opinion would confirm the decision on appeal. Unfortunately, instead of relying on the justice of its case the Roumanian Government has adopted the attitude that it will not allow the Mixed Arbitral Tribunal—appointed for the very purpose under the Treaty of Trianon—to consider the question to all, and to clinch the matter it withdrew its representative from the Tribunal, and thereby put the latter out of action. The possibility that such a device might

be resorted to in order to defeat the Peace Settlement had been foreseen by the Allied Powers, and provision was made in the Treaty that in such circumstances the League of Nations would have to appoint a substitute member for the one withdrawn from the Tribunal, to enable the latter to continue its functions. The failure of the Council of the League to carry out this simple provision has been responsible for all the pother and the long-drawn-out controversy. As things are, Roumania, instead of merely refusing to obey an order of a Mixed Tribunal, has chosen to defy the Treaty of Trianon, which in the same breath she makes out to be so sacrosanct as to require the formation of a Little Entente in order to uphold it. Little wonder that Hungary, with her tongue in her cheek, goes to the League of Nations and asks whether, as the League has declared Article 239 null and void, she may infer that the whole Treaty has been scrapped. The Council may again refuse to act as it ought to act, but a good deal of cant about the League of Nations will have to be thrown overboard, if it does.

Serbs and Croats.

The cause of Yugoslav unity has not been furthered by the fire at the headquarters of the Croat Peasant Party. It was the house where the body of the late Stepan Raditch lay in state before the funeral, and it had been converted into a temporary museum of souvenirs associated with the Croat leader. The verdict has gone forth that the house took fire in two places simultaneously, and it will, therefore, be believed for all time in Croatia that the incendiarism was the work of Serb agents. In the meantime the authorities of the Peasant-Democrat group are reiterating their determination not to return to the Skupshtina, and to be content with nothing less than a separate Parliament. When the psychological moment arrives, however, it will probably be found that the antagonism is directed against the present "blood-stained" Skupshtina and against the over-centralisation of the existing Constitution. The tragedy is that Serbia would seem to have produced no one who is statesman enough to bring about a round-table conference of representatives of all the sections of the Kingdom. At the time of its creation Yugoslavia was like a large lump of putty; carefully and slowly worked in the hands, it was capable of being moulded into a firm compact mass. In the place of this treatment, however, it was subjected to sudden and violent pressure in Serbia's hands, and the putty has oozed out through all the fingers.

The "Brith Shalom."

As our Jerusalem Correspondent says in his letter published elsewhere in this issue, the policy advocated by those Zionist Jews who belong to the Society called "Brith Shalom" is the policy which appeals most strongly to the impartial observer of affairs in Palestine. In such a country as the Holy Land there must, of course, always be dreams, visions even: the mind were insensible that was not moved there to thoughts that may have little contact with reality. But to make of such a thing as a "Jewish National Home" in Palestine it is in our view, as in the view of the "Brith Shalom," absolutely essential, while gazing at the mountain tops, to have one's feet firmly on the earth; in other words, to face facts. It is largely true that a great mass of Jewish thought is still clinging to impossible fancies, as if a modification of the first great dream were now to be deemed as cowardice. With this perambulation in a world of imagination the Jews associated with the "Brith Shalom" will have nothing to do. The Arabs of Palestine do exist, and must always exist—probably in preponderating numbers. What boots it, in the opinion of these thoughtful Jews, persistently to pretend the contrary? If Palestine is to develop, there must, as we have always insisted, be the fullest measure of Arab-Jewish co-operation. Whether the time is ripe, as the supporters of "Brith Shalom" appear to think, for the supersession of Crown Colony Government in Palestine by a Parliament in which both Arab and Jew should be represented is, however, another

matter. In any case, it is obvious that the policy advocated by the "Brith Shalom" is as yet a highly unpopular policy among Jews in Palestine; nor have the Arab leaders so forgotten their former fears of Zionist domination to welcome the new proposals with much effusiveness.

Conscription and Iraq.

No fresh light has been thrown by recent events in Iraq upon the possibility of introducing compulsory military service into the State of King Faisal. Last week the tribal members of the Majlis and the Kurdish deputies reiterated their objections to conscription, and the matter is left much where it was when Jaafar Pasha resigned—a Conscription Bill has been circulated for members to decide whether it is worth bringing before Parliament or not. As far as can now be seen, it is highly improbable that the British Government will take any definite step in the direction of supporting conscription in Iraq: which to all intents and purposes is, in Iraqi eyes, identical with declaring opposition to it. Those Iraqis who favour the introduction of compulsory military service into their country, whether on the grounds of the expense of the present voluntary system, or of its general educative benefit to the youth of the State, or of its assistance in the fostering of a truly national spirit, have recently been given a lead by Nouri Pasha, the very astute Iraqi soldier who has never disguised his advocacy of conscription. Whether he and enthusiasts like him can contrive to gain considerable support outside the towns of Iraq it is difficult to say. Had the Iraq Government, or any Iraq Government, complete authority, there seems to be little doubt that the attempt would have been made ere now to introduce conscription. It is, of course, upon the results of such an attempt that there is such a difference between educated Iraqis, on the one hand, and the British Government and the tribes on the other.

The Mandate for Trans-Jordan.

The recent criticism by the Permanent Mandates Commission of the way in which the Anglo-Trans-Jordan Treaty was signed and published before the consent of the League of Nations had been obtained appears to have been largely a matter of formality. In any case, the Council of the League itself had little difficulty, on September 1, in accepting Lord Cushendun's explanation that, because Great Britain remained fully responsible to the Council for the proper application in Trans-Jordan of all the provisions of the Palestine Mandate, in spite of the delegation of legislative and administrative powers to the Amir Abdullah, the formal consent by the Council to the Anglo-Trans-Jordan Treaty was unnecessary. In the British Memorandum of September 16, 1922, which the Council had approved, a delegation of powers was foreshadowed, and was certainly compatible, in the opinion of the British Government, with the terms of the Palestine Mandate. It is interesting here to recall, by the way, that certain people in Trans-Jordan (for instance, those of Ajlun) are claiming that they were promised direct treatment at the hands of the British, and deny the right by which power has been delegated to the present Amir Abdullah. But it will be long before there really arises in Trans-Jordan a "political question," for apart from a few vexatious things, such as Customs dues, the country is exceedingly well administered. And, of course, the better the country is administered the less probable is the growth of politicians therein.

The Orientalist Congress.

The labours of the Congress of Orientalists at Oxford ended on September 1, and already considerable benefits are visible. For, apart from the accession of knowledge, which was possible to all those who had ears to hear, what the President, Lord Chalmers, called "the right hand of fellowship" was held out in such a way that friendships between peoples of various nationalities were not only renewed but were begun in the happiest circumstances. When one considers the fact, for example, that

but a few years ago Frenchmen could not be persuaded to take part in an Orientalist conference with Germans, the easy feeling which obviously characterised all the Delegates and members present last week in Oxford may justly be regarded as something of creative value. From the general point of view, then, all was well. In the particular aspect, it was to be regretted that Oriental institutions did not send more representatives to the Congress. Turkey, for example, sent but one Delegate; Egypt, two; Syria, one Arab; Persia, one; and so on. Those who did attend, however, will surely have learned the immense, even incalculable benefit which almost the whole world may derive from such Congresses, and it is to be hoped that when they return to their native lands they will report fully what they have seen and heard and felt. They will be the first to admit, we imagine, that the balance of learning has shifted from Damascus or Cairo to the West, and they will be moved all the more to work so that such cities themselves may, as they hope, one day house such a Congress as Oxford had the good fortune last week to entertain.

INDIAN NOTES.

Commerce and the Police.

It is not surprising that there should be criticism in India of the recommendation which the Associated Chambers of Commerce have made for the transfer to autonomous provincial Governments of the control of the police and the responsibility for the maintenance of law and order. For any such idea would certainly seem to be opposed to what has so far been the opinion of the European community. All the Chambers are not, we gather, in favour of the recommendation, as some of them think that the Central Government should control the Police, while all favour the retention of the Criminal Intelligence Department as a central department. The majority feel, however, that, if representative institutions are ever to be a success in India, the Indians will have to realise the necessity for an efficient police force. And the practical question is: will they ever come to realise this, unless and until they are made responsible for the maintenance of law and order? The Chambers answer this question in the negative, and hence the recommendation. There is something to be said for their view. For after all the maintenance of law and order is the primary function of every Government; and there can be no such thing as provincial autonomy, if this responsibility is not undertaken by the provincial Governments. A strong central Government in the India of the future will be an imperative necessity, as we have pointed out on several occasions of late. But it is not easy to see how the Central Government could control the Police and be directly responsible for the maintenance of law and order in each province. For any such division of functions would obviously be very cumbrous, and, moreover, it would create endless friction and difficulty as between the Central Government and the provinces. Whether the risk which will be attendant on the adoption of the Chambers' proposal can be safely faced is a matter which the Simon Commission may be expected to investigate and to determine.

The All-Parties Conference.

When the telegraphic summaries of the draft Constitution, prepared for discussion at last week's meeting of the All-Parties Conference, were first published, we observed that, despite its many obvious imperfections, the report was a document worthy of serious and close attention. Its great merit, we pointed out, was that it apparently defined the Indian demands more clearly and with greater precision than had hitherto been attempted. Moreover, it was reasonable and sane in tone. From the British Press in India it had a mixed reception, the tendency in one quarter being to welcome the report as at

least an attempt at clear thinking and for its acceptance of the Imperial tie, while others were more impressed by the extravagant futility of the main features of the scheme. There was, of course, solid ground for satisfaction to all but the most obstinate reactionary in the thought that a gathering seemingly representative of all sections of Indian political opinion was likely to agree upon the terms of a Constitution which would secure united assent and support. Unfortunately, the proceedings of the Conference itself, which were concluded this week at Lucknow, suggest that, as has so often been the case in the past, the significance of even so obvious a compromise must not be rated too high. It is true that the main resolution in favour of a Constitution conceding a status for India not inferior to that of a self-governing Dominion was passed after a protracted debate. In view, however, of the strong opposition manifested to so clear a departure from the original Congress mandate an addition was made declaring that the liberty of action of political parties whose goal was complete independence was not thereby restricted. Mr. Lala Lajpat Rai, whose experience of Indian politics is probably longer and of a more varied nature than that of any other person present, said at the opening of the Lucknow Conference that he had hitherto opposed any attempt at Constitution-making on the ground that it would augment internal difficulties. His change of mind does not, unfortunately, find any reflexion in the circumstances of which formerly he was wise enough to recognise the force. And when the Committee which has been appointed to select Parliamentary draftsmen to put the Constitution recommended in the shape of a Bill and call a convention representing all the interests concerned to consider the measure, meets, we are afraid that the separatist tendencies to which our Calcutta Correspondent refers will emerge stronger than ever.

The rising of the Hashid tribe against the Imam Yahya in the Yaman has been suppressed, and its head Shaikh, Nasir ibn Nasir Mablkhut, is reported to have fled.

It is announced from Mecca that Shaikh Yahya Basahi, Wazir to the Idrisi Amir of Abu Arish and Sabia, accompanied by the Wahhabi representative at Jizan, the Amir Salih Abdul Wahid, have arrived in the Holy City to consult about possible co-operation against the Zaidi Imam of Sanaa.

On the occasion of the Muslim festival of the Maulud en Nebi (birthday of the Prophet), the Aqsa Mosque in the Haram ash Sharif, Jerusalem, which has been closed for four years for repairs, was formally reopened on August 27 by the Grand Mufti of Jerusalem, Haj Amin al Husaini, in the presence of the Amir Abdullah of Trans-Jordan and Mr. H. C. Luke, Acting High Commissioner for Palestine and Trans-Jordan.

ROUMANIA AND THE BEST POLICY.

Although Roumania is politically quiet at the moment—the business of the harvest sees to that—no country in South-Eastern Europe in all probability is less pleased with itself. Even if there is a certain similarity in the conditions in Croatia and in Transylvania, the Yugoslav Government of the day is oblivious of anything for which it has to reproach itself, however much it may consider Croatian intransigence a matter for regret. The Roumanian Government, on the other hand, is not able to pour the same measure of unction upon its soul. Transylvanian intransigence is there for all to see, but does not, of itself, worry overmuch the Bucharest Government. Unfortunately, it is accompanied by the failure of the Ministry to obtain the big foreign loan at the time when it was most important that it should be handling the money. Some consolation has been provided by the promise of a small advance from French banks, but the source from which this crumb of comfort comes carries with it not a little humiliation. The French move lends itself so unmistakably to the interpretation that, so far as the big powers in world finance are concerned, Roumania would be left to her own devices without compunction; only because of her existing commitments, not exclusively financial, in the country does France feel compelled to come to Roumania's help by means of an emergency advance. Thus in addition to unpopularity at home (for in the face of the monster demonstrations of peasants and others, however ineffective these may be as a political weapon for unseating the Government, it is impossible to contend that the country is with the latter) the Bratianu Cabinet has to reflect on the complete lack of sympathy with which it is regarded abroad. Roumania deserves a better fate than this, and the people as a whole, there is reason to believe, are troubled by the fact. Government and Opposition are each inclined to attribute the blame to the other. The former accuses the National-Peasant Party of deliberately besmirching Roumania's reputation abroad; yet the main burden of the Opposition's message to foreign countries is that they must not judge Roumania by her present Government; but must realise that, with the accession to power of the National-Peasants, she will take her rightful position once more in the world's favour.

The fact is—if Roumania could only grasp it—that the world pays little heed to those political antagonisms and mutual recriminations. It is influenced more by its own experience in regard to Roumania than by the domestic quarrels of party factions. The laws of a country are a public index of national character, but there are other means as well of determining whether a certain policy is due to the chance exercise of power, or whether it reflects the settled convictions of the people. In company with most Roumanians the Bucharest Government, it is to be inferred, resents the lack of sympathy shown it abroad as being unjustified. As in the case of the Hungarian Optant question, it is prepared to argue from one point of view and is satisfied that, because it recognises no other, it can prove right to be on its side. The challenge from abroad on the subject of the Mining Laws is taken up, and item by item the legislation is shown to be justified. Foreign opinion, however, remains unconvinced, for behind the wording it sees the intention. In no respect is political

inexperience manifested more crudely than in the capacity for self-deception, and in the belief that words can be made to count as much as intentions. At the root of the trouble over the Roumanian loan lies the fact that Western financial interests—whether rightly or wrongly is for Roumanians to determine on reflexion—have decided that Roumania hitherto has shown a readier disposition to back out of any obligation, pledged or implied, when it is convenient to do so, than to establish a reputation for undeviatingly fair treatment, whatever the cost. Inexperience, whether political or in regard to business matters, is inclined to seize the temporary advantage and cannot look far enough ahead, to see that the square deal, whether as between nations, between business men or between officials and governed, pays best in the long run. However regrettable the result may be, it is not altogether a matter for surprise that those who consider themselves aggrieved in their past dealings with Roumania should wish to use her present need to inculcate a doctrine which is the basis of business dealings in the West. This would seem to be the main reason for the delay in regard to the Roumanian loan, and it is surely worth Roumania's while to examine the situation from the point of view of those to whom she looks for help.

No impartial observer can fail to sympathize with the desire of the Roumanians to be masters in their own house. Until the outbreak of the War the indifference and lack of enterprise of the small portion of the nation that did not belong to the peasant class compelled Roumania to rely largely upon foreigners to carry on the business of the country as distinct from agriculture. For the development of her oil resources she had neither the capital nor the experience required, and she was obliged to invite foreign oil companies to come to her assistance. It is to the credit of those who formed the Liberal Party that they were the first to appreciate the unsatisfactoriness of this state of affairs. That in setting out to rectify it they contrived to identify the economic development of the country with the fortunes of their own political party is the concern of Roumanians only; the principle to which they were committed of recovering for the nation control of its own economic development was sound and constituted a national service. It was necessary, however, to observe scrupulously Roumania's obligations to those who had come to her help when she was incapable of helping herself, and, in view of her inevitable dependence upon foreign capital for future development, it would have been better to hesitate long before taking any step that could not reasonably count on carrying with it the approval of the foreign interests already established in the country. No exception could be taken to the Mining Laws as promulgated, if they were intended to deal with the normal situation in a mining field; but the impression conveyed abroad by the Laws was that of a deliberate attempt to "freeze out" established foreign companies. It was an essential part of Roumania's obligation in inviting foreign capital at a time when she could not help herself that she should guarantee security of tenure. In the case of an oil company that security almost inevitably entails the right of expansion. To impose almost impossible restrictions on the expansion of foreign oil companies is equivalent to withholding from a manufacturing company the raw materials used for its finished products. It is unnecessary here to go into the details of the Mining Laws which lend colour to the contention that the framers set more store on immediate pecuniary advantage than on establishing on an impregnable base the country's reputation in foreign financial circles for fair play. Apart from the Mining Laws there have been instances of attempts on the part of the Roumanian Government to benefit by the depreciation of the leu at the expense of their foreign creditors. In ordinary circumstances such matters might be dismissed as incidental to business transactions, but in their cumulative effect they suggest that the country which indulges in them has yet to learn that honesty is the best policy.

*The Near and Middle East

From Our Own Correspondents.

Baghdād, August 19.

The Jidda Conference.

News of the breakdown of the Jidda Conference reached Baghdad on August 8, and caused no great surprise, although a very natural disappointment is felt at the rejection of what are here considered to be Iraq's generous and conciliatory proposals. In the House of Deputies the Prime Minister made a brief statement promising a fuller one as soon as he had been sufficiently informed by the head of the Iraq delegation—Taufiq Beg Suwaidi, Minister of Education—who is expected back within a few days. Sir Adbul Muhsin said that King Faisal and the Government of Iraq had done their utmost to promote a spirit of goodwill and to avoid the shedding of Arab blood, and greatly regretted that King Ibn Saoud had not shown more appreciation of their goodwill.

It is understood that the instructions given to the delegation were as follows:—

- (1) To consent to recognition of the sovereignty of H.M. King Ibn Saoud over the Hijaz.
- (2) To agree to the claim put forward by Najd for the extradition of political offenders from Iraq.
- (3) To give an assurance, on behalf of the Government of Iraq, to do everything possible to prevent any acts likely to disturb neighbourly relations between Iraq and Najd.
- (4) To maintain Iraq's claim that the Government of Iraq should be at liberty to continue the building of police posts, for purely policing purposes, so that Iraq might be in a position to maintain peace and order among the tribes in the neighbourhood of the frontier; and more especially to prevent raids into Najd, through Iraq territory, by sections of undesirable Najdi refugees who are now sheltering within Syrian territory.
- (5) To agree to the relinquishing by Iraq of all claims for compensation arising out of the Akhwan raids in the spring of this year.

These are certainly conciliatory proposals, and gave great hopes of an amicable settlement; the stumbling block was evidently the question of the police posts, and to everyone here it appears unreasonable to demand that Iraq should abstain from policing a vast tract of territory which is indisputably hers, and for which her Government must remain responsible. At present all is quiet on the frontier, but the Ministry of Defence has taken the precautionary measure of sending out a strong force of armed cars, to undertake patrol duties in areas in which Akhwan raiders might possibly be expected to make a fresh appearance.

Nouri Pasha on Conscription.

The Minister of Defence, in reply to a number of ques-

tions in Parliament on the subject of Iraq's Army, made an interesting statement on August 1. The Government, he said, attached great importance to Iraq's assuming as soon as possible complete responsibility for her own defence, and had considered several schemes, the last of which was General Daly's plan based on a purely defensive system with a minimum strength of military units. This plan would have necessitated either voluntary service (as now in operation) or the introduction of conscription. Voluntary service was inadequate to ensure the reserve forces necessary to any regular army; the Government had, nevertheless, drafted a Bill, now before the Cabinet, providing for the creation of a reserve force. The system of voluntary service was exceedingly expensive, and in the Pasha's own opinion was incapable of satisfying the aspirations of the country.

His own belief in conscription, Nouri Pasha went on to say, was confirmed by many military experts. It was less expensive, and stimulating to the national sense of responsibility for its own defence. It was for Parliament to decide which system should be enforced.

In reply to a question on the Army's readiness to undertake such a responsibility, the Minister said that it was all a question of proportion. Many years must elapse before the Iraq Army could attain to an efficiency comparable with that of the British Army, but it could already be compared favourably with the forces of neighbouring States such as Turkey, Persia, or Afghanistan, all of which had assumed full responsibility for their own defence. It was the constant effort of the Ministry of Defence to improve the condition of the Army, but until Parliament adopted a definite scheme of defence, money

so spent was largely thrown away. One Ministry, or one group of persons, could not decide so vital a question; it must ultimately be settled once for all by Parliament.

Desert Brigandage.

An Overland Mail convoy which left Baghdad on August 9 was attacked in the early hours of the following morning by a band of armed robbers, about ten miles west of the Syrian frontier. The Nairn six-wheeler car, which carries sixteen passengers, was struck by a bullet, but turned back and safely reached Rutbah, whence information was telegraphed to Baghdad. The overland mail was being carried in a Buick tourer, and the bandits made off with both car and mail bags; the convoy of local cars which was ahead of the mail met the full brunt of the bandits' fire, one man being killed and two wounded. Further details of the attack are still awaited.

No political significance is attached to this raid, the motive of which was merely robbery. A party of police set out at once in cars from Rutbah, but no capture has yet been reported; the robbers are believed to be the same as those who last March succeeded in stealing a Nash car from a desert convoy. At the request of the French authorities, the in-coming convoy due two days later was delayed for 24 hours.

Royal Agricultural Society.

A meeting was held at the royal palace, at the personal invitation of King Faisal, to found a Royal Agricultural Society for Iraq. The gathering included Cabinet Ministers, ex-Ministers, and prominent landowners and farmers. Ex-King Ali and the Prime Minister of Iraq were with the King, who opened the proceedings with an eloquent speech in which he emphasized the duty of all rulers and national leaders to endeavour to lighten the burden of poverty for the labouring classes by promoting agricultural co-operation. The Minister of Finance, thanking the King for his speech, then proposed that im-

mediate steps should be taken to form a Royal Agricultural Society, governed by an administrative committee; it was agreed that in this should be included the committee of a society inaugurated a year earlier on similar lines, the members of which should be considered members of the new society under the Hon. Presidency of King Faisal. A general committee was then elected, and contributions amounting to Rs.5,050 were made forthwith. A suitable headquarters for the Society, overlooking the Tigris, is to be found in Baghdad.

General News.

A claim to the ownership of the Mosul oilfields is being made by the heirs of Nemlizade Tahsin Pasha, who was granted prospecting rights by the Sultan Abdul Hamid. The Sultan later revoked the grant, but after his fall the Council of State disagreed as to Tahsin's rights. The heirs of Abdul Hamid, nineteen in number, are now raising a counter-claim to the oilfields, and are requesting the Turkish Council of State to disallow the claims of Tahsin Pasha's heirs.

The new railway bridge at Salahiyah, on the Qaraghan-Kirkuk section of the Iraq Railways, was opened for traffic on July 27. This bridge is a vital factor in the lines of communication during any military operations in northern Iraq, and the fact that a modern structure of steel girders on concrete piers has now replaced the old and easily-destroyed wooden bridge makes this achievement of the Railways' engineering staff one of strategic as well as commercial importance.

A Polish Fokker monoplane reached Baghdad on July 31 after a non-stop flight from Warsaw. Night-landing flares were put out by the Royal Air Force at Hinaidi, but the aeroplane hit the bund in landing and overturned. The observer, Lieut. Czalas, was killed, the other two occupants—an officer and a mechanic—escaping with slight injuries.

"Sh'ifotenu."

At this time of year events worth recording are few. With the exception of the unimportant and the unfortunate nearly everyone is on leave or gone to take part in one or other of the numerous conferences in Europe. One point of interest, however, is probably worthy of a short note.

There has just appeared here a second volume of "Sh'ifotenu" ("Things we are striving after"), a publication issued by a small group of local Jews who have established the Society called "B'rith Shalom" ("The Covenant of Peace"). Their primary purpose is to educate Jewish opinion—one marvels that it should be necessary—into an understanding that Palestine has been, is, and most certainly always will be, a country with an Arab majority, and that consequently all ambitions touching a Jewish National Home in Palestine must not reckon without their host, the existing Arab population. The leaders of this "B'rith Shalom" are all of them outstanding figures in the Zionist movement and none can doubt the reality of their Nationalist ambitions. Yet they are daring to take the very unpopular line that a Jewish majority in Palestine is not essential to the fulfilment of the "National Home" idea, and they even face the fact that it is not in the least degree probable in the present political circumstances.

The present volume of "Sh'ifotenu" is concerned with the idea of an elected Legislative Council which the last Arab Congress put forward as its fondest wish. Local Jewish opinion was loud in its dislike of any such scheme ever coming into being, since it could only mean an attempted reshaping of the major Palestinian policy—or at least many important details within that major policy—along lines favoured by the Arab majority. The "B'rith Shalom," however, comes out wholeheartedly on the side of the Arabs in favour of a Palestinian Parliament, even with an Arab majority.

Arab-Jewish Co-operation.

Their argument is that at all costs Jewish political thought must come to terms with obstinate Arab facts, and that systematic Jewish and Arab political contacts, however discordant they may and must be, are infinitely preferable to the present condition of things with Jewish Zionist thought functioning in a purely imaginary realm where ideas are allowed to weigh more heavily than realities.

The contributors to the present volume are Dr. Hugo Bergman, Librarian of the "Jewish National and Hebrew University Library," a learned student of Kant and modern sociological theories; Mr. Chaim Margoliouth-Kalvarisky, who ever since the British occupation has been a leading figure in the "higher politics" of the Palestinian Jewish community; Dr. Hans Kohn, a name well-known to those who follow European Jewish journalism; and Dr. Radler-Feldman, a thoughtful writer and member of the "Mizrachi," the Orthodox wing in Zionism. Each advocates the idea of a Parliament with Arab and Jew jointly working out their future salvation within the country along lines which shall give fullest scope to the ambitions of each, confident that, with increase of mutual knowledge, a political *modus vivendi* will prove possible

along lines which it may not now be easy to foresee, but which, at any rate, will be preferable to the present very wooden efficiency of "colonial government" which the Arab loathes and the Jew tolerates out of fear of something worse.

To the Gentile onlooker it would seem that the "B'rith Shalom" policy is the only conceivable line of development, if development there is to be, in the internal policy of Palestine. But it is no use pretending that the policy is popular with the Jews or wholly trusted by the Arab leaders.

One cannot resist quoting the motto adopted by the "B'rith Shalom" group and put at the head of its last publication. It is a quotation from Ahad ha-Am, the great Jewish thinker and "philosopher of cultural Zionism":—

But what shall I say, for well do I know already from twenty years' experience that if Moses and Aaron came and performed before their eyes all the wonders of Egypt they could effect nothing, for God has made their understanding heavy and they will not see things as they are.

And so far the "B'rith Shalom" has only served to provoke a united chorus from local Jewry which runs along the lines of "There was a young lady of Riga. . ."

Cairo, August 26.

The U.S. Arbitration Treaty.

The amount of excitement that the American Arbitration Treaty has caused, both in Europe and in Egypt, has been quite unwarranted. At first the Arabic Press rejoiced that the Egyptians were going to have a treaty all to themselves, and that with one of the most important countries in the world. Then Editors began to scratch their heads in suspicion, wondering whether America had not some ulterior motive! This, of course, made the United States mock considerably, and they pointed out that this was the thirtieth such treaty they had made with small Powers.

Another curious idea current in Europe was that Great Britain was extremely surprised and somewhat offended at America's treating with Egypt without reference to her; for, it was said, Britain also has her "Monroe Doctrine." Britain as a matter of fact was not in the least perturbed, for Egypt has never been prevented from signing treaties with other countries—as is witnessed by the many economic pacts which she has negotiated and the two recent treaties, mentioned last week, with Italy and Persia.

This idea, however, of Great Britain's being offended

with America was at once pounced on by the Press in Egypt, and it rejoiced the heart of the Wafd. It encouraged certain papers to make some amazing boasts, boasts which are said to have been inspired by Nahas Pasha. It was claimed that it was due to Nahas Pasha's diplomacy, while Premier, that this proposed treaty with America gradually came into being. The negotiations that he carried on, however, were conducted in the utmost secrecy, so that the Residency might be outwitted! What was happening was even kept secret from four members of the Cabinet, for fear they might betray Egypt. Then, state the Arabic papers, came the climax; these four Judases, finding out what was going on, resigned from the Government and went to tell the Residency that it was on the point of being outwitted. Thereupon these four ex-Ministers, Mohamed Mahmoud Pasha, Gaafer Wali Pasha, Ibrahim Fahmy Bey, and Ahmed Khashaba Pasha, intrigued with the Residency for the downfall of the Nahas Government and with the help of Great Britain reinstated themselves in the Government! It is only in Egypt that people are so naive as to think that such a story will be believed. No mention is made of the Seif El Din affair or of any of the other well-known incidents which led King Fuad to dismiss the Nahas Cabinet, and it is apparently expected that the public is to believe that the last Cabinet was turned out by the influence of the Residency, because the Wafd were on the point of succeeding in outwitting Great Britain.

"Missionary Makram."

William Makram Obeid, Secretary of the Wafd, left for Europe a few weeks ago to carry on propaganda for the Wafd. This party still consider that they represent a majority in Egypt and regard themselves as the champions of their down-trodden countrymen against the tyranny of the present Government. At least this is how they would have themselves esteemed. Therefore Nahas Pasha has taken it upon himself to send the various statesmen of Europe, assembled in Paris for the signing of the Anti-War Pact, a Note in which he gives his views on the intended treaty between America and Egypt. Makram Obeid, therefore, as far as one can make out, has been spending his time buttonholing these great men and explaining the standpoint of the Wafd.

The real object of all this was shown by a clause in the Note to Mr. Kellogg, which stated that Egypt would be pleased to sign a Treaty of Arbitration with America, but that, should America try to negotiate such a Treaty with the present Government, it would suffer the displeasure of

Egyptians, because the Government did not represent the country. In other words, the Wafd, having failed to assert themselves in Egypt, are now trying to do so abroad. But how they can possibly expect anyone to be interested is hard to see. The latest reports here of Makram Obeid's "propaganding" activities are that he has been trying to get certain prominent lawyers in France to make a statement that the present régime in Egypt is illegal. With this support it is reported that he hopes to influence the International Parliamentary Conference, now meeting in Berlin, at which two Wafd deputies have been accepted as honorary members. But already at a preliminary meeting Egypt has been discussed and a vote passed that the present régime was constitutional.

Makram Obeid is shortly proceeding to London, where he will join the two other members of the Wafd. The three of them make up the Wafd "propaganding mission."

The Government's Views.

Hafez Bey Afifi, Minister of Foreign Affairs, was interviewed the other day on the subject of the Arbitration Treaty and wisely said that he could pass no comment, since the draft had not yet reached Egypt. It is almost taken for granted that the Government will sign the treaty, and certainly Great Britain will not wish to interfere.

The Seif El Din Affair.

While the Wafd are making proud boasts of what they have done in the past and what they intend to do in the future, investigations into the Seif El Din affairs are steadily proceeding. It will be remembered that Nahas Pasha, Wissa Wassef Bey, and Gaafer Fakhry Bey, who were employed to try to obtain a larger share for Prince Seif El Din of the revenues of his own estates in Egypt, and the lawyers were to receive a percentage of the sum which they succeeded in obtaining for him. The charge against the lawyers is that they used their influence as prominent members of Parliament to further the Prince's claims.

The latest development is that a witness went to the police and said that Gaafer Bey Fakhry's clerk with others had tried to bribe certain witnesses to deny their former testimony against Gaafer Fakhry Bey and to substitute a story which was in his favour. The police having got wind of a meeting which was going to be held between this clerk and the witnesses, a plain clothes man was sent. At this meeting the witnesses agreed in principle to alter their story, although they said that they wished to consult their lawyer, and the clerk paid over the money. The police officer had been a party to all this discussion, but on payment of the money he decided it was time to disclose his identity, and thereupon he arrested all involved.

The Press.

Perhaps the aspect of a dictatorship which is most striking to an Englishman is the suppression of the freedom of the Press. When this was done at the Dissolution of Parliament on July 19, Mahmoud Pasha declared that he was not going to suppress criticism where it was genuine but only where it was likely to provoke disorder. But this sort of statement made by a Government which has complete control of the country is generally discounted. Mohamed Mahmoud's Cabinet, however, has been as good as its word. It has been remarkably lenient towards its opponents, only suppressing the most scurrilous papers, and indeed it has shown itself so impartial as to suppress *Al Kashkhoul*, which was a fervent supporter of the Government and a bitter opponent of the Wafd; so bitter and so personal indeed that the Government decided it had gone too far. This impartiality may not seem an extraordinary thing in England, but it is remarkable in Egypt, where it is probably unprecedented.

*Constantinople, August 29.***Adoption of Latin Characters.**

When making his appeal a few days ago to all patriotic Turks to assist him in disseminating and popularising the new Turkish script, the Ghazi can scarcely have anticipated the feverish alacrity with which his request would be met. Constantinopolitans of the upper classes, so it is reported, have literally gone mad in their haste to adopt the *Yeni Haroufeti* or "new script." Disseminating-organisations are springing up like mushrooms after a shower. The Government presses are at work turning out alphabets by the thousand. Night and day classes for the populace are being hurriedly opened in many quarters of the city. Courses of instruction have been inaugurated in all Government offices, financial establishments and the Municipal Departments, whilst about fifty Deputies who are spending the vacation in Constantinople attend a special daily class at the Dolma Baghtche Palace. Turkish characters on sign-boards, shop-fronts, railway stations, liners and homely tramps are being hurriedly painted out and as swiftly painted in again in the new script. Telegrams received from the larger up-country towns call for the dispatch of thousands of copies of the new alphabet, many booksellers having been obliged to close their establishments owing to depleted stocks.

Although the foreign observer cannot but laud, not without feelings of envy, this outburst of unwonted activity at the very zenith of the dog-days and is quite ready to render honour where honour is due, he nevertheless remains puzzled by the dispatch and hurry-scurry with which the measure is being rushed through.

The newspapers are doing their best to aid the movement by publishing daily half-columns of news in the new alphabet, together with a short lesson. But—and this is where trouble usually arises when a toddler tries to run before he can walk—there would not as yet appear to be a sufficiently standardised system for correctly expressing the Turko-Persian-Arabic consonants and vowels by anything resembling either their German, French, Italian or English equivalents.

The only approach to a standard adopted, so far as it is possible for a mere dilettante in the science of Max Müller to judge, would appear to be something in which both Polish and Hungarian equivalents are utilised. As to the affinity between the Turkish and Hungarian languages, Vambery and many other distinguished writers have taught English readers that it undoubtedly exists. The old-standing friendship between Poles and Turks is equally notorious. When, however, the hard "*Djim*" or "*J*" of the Turkish alphabet is represented by the sibilant Latin "*S*"—when the soft Persian "*kiaf*" or "*K*" is made to appear as a guttural "*G*," the unfortunate foreigner who has been learning to write backwards in the Turkish characters for many a long year and now sees the result of his patient labours cast on the scrap-heap, is certainly nonplussed and sorry. That the educated Turk should know best what is suited to the requirements of a comparatively illiterate people and how best to render the phonetic expression of his Tchaghatai-Perso-Arabic language in Latin characters, it is only fair to admit. It does not necessarily follow, however, that bonds of consanguinity or of political sympathy offer the

most practical method of tackling what is, undoubtedly, a very complex linguistic problem.

This dialectic tournament, at all events, is still in its early stages and much water will, no doubt, flow under the bridges of the Golden Horn before a definite standard is finally adopted. The novel departure is unquestionably a move in the right direction, the Arabic characters being an undeniable impediment in the matter of educating the Anatolian peasant.

Notwithstanding the unanimity among the masses which is so freely commented upon in the Turkish dailies, there are still some diehards—obviously belonging to the older generation—who are of a different mind and who cling to old forms and standards consecrated by century-old observances, as may be inferred from an instructive incident which occurred a night or two ago.

The Presidential yacht was cruising in the Sea of Marmora, both the Ghazi and the Prime Minister being on board. The Stamboul Broadcasting Station had been transmitting its usual evening programme, which was listened to in the yacht's State-room. An address prepared by the President and broadcast in turn from the yacht was received towards midnight by all local stations, ships, and amateurs of whom this city now boasts some few thousands. The President stated his conviction that the battle now being waged against popular ignorance with weapons represented by the new Turkish script would have consequences far greater and far more enduring than those which followed in the train of the battles fought and won during the Anatolian war of liberation. "Should this nation ever again be exposed to danger or difficulties," the message went on to say, "I and my comrades will not hesitate for an instant to sacrifice ourselves on its behalf."

After the completion of the address and the lapse of a few minutes, the following anonymous message broadcast in Turkish from an unknown source was picked up by the Presidential yacht:—"Ye are abandoning the Arabic script and are adopting characters considered better adapted to the raising of the Turkish intellectual standard. This is all well and good—but what do ye intend doing in the matter of the Arabic characters which adorn the walls of our mosques and which record the glorious names of our Prophet and his companions?"

As directional-finders are not usually operated on board even Presidential yachts when pleasure cruising, the source of this message must remain a mystery for all time.

National Festivals.

Once again, as so often happens at various seasons of the year, has a rapid succession of festivals and the observance of the Sabbath reduced the working week in business establishments to an almost negligible quantity. The following is the record for the present week: Tuesday, August 28, Festival of National Sovereignty; Thursday, August 30, Festival of the Proclamation of the Republic; Friday, August 31, Sabbath; Sunday, September 2, half day. Maulud, the anniversary of the birthday of the Prophet, also falls within this period, but being no longer observed as a public holiday, does not count. The total length of time during which the Stock Exchange, the banks and public offices are this week open for the transaction of current business works out at exactly 15 hours and 45 minutes as between Monday morning, August 27, and Sunday evening, September 2.

Earthquake shocks were experienced in the Karsindi region of Adana, on the south coast of Anatolia, Asia Minor, on August 28.

The first anniversary of the death of Saad Zaghlul Pasha was commemorated on August 23 throughout Egypt by the recitation of the Quran by the leading shaiyks of each district.

A telegram from Peshawar reports that Captain Weiser, a French Pilot, flying an aeroplane presented to the King of Afghanistan by the French Government, arrived at Kabul on August 22, after a ten days' journey *via* Aleppo, Baghdad, Teheran, Kandahar, and Herat.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 16.

The Statutory Commission.

It has rained political documents on us this week. It began on Friday, when the memorandum of the Burma Chamber of Commerce was published. The memorandum of the Associated Chambers of Commerce of India and Ceylon followed the next day, and yesterday came the report of the Committee appointed by the All-Parties Conference. Space forbids that I should take these documents and analyse them one by one. They all lay stress on one thing, and it points to the rock on which all attempts to build a new Constitution for India may split. The point stressed is that the new Provincial Governments must be endowed with a sufficiency of funds for the development of the Provinces. If the lead were followed blindly, there would be left far from funds sufficient to carry on the Central Government. There is a separatist tendency at work, in fact, if no one seems very clearly to recognise it. It was what was to be expected. Those who are responsible for, say, the administration of Bengal, besieged as they are on all sides by demands for more money for the police, for education, for sanitation, soon lose sight of the fact that, were the Provinces dragged to the middle of the Pacific and anchored there, there would be a Bengal army to pay for, a Bengal navy, and many scientific services that, because they now are organised on an All-India basis, are paid for out of Central revenues, but nonetheless serve Bengal. One may, no doubt, rely upon the Statutory Commission's not overlooking the fact that the development of the Provinces, beyond the point they have reached, must, if the Central Government is not to be dangerously weak financially, be financed largely with new money raised in the Provinces themselves.

The Associated Chambers of Commerce, alleging a lack of evidence to show whether the Indians are or are not capable of governing themselves, are prepared to run the risk of a very considerable advance on Dyarchy. They are prepared, indeed, to go farther than some Indian statesmen would go, and they men who have gained experience as Ministers. They state that Dyarchy has proved too feeble an instrument ("has exhausted its possibilities" is the kind of thing that is said, when it is desired to be polite to the poor beast), and that it is desirable to abolish it in the new Constitution. They recommend the grant to the Provinces of powers varying up to full autonomy, that is, the abolition of the Provincial Executive Councils, and the transfer to Ministries of all the subjects now administered by either half of the Government. They do not recommend any alteration in the legal powers of the Provinces, but an increase in their political powers by the transfer of the whole of the government to them.

A tribute worth remark is paid to the statesmanship showed in the memorandum of the Associated Chambers in an article by Mr. Bipin Chandra Pal in this morning's

Englishman. "It is impossible to deny," this article begins, "that the memorandum of the Associated Chambers of Commerce of India on the question of the next advance that must be allowed to India towards the goal proclaimed by the Montagu announcement of 1917, shows a quality of far-seeing statesmanship which is rare even among professional statesmen. It ought to remove a good deal of current suspicion in the Indian mind of the political motives and outlook of the representatives of European interests in this country." Turning to what he thinks would follow any attempt to go back on the fundamental policy of the Montagu-Chelmsford "reforms," Mr. Pal says: "It would completely destroy whatever faith still exists in the political mind of the country in the good faith of British policy, and would kill all chance of a peaceful settlement of the present conflict and drive the people, already surcharged with a violent anti-British sentiment, into the vortex of a continental revolution, which must spell ruin to those large interests which our European and British fellow-subjects represent." According to Mr. Pal, the reconciliation of the European interests in India and India's "undeniable rights of self-rule" is the most pressing of the calls on statesmanship to-day.

The report of the committee of the All-Parties Conference was described in the *Statesman*, in its first leader on the subject, as "a good piece of drafting, and as certain to receive the most careful scrutiny and consideration in England." Such scrutiny and consideration are invited. The proposals of this weighty document are that there should be an Upper House or Senate elected by the Provincial Councils for the term of seven years, and a popular House, elected by proportional representation and the single transferable vote with manhood suffrage for five years. The Governor-General will have the power of reserving assent to Bills, or he can send them back for reconsideration, while in the case of a difference between the two Houses he can call a joint sitting. In the case of Provincial Bills, there is a three-fold series of control—through the Governor, the Governor-General, and the Crown. It is proposed that there be a Committee of Defence consisting of the Prime Minister, the Minister of Defence, the Minister of Foreign Affairs, the Commanders-in-Chief of the military, air, and naval forces, the Chief of the General Staff, and two other experts, and "no measure affecting the discipline or maintenance of any part of the military, naval, and air forces of the Commonwealth," the report reads, "shall be introduced into Parliament except on the recommendation of the Committee of Defence." One has only to think for a moment of how all that would have struck Lord Kitchener to begin to doubt. The framers of the Report were at their weakest in dealing with such matters. What, however, has any one of the eight men whose signatures appear at the end of the Report ever had that could be called experience of the defence of a country? What do Motilal Nehrus, Ali Imams, and Subhas Chandra Boses know of such matters? A pandit, a barrister, a young politician? Another weak point, but I have already glanced in this direction, is the absence of any sense that India is weak on the side of finance, is a

desperately poor country, and that it is no use framing a Constitution for her that would be very costly to work. One cannot think of a Constitution more costly than the one offered for consideration to the All-Parties Conference.

The All-Parties scheme, as it is known for short, has certainly had a very good Press; but it is only two days old to-day. It was inevitable that the praise should be heard first. One rose from reading it, hardly remembering, there being so hypnotic a quality in its silence, that India is rent with communal differences. There might be no such thing. If there were none; if there were plenty of money to go round (if anything is certain, it is that there is far from plenty), the scheme might be adopted to-morrow by general acclamation, or only after a little amendment on the side of defence. But there are communal differences, and there is less than money enough to go round; so one's judgment, even to-day, must be that the scheme will not do.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 18.

The Nehru Committee's Report.

After a delay of six weeks the Committee appointed by the All-Parties Conference to draft a Constitution for India has at last presented a report to the Conference. The Report, which is a unanimous one, is signed by Pundit Motila Nehru, Syed Sir Ali Imam, Sir Tej Bahadur Sapru and five others. It has been well received in the Press. Even the Anglo-Indian Press concedes that no one can afford to ignore it; the attempt of the *Times of India* to laugh out the Report failed so hopelessly that it has to-day made a serious effort to comment on the findings of the Committee. By Indian leaders of all shades of opinion it is welcomed as a step in the right direction. It is generally regarded as the first attempt to present a unanimous decision which would be acceptable to all the parties in this country. To the British politician the Report should mean even more than to Indian leaders, for it signifies the return of the Liberals to politics. If the Report is a triumph, as is claimed for it, of the Liberal party, the recent suggestion to make the All-Parties Conference a permanent institution is a still greater one, as it will mean the automatic removal of the Congress from its present predominant position in Indian politics. The first thing that strikes even the most superficial reader of the Report is the fact that the resolution of the Madras Congress of 1928 proclaiming independence without the British Empire as their goal has been dropped, and the Liberal ideal of Dominion status has been accepted by the Congressmen—at least for all practical purposes. The expression Dominion status, by the way, is meaningless, unless applied to a country in the Empire in relation to the United Kingdom or the other countries of the Empire. It cannot mean responsible government. Seen in this light, India has already, as the *Indian Daily Mail* points out in a recent editorial, got Dominion status, as she sits in the League of Nations and in the Imperial Conferences. What the Indian demand is, therefore, is that the Government of this country should be in India and not in England, that we should have a Parliament of our own and, lastly, that our representatives in the conferences should be Indians elected by our Parliament. It is difficult to realise what Sir Malcolm Hailey meant when he said in the Legislative Assembly that the term Dominion status was of wider extent than responsible government. The Committee also argue that the terms are both the same, whilst really responsible government is the term of larger extent. To return to the Report. The main recommendations are: that India shall have the same constitutional status in the comity of nations known as the British Empire as Canada, Australia, South Africa, etc., with a Parliament having powers to make laws for the peace, order, and good government of India,

and an executive responsible to that Parliament; that Sind and the Karnatak should be separated from the provinces in which they are now included, that two provinces should be formed and that the same form of government should be introduced in the North-West Frontier Provinces as the other provinces in India will have under the "Reforms." The Committee does not recommend the reservation of seats in the provinces of Bengal and the Punjab for any community, and in other provinces only for Muslim minorities on the population basis. In the N.W. Frontier Provinces there will be reservation of seats for non-Muslim minorities. Reservation of seats shall be for a fixed period of ten years. The Report further contemplates the transference of the control of the military, etc., to Indian hands. Many of these recommendations will undergo modification at the Conference to be held in Lucknow, which promises to be an important one, as many leaders who have hitherto held aloof have announced their intention to attend.

The Limit of Concession.

Tatas have issued another statement regarding the strikers at Jamshedpur, in which they give a summary of events that have occurred during the past few months. The importance of this announcement is due to the fact that it is signed by all the Directors and removes the impression which some strikers had that some of the Directors were sympathetic towards them. The statement runs thus. "We wish to make clear our conviction that the Company cannot make further concessions without serious consequences to the industry. The crucial issues are: (1) the reduction of surplus men by the company; (2) the claim on behalf of the men for full pay for the strike period. A stage is now reached when we consider it necessary in the interests of the workmen to emphasise that they will be well advised to return to work by the 20th instant, failing which the company will have no option but to engage fresh men. Much as we regret the present situation, we are unanimously convinced that the only course now left to us is to put the announcement of August 11 into force." It is related that, when at the battle of Fontenoy the French and the English forces were ranged against each other, the French general rode to the front of the enemy and with a bow asked them please to fire first. The public have long felt that the Directors of the Tata Iron and Steel Company well deserve a niche in the hall of Fame beside that general. This is a step which should have been taken rearer the beginning of the strike.

The Congress of Orientalists—I.

Reception of Delegates.

The Seventeenth International Congress of Orientalists, to which we were able to refer only briefly last week, began at Oxford on August 27 with a reception by the President, Lord Chalmers, in the Examination Schools. There were about 200 Delegates, from Governments, Universities, Academies, and Learned Societies, and, in addition, some 400 members present on this first night and on subsequent days. In a speech of welcome the President said that to those who represented Oxford it was a matter of profound and lively satisfaction that in 1928 Oxford should enjoy the high honour of resuming, after an interval of 16 years (a Congress had been arranged at Oxford for 1915), the fraternal meeting of distinguished Orientalists from all countries in the world. They welcomed there that day eminent scholars from all European seats of learning, from India, China and Japan, and from the New World, and they held out the right hand of fellowship to every Orientalist who had journeyed there to contribute to the world's growing knowledge of things Oriental and to enjoy personal converse with fellow workers in his or her particular branch of Orientalism.

"Our hope and aspiration for all visitors to this Congress," continued Lord Chalmers, "this ecumenical council of Orientalists, is that their visit may not only be pleasant in itself but may also be fruitful for the advancement of the studies which we severally delight to pursue. Bountiful as has been the harvest of last century's achievements in the Oriental field, let us yet join in the hope—the very confident hope—that our present century may garner a still more bountiful harvest of scholarly knowledge of all that the immemorial East can illuminate in the rise and growth of the civilisation and the culture of mankind."

The President went on to announce that under the Congress Statutes of 1897 a Consultative Committee had been appointed to deal on September 1 with questions arising during the meeting of the Congress, and to consider the time and place of the 18th Congress. The committee consisted of the President and Vice-Presidents of the Organising Committee, together with a certain number of foreign members, who had been chosen as fellows: Professors Breasted, Foucher, Snouck Hurgronje and Zimmern.

Lord Chalmers then received each of the Delegates personally, who approached the President according to the alphabetical order of their countries. During the period of refreshments which followed many friendships were renewed and begun.

On the following day the Congress began its serious work of attending the lectures, which were all given either in the Examination Schools or in the University Museum. The various subjects had been divided into nine sections. These divisions included a General section, of which Professor J. L. Myres was President, and sections dealing with the following subjects: Assyriology and kindred subjects (presided over by Professor S. H. Langdon); Egypt and Africa (Professor F. Ll. Griffith); Central and Northern Asia (Professor F. W. Thomas); the Far East (Professor W. E. Soothill); Ancient India, Modern India, Southern India with Ceylon, and Iran, Armenia and the Caucasus (Professor F. W. Thomas); Hebrew and Aramaic (Professor G. A. Cooke); Islam: Turkey (Professor D. S. Margoliouth); and Oriental Arts (Sir Michael Sadler). The following were the officers of the Congress:—General Committee: The members of the Board of the Faculty of Oriental Languages in

the University of Oxford—Professors G. A. Cooke, S. H. Langdon, D. S. Margoliouth (Chairman) D. C. Simpson, W. E. Soothill and F. W. Thomas, Dr. A. E. Cowley, Mr. R. P. Dewhurst, Mr. G. R. Driver, Dr. J. Morison and Mr. J. F. Stenning. Organising Committee: Professor F. W. Thomas (Chairman), Mr. G. R. Driver (Treasurer), Mr. C. N. Seddon (Secretary), Sir R. Burn, Professors F. Ll. Griffith, S. H. Langdon, D. S. Margoliouth and W. E. Soothill. Editorial Secretary: The Rev. E. Burrows.

For purposes of convenience we shall divide our report of the various lectures into the sections under which they were delivered.

General Section.

The General Section under Professor Myres began unfortunately, for none of the Russian lecturers, who were due to begin the proceedings on August 28, had been able to procure visas from the Russian Government. Although this was not a unique mishap—similar ill chance, for instance, having occurred at Oriental congresses in Germany—it was disappointing to be denied lectures on "The New Information about the Trepolian Culture in the Ukraine," "The Tatar feudalism in the Ukraine during the fourteenth and fifteenth centuries," and "Seljukism and the Golden Horde in the Crimea: being archaeological researches in 1925-26," by Professors Boltenko, Petrunne, and Borosdine respectively. (One of the Russian lecturers, Professor A. S. Federovsky, was able to arrive late, and delivered his paper on "The Antiquities of the Golden Horde in the Ukraine" on August 31.)

It fell to Mr. G. Horsfield, of the Government of Trans-Jordan, therefore, to begin with an unwritten paper on "The Archaeological Service in Trans-Jordan and its Works." Mr. Horsfield said that in October, 1924, Professor Garstang, to whom all the present work in Trans-Jordan was due, asked him to repair certain Sassanian ruins at Amman. In April of the following year Professor Garstang procured funds for the establishment of a Department of Antiquities in Trans-Jordan. The lecturer went in the summer of 1925 to Jerash, where he experienced considerable lack of facilities and of workmen. Within six months, however, a storehouse and a road had been constructed, 150 workmen of Jerash had been obtained, and by the end of the summer the theatre had been repaired, and pavement and a few inscriptions had been found. Activities had been extended to rebuilding as well as to excavation. At the end of 1926 Professor Garstang resigned, and in April, a new Department, quite separate from that of Palestine, was created. The lecturer remained, therefore, at Amman, and a competent engineer was put in charge of Jerash. At the present time, the south theatre of Amman was almost wholly excavated. In Jerash there had been found four monuments which were precisely dated, as being of the time of men such as Commodus and Trajan. There were two archaeological expeditions in Trans-Jordan. At Amman there was an Italian expedition, and at Jerash there was the expedition conducted by the Yale University and the British School in Jerusalem. Nothing had been found worth publishing, except the inscriptions which will be published by the Yale-British expedition.

In the subsequent discussion, Professor Myres spoke of the old civilisation of Trans-Jordan, mentioning, for example, the fortress of Rabboth-Ammon, and of the reconstruction of the whole culture of the desert margin region in the early generation after the conquest of Alexander. There were great pylons, gateways, cities, and so forth to attest that the place had a continuous architectural and cultural history. All this was ended, of course, with the Saracen conquest. Circumstances had come to be exceptionally unfavourable to human existence in Trans-Jordan. Now, however, with a settled Government

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY

in the country, and a determination to exploit its natural resources, there was the danger, so to speak, of an increase of population. It was essential, therefore, that the right lines of the preservation of ancient monuments should be laid down now. There must be a judicious discrimination between stones that were essential and stones which could profitably be wasted. (The lecturer had referred to the pilfering of the stones by the local people, and Professor Myres amusingly emphasised the fact that, what had previously been work of loot by the natives was now work of necessity in the interests of archæology.) The work of conservation of ancient monuments in Trans-Jordan was highly important.

Mr. Horsfield remarked how that it was a matter of pure luck that the Circassians were not now in that part of Jerash where archæological work was being carried on. The Circassians, who went to Trans-Jordan from Anatolia in 1882, had intended to settle on either bank, but malaria killed off so many of the settlers on the east bank, that the west bank never received its section.

Mr. P. L. O. Guy, of Megiddo, referred to Trans-Jordan as the step-child of Government diffidence in helping Antiquities. Mr. Horsfield, whose most excellent work he knew well, had great need of travelling assistants, and the Colonial Office ought to know this. Money Mr. Horsfield could not hope to get; but he ought to receive more help.

In conclusion Mr. Horsfield referred to the great assistance which he had had from the Royal Air Force in Trans-Jordan. Group-Captain Rees had considerably helped him, particularly in regard to Byzantine buildings. For exploring in the desert area there was no water. Finally, the lecturer stated that there was no illicit digging in Trans-Jordan.

Next, Professor F. W. Buckler, of Oberlin University, Ohio, U.S.A., lectured on "The Human Khil'at." We are enabled, though the courtesy of Professor Buckler, to publish the following authoritative summary of his lecture:—

"The quest to discover the composition of the *khil'at* in terms of its component garments and other articles included in the gift has proved a failure owing to the great variety of things which in different countries has appeared under the name. Further, the limitation thereby imposed on the investigations to articles of ordinary wearing apparel has obscured the real significance of the symbol known in English as 'the robe of honour.' The distinctive feature of the robe of honour lies not in the number or costliness of the garments comprising it, but in the fact that each is a *khil'at* or cast-off of the donor. The recipient's position is described by another group of terms—derivatives of *halapu*, whose primitive meaning is he crept into [the shadows]—hence the *halipol smalut* combines the ideas of transfer of authority, delegation of function, succession and acknowledged suzerainty with the idea of the extension of the shadow of God (*Khilafatu'llah*) or kingship, as is seen in the *Khirqah* of the *Sufi* at his moment of *jama* or ecstasy, when he becomes the *khalifatullah* or the shadow of God on earth. As I have already suggested, the *khil'at* is the symbol of the central fact of Oriental kingship—its organic and corporate nature whereby the delegate of the King is a member of the King's body, functioning as part of that body and—by the *khil'at*—symbolically incorporated into that body 'so that they are no more twain, but one flesh.' The implied organic unity appears both in the process of delegation and in the succession. The conclusive proof of this implication appears in the one 'garment' which has escaped the notice of investigators, namely, the widow of the deceased monarch.

"The prophet Malachi (ii. 15-16) upbraids those who 'deal treacherously against the wife of his youth,' for the Lord hates 'him that covereth his garment (*lebuso*) with violence.' *Lebuso*, here applied to the wife, is one of the technical terms for a robe of honour. In the Quran the Prophet Muhammad makes a similar allusion (ii. 183). man 'spreading his skirt' over her. (Ruth iii. 9.) The

verb *khala'a* also supplies the legal terms for divorce and the divorced wife as well as terms applicable to a concubine who has been renounced, and it is suggested that the same idea attaches to the widow, who is irrevocably the *khil'at* of her departed husband.

"The Thousand and One Nights' supply two striking illustrations of such *khil'ats* from the Sultan's harem. In the first case (Burton, iv. 65-67) Harunu'l-Rashid gave one of his concubines Qutu'l-Qutub to 'Alau'l-Din, who refused to accept her as his wife on the ground that 'what befiteth the lord befiteth not the liege.' Harun, therefore, sent to the market and purchased a slave girl for the man. The second instance (Burton, *Suppl. Nights*, v. 235) is the Sultan's presenting to the Bhang-Eater 'by way of a *khil'at*, a white slave girl.' These two examples seem to be conclusive evidence of the nature of the custom—that the widow or the abandoned concubine is a robe of honour.

"It is in the realm of kingship that the importance of this institution appears. The possession of the King's last wife or concubine constitutes the capture of the succession to the kingship. For that reason Ahitophel advised Absalom to go in unto his father's concubines (2 Sam. xvi. 21-22, cp. 16-18); Adonijah, in order to retrieve his right to the throne, asked through Bath-sheba for Abishag the Shunammite to wife. Solomon's reply was: 'Ask for him my kingdom also' and the order for Adonijah's execution. Herodotus, in rather significant phraseology, after recounting the murder of Candaules of Lydia, states, 'thus did the wife and kingdom of Candaules pass into the possession of Gyges.' Behind the somewhat fantastic stories of Antiochus' love sickness for Stratonike and the physician's advice lies the truth of the story that Seleucus, in order to pave the way for a peaceful succession, gave his latest wife to his son Antiochus, in accordance with Persian custom—as Tatian has informed us (*Orat. ad Graec.* c. 28).

"The most interesting fact of all, however, lies in the appearance of this custom among the royal tribes of Germanic kingship. About 550 A.D. Hermegisklos, King of the Varini, when he is on the point of death instructs his son Radiger to take to wife his widow immediately after he has passed away. Half a century later, Augustine of Canterbury inquires of Gregory the Great whether the custom is to be permitted to converts. Gregory forbids it.* In 616, Eadbald of Kent, however, married Ethelbert's widow and the act appears as part of a pagan revival. In 856, in face of an attempt to divide the kingdom of Wessex between the four sons of Ethelwulf, Ethelbald, the eldest, married Judith, his father's second wife the moment she had become a widow. Pope Nicholas I. refers to the evil custom of sons marrying their step-mothers. Cnut, the Danish conqueror of England, in order to ensure the recognition of his right to the English throne married Emma, the widow of Ethelred. 'It was an old Danish custom that marriage with the King's widow carried the kingdom with it as a matter of right,' remarks Frazer. Saxo Grammaticus sums up the same view in the words *Ita et nupciis sceptrum et scepro nupcias respondere*. The converse of the custom is that where any other bride is taken she must be a *virgo intacta*, as, if she is a vassal's daughter or renounced wife or concubine, the king is placed in the false position of vassal to one of his own vassals. It is this fact which, I believe, underlies the initial objection of Lothair II. to Teutberga. The custom persisted among the Slavs until the 19th century.

E. H. Keeling,
Hon. Sec.

"The survival of the custom in both the East and the West implies a common origin. It is, as already indicated, Persian and not Semitic. It is forbidden in the Semitic redaction of the Laws of Hammurabi (§§157-8), in Leviticus (xviii., 3,7-8), and Deuteronomy (xxii. 30) as an Egyptian and Canaanitish custom; by Amos (ii. 7) and later Saint Paul (1 Cor. v. 1); the Prophet Muhammad regards it as an abomination. The antagonism is to the institution in its incestuous form, which excited the opposition of the Semites and the Roman Church, which based its decision on Roman Law and its arguments on the Old Testament, but, as Radiger of the Varini explained to his injured and enraged fiancée—it was a matter of necessity, and the princess understood—as Procopius relates the story.

"Sir James Frazer appears to base his explanation of the custom in the descent of royalty and of the royal house in the female line. This explanation, however, hardly meets the case, for its object is not the maintenance of the purity of the blood royal, and if it is, it would fail unless we are to suppose that all David's concubines were of royal blood. Frazer has been misled by two incidental applications, which a strong-minded woman (like Hermitrude of the Picts, or an outraged woman like the wife of Caudaules) would be in a position to make. He has also overlooked the fact that the important point is the stress on the last wife who had been in corporal contact with the King—as Abishag the Shunnamite. The most satisfactory solution, then, appears to lie in the principle of the robe of honour, the widow or the divorced wife or concubine or slave is a human *khil'at*, whereby the organic unity of the kingship is symbolised.

"If this explanation is the correct solution of the problem, then certain consequences follow:—

"1. It explains the origin of the Levirate marriage—the mantle of the elder brother falls on his younger brother.

"2. It accounts for the Hindu *janhar*—a means of preventing the conqueror adding to the right of the sword the right of succession.

"3. It is a definite proof of the common ancestry of primitive Germanic kingship and Oriental despotism.

"4. It finally establishes the theory that the *khil'at* is symbolic of organic incorporation."

Afterwards, Professor Morgenstern, of the Hebrew Union College, Cincinnati, Ohio, declared that among Semitic peoples relationship was originally transmitted through the mother. The Edomite Kings, for example, were never followed by their sons, but all came from different places. It was said of a King that his wife was the daughter of the daughter of etc. That was, the royal descent was traced through the woman, not through the man, but the husband exercised the function of kingship.

On August 29, Dr. H. R. Hall lectured upon "The Publication of Archæological Material." He declared that the cost of many archæological publications was nowadays prohibitive, alike to the student and to the library, and suggested many ways, such as reference to photographs in books easily obtainable elsewhere, instead of expensively produced duplicates, the suppression of non-essential material, and so on. He moved a resolution, which was passed after a discussion in which Mr. C. M. Firth, of Saqqara, Dr. Mayer, of Palestine, Mr. P. L. O. Guy, Professor Steindorf and Professor Myres took part, to the effect that the cost of archæological publications has increased, is increasing, and ought to be diminished, that the ideal price of such publications is £2, or better still, £1 10s., or £1, and that excavating societies be asked to consider the advisability of allocating a larger proportion of funds to their publications in order to reduce their sale price.

In the evening of August 29, Mr. J. W. Crowfoot gave an illustrated address on "Excavations at Jerash (Gerasa) in Trans-Jordan." For this lecture, Professor Myres abdicated the Chair in favour of Sir Ronald Storrs, Governor of Cyprus, and formerly Governor of Jerusalem, who, of course, knew Jerash personally. Sir Ronald said that

Jerash was one of the "Big Four" of the Near East, the other three cities being Baalbek, Petra, and Palmyra. Dr. Crowfoot, who is Director of the British School of Archæology in Jerusalem, then gave an account of the recent excavations carried out by a joint expedition by Yale University and the British School in Jerusalem. He said that the expedition had discovered a great complex of Christian buildings, which included two large churches built east and west of a pillared courtyard containing a fountain, which was probably the site of an annual miracle, described by Epiphanius in the fourth century. According to Epiphanius the water of a fountain at Jerash was turned into wine every year on the anniversary of the miracle as Cana in Galilee, and the lecturer said that the existence of these two large churches with a number of smaller dependent buildings, all centred round the Fountain Court, might be regarded as proof that this was the site of the miracle. He compared the place with two other great pilgrimage sites, the church of Saint Menas near Alexandria, and those of St. Simon Stylites near Aleppo.

The last season's work had also established the fact that Jerash continued to flourish for at least 100 years after the last conquest. The churches were probably destroyed in the great earthquake of 746 A.D. and a second blow was dealt at the prosperity of the place by the removal of the capital of the Arab Empire from Damascus to Baghdad about the same period. Until this time, however, it was quite certain from the coins and lamps which had been found on the site, that there was no serious decay.

On August 31, with the Very Rev. W. Schmidt in the Chair, Professor T. Jordanescu delivered a paper in French on "The Atharvaveda in Roumanian Charms and Witchcraft." These charms he attempted to derive from India by way of the gipsies. Some of the customs of the Tziganes and of the Roumanians—for instance, the perambulation in a state of nudity by young women on certain occasions—had their origin in India. Professor Jordanescu was, however, vigorously attacked by the veteran Dr. Gaster, who said that the lecturer's theory would not hold. He pointed out that gipsy charms did not resemble Roumanian charms. Indian charms, he maintained, went back to ancient Babylonian charms; nor was the resemblance between Indian and other charms confined to Roumania, but was to be found, for example, in Greece, Bulgaria, Serbia, and other places.

A Resolution.

Before this General Section came to an end, a resolution was moved, by Mr. P. L. O. Guy, to the effect that "this Congress desires to bring home to the Governments of countries in the Near and Middle East the need of increasing the facilities granted to accredited excavators and for reducing to a minimum the formalities attendant upon obtaining them." Mr. Guy, who was Director of Antiquities in Palestine before he was put in charge of the Chicago University expedition at Megiddo, set out eight practical steps which, he said, ought to be taken. These were: the remission of Customs duty on all archæological equipment, the reduction of railway fares for all the personnel of the expedition, the reduction of railway freights, the remission of house tax, the remission of immigration fees in respect of all imported personnel, the transportation by the Government of all the Government's share in antiquities (that is, from the site of the dig to the Museum), the acquisition by Government, before the arrival of the excavators, of grounds required for excavation (that is, the excavator should pay the Government purchase price or rent), and the reduction of formalities attendant on obtaining the necessary facilities.

In the subsequent discussion Dr. Mayer spoke first. The resolution found strong support from Professor Chiera, who is digging at Kirkuk. He said especially that Governments should do something in the complicated matter of land. He was followed by Sir Ronald Storrs, who mentioned first the sympathetic attitude of the Government in Cyprus towards archæological expeditions. Formerly in that island the Government took everything found, but

now archæologists could keep a considerable share of the spoils. On one point only did he dissent from Mr. Guy, and that was in relation to immigration fees. He pointed out that Customs were universally regarded as "fair game," and that in the tourist season the temptation of various wives, sisters, relations, and hangers-on in general to attach themselves to archæological expeditions might prove irresistible, and so bring about a real and legitimate loss to Government revenue. Finally, Mr. Clauson, of the Colonial Office, expressed disagreement with Mr. Guy's first three points. He emphatically objected to concealed subsidies, such as would be involved in concessions in the matter of railway fares, house taxes, and so on: rather than that, he would have Government openly subscribe to archæological expeditions. Over the last five points, however, he supported Mr. Guy.

Garden Parties.

One of the most delightful features of this week at Oxford was provided in the garden-parties which were held. The first was on August 28, when Delegates were invited to a garden-party and tea by the Warden of Wadham College and Mrs. Stenning, in Wadham College. Unfortunately, rain interfered with this function. The following day, however, the weather was as beautiful as Magdalen itself, when Dr. and Mrs. A. E. Cowley held in Magdalen College a reception to all Members of the Congress. On August 30, a garden-party (by invitation) was given by Professor and Mrs. D. S. Margoliouth, in New College, and on the following day, similar garden-parties were given, by Professor and Mrs. C. G. Seligman, at Toot Baldon, and by Mr and Mrs. W. H. Buckler, at 1, Bardwell Road.

We shall continue our account of the proceedings in next week's issue.

PERSONAL AND GENERAL

TO-DAY

September 6, 1928 (New Style).
August 24, 1928 (Old Style).
Rabia I, 20, 1347 A.H., of the Muslim Calendar.
Ellul 21, 5689, of the Jewish Calendar.

The Hon. Mrs. Harold Nicolson will return from Berlin at the middle of the month to Long Barn, Weald, Kent.

M. Henri Ponsot, French High Commissioner for Syria, left Beyrout last week for Paris, and is expected to be away for two months.

Keuprulu Zade Fouad Bey, who represented the Government of Turkey last week at the Congress of Orientalists in Oxford, left for Constantinople at the beginning of this week.

Mr. John C. Orr, of Oriel College, Oxford, and Mr. V. A. Ottaway, of Trinity College, Oxford, leave England next week for Abyssinia to take up positions as English masters at the Tafari Makonnen School in Addis Ababa.

Sir Thomas Arnold, who unfortunately was prevented from attending the Congress of Orientalists at Oxford last week by an attack of arthritis, is now better. His absence from the Congress was the subject of universal regret.

The Prince of Wales and the Duke of Gloucester leave England this week for their African tour. Embarking on the P. and O. Kaiser-i-Hind at Marseilles on September 7. Their Royal Highnesses are due to arrive at Alexandria on September 11. On September 13 they will be entertained to dinner at the Gezira Sporting Club by the British community in Cairo.

M. Caclamanos, Greek Minister in London, left last week for Geneva to attend the Assembly of the League of Nations. M. K. A. Collas, Counsellor at the Legation, is acting as Chargé d'Affaires during the absence of the Minister.

The King has been pleased to approve the appointment of Mr. John Coldstream, Indian Civil Service, to be a Puisne Judge of the High Court of Judicature at Lahore in the place of Mr. Justice Campbell, Indian Civil Service, whose resignation has been accepted with effect from September 10.

Abdul Rahman Fikry Bey, who has been on the Staff of the Royal Egyptian Legation in London since its establishment, and until recently held the post of First Secretary, has been appointed Technical Secretary to the Ministry of Finance in Cairo. Fikry Bey, who before entering the Diplomatic Service, studied at the London School of Economics, was deservedly popular both with his diplomatic colleagues and with all who came in touch with him at the Legation.

In response to a request from the Greek Government, Dr. M. D. MacKenzie, of the Health Section of the League Secretariat, has been placed by the Secretary-General at the disposal of the Greek Government in connexion with the epidemic of Dengue fever now raging in Greece. Dr. MacKenzie left Geneva for Athens on August 28.

Tuesday Morning.

Fruit Cultivation in Palestine.

While the principal efforts to develop fruit cultivation in Palestine are concentrated on the well-known orange which has for so long been the mainstay of the country's export trade, endeavours are being made to enlarge the production of other fruits for which conditions are suitable. One of these fruits is the banana, which is the subject of a recent leaflet issued by the Palestine Department of Agriculture and Forests, in which it is stated that there are possibilities of a banana industry of moderate dimensions in the country. It is true that in the case of the banana there are climatic disabilities, but it is believed that these will be offset by Palestine's proximity to the Eastern European markets. At present about 180 acres are devoted to banana cultivation, but it is estimated that from five to ten thousand acres could be devoted to the fruit in the regions best suited for it.

A Loan for Bulgaria.
